Two years ago came a tall, strong father, a gentle sweet-faced mother, and a funny little black-eyed baby closely wrapped up in a big shawl. All fell gracefully, though not suddenly, into civilized ways, the baby soon learning to rule all, both red and white, in a thoroughly impartial way, growing fat and rosy and, like as the months passed, until as we last saw him waddling along and displaying his various accomplishments by way of throwing kisses and rehearsing his somewhat limited vocabulary, we were quite satisfied with the work he had done.

Of the strong, manly boy who goes home to help his father, a much respected and even noted chief, and many others, it is a strong temptation to speak, but it is better resisted, at least for the present.

To Yankton only two have returned this year, both after a lengthened term. One we hope will return in the fall to finish his Normal course and further perfect himself in a trade for which he has shown great proficiency.

The boy from Indian Territory has also devoted a greater part of his time to his trade, that of carpenter, and returns with the hope of making that useful to himself and to his people.

It is pleasant to know that the three Sac and Fox girls return to excellent homes. One of them is a daughter, another a step-daughter, of Chief Keokuk, whose quiet and dignified bearing, as we met him recently at Hampton, seemed the index of an earnest and noble character.

Three and a half years ago, in the dead of winter, after a journey of four weeks, through perils of land and water, Mexicans and Indians, Dr. Sheldon Jackson presented to our mercy 16 Indians from Arizona, 14 boys and 2 girls, Pimas, Papagos, Mohaves, Yuma and Apaches. Among these Pimas a father and son. After a year the father was called home to assist the head chief—his father—leaving his little son in our care. This spring though the child was not ill, yet the doctor's advice was a change of air, and we hope it will be of so much benefit that he may return, as he desires, after a year of rest.

Not long ago a party of Apache chiefs came to make the school a visit, and took back with them our most promising boy as an illustration of what an education could do. It was hard for him to go alone and hard to stand the test by himself, (though at last reports he was doing well), and he will be glad of the helpers who are on their way to him. One boy, who was for some time a scout in the U. S. army, and came here under the name of "Fry Bob," returns as an interpreter, shoe-maker, and tailor, peaceful, thus far, certainly.

Another, a bunch of human dynamite, we are anxious to hear from.

Beside the five who have just gone back, four have returned at different times during

the last two years, four have died, and the rest remain for an indefinite time.

We who know most about these boys and girls cannot but feel very hopeful of their success, and we trust their friends all over the country will be glad to hear that they have done, as well as encouraged by what they shall hear in the future.

A Trip to the Agencies.

BY REV. J. J. GRAVATT.

One going West in March naturally expects to be met by "blizzards" and all that is rough in the way of weather. To my utter surprise, I found brighter days than I had left at Hampton. The people were plowing and sowing.

Arriving at Springfield, Dakota, early Sunday morning, March 23, I was greeted by a perfect Spring day. This was cheering, but it was still more pleasant to be so cordially welcomed by the Principal and ladies of Hope School. In the absence of Bishop Haas whose headquarters are at this school, and by the earnest entreaties of the efficient teachers, I held three services before the day was over. It was nice to see the eager faces of the Indian children. I found among them, relations of the Hampton students. I was most favorably impressed by the admirable management of the school.

On Monday, another bright day, the heavens seemed to smile on my mission. I started for a drive of thirty miles across the prairie to Yankton Agency. The air is so pure and bracing that one seems to drink in strength for any other trial. I imagine my sensation as I drove into the Agency. "Is this the homes of some of the Hampton children? Where did Frank Yellowbird live? Where is Geo. Stricker's home?" has had become of Sam'l Brown? A moment more the wagon stops, and a bright face stands before me. It is David Simmons, one of the returned Indians. His smile and hand-shake were a sufficient reward for my trip. I was grateful for what had been done for him at Hampton. All speak well of David, he has worked faithfully and steadily as clerk in the issue-house.

Here comes a nice looking girl across the ground. It is Maggie Goulet, who, in her modest, gentle way, expresses so much pleasure at seeing a Hampton friend. She goes with me to call upon the Agent, Maj. Goulet. After a short visit, we go to the sweet home of Rev. Mr. Cook. Before reaching it, Samuel Brown appears, and taking satchel, etc., escorts us to the home of Maj. Goulet. After a short visit, we go to the sweet home of Rev. Mr. Cook. Before reaching it, Samuel Brown appears, and taking satchel, etc., escorts us to the home of Maj. Goulet. After a short visit, we go to the sweet home of Rev. Mr. Cook. Before reaching it, Samuel Brown appears, and taking satchel, etc., escorts us to the home of Maj. Goulet.

After a refreshing night, Tuesday comes. It was begun with a communion service in the M. E. Church. It is issue day. How much that means! Indians at all stages of civilization and heathenism can be seen at the Agency. After going in and out among them and contrasting the scene with the quiet one at Hampton, we visited the homes of some of the Indians. Some were neat and some were simply miserable. Our time is limited, so we must go to St. Paul's school. We have heard the Indian prayer-book so often of it that we had pictured it to ourselves. But it is much more of a place than we had thought. The buildings are good, well kept and the students well trained. It is a power for good. Samuel Brown has a shoe-shop in one of the buildings and is teaching his trade to others. George Stricker is at work some miles above the Agency. He is trying to earn money to pay his way back to Hampton that he may be better furnished for his work. Joseph C. has returned to some of the Indian habits, but, I believe, has done nothing very bad. The hour has come to leave Yankton Agency. We do it with great reluctance. The Government School we could not visit, our stay with Rev. Mr. Cook, shorter than we wished, a mere call upon Rev. Mr. Williamson, and we had to say no to several fine young men who wanted to come to Hampton, because we were instructed to bring girls.

Samuel Brown drives me to Choteau Creek, from there a stage ride to Springfield, thence to Chamberlain, terminus of the R. R. From Chamberlain we drive thirty miles to Crow Creek Agency. The creeks being high, we had to go out of the usual route. We got lost, not a very comfortable feeling, on a broad prairie—and seeing an Indian house, we went to be directed aright. An Indian woman appeared, and though she could not speak English, she took us in the situation and pointed towards the right road, talking all the time. She then turned to me, and with a good many gestures gave me to understand she was sick. This done, she came to the door and took hands with me. After leaving her, I expressed some surprise at her actions and her intelligence to talk with strangers. The driver, a borderman, said, "did not you know what she meant?" She wanted to tell you she was sick, and by shaking hands she asked for money to buy whiskey." I could say nothing to the contrary. After arriving at the Agency, I told Maj. Goulet, the excellent agent about it. He seemed greatly surprised and said Indian

women do not behave in that way. He asked where she lived. I described the house and the woman. He said she is one of the best Christian Indians on this Reservation. He explained it thus. She is sick, her daughter is at Hampton and she wants her to come home. This is what she was trying to tell you, for the Indians have been told of your coming. Here we have the interpretation of a border man and of an earnest, faithful Indian Agent. We were fortunate to reach the Agency on issue day. We took in the whole thing at once. It did my heart good to have those people come up and shake hands with me, because they had learned of me through their children. Legredo Rencontre has married an excellent woman, and both he and she are employed at the Government School. Samuel Foursar who was here a short time only, has made a good record. Andrew F. has lapsed into Indian ways, but has done nothing criminal. Knowing the boy as I do, I am convinced he can yet be influenced for better things.

The Agency School is doing good work; it should feed Hampton. Too much credit cannot be given Mrs. Gasman and Miss King, teacher, for their interest in it. In company with Rev. Mr. Burt, I visited Indians in their homes and in their tepees. Daniel Firecloud, a good brave man, whose son is at Hampton, has a neat home. He was plowing, but came in to entertain me. After a pause he said, turning to me, "Our hearts are glad to see you here. When one of the Dakotas goes away and stays a long time and comes back, we are glad to see him. I want to say that is the way we feel towards you." After asking about his boy, he said, "Tell him I am glad he is doing well, but I want him to do better. He must be obedient to his teachers."

Chief Wizer, whose daughter is here, has quite a large and comfortable house. He is an earnest, plain man. He and his wife live thirty miles to see the last of their child. I cannot speak too pleasantly of the Sunday spent with Rev. Mr. Burt in his nice little church. We had three services with large congregations. One of these was peculiarly significant. Two Indian babies, twins, were baptized by Rev. Mr. Burt, an American, two Norwegians, a mechanic and his wife, employed at the Agency, stood for one child and Indians were sponsors for the other.

It was truly gratifying to see the earnest desire on the part of Indians to come to Hampton. More wanted to come than the government instructed me to bring.

Promising young men earnestly asked to come, and it hurt us to tell them they must wait.

After a most interesting visit at Crow Creek (the only trouble was it was too short) Maj. Gasman, his clerk and myself, started for Lower Brule Agency. We crossed the Missouri, yet full of floating ice, at Fort Hall. Here we called upon the Commandant who was unable leave his room, and then pressed on to Lower Brule. Rev. L. C. Walker had appointed a service at the Protestant church, so a good congregation assembled to hear about the work done for their children.

Frank Yellowbird I found at Lower Brule; he is married and has conducted religious services in the absence of the Protestant minister. I could spend only a few hours at this place, as the evening was wearing away and I was that night to meet the children for Hampton at Chamberlain, where the Agency, Rev. Mr. Walker had asked the ferryman to wait until dark, but to our great dismay, upon reaching the river, no boat could be found. Fires were kindled and all of us called for the ferryman to come, but no reply. The white driver comforted me by saying, "It is no use, these people never cross this river in the night at this season." But the Indian Missionary and another, whose brother is at Hampton, who lived near the water's edge, seemed to feel some responsibility in the matter. They yelled and shouted until a light was seen to descend the opposite bank, which we soon learned was that of the ferryman. After struggling for some time against the currents and wind, the boat reached the shore. I don't know which felt most relieved, the Indians or myself, for both knew that I must cross the river that night if possible. We reached Chamberlain about ten o'clock. The children were there in comfortable quarters. Early next morning we started East in the midst of a severe snow storm. What an experience these children of the plains. It is an education in itself. Their appearance and behavior called for favorable remarks from conductors and passengers. After a comfortable journey of four or five days, we arrived at Winona Lodge, Hampton Institute, to be met by the teachers and Indian pupils both anxious to see who and what the new comers might be. They have fallen into their places in the school and are a bright, happy set. Here we must leave them for a while, praying that God's presence may ever go with them, that he may prepare them for a great and good work, and finally give them an inheritance with the Saints in light

## Letters From Hampton Graduates.

FROM A YOUNG EDITOR. "COME OVER AND HELP US." FROM A TEACHER IN DEACON'S ORDERS. THE STORY OF HIS LIFE. FROM ONE WHO IS ROUGHING IT. LIKES TO WORK HARD. FROM A GIRL GRADUATE. A DIFFERENCE OF OPINION.

A tree must be known by its fruits. We are glad to put before the friends of good work from month to month a few samples of the fruits of Hampton's raising in these simple records of its graduates' work and experience.

FROM A YOUNG EDITOR.

Over one hundred newspapers are now edited in the United States by colored men. We are glad that this new enterprise is to make room in the columns for educational matter, and wish it all success. While its teachers make so large a proportion of the reading colored population and are so largely looked to as its leaders, they should demand recognition and consideration of their needs in their own press, and not be satisfied with mere political papers. Every teacher should take, if possible, some good educational journal or paper, and any one of their newspapers would be doing excellent work devoting at least a column to selections from the various excellent ones that are published, the *Virginia Educational Journal*, *N. E. Journal of Education*, and others.

—Va. April 5, 1884.

## Dear Teacher:

Yours of a recent date is before me, I am glad to hear from you. I am getting along very well with my school. The spring here and we are making preparations for our Commencement. I want to come to Hampton to the next meeting if I can possibly get off to come. I think I would enjoy meeting the gathering of the different faces connected with the "Alumni Association."

I send you, this morning, a copy of a paper in which I am interested, which you will see by my name. All of us are young men and we are making preparations for our Commencement. I want to come to Hampton to the next meeting if I can possibly get off to come. I think I would enjoy meeting the gathering of the different faces connected with the "Alumni Association."

I hope I shall hear from you soon. I am your pupil, C.

## IN DEACON'S ORDERS.

A graduate of '78 gives the story of his efforts for an education and study for the ministry in the Episcopal church.

—N. C. 11-4-1884.

## My dear friend,

It is with no small degree of pleasure that I write you to acknowledge the receipt of your letter of recent date, and also the *Churchman* sent sometime ago; for them both I thank you. I thank you for your interest in me and for your desire to know of me. Well I must confess that I hardly know how or where to begin. To be short then I will say that I was born in Salisbury, N. C. in the year 1858. I went to the missionary schools there during the winter time and worked in the brick yard during the summer. My father died ere I could remember him. My mother kept me in school with three other children as best she could. In 1876 one of my teachers suggested that it would be well for me to go to Hampton and work my way through. The way seemed all dark to me, but a ray of hope was shed to guide me through paths through which I deemed it impossible for me to pass, until a friend offered to assist me through the first session. With his help and the work I did, I pulled through. I arrived at Hampton Sept. 28, 1876. Entered the Middle Class and graduated with the class of '78 with a first grade diploma. I worked at the Hyattsville hotel two summers and one month on the farm at \$10 per month. I saved every cent that I made during the summer and paid it over to the Principal, who received a gift of \$50 for me and for which I shall always feel grateful to him. I now owe about \$40 to the school which I mean to pay whenever I can. I came to the St. Augustine Collegiate Institute at Raleigh to study for

the ministry. I entered in the session of '78. I began the study of geometry, Greek and Latin, arithmetic, grammar and other studies. You may be judge whether I have made good use of my time or not when I tell you how I am situated. I am now teaching. Am on the regular staff, and have charge of the faculty. I have classes in Latin, reading, grammar, arithmetic, and have taught a class in Greek. I was ordained one year ago last April and have since had charge of a church in Lexington, Ky., and am now called to that post, but I cannot now accept, since I am teaching and at the same time carrying forward my studies for the Priesthood. The zenith of my ambition now to come North and enter the General Theological Seminary, but I don't see how just now. I do not want to go out as a Deacon, for in that capacity I am so circumscribed, and my sphere of usefulness is curtailed to some extent.

Respectfully,

H. HENDERSON.

Since the above was received, the writer has completed his course, passed his examination, and with two classmates, received full ordination. The first colored ministers we understand to be ordained in the Episcopal church in North Carolina. Mr. Henderson has been appointed to the charge of a parish in Louisville, Ky., and stopping at Hampton on his way thither officiated at the evening services at the School on two Sundays; reading the service and preaching. We wish him all success in his new field and are confident that he will have it.

## ROUGHING IT.

The more ordinary experience of Hampton graduates is such as the following. Some of our finest workers are giving themselves to their people in these varied labors, "liking to work hard," and rejoicing in the fruits of their efforts.

—Va. April 3rd, 1884.

## My dear teacher,

I received your letter just as I was about to close my school at S— and I thought I would wait until I had got my other school all straight, so as to write you about it. After teaching thirteen months at S—, I am quite glad with the children for me to leave them. The trustees examined the children and said that they were surprised at the progress which they had made. My field of work has been very broad here. Every body says that my work has been satisfactory. The people give me the name of being a splendid teacher, but I say not, because I never had any idea of teaching when I was in school. I like engineering better than I do anything else; though I believe I can do most anything. My work has not only been confined to the school house but to the Sunday school, Bible reading to the old people and sick, prayer-meetings, and Debating Society on Saturday nights. Now I am teaching at the above named place; have on roll fifty-six scholars. My school house is a little log hut, very rough indeed, with a slab roof, and no windows, but I get plenty of light through the cracks. Last week I made a black-board and painted it. My board place is four miles from the school house. After walking that distance twice a day, and teaching a night school of five, I feel like resting. I received my map from Miss C— just about five weeks before I closed the school. I find no easy work teaching school, but the work is very hard and troublesome all the time. Don't think that I want an easy place by saying what I have, because I like to work hard. I have not decided on going to the Commencement. I would like to go. This leaves me quite well and enjoying the blessings of God, and hope you are enjoying the same.

Sincerely your friend and scholar, B.

## A GIRL GRADUATE

Thus writes of her arduous but successful work:

—Va. March 23, 1884.

## My dear Miss—

Times without number have I said I must write to you and have never gotten it until now. And now I can only ask your pardon for being so neglectful of my duty toward you. My time is very much taken up many difficulties, I get along. I am in school every day 6 1/2 hours and have a walk of 4 1/2 or 5 miles a day and then teach from 3 1/2 to 4 hours at night. Then Saturday is the only time left to make, mend and clean up in general. I teach Sunday school the first and second Sunday in every month. I enjoy that very much indeed. I have the Berea Lesson Leaves sent me by my cousin in

Philadelphia, Pa. who is Superintendent of a large Sunday school there. They are old, but the gospel is just the same, old or new.

Last term I had six months school and this one seven. The pay is only \$35, and very hard to get; particularly so for me, for I live in a house and I can not go there as I do not know him or the way there either, and have to depend entirely upon sending by some one who chances to be going to court any fourth Monday in a month, as that is court day and he is mostly prepared to pay some then. I have taught six months this month out, and have only gotten \$35. So you see how well I get my pay.

Everything, and person both white and colored, is very different here to what it is at my home in N. C.

A few days ago an old gentleman stopped in my school who was the owner of 160 slaves when Lee surrendered, and we had a long talk on slavery. The first time he met me he knew I did not belong here and wanted to know how my parents came in the North: saying they must have run away from there; I gave him to understand that none had ever called a white man master as far back as I could learn, and as for me I would sooner live on a crust of bread and cold water than call any man master. I prized my freedom next to my religion.

I have had a very severe cold for more than a week from which I have suffered very much. I think it was from getting wet and staying so sometimes all day. I hope you are having good health and a good time in general. I feel no ways weary in leading a Christian life, nor that of my journey. I expect to find peace for my soul.

Yours truly, M.

## Commonwealth of Virginia.

DEPARTMENT OF PUBLIC INSTRUCTION,  
OFFICE NO. 320 N. 9TH ST.,  
Richmond, June 19th, 1884.

The following arrangements have been made for the SUMMER PEARSON INSTITUTE:

The one at WYTHEVILLE will open Tuesday, July 15th, at 9 A. M., and will continue until August 12th inclusive. It will be conducted by Prof. E. V. DE GRAFF, of Washington, D. C., up to August 1st, assisted by Prof. W. B. McILVRA, of Richmond, and then continued till August 12th under Prof. McILVRA. Major W. G. REPASS has charge of the local arrangements, and all communications of inquiry in regard to Board, C., should be addressed to him, at Wytheville.

The HARRISONBURG INSTITUTE, will commence on Tuesday, July 22d, at 9 A. M., and will be conducted by Prof. M. A. NEWELL, of Baltimore, assisted by Prof. J. W. SWARTZ, of Lexington, and a lady expert from Baltimore, for the first two weeks and will then be continued two weeks longer by Prof. SWARTZ and the lady. Rev. A. FUNKHOUSER, of Harrisonburg, has the local arrangements in charge, and will give all information relating thereto.

The FARMVILLE INSTITUTE, for colored teachers, will begin Monday, August 4th, at 8 P. M., and will be conducted by Prof. H. P. MONTGOMERY, of Washington, D. C., assisted by his wife and others, for two weeks, and may then be continued longer, under such arrangements as can be effected. Supt. T. W. CRAWLEY, Prospect Depot P. O., is held responsible for the local arrangements, and has designated Rev. J. W. WHITE and Mr. T. H. BRANCH a committee to assign teachers homes. All inquiries should be addressed to Rev. J. W. WHITE, Farmville, or to Supt. CRAWLEY.

In addition to the Farmville Institute, and for the exclusive benefit of the colored teachers, the last Legislature passed a law establishing a Summer Session of the VIRGINIA NORMAL AND COLLEGIATE INSTITUTE, at Petersburg, under the auspices of the Board of Education, to be conducted by the faculty of said institute, with such special assistance as the Superintendent of Public Instruction may be able to furnish.

In view of the incompleteness of the building of the institutions, the Board of Education deemed it best to authorize the faculty to arrange for a six weeks' course this year, instead of eight, as the law provision justifies.

The session will begin July 15th, and to continue for six weeks. For detailed information, parties interested are referred to the act creating the session, circulars of information sent out by faculty, and to Prof. JAMES STORUM, and Hon. A. W. HARRIS, Petersburg.

In addition to the faculty, which is fully competent for the work, Prof. GEO. E. LITTLE, of Washington, D. C., has been secured

to give two weeks instruction in drawing and its accompaniments during the session. Prof. LITTLE's reputation is a sufficient guarantee that his presence will add greatly to the pleasure as well as profit of the session.

It has required good management to get so much work out of the fund appropriated by Hon. J. L. M. CURRY, the agent of the Peabody Education Fund for this work in Virginia, and but for the liberality of the instructors selected to conduct the Institute it could not have been done. Superintendents and teachers who really appreciate the great need of educating the teachers of our State, cannot be too grateful to Dr. CURRY for his kindness in giving us the means to carry on these Institutes again this year. But for him there would be no Institutes, and we are deeply thankful that, though he has often warned our law-makers, in his wrath he has not left us to the mercy of the Virginia Legislature, but still ministers to our wants, in the hope of a better day. This circular is sent out in order that all may begin to make preparation to attend the Institutes, for in this way only can we forcibly show our appreciation of the favor granted us.

At the Wytheville Institute, Supt. REPASS reports that board can be had for \$14.50 per month at hotels, and for \$10, \$11, and \$12 at private houses.

At Harrisonburg, Supt. FUNKHOUSER reports board at from \$10 to \$12 per month. Supt. CRAWLEY reports that board at Farmville will be \$2.50 per week.

Board at the Summer Session of the Virginia Normal and Collegiate Institute, at Petersburg, is about the same as at Farmville, and we are informed that, by messing at the institution, it need not cost over six dollars per month.

Now let all the *free, progressive* teachers get ready. We are arranging for reduced rates on rail-roads, and as soon as a schedule can be made out cards will be sent Superintendents, to be delivered to all teachers and school officers who desire to attend, as well as to any persons who expect to teach. Applications for these cards must be made to Superintendents.

## PEABODY SCHOLARSHIP.

Chancellor ERAS S. STEARNS informs me that Virginia will be entitled, next session, to ten Scholarships in the State Normal College, at Nashville. This is another blessing offered our people by the Peabody Agent; but he very justly requires that they shall be strictly upward of merit, on competitive examinations.

These examinations will take place at the Wytheville and Harrisonburg Institutes, and will be conducted by Maj. W. G. REPASS and Rev. A. F. FUNKHOUSER, Supts. of Schools, assisted by the conductors of the Institutes. The examination papers will be forwarded to this office, and the Scholarships awarded only to those who attain the required standard. The contest is open to all young men and women, between the ages of 18 and 30, of good moral character and deportment.

Those who desire to enter will address this office for full information.

Very respectfully yours,

R. R. FARR,

Superintendent Public Instruction.

The Normal School Library acknowledges the receipt, during the present school year of valuable public documents from the Departments of State, War and Interior, through the courtesy of Senator Mahone, Representatives Defendorf and Libbey, and Gen. Eaton of the Board of Education.

J. F. B. MARSHALL,

Chr. Library Com.

tion is placed. Neither will the Negro always resort to such expedients as the Exodus, nor will the nation be released from its obligation until it has guaranteed to every citizen a republican form of government, and spent its energies in placing before every child the best educational advantages which the national treasury can provide. This is the nation's only atonement for the curse it has heaped upon the land, and the depth of degradation into which it has thrown a part of its people.

While this atonement is being made, the Negro will patiently toil on, using the liberty of to-day as the stepping stone to that of the great hereafter, whose brightness will be as the noonday sun.

G. W. D.

### Temperance.

#### Extracts from Nineteenth Annual Report of the National Temperance Society.

THE PUBLICATION DEPARTMENT.

"Let us first take a brief survey of the Publication Department. We commenced the year with 1,112 different publications, and have added 7 bound volumes, 23 pamphlets, 109 tracts, lesson-leaves, responsive exercises, and similar productions; making 1,251 now upon our list. The principal work of this Society is educational. This is the bedrock of the reform. The books, tracts, and papers go into every State and Territory in the Union, and into hundreds of thousands of homes where no other temperance influence ever comes, and it is the great moving power which has created this rising public sentiment all over the land for total abstinence and the suppression of the liquor traffic."

THE WORK AMONG THE CHILDREN.

One of the most hopeful and important departments of our work is that for and among the children; about one-third of all our publications are for children and youth; out from this Society are for the education and training of the youth of our land. This is truly a work of prevention, and deserves more than a passing mention. It is the Sunday-school library-books, the *Youth's Temperance Banner*, with a circulation of over one hundred thousand, goes into every State and Territory in the Union, reaching a great host of families who otherwise would be without any temperance teaching. The "Catechism on Alcohol" has circulated over one hundred and thirty thousand; more than one hundred thousand pledge-cards have been printed the last year, and nearly two hundred thousand illuminated temperance cards; one million and a half copies of children's tracts, seventy thousand copies of the "Catechism on Alcohol," a great variety of badges, pledges, song-books, and other publications.

THE WORK AMONG THE FREEDMEN.

This Society has continued its missionary work among the freedmen to the full extent which the funds contributed for this special purpose could command. This work has mainly consisted of sending special missionaries to speak in churches and schools, the circulation of a temperance literature among the people, visiting educational institutes, churches, conferences, and schools, and furnishing a special pamphlet to ministers of colored churches in all parts of the South. This movement for temperance among the colored population is one of the most important, and more full of promise than any other before the American people. It is the great temperance missionary work of the age, in number, stand with outstretched hands for help to break the bondage of intemperance, whose chains, fast being forged by the whiskey oligarchy, are riveted by the saloon and a depraved appetite. This work is all elementary and educational. It is the first time in the history of the large majority of this race that the temperance question has been presented to them as a rule of life and a necessity for action. This work is most interesting and hopeful. Temperance meetings here are larger, more earnest and enthusiastic than among any other people. Entire congregations rise to their feet pledging themselves to temperance and a right life. The number of those who maintain their pledge is fully equal to that of any other race.

A special pamphlet of 226 pages, "The Church and Temperance," written by sixteen different persons, has been printed and sent to five thousand ministers of colored churches, and last year, giving argument, appeal, statistics, and facts upon various phases of the temperance question. This has been one of the most practical and successful of the missionary efforts of the Society. We have received abundant testimonials of the good accomplished through the instrumentality of this pamphlet.

THE NATIONAL GOVERNMENT.

The national aspect of the liquor-traffic assumes each year increasing importance. In Congress greater interest is manifested for and against the liquor-traffic than ever before. In the House of Representatives resolutions have been introduced declaring against any interference by Congress with the liquor-traffic except for the purpose of taxation and revenue, and also proposing that the Constitution of the United States be so amended in the interest of distillers, brewers, and liquor-vendors as to prevent the prohibition of the liquor-traffic by State legislation. On the other hand, bills and joint resolutions have been introduced to provide for a Commission of Inquiry concerning the liquor-traffic; to prohibit the manufacture and sale of intoxicating beverages in the District of Columbia, and proposing a prohibitory amendment to the national Constitution. Deputations from this Society have been granted hearings by committees of both Houses of Congress in favor of the proposed Commission of Inquiry and of constitutional prohibition. The bonded whiskey extension scheme has been overwhelmingly defeated. The liquor issue is thus rapidly becoming a foremost question of national interest.

THE WORK IN THE SOUTH.

In no portion of the country has the temperance sentiment made more rapid progress than in the Southern States. Fully one-half the territory of South Carolina, Georgia, Florida, Alabama, and Tennessee, with large portions of Kentucky, Arkansas, and Mississippi are under prohibition, largely through the operation of local prohibitory laws. The Legislatures of these States, yielding to the request of local communities, have passed laws allowing the people to rule, and in nearly every instance the "dry ticket" has prevailed. While the Legislatures of nearly every Northern State have denied the reasonable request of the people to submit the matter to the voters at the polls as a non-partisan measure, the Southern States have yielded, and hence escaped the agitation for a separate political party, which was made inevitable at the North by the repeated and persistent refusal to allow the people to vote directly upon this question. Hon. James Jackson, Chief Justice of the State of Georgia, in an article in the *North American*, said: "The day of the grog-shop and of that which it produces—the inflated passion at the deadly weapon—is rapidly passing away. The local-option retail law generally pervades the State of Georgia; after county after county prohibits the traffic, reduces the expenses, and diminishes the crime. The prosecuting officers of the State are paid according to the number of criminals tried; and they inform the writer that in those counties where this traffic is prohibited the office of solicitor-general is killed soon, let us hope, the generous Southern sun will shine upon an entire population sober, prosperous, and happy. May that population be swollen into a vast multitude by a tide of emigration which shall enrich every valley and cover every hill-top with good, sober, industrious men."

ARCHIMEDES. (See page 72.)

The illustration represents the old philosopher Archimedes absorbed in mental demonstration of some mathematical problem, unheeding the fact that the Roman soldiers, who have been besieging Syracuse, have mastered the town. As they march in upon him his only thought is for the preservation of the diagrams which are aiding him in his demonstration. Of his personal safety he has no thought. "Noli turbare circulos meos!" (Do not disturb my diagrams) is his warning. But for this the Roman soldier cared naught, and the mathematician, as most authorities agree, was killed on the spot. This was in 212 B. C., when Archimedes was sixty-four years old.

He was born in Syracuse in 287 B. C., and was of Greek extraction. He became profoundly versed in mechanics and hydrostatics, and made many discoveries and inventions in those departments. The story is a familiar one of his discovering a method of detecting the presence of alloy in King's crown. The King suspected that a dishonest artificer had largely alloyed his crown with silver, and Archimedes was consulted in reference to the matter. Pondering the subject, he immersed himself in a full bathtub, when the thought flashed upon him that the water that overflowed must equal the bulk of his body, and hence his mind was once leaped to the conclusion that here he had a method of comparing the bulk of the crown with the bulk of an equally heavy mass of pure gold. Transported with joy he rushed from the bath, naked as he was, crying, "Eureka, eureka!" "I have found it!"

His was one of the master minds of the world, and his genius in his department of thought has never been exceeded, until by Isaac Newton. The artist has well caught the expression of absorbed attention characteristic of the philosopher.—*The Illustrated Christian Weekly*.

### At Home.

#### "Only Mother"

In one of the prairie towns of Northern Iowa, where the Illinois Central Railroad now passes, from Dubuque to Sioux City, lived a young man, whose experience repeats the truth that inherent forces, ready to be developed, are waiting for the emergencies that life may bring.

She was born and "brought up" in New England. With the advantages of a country school, and a few terms in a neighboring city, she became a fair scholar—not at all remarkable, she was married at twenty-one to a young farmer, poor, but intelligent and ambitious. In ten years after the death of their parents they emigrated to Iowa, and invested their money in land that bade fair to increase in value, far away from neighbors. Here they lived, a happy family, for five years, when he died, leaving her, at the age of thirty-five, with four boys, the eldest nearly fourteen, the youngest nine. The blow came suddenly, and at first was overwhelming. Alone, in what seemed almost a wilderness, she had no thought of giving up the farm. It was home. There they must stay and do the best they could. The prospect of a railroad passing near them in time was good; then some of the land might be sold. A little money had been laid by—nothing that she ought to touch for the present. Daniel, the hired man, who had come out with them, and who was a devoted friend and servant, she determined to keep—his judgment was excellent in farm matters. Hitherto the boys had gone regularly to school, a mile or two away; for a settlement in Iowa was never without its schoolhouse. They were bright and quick to learn. Their father had been eager to help and encourage them. Newspapers, magazines, and now and then a good book, had found their way into this household. Though very fond of reading herself, with the care of her house she had drifted along, as so many women do, until the discipline of study, or any special application, had been almost forgotten. It was the ambition of both parents that their sons should be well educated. Now Jerry and Thede, the two oldest, must be kept at home during the summer to work. Daniel and Johnnie could help at night and in the morning. The boys had all been trained to habits of obedience. They were affectionate, and she knew that she could depend upon their love.

One evening, alone in her bed room, she overheard some part of a conversation as the children were sitting together around the open fire-place:

"I don't mind the work," said Theodore. "If I only could be learning, too. Father used to say he wanted me to be a civil engineer."

"If father was here," said eleven-year-old Nate, "you could study evenings and recite to him. I wish mother could help; but, then, I guess mother—"

"Help, boy?" she heard Jerry ask sharply. "before Nate could finish his sentence; and she knew the boy was jealous at once for her. 'Isn't she the best mother in the world?'"

"Yes, she is, and she likes stories, too; but I was just thinking, now that you can't go to school, if she only knew a lot about everything, why, she could tell you."

"Well," replied Jerry, with all the gravity of an old man, "we must take hold and help all we can; it's going to be hard enough for mother. I just hate to give up school and pitch into work. Thede, you shall go next winter, anyway."

"Shan't we be lonesome next winter?" said little Johnnie, who had taken no part in the talk until now; "won't mother be afraid?" I want my father back;—and without a word of warning, he burst into tears.

Dead silence for a few minutes. The outburst was so sudden, she knew they were all weeping. It was Jerry who spoke first: "Don't let mother see us crying. Come, Johnnie, let's take Bone and all go down to the trap; then she heard them pass out of the house."

Desolation fell upon that poor mother for the next hour. Like a knife Nate's remark had passed through her heart. "Father could have helped!" Couldn't she help her boys, for whom she was ready to die? Was she only "mother," who prepared their meals and took care of their clothes? She wanted a part in the very best of their lives. She thought it all over, sitting up far into the night. If she could only create an interest in some study that should bind them all together, and in which she could lead! Was she too old to begin? Never had the desire to become the very centre of interest to them taken such a hold upon her.

A few days after she said, one morning at the breakfast table: "Boys, I've been thinking that we might begin geology this summer, and study it, all of us together. Your father and I meant to do it some time. I've found a text-book; by and by, perhaps, Thede can draw a chart. Jerry will take hold, I know, and Nate and Johnnie can hunt for specimens. We'll have an hour or two every night."

The children's interest awoke in a flash, and that very evening the question discussed was one brought in by Nate. "What is the difference between limestone and granite?" A simple question, but it opened the way for her, and their first meeting proved a success. She had to study each day to be ready and wide awake for her class. They lived in a limestone region. Different forms of coral, boulder, and other fossils were plenty. An old cupboard in the shed was turned into a cabinet. One day, Nate, who had wandered off two or three miles, brought home a piece of rock, whose curious, long finger-shaped cretures were imbedded. Great was the delight of all to find them described as *orthoceras*, and an expedition to the spot was planned for some half-holiday. Questions led back to the origin of the earth. She found the nebular hypothesis, and hardly slept one night trying to comprehend it clearly enough to put it before the others in a simple fashion. Her book was always at hand. By and by they classified each specimen, and the best of their kind were taken to shelves in the sitting room. Her own enthusiasm in study was aroused, and far from a hardship, it now became a delight. Her spirit was contagious. The boys, always fond of "mother," wondered what new life possessed her, but they accepted the change all the same. She found that she could teach, also could inspire her pupils. They heard of a gully, five or six miles away, where crystals had been found. Making a holiday, for which the boys worked like Trojans, they took their lunch in the farm wagon and rode to the spot; and if their search was not altogether successful, it left them the memory of a happy time.

In the meanwhile the farm prospered. She did all the work in the house and all the sewing; going out, too, in the garden, where she raised a few flowers, and helping to gather the berries. Daniel and the boys were bitterly opposed to her helping them. "Mother," said Jerry, "if you won't ever think you must go, I'll do anything to make up. I don't want you to look like those women we see sometimes in the fields." Generally she yielded; her work was enough for one pair of hands. Through it all now ran the thought that her children were men; in up, they would become educated men; in up, they would let them get ahead; not so as to pass her entirely.

Winter came. Now Daniel could see to the work; but the habits of study were not to be broken. "Boys, let us form a history club," was the proposition; "it shan't interfere with your lessons at school." They took the history of the United States, and each of the five younger children were studying. Beginning with the New England settlements, and being six in number, they called each other, for the time, after the six states, persuading old Daniel to take his native Rhode Island. "The woman beats all creation," he was heard to exclaim, "the way she works all day and goes on at night over her books. The mother used to say she hardly knew if she were any older than her boys when they were trying to trip each other with questions. The teacher of the district school came over one Saturday afternoon. 'I never had such pupils,' said he, 'as your sons in history class.' The woman beats all creation." The story of their evening's work. The deep snow often shut them in, but the light shone clearly and bright from that sitting-room window, and a merry group was gathered around the table. Every two weeks an evening was given to some journey. It was laid out in advance, and faithfully studied. Once Theodore remembers, a shout of laughter was raised when nine o'clock came, by Jerry's exclamation: "Oh mother don't go home now; we're having such a good time!" Five years they lived in this way, and almost entirely by themselves. They studied botany. She knew the name of every tree and shrub for miles around. The little boys made a collection of birds' eggs, and they began to watch closely the habits of the birds. It was a pure simple life. It would have been too wild and lonely but for the charm of this devoted mother, and of loneliness were all hidden from them, but of loneliness were all hidden from them, but she learned in an unusual degree to throw every energy into the day's work of study, and create, as it were, a fresh enthusiasm for the present hour. Her loving sacrifice was rewarded. Each child made her his peculiar confidante. She became the inspiration of his life.

English history opened a wide field to this family. One afternoon she brought in Shakespeare to prove some historical question. It was a rainy day, and the boys were all at home. Jerry began to read; and as he read, it proved a treasure that brought them into a new world of delight. Sometimes they took different characters for representation, and the evening ended in a frolic, for good-natured mirth was never repressed.

First of all a preparation had been made for the Sabbath. There was a church in this town, but at a distance of several miles,

and during many days the roads were not passable. She had leaned upon infinite strength, gathering wisdom through all the experiences. The secret of many a promise had been revealed to her understanding, and, above everything, she desired that the Scriptures should become precious to her children. She took up Bible characters, bringing to bear the same vivid interest, the same power of making them realities.

The lessons were varied by little sketches or reports of one Sunday to be read aloud the next. Of this Nate took hold with a special zest. None of this family could sing. She thought of a substitute. They learned the Psalms, much of Isaiah, and many hymns, repeating them in concert, learning to count upon this hour around the fire as others do upon their music. How many of these times came to her in after life—a vision of the bright faces of her boys, as they clustered affectionately around her.

Time rolled by. The railroad passed through. A village sprang up and the land was ready to sell. She could keep enough for her own use, and the boys could prepare for college. Thede and Nate went away to school. The old home was kept bright and pleasant, friends, new settlers, came in, and now there was visiting and social life.

Jerry stayed on the farm; Thede became an engineer; Nate, a minister; Johnnie went into business. Thede used to say: "mother, as I travel about, all the stores and the flowers make me think of you. I catch sight of some rocks, and stop to laugh over those blessed times." Nate said: "mother, when I am reading a psalm in the pulpit, there always comes to me a picture of those old evenings with you in the rocking-chair, by the firelight, and I hear all your voices again." When Jerry, who remained faithful always, had listened to the brothers, he put his arms about her, saying tenderly: "There will never be anybody like mother to me."

She died at the age of sixty-five, very suddenly. Only a few hours before, she had exclaimed, as her children all came home together: "There never were such boys as mine. You have paid me a thousand fold. God grant you all happy homes." They bore her coffin to the grave themselves. They would not let any other person touch it. In the evening they gathered around the old hearthstone in the sitting room and drew their chairs together. No one spoke until Nate said: "Boys, let us pray," and then all kneeling around her vacant chair, prayed that the mantle of their mother might fall upon them. They could ask nothing beyond that.—*Penn. School Journal.*

#### Sulphur for Stock.

An English correspondent puts about two ounces of sulphurous acid in a quart bottle of water, and gives a tablespoonful of this dilution three times per day to cattle suffering with foot and mouth disease. In addition to this, he burns a little sulphur three times a day in the stable in which the animal is kept. He moistens the feet also with the above solution with a sponge. One must be careful not to use sulphuric for sulphurous acid, as the former would be fatal, instead of curative. Burning sulphur in the stable of healthy cattle once or twice a week, he thinks, would ward off disease.

I have long been in the habit of giving a heaping tablespoonful of sulphur for this purpose to my horses and cows once a week, in a mess of meal; also to large swine; to full-grown sheep about half this quantity; to lambs and pigs less, grading it according to size and age. For poultry, once a week I mix sulphur with their pudding, at the rate of a heaping tablespoonful of the former to a gallon of the latter. This keeps them free from lice, unless they are much exposed to these parasites on their roosts or otherwise. Sulphur in moderate doses, and not given too often, is healthful, and a guard against various diseases and vermin.

A simple method of burning it is on a slip of cardboard, or extra stout paper, a foot long and two or three inches wide. Scatter sulphur on one end of this, light the paper and then move it about the cattle in the stable. Be very careful to set nothing on fire when doing this. In order to guard from fire, if litter is in the stable, it should be removed previous to lighting the sulphured paper. A safer way, however, would be to put some paper in a hollow dish or pan with a handle to it to take hold of and move about.—*T. B., in N. Y. Tribune.*

#### Horsford's Acid Phosphate.

Prof. Adolf Ott, New York, says of the Acid Phosphate: "I have been enabled to devote myself to hard mental labor, from shortly after breakfast till a late hour in the evening without experiencing the slightest relaxation, and I would not now at any rate dispense with it."

Harrison Phoebeus, Proprietor.

Old Point Comfort, Virginia.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth.

The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equaled elsewhere as a summer resort or cold weather sanitarium. Over \$50,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material factors being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 44° in winter, and 52° in spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tone of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

For further information address by mail or telegraph,

H. PHOEBUS, Prop.

#### National School Supply Bureau.

BELLEVILLE, Wis., July 31, 1883.

National School Supply Bureau: Last April, being in charge of a large public school, and desiring a position in some good academy or college, I placed my name with your Bureau. On the first part of the present month I received notice from you of a vacancy in such a place as I desired. Putting myself in communication with the party concerned I received the appointment. I am satisfied with the management of the Bureau and feel sure that it fills a useful and necessary place in our school economy. You are at liberty to use my name if you wish.

Respectfully,

EDWARD O. FISKE.

Headmaster Markham Acad., Milwaukee, Wis.

For application-form and circular, address:

Nat'l School Supply Bureau, Chicago, Ill.

N. B. We want all kinds of Teachers for Schools and Families. Good pay to Agents and Private Correspondents.

DEMOBEST'S MONTHLY. The cheapest and best. Six elegant pictures—three in oil and three fine steel engravings—will be sent with a specimen copy of DEMOBEST'S MONTHLY MAGAZINE for 20 cents, post-free, during the months of March and April, or the six pictures will be sent with a year's subscription at \$2. Do not fail to see the splendid January and February numbers of this model magazine. Address W. JENNINGS DEMOBEST, East 9th St., New York.

JOB WORK, of every description, either Printing or Binding, neatly and cheaply executed at the Normal School Printing Office. Estimates made. Samples sent to any address.

THE HATCHET is the only illustrated humor paper published at the Capital. It makes a feature of showing up the really absurd. It contains a large cartoon each week on public affairs and is filled with illustrated comic articles. It is the largest, handsomest, best, and cheapest funny paper in the country. Terms, \$2.50 a year; five cents a copy. To five or more names sent by one party, \$2 each a year. Samples copies sent to any address. Agents wanted in every town. Big commissions.

THE HATCHET PUB. CO., WASHINGTON, D. C.

Horsford's Acid Phosphate.

Dr. R. M. Alexander, Fannettsburgh, Pa., says: "I think Horsford's Acid Phosphate is not equaled in any other preparation of phosphates."

#### THE DEPOT.

Having opened a Store in connection with my business, I am on hand at all times to furnish

#### PURE PAINTS AND OILS

PUTTY, GLASS, VARNISHES, ETC.

A good selection of

#### BRUSHES

of all kinds,

Painters' Supplies & Artists' Materials.

AGENT FOR

JOHNS' ASBESTOS MIXED PAINTS SHEATHING PAPER, ROOFING PAPER &c.

Also for JOHNSON'S DRY KALSOMINE and FRESCO COLORS.

A fine assortment of

#### WALL PAPER & SHADES

of the latest patterns.

Paints Mixed and Glass cut free of charge.

All orders promptly attended to. Thanking the Public for their generous patronage in the past, I shall still endeavor by strict attention to business, and low prices, to merit a continuance of the same. Call on

#### J. W. BOYNTON

PRACTICAL PAINTER.

At the Depot, opposite F. A. Schmel's Store, HAMPTON, VA.

Close connections with Old Point Comfort and Newport News.

#### A PRIZE

Send six cents for postage, and receive free, a copy of a book of goods which will help you to more money right away than anything else in this world. All of other ads. send from first hour. The broad road to fortune opens before the workers, absolutely sure. At Once address, Tarr & Co., Augusta, Maine 12-34.

WATCHING FOR THE BOATS.

[ From Christian Weekly.

## Watching for the Boats.

BY MARGARET E. SANDOZ.

It's time that the fishers were coming back.  
Coming laden with shining spoils.  
The oars are beating the homeward track.  
And the rowers are weary with all night's toil.  
The rise of dawn is peeping and red.  
Unfolding has made the round earth appear.  
The boats are bringing the children's cry.  
And we must be waiting our turn to greet.

So, father, gaze through the trusty glass.  
And scan the waves of the foaming bay.  
You will catch them soon as the Point they pass.  
Your eye is keen, though your hair is gray.  
And, wife, with him in your arms around,  
Keep up your heart, he will soon be here.  
The sea's full harvest he went to reap.  
For the sake of your babe you need not fear.

Fair lady, with blush on your nut-brown cheek.  
Your sailor is hastening across the waves.  
For lack of a word that you would not speak  
His heart is sad and his brow is gray.  
Yet when he is gone, you will have to-day.  
Let a welcome beam on your parted lips.  
For there is a perilous stormy way.  
Who needs must go to the sea in ships.

There was One who stood on a grassy shore  
In the morning's beautiful opening glow.  
And watched the boats with their quivering sails,  
And said to a fisherman old and low,  
"Lovers thou me?" And still he is gray.  
To the men who toil on the salt sea,  
"You, sons of all, should be full of praise,  
If over the billows you go in ships."

The night was chill, and the toll was hard.  
The boats are bringing the children's cry.  
The Lord is ever the sailor's guard.  
And under his smile our tables spread.  
So, baby, wake, for thy father's near.  
And, gentle, when the Point they round.  
For sweet in the front view a waiting ear  
Is the sound of the keel as it scrapes the ground.

## Notes of Travel.

BY ORRA LANGHORNE.

On the 22d of May, I set out on a little trip to the valley of Shenandoah. The cold late spring had been very trying to me, and after wrestling for weeks with repeated attacks of neuralgia, I was beginning to feel as if I belonged to the tribe of Canaanites, "who are but a feeble folk," and like one of the mythical heroes of old, whose name has escaped me. I longed to gather new strength by the touch of my mother earth, and was sure that "Times of Refreshment" would meet me among the friends of my childhood.

The modern treatment of nervous diseases discards the use of pills and potions, the application of blisters and ointments, the debilitating effects of blood-letting, and the soul-harrowing emetic, and bids the sufferer seek the calm he needs in complete change of atmosphere, diet and associations amidst "fresh fields and pastures new."

Following such a prescription, at 4:30 P. M. on a bright pleasant day in May, I took my ticket at the office of the Richmond and Alleghany Railroad, to try the new route to the Valley by way of Lexington, where connection is made with the Baltimore and Ohio. The car I entered was not more than half full, it being yet too early for summer travel to the mountains, and most of the occupants seemed to be of the class usually to be found in our rural districts, plain looking people, who had never known want of the necessities of life, but were to a great extent ignorant of its luxuries and pleasures. There were several motherly looking old dames with weather-beaten countenances and most unbecoming headgear, accompanied by young daughters, fresh and bright enough to atone for their ill-assorted millinery and overtimed dresses, laboriously made in the vain effort to adapt the New York fashion plates to the back woods of Virginia. These women-kind were all laden with boxes and bundles, having come to the city to purchase their spring attire, and were all evidently enjoying the recently completed railroad which had at last given them easy access to the busy world from which they had been so long removed.

I noticed one old lady whose bent form and deeply lined countenance told her to be a woman of sorrows and acquainted with grief, holding out a long skinny finger, bearing a ring of ancient workmanship, to a neighbor she had recognized on the train, saying in a tremulous tone, "It was Mary's, and she put it in my hand when she was dying. I broke it soon afterwards, and I was afraid to part with it to have it mended, but I always intended to have it done, and when the railroad was finished and I could get to town myself and have it fixed, I came the first chance I got." To judge by the silvery hair and wrinkled face of the speaker, how many long years might have passed since Mary had sunk in endless sleep, and the simple-hearted mourner had waited for the scream of the engine to wake the echoes among the mountains and enable her to come to town and have her ring mended.

There were several tobacco planters from the hills and valleys of Amherst and Rockbridge, who had abandoned the mules and oxen, which had been their life-long companions, and taken advantage of the iron horse to reach the nearest market.

In the words of the old slave song, familiar to all Virginians, they had "Bcen 'long

down to Lynchburg town," to sell tobacco down, dar. Planters and commission merchants are natural enemies, and one red-nosed farmer who has evidently investigated the proceeds of his crop so entirely in dry-goods as his female fellow travelers had done, held forth long and loud on the iniquitous practices of the Lynchburg dealers and warehousemen, wincing up with the cheerful wail that "the owls and the bats would yet take possession of their habitations, and the devil would get the last man of the breed." The Richmond and Alleghany railroad runs alongside of James river and up its rugged valley overshadowed by the broken cliffs of the Blue Ridge and following closely the course of the old canal, being built sometimes in its bed, at other times the tow-path where the patient mules crowded along with the lumbering boat, which bore messages of good cheer from the city by the sea to the rocky heights of the distant mountains. The James River and Kanawha canal was designed by George Washington, and like some other institutions of G. W.'s day, tolerated if not encouraged by him, has proved all unit for the progress of our age, and given place to new methods. That portion of the canal, running from Lynchburg to Lexington was opened for travel about 1850 and was at that time of great value to the people of the district, bringing wood, grain, tobacco, cattle and other products of rural regions to the low-land cities, and carrying on the return trip all the manufactured goods needed by the up country folks.

The canal was very often out of order; in winter every severe freeze would close it against travel, the heavy rains of a spring and fall would put the usually slumberous James upon the rampage, and then the tow-path would be washed away, the locks would break, the company would put in for repairs and the good holders, thoroughly realized that no more dividends would be forthcoming for many a long day. Even when all things worked together for good, which they did on an average one day in three, the canal was a slow uncertain method of transportation between the sections. And yet with all the lights before them, in an age when the world rushes on with break-neck speed, and all the great faces of nature are called into requisition to facilitate progress, there is a strong party in opposition when it was first proposed to substitute a railroad for the old canal, which perhaps the best method of the times that produced it, had outlived its usefulness, and like some of its Bourbon co-temporaries was compelled to give way to modern ideas. Every possible obstacle was put in the way of the railroad project, and the legislature wrestled in an unequal eloquence for several terms with the problem, but at last Mr. Parsons, the leading spirit of the new enterprise, proved beyond a peradventure that the canal was the most expensive luxury that Virginia could possess, conservatism was forced to yield, progress triumphed, and the lovely, long silent hills and dales of the upper James were roused to life and energy. Mr. Parsons has bought the famous Natural Bridge property, and built upon adjacent grounds a charming summer resort, with all the latest attractions and conveniences to which the world is invited and is coming. Various valuable minerals, notably iron and slate, are attracting attention from capitalists, and the universal Yankee is found busy in the cliffs and hollows developing treasures which have waited ages in the bosom of the earth for the wand of the magician to call them to light. At one station great stacks of roofing slate were waiting transportation, for the quarry near the Natural Bridge now owned and worked by Capt. Wilson, well known in this district from having been first known and then Postmaster at Lynchburg in the troubled period of reconstruction. Capt. Wilson is a wounded Federal officer, who has filled every position he has occupied in a manner to command the respect of all with whom he came in contact.

When political change and the ingratitude of Republicans removed him from office, he turned his attention to the slate quarry he had purchased some years before, and now finds ready sale for all he can send to market, with peace, which political life can neither give or take away.

For fear of wearing out the patience of my readers I will postpone further results of what Mr. Selby's San called "bobberation" along James river, for the next number of the *Southern Workman*.

## Closing Exercises at Tuskegee Normal School.

Leaving Hampton on the afternoon of May 26th, on the 3:30 P. M. train, we found ourselves on the morning of the third day at 8 o'clock in the town of Tuskegee on the premises of the Normal School, after a walk of five miles over a sandy road; (our dispatch for a team, to meet us, not being delivered until an hour after our arrival at the school.)

On the way, we passed through Richmond, Danville, Greensboro, Charlotte and Atlanta. Prof. R. T. Greener joined us at Danville, enroute for Tuskegee. Having about six hours at our disposal in Richmond, we were fortunate in being able to witness the closing exercises of the Richmond Institute. The salutatorian of the class being sick, his paper was read by another member of the school. The other two of the class were present and in a very creditable manner delivered their respective essays. The student who read the salutatory deserves special mention for his reading, having had only a few hours to look over the manuscript. Space will not allow us to go into a detailed account of these exercises, so we must hasten to our next point, Tuskegee, since it is of this school we are to write.

Having rid ourselves of the dust of 36 hours travel and refreshed the inner man, we are prepared to look around the school. At the sound of the gong, the young men fell in line for morning inspection, reminding us very much of the inspection at Hampton, before the military department was organized. To the music of two drums they marched into the building (Porter Hall) and got immediately to the Chapel for roll call and devotional exercises. The hearty manner in which they were very inspiring; again we are reminded of Hampton's earlier days.

Passing from one recitation room to another, we cannot but admire the good work being done, the earnestness of the teachers, and the thorough appreciation of the advantages of the school on the part of the scholars. Leaving Porter Hall, we go to the Slater carpenter shop—the money for this shop was gotten from the Slater Fund. Here are being made the doors and other wood work for the proposed Alabama Hall. Mr. Thwaitt, a colored master carpenter, is doing this work, assisted by the same students. Porter Hall was built by the same mechanic. In one end of the carpenter shop is located the Printing Office, where job work is done.

We next go to the brick kiln, where bricks are being made for Alabama Hall, by students' labor. A brick machine is required for making bricks, the clay is so stiff it can be molded by hand as is customary. It requires more patience and energy to make a thousand bricks here than in most parts of the country, nevertheless we find the young men, with two mules to drive the machine, working manfully. The barn yard and buildings, now almost in miniature, show signs of a very hopeful nature for the future possibilities. The farm and vegetable garden, working manfully, show the skill of the manager of the department.

Towards the close of the day, the students, at the Principal's request, sang quite a number of the old time melodies, greatly to our delight. After a pleasant night's rest, Thursday, Tuskegee's Anniversary day, opens bright and cheerful, a nice breeze is blowing, which goes a long way towards counteracting the heat of a late May sun, which is quite intense when there is a calm.

Early in the day, teams begin to arrive bringing friends and patrons of the school. The vehicles were varied in construction, and the animals were not all of one kind. But the happy hearts and faces of the owners of these teams, and the joyous smiles and exclamations of welcome on the part of the students soon take our attention from the curious conveyances.

The school band furnished music for the morning inspection. The opening exercises held at 8:30, at nine o'clock the recitations in U. S. History, Ancient History, Arithmetic, Algebra, Plane Geometry, Grammar, Geography, Reading and Natural Philosophy, began and occupied all the forenoon. At noon the visitors were invited to witness the various industrial departments in operation. I will not describe them here, having already done so above—suffice to say that much interest was manifested by the visitors in these as in the academic department. Many complimentary remarks were made by those who had come from a distance, on the thoroughness of the work.

Four large mulberry trees furnished abundant shade under which the company gathered and partook of a bountiful supply of sandwiches, coffee, cake and lemonade.

The following is the programme of the afternoon exercises:

## PROGRAMME.

MUSIC—NORMAL SCHOOL BAND.

ESSAY—"Effect of Good Association."

RECITATION—"Over the Hill to the Poor House,"

PRINCIPAL L. A. ADAMS, Tuskegee, Ala.

RECITATION—"Over the Hill from the Poor House,"

MUSIC.

ORATION—"After H. Stephens,"

J. W. E. HILLIS, Cotton Valley, Ala.

MUSIC.

"Exercise in Teaching,"

LUCAS D. FLOYD, Opelika, Ala.

Annual Address,

PROF. R. T. GREENER, Washington, D. C.

MUSIC.

Prof. Greener's address was replete with sound practical advice and it would afford us much pleasure to lay it before the readers of the *Workman*, but space will not permit. Among the guests were Dr. F. Dorsette and wife, Prof. R. D. Wood, and the congressional minister, Rev. R. C. Bedford; all of Montgomery, Alabama. Also several prominent gentlemen of the town of Tuskegee.

Mr. B. T. Washington, the Principal, and his assistants Misses Adella Aunt, Rosetta Mason, Ada M. Wallace, Messrs. Warren Logan, M. J. Maddox, Wm. Jenkins, W. B. Ross, and H. C. Ferguson are certainly doing a noble work in a splendid manner and too much praise cannot be given for what has been accomplished, and having seen the workings of the Institution, we are led to believe that Tuskegee is to play no small part in the solution of the educational problem of the Negro in the South.

R. H. H.

## What will become of them?

Fort Berthold, May, 19 1884.

A recent issue of one of our illustrated papers pictured the return of a young Indian woman to her wild relatives. One cannot but tremble, not at the physical, but the moral danger of the girl, friendless and alone as she seems to be in the picture, and ask how she is to be kept from degradation. There are three considerations not set forth in the picture, which give ground for belief that she will stand. The first of these is the moral chance in the girl herself. If she has simply exchanged the shawl she formerly put over her head for a dress and learned the use of a fork instead of the fingers and a butcher knife, she will soon fall back again into the old ways with her people; but if conscience has been quickened, and love of good and right things and persons awakened, then we may have hope. What if she does take to shawl and moccasins again, as her poverty, or social surroundings may compel her to do, if in affection, knowledge and purpose she is a different person? It is providential that in our Indian schools at the East as a whole, the moral and positive religious training has been in good hands. The pupils have not been simply white-washed, but instructed in Christian thoughts and principles, and, in many cases, have become such as God will keep. The force of Christian principle in the heart is, we know, doubted, but not by those who have personal experience of it. Such believe in it in others, and base their hopes on it, and find that their hopes are not ill-founded. They have worked, worshipped, ate and traveled, and returned Christian pupils, and believe in them, notwithstanding many failures.

Then there has been a change, in the Indian people. They are becoming rapidly more and more willing to accept the new condition of life provisionally made necessary to their future existence. One chief who often talks with me, speaks of his daughters being ashamed of his uncivilized Indian manners when they return to his home; and, though an old man, will sit like a child at their feet to be instructed; and for some time been struggling with the question of an entire abandonment of the heathen worship and ways of his life time. He is one of many, and it is because so many among the Indian tribes are struggling up towards the light, and at some agencies so many are already in it, that we expect the returned pupils to stand against the still abiding evil.

But our main hope is in the fact that at most of the Indian agencies, missionary work is going on. In a number of cases this work has now the aid of returned pupils from Christian boarding schools, and as new pupils return they will be enlisted in the war against evil. They will find two parties, and will be of necessity impelled to take the right side. Christian missionary men and women will say to them, help us, find sympathy and strength in us, and to many Christian workers from among their own people will say, you have had advantages above us, now help us to overcome the heathen party. We listened to two Christian Indians the other evening, who urged upon the scholars in an Indian school, the necessity of fitting themselves well to help their people; were before them living embodiment of their own speech. The great hope for the Indian as for the white man, for the life that now is, as well as for that to come, is the teaching and the living of the word of Christ.

C. L. HALL.

# SOUTHERN WORKMAN,

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October four months.)

Printed on the Normal School Steam Press by students trained in the office.

S. C. ARMSTRONG,  
H. W. LUDLOW, } Editors.  
M. F. ARMSTRONG, }

REV. H. B. FRISSELL, *Chaplain.* } *Regular*  
MR. W. N. ARMSTRONG, } *Contributors.*  
MRS. ORRA LANGHORNE, }

F. N. GILMAN, *Business Manager.*

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application. To secure safety, it is important that money should be sent by check, and office orders registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent. A limited number of advertisements inserted at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1-2 column.	2 75	7 50	13 50	23 00
1-3 "	3 00	13 50	23 00	40 00
1-4 "	0 00	25 00	40 00	70 00

Special notices 10 cents per line.

The Workman office will be glad to give estimate for printing periodicals, pamphlets or books of all sorts. Special attention given to Society and Association Reports. Prices always reasonable and made with a due regard to material and workmanship required. Proofs furnished without extra charge. Expressage paid on finished work. Address all communications or orders,

Normal School Press, Hampton, Va.

Subscribers are reminded that the "Workman" is reduced to eight pages during the next four months, resuming, in November, the twelve page form.

## Hard Times.

Since trade became dull, and banks began to fail, and bankers defaulted, and merchants went to the wall, and railroad securities have shrunk up more than fifteen hundred million of dollars in three years, the question is constantly asked, what is the trouble? What is the cause? There is sufficient cause, though we may not know it, or be able to explain it. Trade is governed by natural laws, as all things are governed. We do not study these laws sufficiently, and cannot reach any very just conclusion on the subject. We know a few facts, and reason from them in an indefinite sort of way. Communities, like individuals, get their wisdom from bitter experience, and not from listening to men who claim to be, and are periphs, very wise. This great prosperous nation, with the resources of a boundless continent behind it, is as subject to financial panics as Japan is to earthquakes. Notwithstanding the richness of the soil, and the vast mineral resources of the country, and the most unlimited personal freedom of action, and in spite of the boasted intelligence of its people, every few years these financial panics come. Fortunes disappear, merchants fail, trust institutions crumble, workmen are thrown out of employment, and suffering prevails. It does not seem necessary that this state of things should occur so often. We must infer that something is wrong. No doubt that many reasons may be given to account for these troubles. The tariff system, the paper currency, may have something to do with it. And it is very possible that the energetic characters of the people may have something to do with it, and, perhaps, more than all other causes, we are constantly "over-doing." It must be admitted that the average American has a settled conviction that he ought to be rich, and will

be rich in a dozen years. In Europe, that sentiment does not prevail. A man's traditions there, are that his father and grandfather made a living by close economy and great industry, and at the end of a long business career, left little or nothing to his heirs. To these people, the rich, the millionaires, are a class far above them and beyond imitation. The average American has no such sentiments. He has seen too many, in fact, nearly all of the very rich rise out of the ranks, and he sees no reason why he should not rise also. By this he arranges his standard. The owner of a small factory makes a little money. His goods are in demand. He at once increases his factory and enlarges his trade. If the demand again increases, he increases his business on the theory that he will soon put himself among the millionaires. What this single manufacturer is doing, every other manufacturer in the country is also doing. No one feels satisfied. Production is pushed in every way. The limit of demand is soon reached. What is made cannot be consumed. Markets become glutted, and are closed, and the manufacturing interests are in distress. There are now a hundred more iron furnaces than the country needs. The shoe factories of New England can supply the country with shoes by working on half time. The nail factories produce so enormously that their markets are overstocked. So it is in nearly every business. No one is contented. We sneer at the phlegmatic European, especially the thrifty Frenchman, who does a "small business." We tell them that they lack enterprise, and when the 4th of July comes around, we talk of our greatness and our marvelous energy, without reflecting on the penalty we pay for it. Are we the gainers by this great, almost mad enterprise? "How fast will your horse go?" asked a buyer of an Irishman, who had a horse for sale. "A mile in three minutes," was the reply. "I want one that will go in two and a half minutes," said the purchaser. "Ye must be in an awful hurry if ye cannot wait half a minute," said Paddy. The business men wish to get their commercial speed down to the best time on record, and it has resulted in this: that ninety-five out of a hundred business men become bankrupts, and these financial cyclones strew the shores of mercantile life with wrecks. The merchant prince of to-day becomes a book-keeper to-morrow. The railway director becomes an insurance agent. The promising young men take to the rum shops. Those who survive financial disaster are weary and worn out. Gradually the effect of overproduction disappears. Trade slowly revives. But the moment the demand begins each producer rouses himself to his greatest efforts, thinks, contrives, and works to again increase his trade, never considering that every other man is doing the same thing. So that in energy and enterprise are the seeds of trade panics. There was a time, when the manufacturers of the world could not supply the demand. But steam power, doing the work of millions of men, and cunning inventions have more than met the demand. It will be many years before the laws of trade are well understood, and until then, and until business men know and believe what contentment is, the commerce of the country and the world will be subject to severe financial disaster.

W. N. A.

Mr. Welsh's work is already so familiar to our readers that it hardly requires either introduction or comment. But the letter from him printed on another page of this issue and followed by extracts from a letter written by Capt. Brown, lately commandant at Hampton, furnishes a text which carries its own evidence with it, and the two letters taken in connection give such insight into the present condition of Indian affairs and throw such light on future

probabilities, as to justify certain conclusions in regard to both national and individual action towards these people, who still remain at the nation's mercy. Mr. Welsh speaks of the promising, healthy children, and of the appreciation which a majority of the Indians show of the value to them of practical education. Capt. Brown says: "They want their children to learn from books and to work," and speaks at length of the well doing of the returned students from the East. Again, they agree absolutely as to the necessity of controlling the conditions at the agencies, and our own School chaplain, Rev. Mr. Frissell, corroborates in detail all their statements. The points, in brief, of these various experiences are these: Agency Schools, Carlisle, Hampton and other similar undertakings have established the fact that Indians desire, appreciate and are capable of receiving such education as will fit them to become useful citizens and helpers of their own people. The success in training individuals is marked, the regresses are few, the struggle, in general, is brave and commands respect, but all this when granted, only brings us face to face with the at present, almost hopeless difficulties of the conditions which meet our Indian boys and girls who too often are expected to stand absolutely alone in the midst of temptations which even those who have studied the question most closely can hardly appreciate. The question is no longer "Can the Indian be educated?" nor even "How can the Indian be educated?" but, rather "How can we enable the Indian to utilize his education?" We look to the Government for the first solution of this problem, but as a matter of fact the Government will act only as pressure is brought to bear on it by public opinion, and public opinion now as always must be created by individual conviction. How the field is to be prepared for the young men and women who, after careful training in the East, are sent back as the best missionaries to their people, is a matter not easily decided. Good men at the agencies are essential; the witness borne to this by the gentlemen from whom we have quoted is so strong that we feel that the time has not yet come for publishing it in detail, but even good men cannot stand alone, and without good backing can accomplish little. Friends of the Indian everywhere should give careful thought to what is meant when a man who speaks from so wide an experience as does Capt. Brown, says: "It is of little use to attempt to do anything with the personnel at the agencies unless you can find a good man to put in, and have the power to put him in, and keep him in." The Indian can be educated, the Indian is educated; it remains now as we have said, to make the result of some practical value to the nation.

We have received a copy of a letter written by Capt. Henry Romeyn, formerly Commandant at Hampton, in response to a request from Gen. Crosby of Montana Terr. that he should give, so far as possible, a resume of his views concerning a future Indian policy. We regret that we cannot give the letter entire, but in condensing it as we have been obliged to do, we endeavor to retain all the most important statements. Capt. Romeyn's experience has been so wide and his observations are so unprejudiced that his opinions should be received as authoritative and given the circulation that they deserve. He dates from Fort Keogh, April 7th, and says: "It is assumed and must be allowed that until the Indians can be fitted to care for themselves in a manner not in conflict with the best interest of their white neighbors as well as their own, they must be controlled and carefully looked after by those responsible for the best interests of the country. The time has arrived when they can no longer roam at will, as they have hitherto done, over vast tracts of country, which they use only as hunting grounds, and not as producing any other kind of food supply. But their ranges must be circumscribed by law, or it will be done without it, though not without bloodshed, by those who need room for the plow, the flock or the herd. Until they are 'located' but little can be done to improve their status. In order to secure this result he recommends. 1. That each head of a family should receive a tract of land in fee simple, situated always in the neighborhood in which he has lived, in order to avoid the dangers and complications of a removal. The area of the tract should be in accordance with the different habits of the different tribes, the grain producer needing less than the grazer etc. while the tract should be made inalienable for twenty one years, except to heirs in case of death. 2. The lands remaining after the reservations have been thus apportioned should be bought by the Government on the theory that they still rightfully belong to the Indians, and the money thus obtained should be used in the purchase of tools of all kinds, cattle, horses, etc. which would be at once needed by the Indians; but would otherwise be in most cases, beyond their reach. As far as possible the lands should be sold to bona fide settlers only, and an effort made in this way to surround the Indian beginner with helpful influences. 3. Break up tribal relations. Have one and the same law for the Indian and his white neighbors. 4. Aid must of course be given at first, until they have time to earn the necessities of life. At the end of two years however, it should be made conditional. 5. The system of agencies should be materially changed. Only good business men should be employed, and the money to this end fixed salaries should be paid and speculation and fraud punished. 6. Education should be compulsory between the ages of six and sixteen, and should combine as far as practicable, that of the hand with that of the mind, and if any preference is given to either it should be the former. The Indian can live among his white brothers and not know himself degraded; he cannot live among them without labor; and an early training in that direction will be certain to produce better results than if casually had at a later period of life. Establish and maintain the common school, and from among its most promising pupils select a certain per cent. annually to be sent to schools like Hampton and Carlisle, where they can be brought under stricter discipline and in contact with better surroundings than at their homes, and be taught the trades which are necessities in any civilized community. Then after four or five years of such training, if the young man or young woman thinks that he or she can hold his or her own in a white community, do not force a return to the old home, but allow them to do as young whites—go into the world and make the most they can of it. Enough will return to form a strong nucleus for good, and all will be better satisfied. 7. I do not believe that there will be any increase among them. Everything goes to show that they will be absorbed by the Anglo-Saxon race. 8. They should have the ballot when they have become fit for it, not before. Make this the test and you add another incentive for his improvement. Not much perhaps can be done with the adult Indian but the children can be made improvements on their parents. For sometime, probably until this generation and its memories have passed away, it will not be safe to withdraw military control. Enlistment of some of the more turbulent young men as soldiers might be productive of good. But suppose we drop all useless verbiage and simply say, "Treat the Indian as a man"—a man degraded and brutish in many of his instincts, but not utterly devoid of many qualities; a man with human rights, a being with a soul, a human integer which we have no right to eliminate. Thus far most of his history has been written in blood, and can be bound into fearful books of record with the fragments of our broken treaties. Out of the nearly 650 treaties made with them since the formation of our government, we have not kept ten per cent, and yet we complain of Indian treachery and want of good faith. With shameful greed and avarice, such as, great as we think ourselves, we would not care to indulge in toward another nation of our own race, we have set him examples of robbery, with and without form of law, the record of which should tinge every national record with shame. Let us resolve that the future shall not be as the past, and when we have done what we can for the race, if it shall be found that Providence has decreed that it shall disappear from the land and its history be closed, let it be in peace and quietness, and let us wisely shed blood and slaughter, and let its white suppliants appear at the final obsequies as mourners and not as executioners.

GEN. CROOK is one among a number of army officers, who, having thought out the Indian question, are practically testing their theories, so far as they can do so in the face of the political complications which hinder, more or less, all work for Indians. In his recent address to the West Point graduates, he says:

"Make them no promises which you can not fulfill. Make no statements you cannot verify. When difficulties arise, as they occasionally will, endeavor to be so well informed of all the circumstances of the case that your action may be powerful and convincing because just and impartial. Let the Indian see that you administer one law for both the white-skinned and the red-skinned, that you do this without regard for praise or censure; and you will gain his confidence, because you have shown yourself worthy of it. The rest will be easy. Don't expect too much at once, and don't lose courage or patience on account of backsliding. He should be encouraged to work and to save. The man who works and saves is fast leaving savagery behind him. You will find that the Indian has no rights which our people are compelled to respect. The benefit of laws which protect the white man are not extended to the Indian. Even the courts are closed to him; and to secure him common justice and protect him from outrage will frequently require all your intelligence, courage, and energy."

This is the simple common sense of the whole matter, and with this for a basis, the details of our Indian policy could surely be worked out into something more promising than is the present aspect of affairs. Gen. Crook's words of advice, coming as they do from a man whose record will bear the closest criticism, deserve careful attention, and that not merely from the West Point graduates whom he was addressing.

Whatever may be the merits of Gen. Porter's case, it exhibits marvellous pluck, endurance, patience and sincerity. We begin to feel that he "deserves" success. The German poet said that even if there were no new world for Columbus to discover, a new world should have been called into existence to reward his desire and energy. Gen. Porter has, for twenty years, looked for American people steadily in the face, and demanded justice. The great war General of the American Armies, the Senate and House of Representatives, and a military court of inquiry, have fully vindicated him. As his weary work seemed near its end, and the vindication was about to be completed by the final act of the President, he finds himself far from his goal. The President declares that the law of Congress which vindicated him, is unconstitutional. Probably it is. If it is, it remains that a law for his relief be passed, which is constitutional. The people, generally, cannot decide on the merits of this case. Few have the time and patience to read the enormous mass of evidence involved in it. They must look to those whose business it is to decide the question, and accept their conclusion, if apparently fair, and the judgment of these has been rendered. No one should dispute it, unless he has placed himself in a position by the most thorough examination, to criticise with intelligence and knowledge. There can be no reflection cast upon those who originally condemned Gen. Porter. They acted on their consciences. Still they might have been mistaken in their judgment. It is hardly yet time to say that any body of men are infallible, especially military men, who are selected more for their fighting, than than their judicial qualities. If Gen. Porter was guilty of the charges preferred against him, he should have been shot, kneeling before his coffin, and those who convicted him should have seen that it was done. That they did not, is the best evidence that there lurked in their minds a suspicion that their own conclusions were not correct. This man has struggled for twenty years to rescue his name from infamy. The popular sense of "fair play" is now aroused, and the matter must be settled. Either Congress must reconsider the subject and condemn him, or it must find some

way of righting his wrongs. He stands to day before the world with the word "traitor," by lawful verdict, burning in his forehead, while the Nation, though its representatives, has partially wiped out, but halts before completing the work. It should be obliterated, or rewritten in bolder characters.

"We lost a good friend to-day," said one of the colored boys the evening after Gen. Marshall's departure. There was not a soul on the place but could have said the same thing. The drizzling day seemed quite in sympathy with our feelings. The school all collected the night before around the windows in Virginia Hall where Gen. and Mrs. Marshall were staying, and tried to show as best they could by their songs the gratitude they felt for all their years of labor and love. In the morning the battalion was formed, the business of the shops and the mill was stopped, and we all came together to say good-bye to those whose departure makes more of a break among us than we have ever felt at Hampton.

Knowing, as we do, that their place here can never be filled, we trust that they understand how universal is the appreciation of what they have done for and been to the school, and we look forward to the prospect of their frequent visits, as indication that the tie which binds them to us can never be wholly broken. In letters received from Gen. Marshall since their arrival, he speaks with satisfaction of their new and charming home, which is not lacking in memories of Hampton, and his kind thoughtfulness for the students whom he took with him from here shows us that the helpful influences which went out from their home here are to be no less powerful under the changed conditions.

What Hampton owes to Gen. and Mrs. Marshall will never be written down in this world. Like many another record it awaits the eternal reckoning.

#### The Mount Pleasant Orphan Home.

A homeless child appeals to the most tender feelings of humanity. Almost everywhere among our own race, workers in charity have searched the alleys and lanes, the cellars and attics of our cities, for the outcast and forsaken children, and have gathered them into comfortable homes, where they have been trained for lives of usefulness.

Throughout the large colored population of our southern cities, there are many little ones left in utter destitution, friendless, or with friends only a degree less destitute than themselves.

Near the city of Charleston, one who has given years to teaching the colored people of that section, having long felt the need of these homeless ones, had that feeling intensified by finding, one chill day, a little wanderer upon her doorstep. The child had been homeless two years, and that life had been very hard was proved by the scars and bruises upon her little body. She was provided with a home, and, later, four motherless children came under the lady's notice. In the true spirit of benevolence, she cared for them also, and they became the nucleus of an orphan's home for colored children located at Mt. Pleasant, across the bay from Charleston. The home has grown rapidly, and now the family numbers twenty-three boys and girls, whose ages range from two to seventeen years. A house has been procured and, through the aid of northern friends, paid for. The little institution has been incorporated, with a board of seven trustees. The manager, Miss Abbie D. Monroe, has long been the principal of a flourishing freedmen's school, and the home being at hand, the children pass a part of the day within its walls, and the remainder is devoted to doing the work of the home, the girls being carefully instructed in house work and sewing, while the boys are no less busy in outdoor labor.

On Sunday, they form a prominent part of the congregation at the little church, presenting a pleasant picture in their neat and simple dress, the product entirely of barrels of clothing sent by northern friends.

Their quiet and respectful behavior, and bright, cheerful faces add to the charm, and the patrons of the home have reason to be proud of their little proteges. It is the design of the trustees to find suitable homes for the children as soon as they are fitted for usefulness, and one boy has just found a

northern home, while two children have been adopted by colored residents of South Carolina. The colored people in the neighborhood are becoming interested and helpful, and we may hope that as they gain wealth, they may profit by the object lesson before them and that many such homes may be the outcome of Mt. Pleasant Home. At present it is, to a great extent, dependent upon northern benevolence and is in need of generous assistance.

The cost of the support of one child for a year is \$53. It seems a small sum when we consider that, but for this home, these children would be growing up in idleness and in all probability would become the criminals of the future.

"In as much as ye have done it unto the least of these" may be the welcome of those who do not forget the dusky but bright faces of the Mount Pleasant Home.

A very pleasant entertainment was given by the Orpheus Yacht Club of Baltimore in Virginia Hall on the evening of Friday, July 11th. This is the second visit of the Club to the school, and their second coming was enjoyed by the students even more than the first. Dr. Harrison's recitations and comic songs were received with rounds of applause. The performances on the zither and cornet were highly appreciated. The quartette from Tuskegee, solos from Messrs Hamilton and Paggis, and choruses from the school seemed to afford entertainment to our visitors. Our hearty thanks are due to the Club for coming up through the severe rain and giving the students and teachers such a treat.

The National Educational Exposition which was held during July at Madison, Wisconsin, attracted large exhibits, partly in its own name, and partly because all the material collected is to be sent, later on, to the great International Exposition which is to be held at New Orleans.

The Schools of the A. M. A. were requested to make special efforts to send creditable exhibits in line of their school work, which were to be grouped as coming from a single State. The exposition included a "Main Exhibition" and a "Department of Industrial Education," in both of which Hampton had a place, and in both of which the school, as the oldest child of the A. M. A., has endeavored to do credit to its systems. The material was classified as follows, and in accordance with the "Rules and suggestions" sent by the Association, Hampton sent the following exhibit:

Large hexagonal revolving case, 6 ft. high, 3ft. 2in. longest diameter.

This was made in the Indian training shop, in part by Indian boys, of pine stained to imitate black walnut, and was surmounted by a scroll ornament of yellow poplar, made in the wood working shop of the Huntington Industrial Works.

It contains eighteen divisions, three on a side holding large photographs, etc., as follows:

#### FIRST SIDE.

- (top) Photograph of Senior Class of 1884.
- Two groups of colored girls.
- Group of Indian girls and teachers.

#### SECOND SIDE.

- View of buildings from Barn cupola. Library, Wigwam, Virginia Hall, Gymnasium, Winona.
- Group of newly arrived Indians with the Indian student (Julia St. Cyr), who brought them to Hampton.
- Photograph of interior of Training Shop for colored boys—(wood working shop of Huntington Industrial Works) showing specimens of their work.

#### THIRD SIDE.

- View of Academic Hall.
- View of Buildings—Library, Wigwam, Stone Memorial.
- View from Mill Tower—Academic Hall, Virginia Hall, Library and Office, Gymnasium, Wigwam, "Stone," Fire-Engine House, "Marquand."

#### FOURTH SIDE.

- Wigwam.
- Winona, Virginia Hall.
- View from Academic Hall—Principal's House, Winona, Virginia Hall, Gas Works, Library.

#### FIFTH SIDE.

- Virginia Hall—Battalion Cadets in front.
- Huntington Industrial Works, "Graves" and "Marquand", Machine shop.
- Barn.

#### SIXTH SIDE.

- Group of Indian boys.
- Specimens of printing from Normal School Steam Press.
- Circular letter of Gen. Armstrong.
- Specimens from the Industrial Department and of students' labor in general, are hung from the bottom of the case and stand grouped about it, as follows: Specimens of Tin-ware: cups, cans, coffee pots, etc. (Indian Training Shop).
- Mittens from Knitting Room.
- Iron work from Blacksmith Shop: (hammer heads, horse-shoes, hooks, wagon fittings, etc.)
- Spokes and felloes from Wheelwright Shop.
- Specimens from Shoe Factory—Government brogans, men's shoes worn by students, ladies' buttoned boots.

There were also sent, specimen copies of Southern Workman, reports, circulars, etc.

#### Extract from a Letter

FROM CAPTAIN ROMNEY, FORMERLY MILITARY COMMANDANT AT THIS SCHOOL.

7th Nov. 1884

"It was in Detroit one day last week to attend the meeting of the Grand Army of the Republic and among others I met there two of Hampton's boys, one, Sam Smith, whom you may remember as having at one time been in the Navy, but who did not get through Hampton, and the other 'Cruze'. They are employed by the Mich. Central R. R. as night watchmen at Soper month each, and I find that Hampton guard duty has not been 'duty vainly done'. There was a glorious display of dental organs when they met me, and their smiles were only limited by the distance from ear to ear on their countenances."

#### Horsford's Acid Phosphate.

No Physician Need Hesitate.

Dr. S. V. Clevenger, Chicago Ill., says: "Horsford's Acid Phosphate should be made official. It is the most eligible form for the administration of phosphorus, and no physician need hesitate to order it on his prescription blank."

#### RABY LODGE.

FOR SALE BY PRIVATE CONTRACT.

This pleasant residence, adjoining the Normal and Agricultural Institute grounds at Hampton Va., comprises seven rooms on the ground floor, three of them with open fire places; six rooms on the second floor with commodious bath-room. The rooms are well-clothed; large dry cellar and kitchen, large ground cistern, with pump, for rain water; a well of excellent spring water with pump; also well and force pump in cellar. A two stabled stable and coach house with granary and hay loft above. Ornamental and fruit trees, shrubs and vines on the grounds, a good boat landing opposite the house, with unobstructed view of Hampton Roads.

For further particulars, apply to George Dixon, Raby Lodge, Hampton Va.

#### Horsford's Acid Phosphate

In Debility from Overwork.

Dr. G. W. Collins, Tipton, Ind., says: "I used it in nervous debility brought on by overwork in warm weather, with good results."

#### SPECIAL ANNOUNCEMENT I

In order to place this interesting and valuable work in every colored family, North and South, the publishers offer the

**HISTORY OF EMANCIPATION,**

(By Col. Jos. T. Wilson.)

at the reduced price of

**\$1.00 PER VOLUME, POST PAID.**

This offer is good only till Sept. 1st, and but a single copy will be sent to one address at this price.

This book is octavo size, 324 pages, handsomely bound in cloth, and is the work of colored and Indian printers.

The regular price is \$1.50.

Send postal note or dollar bill.

Address: Normal School Press, Hampton, Va.

#### Horsford's Acid Phosphate.

Beware of Imitations.

Imitations and counterfeits have again appeared. Be sure that the word "Horsford's" is on the wrapper. None are genuine without it.

### The Southern Press. Both Sides.

On the 11th of July, the Democratic Convention nominated, on the second ballot, Grover Cleveland, Governor of New York, for President, which nomination was, later in the day, made unanimous and has already received such tokens of the hearty approval of the party, as make it evident that the campaign is to be close and hardly fought. As a rule, the colored press makes the question one of parties and not of men, which is hardly to be wondered at, when it is remembered that their interpretation of the intentions of the two parties is based upon the experience of the colored race in the past, and that this experience has been wholly in favor of government by Republicans.

The *People's Advocate* says that the Chicago Convention "represents despotism and unequivocal hatred to the Negro" and will doom its participants to ignominy and contempt.

The *Southern Tribune* (col'd) after an energetic appeal to the colored Republicans of the South, says: "We will not be a party to anything that will create a breach in the party, or that will give any one an excuse and to vote and work for the ticket, we are for the rights of all and the harmony of the party."

A very concise statement of the opinion is given by the editor of the *New York Globe*, who, however, is in danger of being considered unfaithful to the best interests of his people, and in view of a tendency to "bolt," is coming to be looked upon by his fellow journalists with some suspicion.

"When you assail the Republican party you assail the protected interests of the country—the protected interests which thrive by subsidy and the conference of undue advantage—the corporate interests, and all other 'interests' which concentrate wealth and produce pauperism and crime."

Still, there is no party in opposition to which the people are disposed to confide their destiny. They have no confidence in the Democratic party, which stands for revolution, nullification and spoils; they have no confidence in the Greenback party, because a specie currency is a settled fact; and they have no confidence in the Labor party because there is no organization of labor forces, no intelligent concert of leadership and procedure, and no well defined issues.

As things stand now, the Republican party is the only party in the field, which has a thorough organization, a clearly defined policy and masterful leadership. Hence that party has swept the field in the past, and will continue to sweep it in the future, unless an opposition shall arise masterful enough to depose it.

"The Republican party will receive the bulk of the colored vote in the coming election, not because the colored people are persuaded that the success of that party will further fix their status as citizens (that's a lie), but because they are afraid to trust the Democratic vandals. Every measure which the Republican Congress has enacted into law for our behoof has been declared to be unconstitutional—by Republican, not by Democratic judicials. The colored people will support Blaine and Logan, but they will not do it blindly—they do it because nothing better is offered to them."

The *Christian Recorder* (col'd) sums up the sins of democracy, and considers the individual candidates of small importance in comparison with party platforms.

"Comparison of the two chief parties results in finding in both the evils common to mankind. But the one shows a marked difference toward the race varieties outside of its own. We heard a democrat answer the question, 'What is democracy?' by saying, 'Well, it would take me two days to answer that; but it is equal rights so far as practicable.' The other evinces a definite feeling of a sort of general, universal manhood, extending beyond any given race variety. Whether we consider the two parties with reference to the Indian, the Negro, or with reference to money and tariff, we get the same result. The one despises, the other defends the weak."

There is a moral element to be considered in politics. With these virtues in favor of the Republican party, and those vices against the Democratic, it would seem that all men hoping for better days and better politics should devote themselves to the better party and, if more virtuous than either party, attempt the reformation of the one

that is not 'clean gone from original righteousness, instead of the one that has committed the 'unpardonable sin.'"

The satisfaction of Southern Democrats with the nomination has increased daily, and the expressions of the press in regard to it are remarkably unanimous, especially when contrasted with the uncertain ring noticeable in the utterances which come from the Republican ranks.

"We have never seen a community more delighted than ours at the nomination of CLEVELAND and HENDRICKS. It is true that many of our people would have selected BAYARD as their first choice; though they always had a very high admiration for CLEVELAND; but at the same time they were willing to surrender their choice in favor of CLEVELAND, against whom they never had any objections whatever, and who—as it has been proved—is the very strongest man that could have been selected to carry our flag to certain victory."

Fellow-Democrats, the skies have never been so bright as they are now. Not only are our candidates above even any suspicion of political baseness, but they are confronted by men who are known all over the Union as the leaders of the plundering-squad of the Republican party, and were put there to gorge themselves and their gang with even more of the spoils. The people of the United States have been taxed and taxed long enough to make millions of these suckers of the treasury, and the national stomach revolts at placing in the Presidential chair a man who is notorious all over the Union for his unblushing corruption, and to whose name the name of the 'tattooed man' has been given by acclamation from the Atlantic to the Pacific."—*Landmark*.

The *N. O. Picayune*, after calling attention to the indications that the present standard of business morality in this country is alarmingly low, and that there is close connection between dishonesty in business and corruption in politics, goes on to make the following deductions:

"The recent Republican nominations at Chicago, with the comments of Independent and bolting Republican journals, combine with late failures and revelations in Wall street to lend emphasis to these gloomy reflections. It is a very remarkable circumstance, that the majority of a great national party should willfully select as its leader, in a contest of such importance, a man who has so small a claim to the moral support of the American people. That sagacious politicians should have considered his candidacy a safe venture, is among the ominous signs of the times. Their opinion seems to be that the people have so intense an admiration for smartness, sharpness, shrewdness, and a ready flow of vivid speech, that the possessor of those traits can command their suffrage, although it may be demonstrated that he has already abused the opportunities of office."

It remains to be seen how far this estimate will be justified by the popular verdict in November next; but we are not in need of this particular instance to prove the prevalence of corruption in politics. That is something that men admit only too readily. If they would test the matter more by personal examination, we might have more hope of a speedy reformation. The Republican party has been corrupted by a too long tenure of office. Its corruption as a national party may be accounted for by precisely the same conditions that have led to the corruption of the Democratic party in certain quarters where its supremacy has been long unquestioned. A reformation involving only a change of parties will be, can be, only superficial and temporary. The true reformation will come when the people realize that public business has all the urgency of private business in free countries. They will begin to see this point when they understand how closely and vitally politics and business are related. Congress is engaged much of its time in giving away the people's money and the nation's land. Corporations and monopolies govern through the lobby, and the people are flattered and satisfied with a little cheap eloquence on the stump."

A deduction from similar views is made by the *Richmond State*.

"The remark is sometimes made that a politician cannot be honest, and that no matter who the candidate for high office may be, serious flaws are sure to be found in his private and public life. For while it is true that the Republican party at this time includes very few honest leaders, it is not true that as a rule politicians are necessarily corrupt. The Democrats at Chicago had many statesmen of spotless reputation to choose from. BAYARD, THURMAN, HENDRICKS, McDONALD, and CLEVELAND, are all men of high character. They are men who have been in politics many years, but their records

are clean. Can men claiming to be honest treat the matter so lightly, and say, 'True, BLAINE may be corrupt, but he is no worse than hundreds of others politicians.' At the polls in November the people will have the opportunity of voting for a ticket composed of pure men—men who have been as honest in their political work as they could have been in their private transactions. If the people vote for CLEVELAND and HENDRICKS they will help to put down rascality. If they vote for BLAINE and LOGAN, they will only vote to continue corrupt men in power. From a moral standpoint, there is a wide gulf between the two parties; in the present case, there is a great difference between the moral status of the standard-bearer of the two parties."

The *Baltimore Sun* believes that the tariff complication may prove to be the turning point in the coming election. "According to the estimate of our esteemed contemporary, the *Philadelphia Times*, there are more than one million 'thoroughly independent voters' in the country, who vote to suit their own interests, and are not subject to strict party discipline."

If that be so, it would seem at first that the Democrats would certainly win the next election. If the personal honesty of the candidate be made the turning point, nearly all the million Independents will be pretty sure to vote for Mr. CLEVELAND. But, on the other hand, if the Republicans shall succeed in their purpose of bringing forward the tariff as the main issue, if they can cover over the character of their candidate by making free trade or protection the distinction between the parties, then the majority of the Independents may side with BLAINE."

There are more things that nobody knows now to be learned in this election than were offered to learners in any previous contest we have ever seen."

It is hard to foresee how far the pendulum will swing, but so far as the prospects for the coming election can at present be calculated, there was never less chance of a split in the Southern democracy.

The power of the independent vote is already making itself felt even in the South, and one rather amusing result of it is indicated in such items as the following:

"For once, some of the northern Republican papers are hurrahing for the 'solid South.' They are opposed to BLAINE and in favor of CLEVELAND; therefore 'the solid South' is just such a bad idea after all."—*Richmond State*.

Southern religious journals, as a rule, carefully refrain from expressions of political opinion, but just now the feeling is too strong to be entirely ignored. Brief ideas like this from the *Southern Christian Advocate* (Charleston) show the power of the forces that are at work.

"CLEVELAND and HENDRICKS is a strong ticket. Could the Convention have done better, with all the material which it had at command? The country has not had a better chance to put the Democrats back into power."

An interesting summing up of the work of the Convention is given by the *Angusta Constitutionalist*, and it is not too much to say that its declaration as to the general satisfaction with the nomination, is receiving corroboration on every side.

"The National Democratic Convention, which finished its labors at Chicago on last Friday, will be memorable in the history of American politics."

The plan of battle has been agreed upon. It will be intensely aggressive. It is impossible to fight a successful campaign in national politics without an idea. Governor CLEVELAND has an idea that in the American mind means something, and that something is reform. He reformed the government of Buffalo, and then the people of New York said this man has done a good work; and we will make him Governor of our State. With strong hands, perfect system and determined energy he entered upon the discharge of the duties of this high office, second in importance only to that of President of the United States. He found abuses there and he has corrected them."

As the Governor of a great State, Mr. CLEVELAND rose above the dictates and demands of angry faction in his own party. Sworn to do his duty, he never hesitated where the interests of the public came into conflict with the private ends of his friends or his party associates. It was when he determined to be the Governor of the whole State of New York, and not of factions or of a party in its narrow and illiberal sense, that the country looked upon him as the embodiment of reform. No other name became so thoroughly identified in the public

eye with reform as that of GROVER CLEVELAND. And that is why he was nominated at Chicago.

This nomination is not the outcome of machine politics. There was no preconcerted clap-trap about his nomination, who is the outcome of an honest, hearty demand all over this country for honest methods in politics, and a thorough reform in the administration of the general government. As an evidence of the spontaneity of the feeling that Governor CLEVELAND was the candidate for the Democratic party to nominate for President, the writer, who had an opportunity of being informed, does not know of a member of the Georgia delegation who received a letter from any friend of Gov. CLEVELAND, asking support for him at Chicago. It seems to have been a settled conviction with men who had given the question of the best nomination thought and who were not governed more by sentiment than judgment that CLEVELAND was the man of all men for the party to nominate.

A new man, with correct methods in the administration of county, municipal and gubernatorial affairs, he had but one record as a politician and that record is written in two words: HONESTY—REFORM.

When Mr. BLAINE was nominated at Chicago, the Independent public opinion of the country as represented by such papers as the *New York Herald*, *Times*, *Post*, *Harper's Weekly*, the *Boston Herald*, *Springfield Republican*, *Philadelphia Times*, all with one voice said now is the opportunity for the Democratic party. CLEVELAND and reform will sweep the country in November."

Gov. CLEVELAND is the antithesis of Mr. BLAINE. The one is officially honest and unpurchasable. The other is believed officially to be venal and corrupt. The one is crystallized with economy and reform. The other is honeycombed with extravagance and speculation. The American mind is quick to contrast the difference between the two men. Hence CLEVELAND'S nomination.

No other name would be so potential with the Democratic party, and any other candidate would have, to a certain degree, necessitated an explanatory or defensive campaign. The feeling in favor of CLEVELAND'S nomination was not manufactured or brought about by any influence other than by a desire to subserve the interests of the party and the country by the selection of the best and most available candidate.

The presence of the Southern Senators and their influence in the delegations would have been potential for the nomination of Senator BAYARD, but there were men on the respective delegations whose convictions could not be swayed by sentiment from the line of common sense and practical politics. Mr. BAYARD'S nomination necessitated a defensive campaign and a doubtful issue. While Mr. BAYARD was undoubtedly the personal choice of the delegates from the South, it was felt that it would never do to force his nomination upon the Northern Democracy. Outside of Tammany and Massachusetts there was no material following from the Northern States for Senator BAYARD. Even in the case of Tammany, one of its leading members seconded the nomination of ex-Senator THURMAN, "the noblest Roman of them all," who was known in the Convention by JOHN MCLEAN, Chairman of the Ohio delegation, nominating Gov. HOARD for the Presidency in opposition to him.

The boom of Governor HENDRICKS for the Presidency was apparently real. The spark of one vote from the Illinois delegation set the Convention in a blaze of excitement. It looked as if a tidal wave had set in to sweep him into a nomination. For twenty minutes the Convention was stormed by a cyclone of cheers and shouts for Governor HENDRICKS, but when the excitement subsided and the Convention came down to business, it was apparent that the members had not lost their senses. It was a conviction with the majority from the start that CLEVELAND only was the talismanic name that could bring victory to the party."

The platform is the result of compromise or conciliation. It is entirely acceptable to both views in the party. All Democrats, Independents and Republicans who desire reform and honest government can stand upon it. It is the embodiment of the conservatism, wisdom and patriotism of the Democratic party.

### Horsford's Acid Phosphate.

#### Valuable Medicine.

Dr. W. H. PARNELLE, Toledo, O., says: "I have prescribed it for nearly a large variety of diseases, and have been amply satisfied that it is a valuable addition to our list of medicinal agents."

## Letters From Hampton Graduates.

FROM AN INDIAN GRADUATE. *Good Success and Good Spirit.* SEE A HEAD AND HIT IT. FROM SOUTH CAROLINA. FROM A HARD WORKER. FROM A MARRIED TEACHER.

FROM AN INDIAN GRADUATE.

One of the first three Indian graduates of Hampton—who, after three years in the school graduated in the class of '82, and have all done well ever since—writes the following interesting letter.

*Keshena, Wis. Mar. 3, 1884.*  
*Dear Friend and Teacher.* I received your postal card a few days ago, and was glad to hear from you. I received also your circular some time last fall and I intended answering it but I forgot to; and after sometime could not tell whether I had written to you or not, till I received your card. You wanted to know what I am doing. I have been clerking in a store for one year and a quarter, and I have lately resigned. I am now teaching at the Govt. Boarding School at Keshena. I was appointed an assistant teacher by the new Indian Agent, D. P. Andrews, last fall, in the month of September, but did not commence teaching till the 13th day of February, that is last month, as the school was not finished till then.

When I first returned home in June, 1881, I was filled with joy for being permitted to have the happiness of seeing my people once more, especially my dear parents and relatives. I did not seek for employment immediately, but I spent my time for a while visiting friends. I had a very happy time wherever I went. In every way I had the natural feeling of gladness that people feel when they return home after having been away from home for years. After seeing all my friends I went to work on the farm for my father for some time. In the month of August I heard that the school was to commence on the following month, that is in September. I thought I ought to do something, and I soon had my mind fixed to apply for a position as an assistant teacher of this school, so I went to E. Stephens, who was then U. S. Ind. Agent, and made my application. But to my surprise he told me that on account of my age I could not control and govern the school children and he therefore could not take me. I went home disappointed. I did not expect he would refuse me. There were two teachers at the school, viz: principal and assistant; the assistant was his daughter.

He was regarded a mean and dishonest man and was disliked by all the Indians under his charge, as well as by the whites who knew and saw his acts. The Indians at last made a petition to the Department for his removal, in which they succeeded.

After thus failing to get a place to teach, I was employed by Mr. M. Wescott, a Postmaster, a store keeper, and railroad man, to clerk in his store, which I accepted and held till the 13th ult. when I went to teaching school. The building of this school was commenced early last spring, and has been completed at a cost of a little over \$8000. It is intended to be an Industrial school. Next summer we are going to have more buildings put up. I mean work shops; shoe maker, carpenter, harness-shops, etc. This is the first school of this kind that was ever built here on this reservation, and I hope that it will prove to be what is most needed for the education of these people. This is all for the present. I will try and write again in a short time.

Your Friend,  
M. OSHKENNY.  
Class of '82.

*GOOD SUCCESS AND GOOD SPIRIT.*  
A young man who, since his graduation from Hampton, has with much earnest effort accomplished a collegiate education, studying at Dartmouth, writes of his present work and aspirations as follows:

*Galveston, Tex., Feb. 23, 1884.*  
Your letter dated January 22nd, reached me February 21st. It went to Port Mills, then came to me at this place. I arrived here on the first day of Sept. last. I was offered a position in the public school here and I accepted it. You know that I have been studying a long time, and that my means were very short. I had to borrow money to finish up my college course. I felt when the position was offered me to become a teacher at Tuskegee, that my first duty was to pay the debt I owed for my education. So I selected the place that would pay me the most.

I felt sorry that I could not join Mr. Washington and help him in his work. I get \$65 per month here with a prospect of

increased pay. There is no place I think would have suited me more than the Tuskegee position. But I had to leave myself feeling out and work to pay up and be a free man. I can not feel free as long as I owe any man. The School Trustees and Supt. seem to be pleased with me as a teacher, and apparently well satisfied with my work. I love the work and I give my undivided time to it. I came here knowing to no one save the Harbor Master. They placed me next to the principals who were elected the year before, and do all they can to make me satisfied with the place. I have had very courteous treatment from all the prominent men in town.

The Supt. is a gentleman in every particular. He seems to know no color in his desire to promote the best interest of the school.

I got the highest grade certificate that could be given, and the *Galveston News*, and several papers made comments upon it, as there were so few of these certificates issued. And there is no school in town among the colored people that could give me employment according to the certificate I hold, and only one among the whites and the teacher of this one is a young man of the University of Virginia. It will be two years or more before the colored have one or have enough children to go to the highest grade school. Yet they are moving towards it rapidly. There are some very bright (intellectually) children in the school here.

Galveston has a very mild climate. No winter hardly. Fruits are growing the year round. New potatoes are in market. Yet the people are interested in education as much as can be expected of them. There is not much interest in Sunday school, as there are only two on the island. As regards religion it is more of the demonstrative than real. Yet I feel at times as though they are incapable in their present state of feeling any differently. They have so long been accustomed to a wild and sensual manner of worship that they firmly believe in them, and I feel as though they will be saved upon their belief.

Yours very truly, W.

SEE A HEAD AND HIT IT.

A variation on the Irishman's motto and method in Donnybrook fair, has been found by a Hampton graduate.

—*Ch., Va., Dec. 17th, 1883.*

My Dear Teacher:

I hope you have not given me up as "missing." I am glad to inform you that I am still at the front though not making much fuss about it, but every time I see an ignorant head I hit it. I have regained my health again for which I thank God. I had a very good school on Eastern Shore but wanted to come among my relations, and in the mountains which I think is a great help to my health.

I opened school here the 8th of last Oct., under anything but flattering circumstances. The school that I came to take had been taken when I got here, so I had to huan up another. I heard that a new settlement of people wanted a school started in a place called the big woods, so I went up to see them and found that they were very anxious to have me start a school, but they had no house, but I told them that I could get a room from some of the families until I could have a house built, so I got a room at \$2 per month, then I had to go to see the Supt. who lived about twenty miles away. I took the cars for St. Joseph the Supt. When I got there I found that he lived eight miles in the country. It was late in the afternoon when I found this out, and I had walked nine miles that day, but I started for his house and got there a little after dark. I slept that night with some farm hands and got up next morning before day and found the "Colonel" at the barn, and told him what my business was and he said he could not "examine me then for all of his papers were in S—, and he could not go down until Saturday, and this was Monday. I told him that it was very inconvenient and expensive for me to come up again; then he asked me where I had been to school. When I told him at Hampton, he said that he would not examine me if I had my diploma. I told him that it was in my trunk, so he gave me a letter and told me to open school and send my diploma to him and he would give me a Certificate So I did, and after making benches from slabs which I got from a sawmill with an ox team, I have a fine school of 30 pupils which will be increased to 40 by Christmas. I have made two months with an average of 24.60 and 47.75. I hope that I may be able to fill out Hampton's expectations.

Yours Truly, S.

FROM SOUTH CAROLINA.

A teacher in the "Black Belt" gives the following interesting account of his work.

—*S. C., Jan. 3th, 1884.*

*Dear Friend,*  
This term I am on—Island, my native home, as I can be home ev-

ery day and thus secure better attend on during my illness.

I went up to examination in October, and among seventy three teachers I had the distinguishing honor of passing the best examination of colored, obtaining 97 out of the possible 100. I am principal of a graded school here with a white lady for my assistant. We have 97 on roll and a daily average of 83. The pupils are very backward, having had very inferior teachers and only four months' school. I am trying to reform the system in my school room, and I am thankful that my labors are being rewarded.

Now I see that interest and desire for learning showing itself, as it never has yet. My work has given such universal satisfaction, that it amounts almost to dissatisfaction. The progress made by my pupils has been published around. The result was many parents took their children from the school in their district and sent them to me. Of course those teachers became displeased. My failing health prevented me from opening my night school as usual, but my Sunday school is in full bloom and I trust will bear fruit for the Master.

I walk three and a half miles to my school every day and come home in the evening. I am compelled to go the same distance for my Sunday school.

The cards you sent me I distributed as Christmas presents. You ought to have seen how pleased they were for such simple tokens of love. I have no assistance in my Sunday school but such a few older men can give, yet we manage to get along quite well.

The people are interested in education as much as can be expected of them. There is not much interest in Sunday school, as there are only two on the island. As regards religion it is more of the demonstrative than real. Yet I feel at times as though they are incapable in their present state of feeling any differently. They have so long been accustomed to a wild and sensual manner of worship that they firmly believe in them, and I feel as though they will be saved upon their belief.

We have one or two good members around of the A. M. E. denomination who are doing considerable teaching, religion, elevation. I am more than ever determined to pursue the course I mentioned to you last year, and if nothing occurs, shall begin at Lincoln University next Fall.

Yours truly, B.

FROM A HARD WORKER.

A young man who has in some respects an exceptionally difficult field, writes nevertheless cheerfully:

—*Tenn., Jan. 29, 1884.*

*Kind Friend,*

I was in—on Thanksgiving Day and made a speech on "Temperance, and the Negro as a citizen." I wrote for me. I had a very pleasant time.

This is my second year at this place. If my health was good I would enjoy the work much more. If it were not that I work all day in the school room and suffer all night, I would not give it up for any other profession. My school is very large. I have one assistant teacher. Last year I had on roll 108; I have already 127 on roll, and eleven transferred from country schools to this. There are more to enter. I am kept quite busy with my school room duties and with the Secretaryship of the Independent Order of good Templars for Tennessee. The last named office I have recently given up. I hope I may have less work to do now, though my school duties are on the increase.

Christmas I had a Christmas-tree in my school house. The building was trimmed and the tree had over 300 presents. Music was furnished by the colored brass band of this town. It was certainly gay. Complimentary notices of our exhibition and tree appeared in the "G—Democrat" and the "Herald." I can certainly say that the better class of people are very interested in my school. The Herald says—"Its preparation evidently showed more care and pains than any other similar entertainment gotten up in our town. We noticed with commendation the fact that the recipients were from the the very best standard authors such as Dickens, Longfellow, etc." Both papers spoke in the very highest terms of me and one ventured to say: "The colored people here cannot well dispense with his services hereafter."

Of course I have my opposers and they would willingly "dispense with my services" now. But where is the teacher who hasn't them? The teacher that pleases everybody pleases nobody. The man or woman can find his worth only by facing obstacles.

The books given to my school last year do much more good than I expected. I wish you could be here some Friday P. M. when I am loaning books; all are in ecstasy to secure a book. I have to call them by classes

to keep back a rush. I am glad to say that they don't merely read through a book and that is the end of it. They read and remember, and, I trust, digest. I can have them to give me a general idea of a book, (its contents) that I may tell others. A book called "Aunt Sally" goes like wild fire. It is a story of slavery. Reading it at the fireside, makes father or mother tell some sorrowful story of their own to the child.

How glad and thankful I am for the Library. I have now about 300 volumes. Kind friends in Conn. in sending me a box very thoughtfully placed in it several files of papers. Rainy days these papers are just the thing needed. I sometimes turn the school into a reading room. The books you and Miss C. sent are as much read as the others. They take care of them much better than I expected. Please pardon my long delay in writing to you.

I am, very truly,

H.

FROM A MARRIED TEACHER.

In most cases marriage has not brought our graduate teachers' school work to an end. With a "good companion," it often goes on as usual. One of our young women graduates gives a pleasant account of her good examination and her faithful work.

—*Va., Jan. 6, 1884.*

*My Dear Teacher:*

As the old year has passed, and I have begun my work in the new, I thought I would write to you. I intended to have written to you before, but I kept putting it off. I know you will excuse me, as you know I am married, and as I have all my business to attend to, it keeps me quite busy. I received your kind letter a few days before Christmas and I was very glad to hear from you.

I was married last May at the Loyal St. Baptist church—*Va.*, and came here to live, where I have been teaching ever since I left Hampton.

I have a good companion and a pleasant home and I am getting along nicely. I am teaching in the same place, and I have a full school this term, larger than I have ever had before, and everything seems to be in a prosperous condition.

The children set in this term as if they intended to learn and I am glad to say, I never saw children more attentive to their studies than these children are. It has been said by both white and colored in this neighborhood that this is one of the best schools in the county. The children seem to be under such good discipline, and improve so fast.

We have a new Supt. this year, and I was a little afraid at first that I would not stand as good an examination this term as I had before, as I did not know anything about him. I went and was examined and he was so well pleased with my examination, he took a copy of it to show some other teachers. He is greatly in favor of Hampton graduates. I had fifteen words in spelling, ten questions in arithmetic, twelve in geography, ten in grammar and ten in history, and these are my averages: Arithmetic 10, spelling 8.5, geography 10, grammar 9.5, history 9.

I am thankful to say that I have a new school house this term, which is very comfortable. I had a Christmas tree for the little ones, and had a very nice time. I try to do everything I can to make the little ones happy.

My Sunday School is getting along very well. I hope you had a merry Christmas, and will have a happy New Year. I guess you have heard how the people of Va. were treated about the last election.

I hope you are getting along very well in keeping house for your brother. I often think of my Hampton friends and wish I could see them.

I remain your old student, Class of '81.

## Incidents of Indian Life at Hampton.

*"Tasted not the food before them,  
Only waited on the others."  
Only served their guests in silence.*

*Himasha's Wedding feast.*

There was no "representative of the press" at the sumptuous little "tea" which Mrs. Philip Stabler, on a lovely June evening inaugurated her complete house keeping in one of the "Omaha Cottages." There was only a select circle of friends, whose toilets the reporter would have had little trouble in describing, and whose *bon mots* were like the fancy-dress caps they improvised from their pretty napkins—for this day only.

If anybody had been able to refrain long enough from eating strawberries and chicken salad and delicate cake, prepared by Minnie's own skilful hands and served by two pretty Indian girls in the neatest of white frocks, they must have felt the suggestive contrast in the faces of some of the guests, surrounding the table with its white cloth in the tiny cosy room. Our minister, with his grave, pleased looks, the gratified faces of the teachers, the proud hostess smiling shyly at her place of the table; the most sitting in bashful dignity opposite; and above all, that irresistible baby, pervading the feast and tyrannizing over everybody with the most perfect grace in the world! Perhaps the prettiest moment, after all, was when your correspondent, (to keep up the imposing picture which we began,) stepped from the diminutive porch into the narrow foot-path, winding through blooming clover, heard the sweet, powerful voices from the Chapel rise in their evening hymn, saw the white dresses dispersing and Philipus out for night-school with a pile of books under his arm—then in a minute met him returning with long strides, carrying on the other arm that tyrant Eddy, who had strayed too far into the long grass. So ended our second Indian house warming. E. G.

The following letter is the first of a series descriptive of the expedition into the Indian country recently undertaken by Rev. Mr. Frissell, the results of which will be presented to our readers in our September No.

Fr. Berthold, June 4th, 1884.

Dear General:

Our long journey with the Hampton children came to an end this afternoon, when we brought the three for Fort Berthold. Mary, Sarah and Karunach to their homes. We sent off the different squads by the way, those for Arizona leaving us at Grafton, W. Va., in charge of Rev. McIntosh, and those for the Indian Territory under the charge of John King. The rail road company placed a whole car at the disposal of the children, so that they were very comfortably fixed. They brought out their Moody and Sankey hymn books occasionally, and we all sang together.

We parted with Capt. Brown at Chicago, and left the Standing Rock children at Mauden D. T., in charge of a young man whom Maj. McLaughlin sent for them.

The Fort Berthold children spent the Sunday with us at Bismark. We went together to the Presbyterian Church and Sabbath School.

The people seemed much interested in the children and asked me to speak to the school about our work, which I did, and preached in the evening.

As the movement of the boats seemed quite uncertain, we took the Monday morning stage for a 90 miles' ride across the plains to Fort Berthold.

On our way up we met a number of Indians with very good teams and wagons going down to Bismark after having put in their crop. Among these were Kawhat and White Breast. They had both been back to the camp for a time but were working on their farms and wore the white man's dress.

I confess to a feeling of pride in the appearance of our Hampton children. They made a most excellent appearance at the table and behaved themselves in a quiet, orderly way. "They don't seem at all awkward like at table" said the young man who came to escort the Standing Rock girls to their homes.

After a ride of two days across the plains, we came to the Fort Berthold reservation, and the Fort Stevenson school. I found here Mr. Wells and his wife, whom I had known in the East. They were both enthusiastic over their work and were struggling against poor accommodations in the way of buildings and small appropriations for rations and help.

The children at Hampton would have hardly been satisfied with the tin dishes of soup which, with bread, made up the principal meal of the day. The children were much excited, nine girls being placed in one room, as only a few of the barracks had been fitted up for school purposes. They had in all 48 children, all from the Berthold reservation. Instead of having the children work half a

day and study half a day as at Hampton, they detailed boys for two and three weeks at a time for a certain job of work which needed to be done. During that time they did not go to school at all. The instructions from the Interior Department lay much more stress on work than study. I went out and looked at the farm, where I saw 20 acres of oats, 9 acres of potatoes, and 4 acres of garden truck. The health of the students had been very poor during the winter, much worse I should judge than of the Indians at Hampton. Mr. Wells, said that they were obliged to doctor them continually, for weak eyes and sore throats. Mrs. Wells, the wife of the principal, was acting as matron, and doing self sacrificing work, having no help except such as she could get from the Indian girls. I think that Mary and Sarah Walker will be of much help to her.

After taking dinner at the school, the farm wagon was brought up to the door and we drove away toward the agency, which is seventeen miles from the school. A part of the way lay through the bad lands, and a more impressive entrance way to an Indian village could hardly be imagined than these great domes of red rock rising on both sides of the road abruptly from the plains to the height of sixty and 100 feet. They looked like great temples and gave one a sense of awe.

As we approached the village, for quite a distance along the river bank, we saw nicely cultivated plots of ground running down from the road to the banks, with here and there an Indian and squaw at work. This had been laid out, I was told, under the direction of a white man, and the result had been the best sort of farming by the Indians and excellent results in the way of crops. In fact, some of the boys said that this year the farmers around went to the Berthold reservation to get their seed corn.

The Indian burying ground on the reservation was the next object that attracted our attention, if indeed it can rightly be called a burying ground where the bodies are raised on high poles and covered with all the belongings of the departed ones. In some cases the box containing the remains was merely placed upon the top of the ground.

We had heard pleasant words said of the new agent, and we received a most cordial welcome and kind attention. He promised to make places immediately in the Stevenson School for Karunach and the two girls. Karunach is to mend the shoes and teach the boys shoe making. Sarah is to help Mrs. Wells as matron, and Mary will go into the school and help Miss Wain in the school room, as she is able.

The Major kindly escorted us through the village, which is a closely crowded collection of mud and log huts with here and there a circular lodge made of earth. In many cases there was a large central room with a fire in the centre and from this central room smaller rooms opened, where families lived together, this central place being the lodge room of the chief. It was in such a place as this that the Mandans held their grand dances in the evening, where only men were allowed.

Into this dimly lighted room the men of the tribe came, some of them almost entirely naked, with very extensive head dresses of feathers extending down their backs. One of these was said to be worth \$40. At the sound of the drum and a peculiar chant the dance commenced, the men trying to make themselves as much like the different animals as possible. These dances are held nearly every evening, I am told, at Berthold, and continue through much of the night.

There was much waiting when the parents of little Susie learned that she had not returned with the other children, but they were consoled with the promise that she should come back in the fall. Inquired after the children that had been at Hampton previously, Tom Smith had been in the camp but I found him in white man's clothes, having charge of the stables at the agency, and heard good accounts of him from the agent.

Of Josephine Malnou, I heard good things; she had gone to Fort Buford and was keeping a decent good home for her husband. I was told that he had sowed more than a hundred acres of grain this spring. Arhotchish had gone with his father Mr. Buford and was doing well. I found Delusa in Indian clothes. The poor fellow had not strength physically or morally to withstand the pressure. I found him lying down in one of the lodges. As I pulled back the clothes and saw the bells and the Indian dress, he looked ashamed, but promised better things. The Major is interested in him and will help him toward the white man's road. I listened to the story of the death of Abuka and Laughing Face; they tried to walk the white man's way, they tried to keep at their work, but they grew weaker and finally had to give it up.

I shall bring back no children from Berthold. The conditions are not favorable there. They have a good missionary but the people have so far adopted the vices of civilization that they are rapidly dying out. Unlike the Sioux, they have yielded readily

to the demands of the white man and it has been their ruin. They are crowded closely together in a small unhealthy village. Not one of them as far as I saw, has a place of his own apart from the rest. They have their dances nearly every night, and the result is that they sleep much of the day. There is such jealousy between the Arickarees, the Gros Ventres and the Mandans that the work of the agent and the missionary is much hindered. The work of these faithful teachers is not lost and the school at Stevenson is a move in the right direction. The Major has taken a strong stand in favor of education. He has said to them, "If you want rations you must let me have your children." Rev. Mr. Hall has won the confidence of the people to a remarkable degree and good reports come from the children sent to the Santee school. But it seems to me that the death rate at Berthold is too high to make it advisable to bring many more there. More than half of those who have been at Hampton, from this reservation, have died during their stay there or after their return to their home, while not a single one of the Standing Rock children has been lost.

We enjoyed the hospitality of Rev. Mr. Hall and his pleasant home on the banks of the Missouri. He showed us his pretty little chapel, where he preaches in the Reel language in the morning, in the Gros Ventre in the afternoon, and in English in the evening.

We shall never forget the picture that we saw from the high bluffs near his house, the tall domes of the bad lands in the distance, the closely packed Indian village with its strange looking cemetery in the rear, here and there an old chief wrapped in his blanket looking out into the distance, and down below, the queer tub boats with their skilful Indian boatmen battling with the swift current of the river. The girls stayed with us at the missionary's house and Karunach stayed at the engineer's house so that no night might be spent at the camp. To-morrow morning the teams will carry us back to Bismark, and take the children to their new school at Stevenson. H. B. F.

## MEDICAL REPORT.

General S. C. Armstrong.

Dear Sir:

Physical examination of the thirty-two Indians received at the school June 28th, results as follows:

Of the seven girls, all give some sign of incipient disease of the lungs. In no case was there any sound heard under careful observation. In one case, there are complications which render it advisable for the girl to return home when practicable. Of the twenty-five boys, fifteen are apparently in sound health, and the others have scars showing previous swelling of the cervical lymphatic glands. Another lost the sight of the left eye in infancy.

Ten boys have indications of pulmonary weakness.

Three of these are particularly unfavorable cases. I would recommend that one should immediately return home, and that the other two should be under careful observation and that they should be sent home on the first sign of advancement of the disease.

The remaining seven have a good physique and, without exception, are of robust health. Judging from former experience, these boys have a chance for improvement in health while in the school, and for subsequent years of usefulness.

Yours very respectfully,

M. M. WALDRON, M. D.

On our editorial page we have called attention to the two following letters, which contain the results of personal observation by intelligent and interested students of Indian life, and have, in every line, a practical value.

SANTA FE, N. M. JUNE 8th, 1884.

Dear General:

I feel that I must write you a few if only a very few lines, regarding some results of our journey to the South West. Mr. Gardiner and I passed two weeks at the Navajo Reservation, where similar impressions were produced upon our minds to those which you received a year ago. Great things may be expected of those Indians under the management of a strong, wise Agent, untold evil and trouble, otherwise. The loss of Major Riordan is universally deplored. Indians and whites are but of one mind regarding the folly on the part of the Government, which compelled his resignation. The Navajos offered to add \$1000 to his salary from their annuities if he would remain. I feel that men of this border-land are even more indignant than we of the East at the extravagant parsimony which marks our policy toward Indian Agents. The ladies who are at present conducting the School at Fort Defiance, Miss Coffin and Miss McIvor, are doing a work which

should be known and supported. It is admirable, as Mr. Gardiner and I can testify from personal inspection. The children under their care are healthy, intelligent boys and girls. They are in good discipline and making rapid progress. No one with any heart and head can see such children without beseeching God and man to open to them some better future than we have afforded their people in the past. Our empathy regarding them is criminal. The employees on the Navajo Agency are well fitted for their work and should not, in my judgment, be disturbed or removed by the new Agent (Mr. Bowman of Colorado). This gentleman had not reached Fort Defiance when I left, but wrote to Mr. Marshall, acting Agent, asking the number of employees at the Agency and amount of salary attached to each position. He added that times were dull in Colorado and many of his friends proposed coming to New Mexico. But I am wasting your time and writing not a few lines; but a long letter.)

I am delighted to be able to inform you that two strong branches of the Indian Rights Association have just been formed in New Mexico—one at Albuquerque, the other at Santa Fe. This fact, to my mind, is one of greater encouragement than any other which has occurred in the history of the movement. The reception which we and our work have received from the leading men of this section has been most gratifying—frank, cordial, sincere. The practical character of our aims—their freedom from sentimentality, has been fairly recognized. I regret to say that we failed to meet Gen. Crook at Whipple. But, as he had just gone East. We had, however, the pleasure of a delightful interview with Captain Bourke, a charming and highly cultivated man, who has had long experience in the Indian field and who is possessed of a great fund of information regarding the character and habits of the various tribes. Capt. Bourke expresses warm sympathy for our work. At Prescott we met a number of gentlemen who strongly approved our projects and who are likely to aid us in the future. Prominent among these, was the Rev. Mr. Hunt, Pastor of the Congregational Church, who entered heartily into our project approving a branch Association at Prescott. A meeting of prominent gentlemen was held at the place and I think we should have succeeded in gaining the desired end had it not been that Governor Trible was not willing to commit himself in the matter. In the face of his disapproval we thought it wisest not to press the question at this time, but to wait until Arizona might gain confidence from the examples of New Mexico. We feel entirely content with the splendid way in which Santa Fe and Albuquerque have come forward to our aid and judge that the moral influence of this occasion upon the East will be very strong. Gov. Stover, is President and Mr. Snyder, a rising lawyer, is Secretary of the Albuquerque Branch, while the officers of that which was formed last night at Santa Fe are: Mr. W. W. Griffin, Pres. Mr. Pedro Sanchez, Vice Pres. Mr. William M. Berger, Rec. Sec'y, Rev. E. W. McNary, Cor. Sec'y. These gentlemen and others on the Executive Committee, represent the leading men of Santa Fe. But I have said far more than I intended to, and will close with the hope that you have a chance to talk of these matters with you on my approaching return to the East. I remain as ever, my dear General, with regards to all at Hampton, most sincerely yours,

HERBERT WELSH.

UNITED STATES INDIAN SERVICE,  
Crow Creek Agency, June 6th, 1884.

GENERAL S. C. ARMSTRONG,

Dear Sir: I found Major Swan at Pierre on my way here from Cheyenne Agency and he promised to give employment to Gabe and Larabee. Felix Benoit is Agency Interpreter, Joseph Wahn is a Scout, Henry Fisherman and Agenogewea are both working on farms belonging to their people. All are well spoken of. Here at Lower Brule all the Hampton boys are well employed. The tone of the Indians at this Agency is progressive, and I am convinced that it is the best point to concentrate on. The improvement in the last year is very marked and encouraging. The Indians will probably have, if the season is good, about ten thousand bushels of wheat. Major Gasmann is thinking about a mill, and would like to have two of the boys taught how to run a mill. You haven't that industry at Hampton; but I think that they might arrange to grind the corn meal without much additional expense for machinery. These Indians will in a few years raise a great deal of wheat and probably most of the industries will be carried on here. The Major expects to work the Indians into sheep raising. They now have a goodly number of cattle, hogs, chickens and horses, &c.

Boys who have written or brought foolish stories about Hampton are hurting themselves more than Hampton and are very foolish. Their people here are very earnest in their wish that their children should do well and work well and are not pleased to listen to foolish tales. The good boys have written good letters and have given their people good talks after they returned home and the Indians say the others *live* and are *dead* and that is the reason they speak ill of Hampton. Medicine Bull, Jr., spoke in council the other day and has made a marked impression on the Brule Indians in favor of school work and farming. Even John Archambeau has gone to work and bids fair to redeem his record. I am greatly pleased with the tone here, though Major Gasmann says that he feels that he has accomplished very little, only made a good start. It is certainly a good start. There is so much to be accomplished in this work that I do not wonder at his feeling little has been done. John Williamson, the best man in all the mission work, who has spent his life in the work expresses the same feeling.

I assure you that my hearty sympathy and interest will always be yours, and I shall always hope for the success of your labors. With best wishes and kind regards to all,

Yours truly,

Geo. LeRoy Brown,  
1st Lieut. 11 U. S. Infy.

#### Gumption.

If called upon to express in one word the essential qualifications for success in rural industry, I would unhesitatingly use the "old English" word "gumption."

A farmer may have energy, intelligence and means, but if he lacks gumption he will fail of success. Gumption is not only direct, but what to farm—what products bring the largest returns from the labor and money expended thereon.

Gumption discourages going on increasing from year to year an over-supply of any commodity, when others are in demand which pay better and which could be as readily and more profitably produced.

Gumption never risks all on one crop, but diversifies; and after making the farm as near self-sustaining as possible as regards home needs, then directs attention to what is wanted and can be best and most profitably produced on the farm, considering adaptability of soil, capacity and experience in management.

It is the province of gumption to select the best tools and implements and take proper care of them; to keep the best stock and teams and to properly care for them; to feed and improve the soil, beautify the homestead and surroundings, add to every convenience necessary; to prepare for work and execute at the proper time, using system in the management and adapting it to favorable or unfavorable conditions of seasons and circumstances, spending the most of the first and wrenching success from the other.

This is gumption, a faculty allied to common-sense and greatly improved by cultivation.

Gumption is by no means confined to the rural population, but is potent in other callings and occupations. When the writer was a pupil in college, he had for associates two young men, both of more than ordinary intelligence and capacity. One called himself "a genius," and stood fairly well in his classes, without much study; while the other, a quiet, modest youth, said "I have to study closely and long on my lessons to prepare for recitation." These two were often pitted against each other in debate in the literary society, and it was the verdict of that society that the "genius" often got the benefit of his opponent in discussion. But the former went to the grave a wreck, leaving no impress of his genius upon the age in which he lived, while the latter is now a distinguished Bishop of the church, of humble piety, great learning and commanding influence. One had genius, the other had gumption.—*The Rural Messenger*.

Old Point Comfort Hotel, Virginia.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth.

The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material factors being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 41° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious taste of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

For further information address by mail or telegraph.

H. PHOEBUS, Prop.

#### National School Supply Bureau.

Des Moines, Wis., July 31, 1883.

National School Supply Bureau: Last April, being in charge of a large public school, but desiring a position in a more quiet and less responsible position, I resigned my position. During the first part of the present month I received notice from you of a vacancy in such a place as I desired. Putting myself in communication with the party concerned, I received the appointment. I am well satisfied with the management of the Bureau, and feel sure that it fills a useful and necessary place in our school economy. You are at liberty to use my name if you wish.

Respectfully,

EDWARD O. FISKE.

Headmaster Markham Acad., Milwaukee, Wis.

For application-form and circular, address:

Nat'l School Supply Bureau, Chicago, Ill.

N. B. We want all kinds of Teachers for Schools and Families. Good pay to Agents and Private Correspondents.

DEMOISEL'S MONTHLY. The cheapest and best. Six elegant pictures—Three in oil and three fine steel engravings—will be sent with a specimen copy of DEMOISEL'S MONTHLY MAGAZINE for 50 cents, post-free, during the months of March and April, or the six pictures will be sent with a year's subscription at \$2.00. Do not fail to see the splendid January and February numbers of this model magazine. Address W. JENNINGS DEMOISEL, East 4th St., New York.

JOB WORK, of every description, either Printing or Binding, neatly and cheaply executed at the Normal School Printing Office. Estimates made. Samples sent to any address.

THE HATCHET is the only humor paper published in the Capital. It makes a feature of showing up Public Men as they really are. It contains a large cartoon each week on Public Affairs and is filled with illustrated comic articles besides. It is the largest, handsomest, best, and cheapest funny paper in the country. Terms, \$2.00 a year in advance. To five or more names sent by one party, \$2 each a year. Samples copies sent to any address on application. Wanted in every town. Big commissions.

[From Harper's Weekly. Copyright, 1883, by Harper & Brothers.]

## A Ride on the New Railroad and Into the Shenandoah Valley.

NO. 2.

BY ORRA L'ENGHORNE.

The scenery at Balcony Falls, where North River pours into the James about halfway between Lynchburg and Lexington, is wild and beautiful, and made me long to stay and enjoy it.

A monument high up on the mountain side attracted attention from the passengers, and many surmises were ventured, as to its history, until some one acquainted with the locality told a touching incident connected with it. It seems that many years ago, an old white man fell into the river at this point where the current is very strong, and was struggling vainly with the flood, when a negro boy seeing the danger of the drowning man sprang into the surging stream and only succeeded in saving the white man's life with the loss of his own.

The story excited much interest throughout the country, great sympathy was felt for the fate of the generous youth, and at the suggestion of Mr. C. C. Baldwin, then editor of the Lexington Gazette, funds were collected and a monument erected on the cliff over hanging the spot where the noble deed was done.

My visit to the valley was made in what some one has called the season for Alum Water and Alma Mater and the air was full of excursions to the springs and school commencements. After family affairs had been fully discussed, my sisters had much to tell me of the Exhibition at the Colored School, which had attracted general attention in the community, and was a signal triumph for the faithful teachers over the prejudice and proscription with which they had long contended.

The principal of the Colored schools in Harrisonburg is Miss Bragg and her assistants are Miss Evans and Lucy Simins, who is well known at Hampton. Miss Bragg is a very intelligent and cultivated young lady, with good knowledge of music and genuine enthusiasm in her profession. She is a graduate of Rev. Giles Cook's school in Petersburg; Miss Evans is a native of Michigan and a sister of a promising young minister who has lately gone as a missionary to Africa. Miss Simins was born a slave in the country where she is now a highly valued teacher, and is a Hampton graduate.

One or two white families in the town, who had long been interested in Lucy's school, and had frequently attended her examinations, were anxious that the closing exercises of this year should take place in the Town Hall, a building of considerable size in a central location, instead of in the Colored school house, situated in the suburbs of the village. An application to the trustees for the use of the city hall, though warmly urged by the constant friends of the school, was positively refused and the disappointed teachers who had taken great pains to arrange an interesting programme for the occasion were compelled to hold their exhibition in the school house. Their steadfast friends succeeded, however, in inducing some of the prominent white citizens, who were perhaps still laboring under the impression that "niggers could not learn," and efforts to educate them were thrown away, to attend the exercises. Quite a large audience constituted as, the fluent reporter always remarks "an array of beauty and intelligence" witnessed the exhibition and so great was the surprise, so genuine the admiration among the white spectators that the exercises were repeated a few days later by general request, and this time there was no difficulty whatever about using the town hall.

The faithful teachers had the satisfaction of seeing the large hall filled to its utmost capacity with white and colored citizens and the praise bestowed upon the children and their instructors after the songs and recitations were ended, was really unbounded. Everything passed off harmoniously and the occasion was doubtless the means of making a wide breach in the stubborn walls of prejudice between the races.

The editor of the Democratic paper gave glowing accounts of the affair in his next issue, complimenting the teachers in no measured terms, and expressing with much kindness earnest hopes of the progress of the colored people among us.

It has been well said by one of the early masters of English Literature that "Learning driveth out the ignorance, prejudice and barbarism of men's minds."

The present Superintendent of schools for Rockingham is a worthy citizen of the county, who received his appointment, when the Readjuster clamor was in the ascendancy. A great deal of abuse has been lavished upon him by the opposition press, the cause of which when sifted down, proved to be no greater offense than his having named a colored minister, a missionary to Africa, and brother of one of the excellent teachers hitherto mentioned, when a guest at his house took a seat at his table.

Endless tirades were uttered, and columns of vituperation, printed, doubtless annoying and unpleasant at the time, but in the end the agitation of the subject probably benefited the colored people.

The county Superintendent is an estimable citizen and good officer, having a large and respectable family and church connection. When his conduct towards a visitor who sent him his own roof was attacked, his friends felt called upon to defend him, and some persons were found bold enough to declare that even in Virginia "a man's house is his castle" and has a right to ask whom he pleases to sit at his table.

To the dispassionate observer, the fact that Mr. Trunkhouser was willing to receive his colored brother, in the name of Him who sent him, and honor him for his works sake, knowing full well the storm of prejudice that would thus be aroused, is excellent reason for respect and esteem.

We have just received the annual report of Miss Austin's Industrial School, Knoxville, Tenn., and find it even more interesting than usual. The extracts which we make from it, require no comment, but we are very glad to express once again our cordial sympathy with Miss Austin's work.

The "Departments" of which she speaks are as follows: Sewing School, Cooking Class, Little Housekeeper's Class, and Training Shop in Carpentry with a total enrollment of 424, and an average daily attendance of 77.

A Sunday School of 422 children and adults.

It gives me pleasure to send you my report for the session of 1883-84.

Every year shows better work done, more systematic arrangement, and an increasing interest on the part of the parents of the scholars and the friends of the school.

Four years ago I said that our schools would soon be self-supporting. My mistake was in looking for that result too speedily. I still hope for it, and shall make every effort to that end consistent with thorough instruction. The work is still a great problem; the public is to be converted, school boards to realize the necessity for it, parents are to see the results, the children are to feel that this is as important as any other school work, and teachers themselves are to be trained into correct ideas and practical methods. Any one with this load to carry needs patience, hope and great faith. In my case the difficulty is increased by that uncertainty in money matters which belongs to an independent effort, unconnected with any organization pledged to its support. To be able to show progress and success in these circumstances proves that we have good material, reliable friends, a solid foundation, and something worthy of your continued interest.

We have in all our departments different children each day in the week, a very bad arrangement which is forced upon us by lack of accommodation for our scholars.

The cooking class has been very experimental. We had only one lesson in the week and attempted nothing but soup and bread, which was given to the children or to some needy persons. Expenditure, \$4.88.

During the holidays we gave a dinner to a party of twenty-five, each guest paying ten cents, which defrayed the entire expense. The dinner was in three courses, cooked and served entirely by the members of the class, and consisted of beef soup, veal croquettes, Irish stew, potatoes, cold slaw, macaroni and cheese, rice pudding, apple dumplings, coffee and bread; enough for every one.

I am indebted for this idea to the New Century Cooking School, of Philadelphia, and I am happy to testify that a ten-cent dinner is a feasible thing.

The city school has enrolled six hundred children. The lower grades are so overcrowded that the children are divided, half attending school in the morning and half in the afternoon. This arrangement gives me the opportunity of taking them into our industrial classes the half day they are out of school.

When we built the Austin School House, we thought it large enough to accommodate a growing school for years to come. Two years after it was built, I was obliged to give up the room reserved for industrial purposes, that classes might recite there a part of each day, and besides I needed more room for a kitchen and a carpenter shop.

With the consent of the Board of Education, and with money given by them and by citizens of Knoxville, I put up a frame building on the school ground. This is no longer large enough to accommodate us; each boy going into the shop only once a week for half a day, and each boy going into the shop only once in two weeks. If we are to

teach anything thoroughly the children should come to school every day and make it a business as well as a pleasure.

We ought to have a large brick building, with shops for carpentry, cobbling, tin work or whatever industry we may be able to introduce; with rooms for cooking, sewing and house keeping classes; with a large room for library, reading room, and meetings of the Young Men's Christian Association, which has just been formed among the colored people. This room should be open every day and evening, and made as far as possible a place of resort for them. There should be also an assembly room for lectures, concerts and for our Sunday Schools and it would be very desirable to have a roller rink in the basement.

We have tried to have a good deal of this in the public school house, but the difficulties are numerous. The house is overcrowded and desks are in every room. The appliances for school work are injured and often destroyed by the way of school discipline, and there is trouble in keeping rooms in order which are used both day and night for so many different purposes.

I had an opportunity of buying a lot of land adjoining my own, at a cost of five hundred dollars, and having four hundred dollars in hand, thought it best to secure it, and should we get the desired building we will need the money, which can be bought at the same price. There are great advantages in having our school away from the crowded part of the city in which the property owned largely by the colored people and out of the way of saloons. A brick building is desirable, as it is more durable, and as brick-making is one of the industries of the place, it is not very much more expensive than a wooden building. The property will be conveyed by deed to trustees, who will hold it in trust for the purposes described in this report.

I may look greedily in me to ask my friends for another building, but it is not my fault that the seed you have sown has increased so rapidly.

In 1876 you gave me six hundred dollars for my first little school house; it was afterward sold for what it cost, and the money was used in the school. In 1880 you gave six thousand five hundred dollars for the Austin Building.

In 1882 you gave nine hundred and seventy-five dollars for my own comfortable little house; in that year also the Knoxville people gave four hundred and twenty-four dollars for the frame building we are using, and which the Board of Education will probably buy again for school uses.

In 1884-'85, you will give six thousand dollars for the John F. Slater Training School?

The colored people are showing their interest in this project, and are willing to give what aid they can to further it. It is not a matter of great interest to the people of Knoxville, and I can not say what any of them will do, but I think I can depend on the Board of Education and some others who have already shown their interest in our schools. After all I must look to the North, and to those who are interested in this people, in me, and in every good work. Therefore I appeal to you; the hope for our people is in this manual training, and having started a school which every year is nearer to being on a paying foundation, I must look to you to sustain it till it can stand alone.

It is extra money I ask for the building, for regular expenses must go on as usual. It costs me about two thousand dollars a year to carry on this work. In six weeks our schools will reopen; one teacher's salary will be paid by the Slater Fund—we have one hundred and twenty-one dollars in the treasury; I have had to engage two teachers for the next term, and I ask myself with a considerable anxiety, where is the money to pay their salaries? I shall work hard to make these schools self-supporting, but at present I must beg for your continued contributions. There is an old saying "he gives twice who gives promptly," and with the year's work almost at hand, I urge my friends to take off from me the anxious burden of its support.

For the new building there is hard work to be done; we are not idly depending on the North and I never encourage the colored people to feel that they are to be carried all their days. Some of them are doing what they can, feeling the necessity for their children, but what is our responsibility for those who have no one, not even a father or mother, to care for their temporal or spiritual welfare? I believe that such a building would be a great help and an untold blessing to the little children, and to the older ones who have no place to spend their evenings and no respectable place of amusement open to them. If any one will give for this purpose without special solicitation I shall be most that kful.

I am often asked by children and Sewing Societies, What can we do to help you?

Work cut and basted for sewing school is a great help; pictures for object lessons, or pasted on muslin and sewed into books; old copies of St. Nicholas, Wide Awake, and such magazines are most welcome. Just now money in small sums or large for our present work is our greatest want.

My address is No. 88, Patton St., Knoxville, Tenn., and money may always be sent to me there. Also, to Miss I. E. Gray, No. 20 Mt. Vernon St., Boston, Mass., or to Mrs. C. D. Austin, No. 2719, Wabash Avenue, Chicago, or to Mr. James S. Cox, Room 63, Trinity Building, New York.

EMILY L. AUSTIN.  
Knoxville, Tenn., July 15th, 1884.

The following extract from a Chattanooga paper has been sent us, with the suggestion that the readers of the *Southern Workman*, who already know something of Mrs. Steele and her work, may like to know more. While the bitterness of the old days in the South is gradually giving away to a juster feeling yet there are still many and peculiar difficulties to be encountered, so that any evidence of appreciation is encouraging to those who like Mrs. Steele know what it is to labor with small hope of earthly reward.

In this practical age, when the world seems absorbed in selfish ambition, there is a never ending strife between man—a constant struggle for ascendancy. It seems hard to realize that there are persons who for self, lose consciousness of their own needs, and devote a noble and self sacrificing life to the elevation of those far below them in the social scale, denying themselves every comfort and braving scoldings, sneers and discouragements.

In our midst to-day there is a noble woman who has undertaken a stupendous work, which entitles her to the veneration and esteem of every one. The work she has before her is the amelioration and the education of the hundreds of colored children who are in our city, many of whom were orphaned by small-pox and left dependent on the cold charities of the world, without friends or relative.

The inspiration of this charity came to Mrs. A. S. Steel, a lady living in Massachusetts, and through her influence the American Missionary Association interested itself in the work and she came to this city to devote her personal attention to its prosecution. Her first step was to thoroughly familiarize herself with the number of needy children, their condition and other details. Her investigation developed a sad state of facts. In our midst she discovered hundreds of children growing up in the most besetted ignorance, surrounded by the most depraved influences, without the means of sustenance and living by what they can beg or steal. It would be impossible to exaggerate the picture. She then addressed a circular to friends in the North, relating the facts and asked aid to educate these unfortunate creatures. Her appeals met with a quick response and in a few weeks she had received sufficient to purchase twenty-five scholarships in the schools at Nashville, Atlanta and Jackson, Miss., and selected the most deserving children as the beneficiaries. She continued her work and yesterday secured another sum sufficient to educate five more.

County Judge McRee is aiding her in every possible way in her noble work. He furnishes free transportation for all the children for whom he provides scholarships, and does everything else to encourage and advance her work. She is very much pleased with her success so far, and thinks she will procure at least one hundred scholarships this year.

### A COLORED ORPHAN'S HOME.

Her work in behalf of the older children is but one branch. She is now inaugurating a movement which will be even more reaching in its benefits. A few days since she purchased the Morford place, a tract of land on an eminence in Tadeus town 100 feet square, and will erect there a home for colored children. It will accommodate thirty inmates. Children under 12 years of age will be chosen by the County Commissioners on her recommendation, and will remain there until 12 years of age, when they can be sent to the colleges. The county will contribute \$5 per month for each inmate, as is done for the Orphans Home of the Woman's Christian Association, and will encourage the work by every means possible.

The effect of this charity cannot be overrated, and we bid it God-speed and bless the self sacrificing woman who has inaugurated it.

# SOUTHERN WORKMAN,

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October four months.)

Printed on the Normal School Steam Press by students trained in the office.

S. C. ARMSTRONG,  
H. W. LUDLOW,

1-2 "	5 00	13 50	23 00	40 00
1 "	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

The Workman office will be glad to give estimates for printing periodicals, pamphlets or books of all sorts. Special attention given to Society and Association Reports. Prices always reasonable and made with a due regard to material and workmanship required. Profits furnished without extra charge. Expressage paid on finished work. Address all communications or orders.

Normal School Press, Hampton, Va.

Subscribers are reminded that the "Workman" is reduced to eight pages during the next four months, resuming, in November, the twelve page form.

Entered at the Post Office at Hampton, Va., as second class matter.

The unusual preponderance of Indian matter in our present number has been made necessary by a combination of circumstances, and we trust will not be unacceptable to our readers. The increase in the number of our Indian students has not altered their relations to the school, as there has been a corresponding increase in the colored department, but the pressure of their need is at times so great that it is difficult not to give it what may seem an undue prominence. The Negro has in many respects a vast advantage over the Indian, and the contrast between the future of the two races, even should the latter be given every possible chance, is so overwhelmingly in favor of the strong sinews and sound lungs of the Negro, that in common fairness he should hold out a helping hand to his less fortunate brother, who has, even more unjustly than he, been sacrificed to the interests of the white man.

WE WILL give in our letters from the different agencies a more detailed account of the condition of our western field. A brief statement as to Indian children who have returned to the West and those we brought with us to school may be of interest to our readers.

Return 32 Indian youth to their homes in the West, and collect and escort the 35 children to be brought from Fort Berthold, Standing Rock, Cheyenne River, Crow Creek, Lower Brule and Yankton Agencies to Hampton was the order which came to us from Washington.

## FORT BERTHOLD.

Of the children to be returned, three come from Fort Berthold, Sarah and Mary Walker and Henry Karunach. All three of these were placed in the Fort Stevenson school which is on the Fort Berthold Reservation. Sarah and

Mary will help in the school room, and Karunach will mend shoes for the boys and girls. The new agent Maj. Gifford, and the missionary Rev. Mr. Hall, kindly interested themselves in securing places for the children. Mr. Hall took the two girls into his house so that they might not spend a night in the camp and Karunach found a place with the engineer at the agency. The next morning the school wagon conveyed them to their new field of labor.

Of those who had returned from Hampton to Fort Berthold in former years, Tom Smith had charge of the agency stables and was doing well; Kawhat and White Breast had put in their crops and had gone down to Bismark to spend a few days. They dressed in white men's clothes but had had some relapses into the old life. Daluska I found in the camp in his Indian clothes and long hair. His health was very poor and the current was too strong for him. He promised better things. The Agent had already looked him up and tried to help him. Ahuka and Laughing Face worked as long as they could but their strength gave out and they died trying to walk the white man's road. Very pathetic was the account which the half breed interpreter gave me of their struggles. Good reports came from Josephine in her married life at Fort Buford.

## STANDING ROCK.

We returned four girls to Standing Rock, Rosa Bear Face, Frances White Cow, Fidelia Walking Medicine, and Josie McCarthy. I found that the excellent agent Maj. McLaughlin had very definite plans for each one of them. He evidently believes in establishing as many good Christian homes on the reservation as possible. Of his excellent management of the reservation, of his plans for new schools and the good work done on the farm school and in the sisters' school at the agency, it will be our pleasure to speak in another place. We left Rosa with all the work she could do as seamstress and orders ahead in the families at the fort and on the agency. Frances and Fidelia were fortunate in going to live with Mrs. McLaughlin although a number of places were open to them.

Josie McCarthy was spending a few days with her mother who had a good home on Grand river. Both she and her mother promised that vacation from work should last only two weeks and then she should go back to the sisters' school.

Of the old Hampton boys we saw John Pleets with his neat intelligent wife in their clean home with their pretty babe and Unakiampa who has married into a royal family, having become Sitting Bull's son-in-law. John has charge of the stables and Unakiampa makes doors and windows for the log houses that are going up all over the reservation.

Of the 12 we brought from Standing Rock, Shield is an Uncapapa Sioux from the Grand River camp, a full blood and one of the most promising of the boys in Mr. Riggs' school there.

Bleheca or Industrious comes from the same school. He is the son of a chief and is a full blood Blackfoot Sioux. Zintkalawaxte or Pretty Bird comes from the same camp on the Grand River and is an Uncapapa Sioux, full blood. Five other girls came with us from the camp but this girl was the only one who held out in her determination to come.

Wicakutela or Single Feather is a Blackfoot Sioux, a full blood. All these children come from the late hostile bands of Indians who have been only a short time on the reservation.

Wanampa or Joseph Arrow is an Uncapapa Sioux, a promising boy of 17 years. We refused more young boys in order to give a chance to those who having had some little opportunity for study or work on the reservation were anxious for further education.

Masincala or Charles Rabbit is a strong looking boy of 19 years. He had worked in the blacksmith shop and was a paid apprentice on the agency. He had made a good record.

Pamani or Frank Hooting Walking had been at Hampton before but had married a nice looking wife who was very anxious to return. So we brought with us both Frank and his wife Celeste Pamani, both of them being Yanktonnais Sioux.

Rosa Pleets was another of the old Hampton students who was anxious to return. She had been living with Rev. Mr. Swift at St. Stephen's mission and felt anxious to learn more. She had made a good record since her return from school.

Kokat Wosica or Jerome Makes-Trouble-Beforehand, the son of the Lieutenant of Police had been on the Farm school and had done well.

Cihila or Benedict is another of the boys who had been at the Farm school. Maj. McLaughlin placed much confidence in him and was glad to have him come. He is a Blackfoot Sioux and has a fair knowledge of English. Our quota from Standing Rock seem to give promise of doing well and so long as Maj. McLaughlin remains as agent, our returned students will have in him a wise and kind friend.

## CHEYENNE RIVER AGENCY.

We returned to this agency two boys who belong on Peoria Bottom where Mr. Riggs has his school. Wm. Larabee goes on to the farm where he has good prospects of success and Baptist Gabe is to be interpreter. They both of them came from a civilized community of Indians where they will be surrounded by good influences. Of the old students I saw two, Felix Benoit was acting as interpreter and doing well. Louis Agenouweba had been on a farm and asked to come back. Besides Louis we brought from Cheyenne River seven boys. Five of these come from the government school under the care of the agent's wife, Mrs. Swan. These are, Harry Woodface, Lewis Rattling Rib, Frank Door, Albert Cedar Boy and Arthur Crow Boy. The two others came from Mr. Riggs' school at Peoria Bottom, Yuxpu and Spotted Eyes.

## CROW CREEK.

To Crow Creek we took back only two boys: John Archambeau and Santee or Single Feather. I left John working away with a will in the carpenter shop. Santee was not strong enough to work.

Few white boys have as good chances as are offered to returned students from Hampton to Crow Creek. We found the condition and tone of the Indians at Crow Creek of the best; the interest and hard work of Maj. Gasmann and his good wife is shown on every side. We shall have an opportunity to speak of the comfortable homes of the Indians there, as well as their fine crops and general progress, in our letter from this point. We brought back from there twelve Indian youth, eight boys and four girls. They were all Lower Yanktonnais Sioux. Most of the boys had worked in the shops and had made a good record there. Two of these, Andrew Fox and Samuel Fourstar had been at Hampton before. Andrew was acting as interpreter on one of the steam boats running up and down the river, buying wood of the Indians along the shore. Samuel had been in the carpenter shop. Chas. Le Clair and Chas. Mc Bride are half breeds and can speak English very well. Of the other boys First Hair, Pretty Hand, Alfred Crow, and His Blue Pipe all had been in the shops except the last named. The names of the girls from this agency are, Owl Woman, Whip, Sacred Iron, and Beg-From-Her. The average age of the youth from Crow Creek was 19 years but they had all had some opportunities on the reservation.

## LOWER BRULE.

Our largest delegation went to Lower Brule. Of these Bear Bird immediately entered the government school as instructor in farming and drill master.

When we came down the river we saw his potatoes which did him and his boys credit and his row of Indian youngsters marched into church with great precision.

Peter Brazo found plenty of work as a painter and was to be employed in the shop in that capacity.

Medicine Bull was going into the carpenter shop on the agency. He was helping his father on his farm down at the White River Camp. We heard good things of him and of how strong a stand he had taken for better ways.

Philip and Katie Councilor with little Charlie had settled down in a comfortable house at the agency and the Hampton boys who work in the shops are all to board with them.

Andrew Roberts had come and tried to work but his eyes were too bad and he had to give it up.

Looking Eagle, Maggie Bull Head and Sarah White Cow were at their homes not well enough to do any work.

We left little Jamie Rencontre hoeing the minister's potatoes. He had given his father some sage advice in regard to raising clover in Dakota as they did in Hampton, telling him that it was very good for the cows.

Frank Yellow Bird we found hard at work in his house and saw his thirty acres of wheat and his comfortable home.

Zedo Rencontre was also working his farm. The prospects for a good crop were excellent. We brought back only one boy from Lower Brule. He came from the White River Camp where the Indians are not favorable to education.

The return of Maj. Gregory to Lower Brule is a fortunate thing for the Indians.

Two of our party went to the Yankton Agency: Chas. Picotte who expects to return in the Fall and Maggie Goulet.

The three Apache Indians left us for the south west at Grafton, W. Va. under the care of Robert McIntosh, the party consisting of Robert, Wm. Roberts and Stajo. Juan Garfield and Harry Azul left us at the same place for the Pima Agency. John King took charge of the girls from the Sac & Fox Agency, Hattie Myles, Nellie Keokuk and Addie King.

Of the thirty two new comers, there are excellent reports from the shops and the school rooms. The one who has control of those that work on the farm says: "It is the best lot of Indians we have ever had." There has been some sickness among them but the Doctor reports that in many cases it is home sickness.

In another column of our present issue will be found an obituary notice of a man whose life offers a really fine example of what can be accomplished by straightforward common sense and steady industry. Mr. Porter, of whom we speak, was not distinguished for brilliant endowments, nor had he had special advantages of education, but was nevertheless a man of whom his people have reason to be proud. His soundness of judgment and honesty of purpose gave him, early in life, a powerful influence among them, which he never forfeited by word or deed, and the record which he leaves behind him is that of a man who deserved and won the thorough confidence of all who knew him. The generation of colored men to which he belonged produced some individuals who were made strong by the bitterness of the struggle which they undertook, and who stand as beacons for the younger generation, of their race. In spite of changed conditions, the demand for such men as Mr. Porter, the need for such characters as his, the value of such influence as he wielded, is just as great now as it was thirty years ago. His life was quiet, his ambitions thoroughly practical, and without push or protestation, he made for himself a most enviable position. Above all questions of pecuniary success, social influence or political power, stands the fact that he made himself trusted and respected by men of both races, and in so doing did much to advance the interests of the race to which he belonged. For, one such man, whose life is known to many men, does more to prove the possibilities of the Negro, than all the arguments that ever were printed.

The following pleasant letter from Gen. Marshall is meant to include all his "Southern Workman" friends, and will give them a glimpse, at least, of his life under its new surroundings. It is needless to say there is always room in our columns for communications from him.

Kendall Green, Boston, Mass., Aug. 3, 1884.

I cannot yet sit down to write to any of our Hampton friends without a sensation akin to *homesickness*; and I have taken up my "style" more than once to write to you, but have dropped it again for that reason.

We both fully realize how great is our own personal loss in leaving so many warm friends, and in relinquishing our share in the grand work in which it has been our privilege to be engaged for so many years.

The many kind expressions of regret at our departure which have come to us from all sides, are inexpressibly grateful to us, though they but deepen our own sense of loss at parting from such friends. We will console ourselves however with the hope that we shall be permitted to make frequent visits to dear old Hampton as long as we continue in the South.

If we can be contented anywhere away from our Hampton friends, we surely shall be in this lovely, quiet country place, where we have set up our Larch and Penates. The air is pure, the location beautiful, the clime which overshadow us are magnificent, and we are among the familiar scenes of my childhood in my mother's native town, where her memory is revered by all. We attend the village church, of which my grandfather and great grandfather were pastor till their deaths.

Into these quiet scenes we have brought a pocket edition of Hampton. Five Hampton students, three of them Seniors, and all of them willing workers in their several spheres of duty, are with us, and are the wonder and admiration of the juvenile portion of this little community, who listen to the plantation music of this quintette, and to Sterling James' fantasias on the accordion, and Harris' Barrett's stories, as they sit on the steps after their day's work is over, with open-eyed wonder.

The old country farm house of my uncle in which we have taken up our abode, has been made comfortable and convenient by a wide hall running through its centre, the stairs, mantel and wainscoting of which were made for me at the Huntington Industrial Works, of Southern wood, and are much admired by visitors. Many of whom the knowledge that such work can be done at Hampton school is a revelation. My carriage and cart harnesses made at the Indian work shop, compare well with similar work done here. In the shed stands a neat and well made tip-cart, on whose blue sides are painted "Hampton Institute," made at the Farm Wheelwright Shop, which my carpenter, whose winter work is cart making, says cannot be made so well here for anything like its cost, including freight from Hampton.

Three pure Jersey cows, two of them born on the School Farm and all from Hampton are much admired, and furnish us with rich milk, good butter and that most delicious and healthful summer drink, pure buttermilk.

Last, but not least, comes "Kate," the gentle but spirited five-year-old mare born on the Hemenway Farm, and educated by that thorough trainer and lover of horses, Chas. Vanison. She never saw a hill or a rock, or running water or a horse car and but once or twice a locomotive before she came to Massachusetts last month, but she is getting accustomed to all these wonderful sights and sounds, except that of a little long eared donkey in a child's yellow wagon, which she can't abide, and which by her actions she evidently takes to be the evil one herself, and like the little Butterflies at sight of Santa Claus, thinks he is surely after her, and she doesn't mean he shall get her. The poor donkey is amazed at the terror he excites, but having no canny for Kate, as Santa Claus had for the Butterflies, is not likely to make friends with her ladyship.

The Presidential Campaign bids fair to be one of political summer. Many of the old line republicans and original anti-slavery men, consider Blaine and Logan as well worthy of the nomination, and will either withhold their votes, or give them to the democratic candidate, on account of the good record he has made as Governor of New York. Some will vote for St. John, the prohibition candidate.

The Blaine men claim that this defection of the "Dutes and Pharisees" as they contemptuously term these advocates of civil service reform, will be more than made up by accessions from the Irish voters, who have always heretofore been solid for the "Democratic Ticket," but many of whom have now proclaimed their intention to vote for Blaine, under the idea, which has been very industriously circulated among them, that Blaine if elected, will proceed forthwith to

"twist the tail of the British Lion" or in other words, get up a war with England, a consummation most devoutly wished for by every exiled son of Erin. It is not a hopeful sign when the great political parties have to resort to such buncombe to attract voters to their sides.

J. F. B. MARSHALL.

Our attention has been called to an article in a late number of the *Overland Monthly* (San Francisco) which purports to be a description of the working of a curious piece of New Zealand legislation known as the "Law of Muru."

The law as will presently appear, is unmistakable in its practical working, yet it is difficult to define abstractly. In outline, it may be said to be a vigorous and ferocious sort of "blazing," with robbery superadded. Sometimes it is the robbery alone without the personal violence, but frequently, perhaps usually, both are combined. The law is commonly applied to an individual by the village of which he is a resident, that is, by his own relatives and friends, but sometimes one village will muru another village or one tribe another entire tribe. The aggressors appropriate all the movable property of the person or community thus murdered and divide it equitably among themselves. Thenceforth, the defendant becomes the guest of the assailants. He is received into the community, and is supported with as much comfort and honor as any member of it until his own industry, or the muru of somebody else, restores his material prosperity.

The recipient of a muru, so far from considering it an injury or a disgrace, regards it as a great privilege and distinction. He looks upon it very much as a poor clergyman looks upon a donation party. Both visitations are substantially alike in their operation, yet both indicate the polite attention of the neighbors, and both bring some measure of benefit in their train. In both instances the zealous friends are "cruel only to be kind."

The more extensive and complete the plundering and destruction are, especially if they are accompanied by a beating which renders the recipients almost senseless, the better he likes the muru, for it is then a "great muru," and he is proud that, in the opinion of his fellow citizens, he is worthy of such elaborate preparations and such conclusive results. In other words, he regards himself as a man of a good deal of consequence when his neighbors think it worth while to take so much trouble on his account. It is a curious paradox, which is in keeping with many contradictions in the Maori nature, that the greater the abuse to which the victim is subjected, the greater is his gratification.

The personal castigation is occasionally omitted, but the plundering part of the muru is rarely varied. It always consists in taking all the property a man has, so the only variation possible would arise from the differing nature and extent of the possessions of different individuals. The monotony of wholesale robbery is often relieved, however, by burning the victim's house and outbuildings, and destroying his fences and growing crops. This is, of course, an additional honor.

The word *muru* literally means "plunder," "robbery"; or, to speak more accurately, the proceedings indicated by those terms have been called in recent times *muru*. This use of the word, however, is one of the "modern improvements" resulting from civilization. The ancient meaning of *muru*, and its technical meaning at the present day, is a lawful and honest one. When used in that sense, it does not convey any disagreeable suggestions to the native mind. The spoliation by virtue of it does not strike the Maori, as at all akin to theft.

The principal reason for this is, that the people are communists. All property, though often accumulated by great individual labor, and apparently held by distinct individual tenure, is really at the service of the community whenever needed. For instance, all the inhabitants of a village eat together, and each contributes to supply the common larder. They thus enjoy a perpetual picnic. So, in case of war, or the entertainment of strangers, or any other event which taxes the resources of the tribe, each man bears his share of the burden. Since all property actually belongs to the community, and is only held in trust by individuals for the common benefit, therefore, whenever the community sees fit to muru a man, it is simply relieving him of his trust, and resuming the control of its own estate. It is a practical and effectual method of obtaining an accounting. By another contradiction, however, though all property is so held in trust, a native chooses to sell a pig, or a horse, or anything else that he may have, he can do so, and use the money for his own purposes, without being accountable to anybody. This principle may have been adopted in mercy, or it may have resulted from policy. If the

savage nature is at all like civilized nature the aborigines found out long ago what a trial it is to a trustee to refrain from appropriating the trust estate to his own use, and how nearly impossible it is to prevent such appropriation. Perhaps they cheerfully made some concession to his feelings, or, perhaps, making a virtue of necessity, they permitted him to use a part of the estate and remain with them, rather than have him take the whole of it and emigrate.

It is impossible for us, of course, to attempt anything like an analysis of the above singular state of affairs, singular, it strikes us, even for New Zealand, but whether the author owes his material chiefly to history, or has drawn in part upon his own imagination, the result remains that he has produced a clever bit of sarcasm upon communistic theories, for as he says in his closing sentence "The only thing in civilized communities which at all resembles the 'Law of Muru,' is Mr. Henry George's theory of the nationalization of land."

DIED—On Friday, Aug. 13th, at her residence in Philadelphia, Mary Anna Longstreth, in the seventy-fifth year of her age.

There are few who have such a claim upon the love and respect of the teachers and students of Hampton, as had the dear friend whose beautiful life has just come to its close. Ceaseless in her beneficence, thoughtful for all, from the least to the greatest, full of spontaneous kindness, while remarkable as well, for her capacity for organized work, she has left for all who knew her an example which is full of inspiration. We hope, later on, to be able to give to our readers a sketch of her exceptionally busy and useful life; as yet we can do no more than pay a loving tribute to her memory. On the evening of the day upon which the news of her death reached Hampton, the students, as they assembled for prayers in the Virginia Hall Chapel where she had so often sat with us, were informed in a few earnest words by the Rev. Mr. Gravatt, acting Chaplain, of our common loss. Early on the following day the portrait of Miss Longstreth, which has hung for several years in the Teachers' Parlor, was draped by loving hands, in soft folds of white and grey, with beautiful clinging ivy sprays from the school grounds, and as one by one her friends came to look at it, it was not hard to believe that she knew better than mortal tongue could have told her, how truly she is mourned.

On the evening of the same day a short address was made to the assembled students and the following resolutions were adopted, signed by representative of the school who had personally known Miss Longstreth, or were under special debts of gratitude to her, and sent with warm expressions of sympathy to her family in Philadelphia.

"At a meeting of the Officers, teachers and students of the Hampton Normal School, as represented by those remaining during vacation, held in Virginia Hall, August 19th, 1884, the following preamble and resolutions were unanimously adopted.

"Whereas, We have learned with great sorrow of the death of Miss Mary Anna Longstreth whose life is linked with the history of this School.

Therefore be it resolved:

First: That we realize that in the death of Miss M. A. Longstreth, we have lost one of our earliest and most faithful friends, to whom we owe a debt which our warmest gratitude cannot repay.

Second: That with the deepest appreciation of what her life has been, a blessing to us and to many others, we offer as a school and as individuals, our sympathy to her family and friends.

Third: That these resolutions be spread on the records of the Institute and a copy of the same be forwarded to the family.

GEORGE BUSHOTTER.

DIED—on Thursday, July 24th, at his residence, 222 W. 26th St., New York City, Peter S. Porter, aged seventy-two.

For many years Mr. Porter and his hospitable house have been known to travellers of his own race and to their white friends throughout the country, and his death will be a serious loss far beyond the circle of his immediate acquaintance. He was born in Milton, Delaware, but since 1833 had made New York his home and as a business man had been more than usually successful. He took a courageous interest in the cause of anti-slavery and had a wide knowledge of and sympathy for the sufferings of his people. His position at the head of the small hotel known as "Porter's Mansion" gave him somewhat unusual opportunities, and many of the young men and women, who have been made at home under his roof, feel that they owe much to his experience and wise judgment. His uniform kindness to Hampton students and their friends deserves special recognition in these columns, and has always been thoroughly appreciated by the officers of the school.

He was buried on the Sunday following his death from the Fifteenth Street Union A. M. E. Church, of which he had long been a member, and the simplicity of his nature was shown by his request made just before death and carried out by his family, that there should be "no display nor great ornamentation" connected with his funeral. A sketch of his life, if the materials for it could be collected, would be both interesting and valuable, for he was in the best sense, a representative man.

DIED—Pinkie Kauffman, a graduate of this school, class of '80, of consumption at her home in Little Plymouth, Va., Tuesday, July 29th.

Tribute of Respect to the late John F. Slater.

The following resolutions were passed in a mass meeting composed of the colored citizens of Tuskegee, and the Normal School officers and teachers.

Whereas, Mr. John F. Slater, was, in the true sense of the word, a philanthropist such as is seldom seen; and whereas, he manifested his abundant generosity toward us in the gift of one million dollars for the industrial education of our race, therefore be it—

Resolved, that we, the teachers and students of the Tuskegee Normal School, do sincerely lament the death of this, our proven friend and benefactor, and extend our deepest sympathy to his family and friends.

Resolved further, that a copy of these resolutions be sent to the family of Mr. John F. Slater.

Resolved further, That these resolutions be published in some of the leading journals of the country, and also that a copy of the same be sent to the Trustees of the John F. Slater Fund.

Horsford's Acid Phosphate, In Night Sweats and Prostration.

Dr. R. STUBHALTER, St. Louis, Mo., says: "I have used it in dyspepsia, nervous prostration, and in night sweats, with very good results."

Send 25 cents for a descriptive pamphlet giving a history of this institution, together with all other places of interest in the neighborhood.—Profusely illustrated.

Stamps taken. Address C. W. Betts, Hampton, Va.

Horsford's Acid Phosphate, In Debility.

Dr. W. H. HOLCOMBE, New Orleans, La., says: "I found it an admirable remedy for debilitated state of the system, produced by the wear and tear of the nervous energies."

### The Southern Press. Both Sides.

The position of the Negro race in the present political campaign deserves, (and is without doubt obtaining,) the most careful consideration, not only from politicians, but from those who aim to go deeper than does the average politician. The next four years promise, whichever way the election may go, to be a pretty severe strain upon Republican institutions, and men who think clearly and honestly were never more needed by their country than now. We propose to give our space for this month largely to editorials from colored papers, for their remarkable unanimity of opinion in the face of what they feel to be a crisis, shows that with them the old fear of Democratic rule is stronger still than any other motive.

The *Christian Recorder* speaks "a word to colored Democrats," which is worth listening to, and might well gain a hearing from others than those to whom it is directly addressed.

"Despite the fact that a colored Democrat is somewhat of a *rara avis*, yet are they sufficiently numerous to attract attention. That there should be men of this class both in the North and in the South, is in no sense surprising. In the North no little color prejudice exists even among Republicans; in the South no little we are able to best friend doctrine may be heard. The result is one and the same—colored Democrats are made. The word we wish to say to those of our brethren who have either been driven or coaxed to the verge of leaving the Republican party—driven in the North and coaxed in the South—is: DO NOT FAIL TO DISTINGUISH BETWEEN PERSONS AND PARTIES. This is absolutely necessary, if we as a people would not become a cipher in the politics of our section and our country. We must distinguish between the party and the men who compose it; for potency is of a party and not of individuals. Individually there may be but slight difference between a Democrat or a Republican. Indeed, the Democrat is often the better man—that is, he is the more ready of the two to give work, and there is no phase of our career more important to us than this very question of work. But, as we have said, it is not to men but to parties that allegiance is owed. This being the case, the second word we would say to our colored Democratic brother is: COMPARE THE TWO PARTIES. First, compare their history; second, compare their rule when in authority; third, compare their probable future.

The history of the two parties is so well known that it is scarcely necessary for us to say a word. Even Democrats themselves do not deny that it is a bad one as it relates to the colored people; and when a man pleads guilty, prosecution is unnecessary.

But we come to the second: Compare their rule when in authority. It is to be said that while the Democrats plead guilty as to the past, they strenuously insist that as it relates to us, they are all right now—at least this is what their friends say for them with greater readiness than they say it for themselves. But let us test the assertion by whomsoever made, by the facts in the case, as these are made to appear in the region where the Democrats hold sway. The Democratic party rule the South, the Republican, the North. Without going into detail it is only necessary to take a glance at the two sections, and it will be seen which of the two is to be taken as the more friendly toward us.

Only a word is necessary as to the third: Compare their future. The Democratic party has been bad in the past. It is bad now. The probabilities are it will be bad in the future—at least it will take another generation to purge it.

In conclusion, we say, we are anxious that those of our people who may feel inclined to vote the Democratic ticket shall consider and decide upon the above points we have made before they carry their intentions into effect. And this is the more desirable if they live in a State or locality that is likely to be hotly contested, New York, for instance. We say to the colored voters of the Empire State before you vote the Democratic ticket, satisfy yourselves as to its history, its present rule in the South, and its probable future."

The *Virginia Star* quotes from the *New York Witness* an article which asserts comfortably that, in a general way, everything has been for the best, that the Democratic defeat in the last Presidential election, the death of Garfield, and the succession of Arthur, made "the hand of Providence clearly visible," because the "Democratic party was not yet fit to rule." The article closes with the following declaration:

"The time has come for when, for many reasons, a change is not undesirable. The passions and prejudices of the war period have spent their force. The fear of Southern domination is dying out. People are beginning to surmise that perhaps after all virtue and patriotism are not monopolized by the Republican party. If the Democrats had nominated a Butler or a Randall, there would have been little to choose between the two parties. The ways of Providence would then have been inexplicable indeed. But just when he is needed, the man for the emergency appears. All eyes turn toward Cleveland. His party is endowed with the courage and the good judgment to nominate him. The Independent Republicans declare that they will vote for him gladly. The Prohibitionists need no longer fear Democratic any more than Republican ascendancy. What means all this? God reigns. Let timid souls trust Him."

*Apocryphos* of which the *Star* goes on to say:

"The election of a suitable person to be President of this country, and the party that elevates him to that position, are matters of importance to every citizen of whatever color or condition he may be in; and we call attention to the above article because it essays to show that a power beyond that of man has been, and is now, controlling the affairs of the nation."

Admitting all that the *Witness* says about Presidents and parties in the past, we are puzzled to see the great change alluded to in the Democratic party. That party in the South holds control of the majority of the States by the president, disregard of the political rights of the colored people. If a free vote and fair count was allowed by them in many States where colored voters are numerous Republicanism would flourish in the Southern States. But the rights of colored voters are not respected, and Democracy reigns.

Agreeing with the *Witness* in its views of a superintending Providence, we are at a loss to see the fitness of the Democratic party for the control of the affairs of the Government now more than at other times spoken of.

Mr. Cleveland may be at this time a desirable man in every respect, but if he is elected President the Democratic party will rule the country and not Mr. Cleveland.

Southern domination, and the passions and prejudices of the war are slumbering and only await a Democratic victory next November to convince the too confiding colored people of this country that their best interests are allied with the success of the Republican party."

The *Christian Recorder*, after enumerating the various parties and the causes which they claim to represent, warns its fellow journals that even religion can not purify the Democratic party, or wipe out its past record.

"We have neither time nor space to consider formally the merits or demerits of these various parties, and the policies they represent. Indeed, for the most part it would be a work of supererogation. While some of the men, as St. John and Governor Cleveland, are but little known, Hon. J. G. Blaine and Gen. B. F. Butler are well known. But far better known than any of the candidates are the parties which stand behind them. Save as between the Republican and Democratic parties, there is no serious contest. The rest are simply—in vulgar parlance—side shows. Now, looking at parties as they stand to-day, and as they have stood during the past twenty-five years, who can hesitate in choosing which party, and therefore which candidate, to support and vote for next November? We heartily deprecate the petty war being made on the Republican party in the name of virtue and purity. If we were chief and had the right to speak here, we would frankly tell it our mind. We are out of sympathy, we have no patience with religious papers that are going to purify the nation through Democracy. They may be honest, but they are blind. We hope, we shall pray and vote for the election of James G. Blaine."

In Virginia the dread of the Democratic party is perhaps intensified by a distrust of Bourbonism which, whatever its basis may be, is certainly very general.

"The Electoral votes of Virginia will be cast for Blaine and Logan if her voters are dealt with fairly. The people are tired of Democratic rule, and at the first opportunity will give the Democracy a set down. The farmers of our State are suffering from Bourbon rule and are determined to vote to better their condition."

Last spring hand bills were distributed throughout the limits of the corporation of this city calling on the white voters to sup-

port the Democratic primary, as much as to say they wanted no black voters and that it was a white man's party and no Negro need apply. Now we come to a National contest, and we find them concocting their petty schemes to catch the Negro vote. What means all this? Are we tools? Must we be used as cat's paws to execute deeds of wickedness? Must we vote to place the enemy in power? We want the colored voters here to remember the above and cast their ballots accordingly.

We want to see a Blaine and Logan club organized in every precinct. We want every colored voter to make it his duty to be present. Don't wait until the next meeting but come to the front. This is no time to wait for we will lose ground if we do so. The enemy is preparing for a determination fight. There are colored men throughout this county who never vote. These men are to be hunted up and brought to these clubs. There are great numbers of young men who will cast their first ballot this fall. We want them to be looked after. If you want a full vote begin now and have good organized clubs. — *Virginia Critic*.

The only outspoken evidence of anything like divided opinion, which comes just now under our observation, is found in the *N. Y. Globe*, and it is only fair to let the editor speak for himself, though his sentiments take somewhat heated expression.

"I desire to say a personal word of my attitude to the ticket, put in nomination at Chicago. I am not in the habit of apologizing, nor am I apologizing now. I generally show my convictions, let the consequences be what they may."

I shall not support the nominees of the Democratic party at against Blaine and Logan, and I am emphatically understood. What support I give Blaine and Logan will be given in a way best calculated to advance the cause of the people, and not to satisfy politicians. The Republican ticket, as out from me, is not the best that could have been selected, and it is not for me to express unqualified admiration and enthusiasm for it which I do not feel.

I propose to continue to fight for the race, and if the race don't support the paper I will leave the field to some other man, who by his slippery methods, his personal vituperation, his subservience to men and parties and his purchasable character, will give them more satisfaction than I who propose to follow my own idea of what I think is right and best, and not what somebody else thinks.

I stand where I have always stood, a defender of the race against the treachery and hypocrisy of all men and all parties, and if the people want a man of more subservient character to be their editor they can easily find such one."

In spite however of the declarations of the colored press, the white Democrats of the South look for a following from among the Negro voters and keep up their spirits by such assurances as these:

"As we have often explained, there is not a southern State that does not thrive under Democratic rule. The intelligent, industrious, patriotic people of the South are staunch in the Democratic faith, and where the negroes are left free to vote a large proportion of that race vote the Democratic ticket. Under Republican rule the southern States were in a terrible condition, and not until the Democracy got control was there anything like peace and thrift." — *Richmond State*.

"No party can be trusted for a quarter of a century with power without growing corrupt. The attraction of the spoils brings to any organization long in power all the trading politicians and spoliemen of the country; and this has been the fate of the Republican party. Here in Virginia its recruits are men who were among the office-hunting, negotiating Democrats, and they boldly avow that they went over to the other side 'because ARTHUR was for them.' In other words, it was a bargain in which service was to be paid for in place and plunder. The same thing has been going on at the North, until corruption threatens to give us an oligarchy of the worst and most profligate men in the Republic. It is because of this that the Independents have entered the field; and they have organized with such numbers at their command as to justify us in the belief, already expressed, that our ticket will be invincible. This is a source of unspeakable satisfaction, not because it will give us the victory, but because it promises to give the Republic a new lease of life, and to restore to the body politic to something of its original health and vigor." — *Norfolk Landmark*.

There seems something almost contradictory in the fact that from the far South come the coolest utterances, and

the broadest views of the situation. We quote from two New Orleans journals, the *Picayune* and the *Christian Advocate*, parts of editorial articles which show much common sense and remarkable freedom from the prevailing excitement.

"There is one feature in this independent movement that aside from all considerations of immediate party success or defeat has an important bearing upon the future. It affords conclusive proof that political parties will no longer be sustained by sectional issues, and that new lines of party demarcation are coming into sight, that strictly national issues must henceforth be brought to the front, and that the party spirit which has festered so many unworthy and corrupt men into prominence must give place to deeper considerations of public welfare and national honor." — *Christian Advocate*.

"We are again entering upon a quadrennial political contest, and it promises to be unusually exciting. The two great parties are so nearly equal in strength that the issue is difficult to precast. The one in power, flushed with the victories of twenty-five years, and sustained by immense patronage, will contest bitterly the last inch before lowering its flag. On the other side there is a party thirsting for power, strengthened by the disaffected and independent elements of the majority, and encouraged by the general American conviction that a change of administration is best for the country and government, which will strain every nerve to regain its ascendancy. The character and enthusiasm of the two national conventions, and the sharp contest for the nominations, indicate the hopefulness and determination of each. Unless, therefore, an unexpected reform is vouchsafed to the American people we will have the usual campaign of slander. Each party will denounce the other with discrimination, and invoke the direst imprecations. The country will go to rotteness and ruin if the one remains in power, or will suffer revolution and anarchy if the other wins a victory. So in either case, according to the average newspaper and stump-speaker, the nation will be destroyed. And, strange to say, the ordinary partisan believes it, and grows wild with foolish excitement. Well, what has a religious journal and Christian citizens to do with the matter? Much every way."

In the first place, every citizen should vote. Clothed with the solemn privilege of suffrage, with responsibilities which can neither be neglected nor relegated to others, he cannot be indifferent to the issues involved, or the result of the contest. To exercise the elective franchise is an imperative duty. In Republican governments, founded upon and sustained by the popular will, it is the Christian citizen's sacred duty to use the power of the ballot in the interest of a good and honest administration.

In the next place, he should vote as he prays. He should deposit his conscience with his ballot. Let it be the expression of profound conviction, and not sectional, sectarian or partisan prejudice. To pray for good rulers and vote for bad men is an anomaly and a contradiction.

Again, we should study both principles and men. The old party shibboleth principles, no men, needs repudiation. Study platforms and men who have been nominated to represent them.

We should be slow to accept and repeat campaign slanders. They are hurtful to the soul and an injury to good citizenship. So far as our opinion may be regarded, we are glad to believe that both the distinguished gentlemen nominated for the presidency are of high personal character, and in either hands the nation will have a chief magistrate worthy of honor."

### The Apaches Surrender.

On our front page we give a picture from a sketch taken on the spot by Mr. A. F. Harner, of NANE, the Apache chief, entering General Crook's camp, in the heart of the hostile stronghold to sue for peace. The campaign of our redoubtable Indian fighter was marked by consummate strategy, and the victory, attained with the loss of one life only on the side of our troops, was complete and crushing. Should General Crook's wise suggestions be carried out, and the captured Apaches be distributed in small groups among different reservations, we shall probably hear of no more outrages by this pestilent tribe.

### Horsford's Acid Phosphate. IN CONSTIPATION.

**Letters from Hampton Graduates.**  
**A LIVE TEACHER'S INSTITUTE.** A FAITHFUL WORKER. A FAIR FIELD AND NO FAVOR. AN ENCOURAGING OUTLOOK. PIONEER WORK. AN AMBITIOUS TEACHER. A PATHETIC LETTER. ROOM FOR MORE.

A LIVE TEACHER'S INSTITUTE.  
 How helpful to timid and inexperienced teachers an "Institute" conducted specially with reference to them can be made, is shown by the suggestion in the following letter.

—Va., February 1st, 1884.

Kind Friend:

I have not written you anything of my school work this new year, although I have intended to for some time. I am still getting along nicely. They said quite a while. Their visit seemed satisfactory to them, and it was very much so to us, as they praised the children very much for the promptness and accuracy with which they recited.

My school is not so large as when I wrote to you last. I had eighty-six, but was obliged to send some of them out into another room and they have only a half day session until we get another teacher, which I guess will not be longer than a week.

Our "Teachers' Institute," was held on the 16, 17, and 18th of last month. It was the most interesting we have had for several years. There were over two hundred teachers present from this county and two Superintendents from other counties of the State. One of the most interesting features of the Institute was a question box, to which the teachers contributed quite freely as there were, many too timid to get up and ask questions who were not afraid to write them. One of my questions was, "How many pupils should be allowed to a teacher at a graded school?" The answer given was Forty. At the time I had eighty-six; some of the trustees being present, surmised it was from some one of us. I guess so they promised us another teacher.

I received the hymns you sent me some time ago; thank you. Hoping you are well and to hear from you soon.

I am yours truly,

A FAITHFUL WORKER

Seven years of faithful teaching might almost win the rank of "Professor" for the young graduate, who gives us this bright glimpse of her work.

—Dec. 7th, 1883.

Dear Miss C.

Your letter came a long time ago, and it does seem so much like sheer negligence to have kept you waiting so long. "Better late than never" is an adage which, though poor, gives a sort of comfort to those who are late. I returned from dear old Hampton Sept. 2nd, whither I had gone to spend a part of my vacation, to this place to reopen the school that I have taught for three terms, this now is my third. I have a school of fifty pupils and an average of forty daily. I have much work to do among this number besides teaching them to read &c. I have a moderately comfortable school house, with nice desks and as there are so many workers who have not this accessory, I feel very grateful.

We have beside the school house a very pretty church here, built about two years ago, and a pastor who resides among us so we have Christian preaching and teaching at our very doors. Yet I am sorry to say the people here are not as zealous with all the helps they have as others whose blessings are fewer and whose advantages are inferior. I enjoy teaching my people, which I have been doing ever since my graduation in '77 without one single year of interruption. I, of course, have had moments of darkness and almost despair. I have always struggled on, committing myself and work to the care of Him who clothes the lilies and without whose knowledge a sparrow does not fall. I am not feeling very strong this year but I go about my work cheerfully, fearlessly and I do trust faithfully. Please excuse the tardiness of my letter. I shall be glad to write you from time to time and tell you of myself and work.

Yours very sincerely,

A FAIR FIELD AND NO FAVOR.

That the field ready for our Hampton boys is by no means a narrow one is shown by the many young men as this, who is able to bear the test of "no favor" so successfully.

Post Office Department, Washington, D. C.

November 21st 1883.

Dear Miss C.

The first, and only communication I have received from you came yesterday. I am

indeed happy to reply to the same.

I am not teaching, but employed in the Department, and have been since I left Hampton.

I am doing very well, I have just heard the result of an examination which took place on last Monday and am pleased to tell you that I passed with 97.8 in arithmetic, 95.9 in grammar, 80.75 in letter writing, and a good standing in other branches. My general average was 86.7 on this I was promoted to a first class clerkship in this office.

I am making an effort to succeed, and am blessed with good health to work on. I never forget Hampton, and I often visit there during the summer season.

I have just returned from my vacation. I visited for the first time the West as far as Chicago. I visited also Cincinnati, Cleveland, Detroit, and other cities in those sections.

I will state as a consequence, that my desk has much accumulated work on it, and I am just now very busy.

Hoping that you are well, I remain yours truly,

H.

AN ENCOURAGING OUTLOOK.

We find that, as a rule, our graduates work harmoniously together, feeling "Hampton" to be a strong tie, and are usually aggressive in their work, that is, are not contented with doing their duty in the letter only, but rather in the spirit.

—Va., Dec. 20, 1883.

Dear Friend:

I feel quite ashamed of my negligence. I have thought often I ought to write and give an account of my work, for I am trying as you say to do my duty, and no more is required.

Last winter I was assistant to Miss Nanette B. Groom in Catonsville, Md. for a few months—vacation we spent together with Mrs. Vanison at the Hemenway Farm. In the fall she returned to Md. and I to Charles City Co., where I taught the winter of '83. My health was so poor I could not return last year. Now I have been teaching since the 15th of Oct. and have an enrollment of 38. The school has never been larger. We had some trouble the first of the term about books. The new books were to be introduced in our school and it was too expensive to use the old books, there wasn't a store in the county that kept the new ones. The nearest city was Richmond, 36 miles, so you may imagine, my trouble. The parents did well, got their books as soon as possible, and in a month my whole school was progressing finely.

The Sup't. visited me and told me I was ahead of all the other schools. He admired my chart and cards of other kinds I had in school, and wished all could be so well supplied. He wants some mottoes for all the schools he said. I told him I was going to make me some splendorous work, he said made one and he liked it he would give me the contract to furnish all the schools. I haven't sent my sample in yet.

The churches are so far apart the children have been deprived of Sabbath School. I began one a month ago, and it is crowded every Sunday, with young and old. I teach at my school house, which is very comfortable. I had some Sabbath school papers a lady sent me when I taught before and I never gave them out until a few Sundays ago. I never saw such delight, they never saw one before. We have two Bibles, three hymn books. Yet I feel delighted because I am trying to teach these little ones early the love and fear of God, and I believe he will bless me in the work. My health is better and I am contented in the pines and go happily to my work daily. I have written so much but I must tell you this. We the colored teachers of — have organized a Teachers Institute which meets monthly for the elevation of ourselves and progress of our schools. Mr. Thos. B. — is President; he is a Hampton graduate of my class, '78, and is married and has a good school; I shall be glad to hear from you.

L.

PIONEER WORK.

The growing demand among colored people for good Schools, means, of course, larger opportunities and a higher standard for our colored teachers, and this they evidently appreciate.

—S. C., Nov. 29, 1883.

Dear Friend:

Your circular has been in my possession for some time and I have been intending to write to you but have delayed until now. I hope you will not feel that my silence is from want of interest in my Alma Mater for I can assure you that some of the pleasantest days of my life were spent at Hampton.

I am now teaching in this city and have been for the past three years. There has been established in this city a University known as Allen University. I am assistant in the Normal Department and also teach in the Intermediate. I like my work very much and feel that I am a very weak instrument in aid of my race in this State. I was one of the first scholars that went to Hampton from this State and have the pleasure of teaching in the first boarding school founded in Columbia for our race. I feel that we are doing a good work. Quite a number of the counties are represented largely and we are moving on grandly in the midst of our poverty, for we are poor. I shall send you one of our catalogues which I hope will be of interest to you. Perhaps Gen. Armstrong has seen one already.

I hope Miss C. that you will answer this letter though I don't suppose that you are expected to answer the letters you get from the students. I feel that I should like to have a personal letter from you. I used to correspond with my teachers very frequently, but now I never get a word from my old friends but, of course, it is my fault.

Very respectfully yours,

P.

AN AMBITIOUS TEACHER.

"A Map and an Encyclopedia" are certainly worth working for, and a teacher who has made up his mind that his school is to own one or both of these, is pretty sure to leave his scholars better off than he found them.

—Co., Ala., Dec. 11, 1884.

Dear Teacher:

Your kind and much esteemed letter came safely to hand some time ago, and I was glad to hear from you. I would have answered it before now, but at the time I received it our county superintendent's time had expired and I was waiting for him to be re-appointed or another in his stead, so I could give you some account of my school. I mean that the public schools were not opened until a superintendent was appointed, and I wanted to carry on my school a while before I wrote. I commenced a public school on the 23rd of October last, near the above named place. I have on roll 95 pupils, average attendance about 68. The school that I am teaching now, will close the last of March. It will last 5 1/2 months. My salary is \$35.00 per month. There is another school being reserved for me until I close this one. I have an old map at this school, but the other one is without a map. I will try to send for a map in April, also send the names of those who pay on it. You will please let me know your next letter, how much a good Encyclopedia or a set of them will cost. I feel that I should have one.

I remain as ever, yours truly,

H.

A PATHETIC LETTER.

The writer of this has, with the help of her sister, to support her helpless mother and grandmother, and it is no wonder that her burden seems sometimes greater than she can bear.

Some rays of sunshine must however come into her life when she finds herself at work in her "nice," new school house, two stories high, well lighted, with black boards on the walls.

—Va.

Dear Miss C.

I have been through a great deal of sadness the past year. My mother was sick all last winter, could not walk. Grandma has been sick for the past three years, just can creep from one room to the other, and during their sickness last winter my brother died and my sister and I had to bury him. I am a little bit of a girl, most of my children being as tall as I am, and this was as much as my little heart could bear at the time, but still I do not forget to thank Providence for his kind protection over me. After teaching eight months last year at \$25 per month I was not able to spend one week from home for a little rest. I hope it will not be so always. I pray for you kind Northern friends who do so much for us, and pray that some day I may have the pleasure of seeing you. I feel as though I could talk to you all this evening. I thank you very much for your kind greeting, and hope I may be more successful this next year than last. When I kneel at my bedside, night and morning, I shall not forget my kind friends in sending up my petitions to Him who cares for us.

With many kind wishes, I will ever try to do my duty.

D.

ROOM FOR MORE.

This interesting account of a country school shows what one earnest teacher can do. And this teacher could find places for four more, if Hampton could but supply them.

—Va., Feb. 20, 1884.

Dear Miss C.

After graduating last June, I went to Massachusetts and stayed a short while, then I returned home, teaching here about August 1st. Our examination came off earlier than usual; commencing August 28th, and lasting three days. I went the first day; stood examination very well and received a first grade certificate. Could have secured schools for four more teachers last fall. Did write to quite a number but was unsuccessful. There are no Hampton graduates in this county. There are two undergraduates doing good work, Mary T. Junior class of '83 and Henrietta M. Junior class of '82. My brother is teaching in Westmoreland Co., Va. has a large school, 83 pupils enrolled. I opened my school October 15th, with 12 pupils, now numbers 98 pupils. My school house is very good; but if one had peeped inside, they would have thought it anything else but a school room. After taking charge, I had some desks and benches made, and three black-boards; two 4 by 6 and one 3 by 6 feet. The map you sent me is highly appreciated by the children and is a great blunder to me. If I just mention "map," they are like so many bees busy, ready to take their places on the floor. When I first used to give them the pointer and tell them to point to a certain State, some would as soon point to the Atlantic Ocean or the Gulf of Mexico as to point to the State; that created quite a laugh with those that knew better. Now I have to be quite sharp to make them point to me. I was to bring the map in the school room, was quite a different one to the former ones. If Barnum had been coming to exhibit his circus, I don't suppose they could have been aroused any more; each one was eager to have his or her curiosity gratified. I have about three more weeks. I am glad to say, the people are much pleased with me. They show their appreciation by helping together, promising and binding themselves to pay me twenty-five dollars (\$25.00) per month for five months, with a view of having me to teach for them again next winter. Heretofore they have had considerable trouble about teachers; more so last winter than ever.

It is quite amusing as well as affecting to see the children treat the school with their apparel neglected. Some are snugly dressed, while others are not clad sufficiently to stand the wintry blast. I have seen some come with a square piece of calico made into a dress and tied on their heads, seemingly as contented as one with the costliest bonnet or hat that could be had. There is one thing that impedes the progress of some, and that is being unable to get books sufficient. The people as a general thing are doing very well here, some owning comfortable homes, and striving to rise in the scale of elevation. Many, the people here are striving to educate their children. It behooves us as a people, to be more anxious at present to secure education, than to cast ballots and hold office. When we become intelligent, we cannot long be excluded in any State from the place we are fitted to occupy. "Knowledge is power." Let us become intelligent and it will be impossible to keep us in any position of weakness and inferiority. But no outward franchises and legal guarantees can raise us to honor and respect, if we are weighed down with ignorance. We must learn to speak correctly, to think clearly, to understand ordinary matters with intelligence, to cultivate a taste for reading, for art and for all elevating influences.

But in obtaining a higher education, we must be cautious. There is danger that in the natural ambition which is aroused by the new opportunities, we will seek to occupy places for which we are not as yet fitted. No man is really raised to honor, when artificially elevated in position. His defects in that case, become the more glaring. True wisdom therefore, dictates that we should make of ourselves thorough scholars, and acquire a little smattering of knowledge, and then assume the airs and literary titles of educated men. I must stop, as I have already said too much.

I feel grateful to you for reading matter sent me, and shall go on with my work, trying to be faithful.

Respy yours,

W. D. L.

## A Visit To The Jail.

BY ORRA LANGHORNE.

During my stay in the valley I was glad of an opportunity to go with my sister on one of her accustomed visits to the jail. For years past she has gone regularly on Sunday afternoons to read and talk with the prisoners, and it is always anxious to interest other people in her pet. The one claim of special attention at this time was a little Negro boy sentenced to a long term in jail for committing burglary, the judge having pronounced him too young to be sent to the penitentiary.

The jail in Harrisonburgh is a substantial brick building, the broad entrance and grassy plat on either side giving it a tidy and comfortable appearance, with little to indicate the sombre use for which it is intended. In the rear, a high wall and iron bars across the prisoner's weary face peering through them, bespeaks it a place of punishment.

I well remember the building of the "new jail" as it was for many years called, in my childhood, and the interest of the citizens when the structure, then such the handsomest in the village, was completed; and how, when it was ready for occupation, there were no prisoners to incarcerate, how the jailor's wife took boarders in her spare rooms, how the Presbyterian minister being a bachelor, went there to board, and the well-worn joke, which met the reverend gentleman at every turn, about having "gone to jail" as it seemed as if there was little use for a prison in those quiet times.

Offences committed by colored people were left to the owner's jurisdiction in the case of slaves, or, if punished at the whipping post if the offenders were free Negroes. Once in a score of years a man was hung for some desperate crime, and at rare intervals the malicious burning of a house or barn gave the jail an occupant, who was after trial sent to the State-prison at Richmond.

When the war came on, the jail saw sorrowful sights in the imprisonment of men. In opinion's sake, the valley having many Unionists who were either driven from their homes, or arrested by Confederate authority. Just before the army surrendered, a party of Southern deserters, when ordered out of the jail on the approach of the Federal army, supposing they were to be executed, got up a mutiny, and were overpowered with much difficulty. The Confederates did not have time to attend to their case just then, and the deserters a few days later found themselves at liberty by the close of the war.

There seems to be a great increase in the criminal classes since the close of the great revolution which changed all social conditions in the South; and the jail is never without occupants now.

The want of accommodation in the Insane Asylums often makes it necessary to confine lunatics in the county jails until other provision can be made for them. At the time of my visit a wretched old black man, feeble, but quite imbecile, lay in one of the upper cells. His condition was hopeless, and it was a comfort to hear not long afterwards, that death had come to his relief.

A civil runaway, recognized my sister when we entered the jail, and at once took us into a long well lighted hall, upon one side of which there were several grated doors. One of these doors was just opposite the front entrance, which is usually open by daylight, so that the prisoners occupying that apartment can look into the street and see all who come and go. This cell contained two white men, one of whom was to be released in a few days, having been arrested for making a row in the street.

The other, a gaunt, haggard looking man, had drawn his bed close to the grating, so that he could sit or recline on it, and talk to his wife who had a chair in the hall. The woman was neatly dressed, and her troubled face and disturbed manner showed how keenly she felt her position. It gave me a shock to hear the man's name and recall it as belonging to a respectable family in the county. My sister told me the sad story after we left the place, and, like the history of many other crimes, it might be summed up in one word—whiskey. The prisoner had hardly reached middle age, though his worn and haggard features bearing the painful imprint of a wasted life, made him look much older than he really was. He had fair prospects in early life, inherited a little property, was well connected, married a nice girl, but was "wild"—had kept bad company—been addicted to "sprees"—had been in jail before for fighting, but was now charged with the more serious crime of forgery.

Being the sort of man who is created by drink, he had done many reckless things, and his friends, instead of helping him out of scrapes, were now disposed to let the law take its course, and put him where he would have neither temptation or opportunity to make further trouble. He talked freely, referring sadly to his evil deeds, to his only child, a boy fourteen years old, to the sorrow

he had caused his wife, and thought if he could escape the penalty of his fault, this time he would live in the future, and be different. Alas! his regrets had come too late. The crop of wild oats had produced a bitter harvest, and having sown the seed he had now to reap the whirlwind.

At the grated door, a few steps further on, a little Negro boy was standing, as we approached, smiling and cheerful, evidently much pleased to see his friend "Miss Annie." If the first prisoner had misused his chances in life, this one seemed to be of quite another class, and could not be said ever to have had any. He was a poor little black wail, one of the children whose name is legion, now-a-days in the South. He had known no home, no parents. Like Topsy, he "wasn't born, he jes grewed." He had never been brought up, only "jerked up." When thought of enough to make a living, some one had hired him and he had seized the first opportunity to steal. It so happened that he had broken a lock to secure some money, and being proved to have committed burglary, was sentenced for a year.

He was said to be about fourteen, but nobody knew his exact age and he had been so stunted in his growth that he might have passed for ten. He did not seem by any means dull, but answered questions brightly enough, and said a little lesson from the Bible, and a verse from the Bible, as he does every time he sees Miss Annie, who is teaching him to read, through the grating of his cell. It made an odd picture. The lady on one side of the iron bars, holding the book, and the sharp little, dark, moor, not at all bad looking on the other; the prison into which his childish feet have strayed, being the first place where any leaves from the tree of knowledge have fallen for him. As we turned away he went to a top house when we were building of blocks and picture cards when we came, and the jailor said "Ed. was always at some play like that." A plate half-filled with food sat in the door, and the turnkey explained that the child had just finished his dinner. The food was of good quality, meat, bread and vegetables, and the man spoke kindly of the child, and said he allowed him to walk in the yard to a top house when we were building of blocks and picture cards when we came, and the jailor said "Ed. was always at some play like that."

A plate half-filled with food sat in the door, and the turnkey explained that the child had just finished his dinner. The food was of good quality, meat, bread and vegetables, and the man spoke kindly of the child, and said he allowed him to walk in the yard to a top house when we were building of blocks and picture cards when we came, and the jailor said "Ed. was always at some play like that." The food was of good quality, meat, bread and vegetables, and the man spoke kindly of the child, and said he allowed him to walk in the yard to a top house when we were building of blocks and picture cards when we came, and the jailor said "Ed. was always at some play like that."

The Hon. John Paul, now Judge of the United States Court for the Western District of Virginia, whose experience as Commonwealth's Attorney for Rockingham Co. gave him much acquaintance with the criminal classes, has long been desirous of seeing the Reform School for young prisoners established in the State, so that juvenile offenders being separated from older criminals and taught useful occupations, may have some chance for improvement. Judge Paul has long been interested in this subject when a Member of the General Assembly some years ago, and it is to be hoped when the Presidential election is over and redistricting the State in the interest of politicians is no longer the point of engrossing interest with our lawyers, the Reform School and other questions of general importance will claim the attention of the Virginia Legislature.

## Editorial Correspondence.

Cloudland, N. C. Aug. 25th, 1884.

Here we are on the top of a mountain 6,394 feet above the level of the sea. By taking a walk of five minutes we get a view into seven different States, with a hundred mountains tops over 4,000 feet in height. The Roan Mt. upon whose top our hotel is situated, is between the Unokas and the Blue Ridge. Looking to the north we see Mt. Mitchell, the highest point this side of the Rockies. To the northwest lies the Cumberland range and out beyond, the Cumberland plateau. The mountain lies partly in Tennessee and partly in North Carolina and is a most attractive summer resort. Gen. J. T. Wilder a gentleman largely interested in the iron trade in Chattanooga, has purchased the whole mountain and has already commenced to erect a hotel with a capacity of 300 guests. The ride over the Norfolk & Western R.R. and East Tenn. and the North Carolina R.R. is most beautiful. The last fifteen miles is through the deep gorges of the Doe River. This part of the South is coming to be better known every year both for its wonderful scenery and the richness of its coal and mineral resources.

On this mountain top one entirely escapes the summer heat. The proprietor reports the thermometer having reached 68 deg. Fahrenheit. These mountains are remarkable for their wonderful verdure, being heavily wooded to the very top. They are filled with enormous cherry, black walnut and oak timber. Prof. Asa Gray of Harvard College says: "This is the most beautiful mountain east of the Rockies. The mountain top is a mild grassy prairie of 1,000 acres, dotted with red Rhododendrons, Azalias and mountain flowers in clumps from a yard to ten acres in area, set in beautiful greenwald, fringed with rich luscious and spruces, growing from beds of most luxuriant mosses. From our lofty height we can often look down on the thunder storms in the valleys, while we are basked in the sunshine. The cloud effects are wonderful, and it is rightly called Cloudland."

The company which fills the hotel is made up from all the Southern States, especially from the interior. One may gain here a good idea of the northern mountaineer in his simplicity. The inhabitants are strong, well built men of Scotch-Irish extraction. The country abounds in "moonshiners" or whiskey distillers, who give the Internal Revenue officers plenty of work. They have little regard for human life. It is said that there are more murders in this country than in the State. The people say that they can do nothing with their wheat and corn as they have no roads by which they can carry their produce to market, and so are obliged to convert them into whiskey.

These people suffered very much during the war, as their houses and farms were ravaged by both the Union and Confederate armies. At one time they were driven from their homes on horse-back, almost every man he meets accuses him with "Howdy stranger?" and hauling a black bottle from his trousers pocket to my feet, and says, "Have a drink, stranger."

The opening up of a rail-road to the Cranberry mines, which runs within twelve miles of the top of the mountain, has made great changes in the people. Three years ago not one of the natives employed on the mountain had ever seen a rail-road train. They had no money, and all their exchange was by means of barter. The mines and the rail-road have brought money into the country, and they find a much better market for their produce. At Bakersville, just at the foot of the mountain, a large mica mine has been opened, which is said to be the richest in the country. The ranges are full of ore which crops out at intervals through the mountain. As we came up the mountain in the stage coach, which runs from the railroad to the top, we passed the polling place of one of the districts in Tennessee. Our driver was anxious to vote, so the stage stopped and I accompanied him to the polls. It was quite an interesting scene. The polls were not yet open. A table was placed with chairs out under a tree, and a number of hardy mountaineers were collected from the country around. They had considerable difficulty in getting the polls opened. One man there to vote in the polls of the election, but he read with difficulty, was unable to find the place in the book of the Tennessee laws where the proper oath was to be found. We found the same man at the polls, but he read with difficulty, was unable to find the place in the book of the Tennessee laws where the proper oath was to be found. We found the same man at the polls, but he read with difficulty, was unable to find the place in the book of the Tennessee laws where the proper oath was to be found.

We were able to get a few days out among the graduates before coming here. Although the schools were closed, we could get a pretty good idea of how our students were doing. In most cases they had made their mark upon the community. Our first visit was to Southampton County. We took the cars to Franklin, found one of our graduates living in a nice comfortable home of her own. She had been for many years in this one place, and had avoided the expenses and loss of power which sometimes comes from moving from place to place. She had sometimes taken summer schools in the country district, but returned again in the fall to the same place. She had told me of the work she had done in the church, of her influence upon the young people of the place. I heard of the large Sunday school she had gotten together. The tale of her last school in North Carolina, where, with her own hands, she had helped build her school house and make her room comfortable. In the afternoon she kindly gathered the Hampton students from the

county around; and we heard reports from most of the Hampton workers in the county. The teachers have been troubled about getting their pay this year, in some cases having to wait six months before they could get the money due them, and in others being come led to accept large discounts.

We spent two days at Danville. More students come to us from this city than anywhere with the exception of Norfolk. We have a number of Hampton graduates living in the school's, and I was pleased with the record they had made. The Danville riots have been a very unfortunate thing for both white and colored people. The only good result that I have seen is the causing some of the colored people to leave the city. There are too many of them there. The children go into the tobacco factories where they learn very little that is good, and grow up weak in body & mind. The better class of colored people are doing well. They have comfortable houses and are building respectable churches. They are to be seen in the Hampton students in their homes and found them living in very nice, respectable houses. I found that rows of houses in very pleasant streets were owned by the colored people. These property owners I found to be a conservative, respected part of the community. In one of these Hampton homes I found four of our graduates; every one of them had made a good record as a teacher and two of them had pursued their studies in higher schools. I went into the Sunday school and found two of our graduates acting as superintendents, and many as teachers. In the missionary societies and in all the charitable work of the place they had a part.

I heard very pleasant words in regard to Mr. Slaughter, to whose intent of schools. The teachers feel that he is very fair in all his dealings with them. He gives the same examination to the colored teachers as to the white, and hopes to bring them up to the same standard. He kindly showed us his examination papers and the marks of our graduates. One of them, Grassy, received a first grade certificate. It was certainly very creditable to him and showed that he had been making progress since graduation. The papers were difficult and embraced some subjects not in the course at Hampton.

We found some of the graduates with pleasant homes of their own in which they take much pride.

At Lynchburg we found the colored people in a better condition than at Danville. There was less of race prejudice there and the advancement of the colored people was still more marked. I found there a colored church worth \$10,000 said to be the finest in the place. As a colored man and a colored man, and property owners to quite a large extent, Mr. and Mrs. Langhorne have done much in aiding them to acquire property. They kindly showed me the settlement of colored people that they had started in houses of their own, and told me that some of these former tenants now had tenants of their own.

I went to the homes of several of our graduates and found them living on the high land in a very good part of the city.

Lynchburg has the best jail in the State of Virginia and the prisoners are well cared for and are somewhat reformed. They have endeavored to introduce some industries into the jail but with no very great success. It is much to be hoped that our present jail system, which keeps a large number of prisoners in enforced idleness at public expense will be changed. Any employment for their hands, however simple, would be a great improvement.

I ran down to Farmville to be present at the opening of the Institute for colored teachers in that place. I found some twenty Hampton graduates present, several of whom I had never seen before. As the morning was unoccupied we had a meeting of the Hampton students in the Baptist church and heard reports of their work. The new State Normal School at Farmville will make it quite an educational centre. Our good friend Judge Watkins is active in this as he is in every good work. The colored people of the State have no better friend than he. We were glad to hear that this place there was coming to be an intelligent, respectable community of colored people; that the feeling between the two races was excellent, that the colored papers were studying under the care of one of the white pastors: Hampton sends into this community this year some of her best students, and we feel sure that they will have every opportunity to make the most of themselves. Superintendent, Mr. Crawley, can give them.

Yours,

H. B. FRISSELL.

## Horsford's Acid Phosphate, INVALUABLE AS A TONIC.

Dr. J. L. Pratt, Greenfield, Ill., says: "It is all that it claims to be—invaluable as a tonic in any case where an acid tonic is indicated."

## SOUTHERN WORKMAN.

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October four months.)

Printed on the Normal School Steam Press by students trained in the office.

S. C. ARMSTRONG,  
H. W. LUDLOW,  
M. F. ARMSTRONG.

Editors.

REV. H. B. FRISSELL, *Chaplain*,  
MR. W. N. ARMSTRONG,  
MRS. ORRA LANGHORN,  
F. N. GILMAN, *Business Manager*.Terms: ONE DOLLAR a year IN  
ADVANCE.

Specimen copies sent upon application. To secure safety, it is important that money should be sent by Registered Post office orders, or registered letters. Write plainly, give name in full, and name of Post-office, County, and State to which the papers are to be sent. A limited number of advertisements inserted at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square	1 00	2 75	5 00	9 00
1 column	2 75	7 50	13 50	23 00
1-2 "	5 00	13 50	23 00	40 00
1-3 "	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

The Workman office will be glad to give estimates for printing periodicals, pamphlets or books of all sorts. Special attention given to Society and Association Reports. Prices always reasonable and made with a due regard to material and workmanship required. Proofs furnished without extra charge. Expressage paid on finished work. Address all communications or orders,

Normal School Press, Hampton, Va.

Subscribers are reminded that the "Workman" is reduced to eight pages during the next four months, resuming, in November, the twelve page form.

Entered at the Post Office at Hampton, Va., as second class matter.

In an article published in the September number of the *Century* magazine entitled "The Foreign Elements in our Population," Mr. Joseph Chamberlain offers us a most comprehensive resume of statistics which are, in themselves, so suggestive that they are likely, even without the further suggestion of the author's comments, to stimulate thought and open a broad field for discussion. He shows that the various nationalities represented in the immense flow of immigration to this country, can be grouped almost within definite boundaries, and he gives the relative percentages of children born of foreign and native parents, with the percent, so far as it can be ascertained, of race intermarriages, so that a map of the United States colored and indexed upon his basis of division, would furnish to the eye, instant evidence of the type occupying, or in the next generation likely to occupy, any given locality.

We recommend to our readers a careful study of the whole article, but for our present purpose we extract upon such statements as bear directly upon the development of the Southern States, and notably upon the future of their Negro population.

Mr. Chamberlain broadly localizes our foreign citizens as follows:

"From the examination we have made, we perceive that the Germans are the most numerous body of foreigners in fifteen States and territories, which are the following: Alabama, Arkansas, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Mississippi, Nebraska, Ohio, South Carolina, West Virginia, and Wisconsin.

The Irish are the most numerous foreign element in twelve States and territories, as follows: Connecticut, Delaware, District of Columbia, Georgia, Massachusetts, Mississippi, New Jersey, New York, Pennsylvania, Rhode Island, Tennessee, and Virginia.

Of the remaining States and territories, thirteen have more Irish than Germans, and

seven have more Germans than Irish. There are, therefore, twenty-two States and territories where the Germans outnumber the Irish, and twenty-five where the Irish outnumber the Germans.

The Chinese are the most numerous foreign element in five States and territories, as follows: California, Idaho, Nevada, Oregon, and Washington.

The British Americans are the most numerous foreign element in four States and one territory, namely: Maine, Michigan, Montana, New Hampshire, and Vermont.

The British are the largest foreign element in two States and two territories: North Carolina, Colorado, Utah, and Wyoming.

The Mexicans are the largest foreign population in one State and two territories: Arizona, New Mexico, and Texas.

The Scandinavians are the most numerous in one State and one territory, Dakota and Minnesota.

The West Indians are the most numerous in one State, Florida.

A glance at the map, in connection with the list just given, will show that the immigrant races have grouped themselves in a manner worthy of further note. We find what we may call the Irish States, beginning with Massachusetts, constituting an unbroken belt as far south as Maryland, and after the narrow interruption of that State beginning again with Virginia, and, bending westward, extending through Tennessee and to the Gulf in two prongs, Georgia and Mississippi. The German States are a compact mass in the center of the republic, extending from Lake Superior to the Gulf of Mexico (Wisconsin to Louisiana), and from Nebraska eastward, with a tongue through West Virginia and Maryland to the Atlantic. The British Americans have a group in northern New England, and a detached State and territory, Michigan and Montana. In the North-west, all these bordering on Canadian territory. The British have three contiguous mountain political divisions and a detached Southern State; the Mexicans have a group bordering on Mexico, and the Chinese the Pacific group, facing China.

A closer analysis of this distribution shows:

"Our foreign-map grows lighter in shade as we move southward. New Jersey having 49.6 per cent. of foreign birth, 8.2 per cent. of the population being Irish-born, 5.7 German, and 3 British. Pennsylvania has 16.1 per cent. foreign-born, 5.5 per cent. of the whole population being Irish, 3.9 per cent. German, and 3.0 per cent. British. Delaware has 6.5 per cent. foreign-born, of whom something more than half are Irish, the rest being of various nationalities. Maryland has 8.1 per cent. foreign-born, 4.8 per cent. German and 2.2 per cent. Irish—the Irish here first losing their leadership in the Atlantic States south of New Hampshire. In the District of Columbia the foreign-born are 9.7 per cent., the Irish being 4.4 per cent. of the whole population, and the Germans 2.8 per cent. West Virginia has 3 per cent. only of foreign-born, the Germans being slightly in excess of the Irish. In Virginia there is not one foreign-born person to one hundred natives, the percentage of native-born being 99.00. Here, as in all the remaining States of the South bordering on the Atlantic or Gulf (except Florida, where 1.8 per cent. are West Indians), until Louisiana is reached, we have fewer than 1 per cent. of foreign nativity, and the few foreigners, living mostly in the cities, are of diverse nationalities. Our Southern States are scarcely so much affected, as yet, by foreign settlement as are some of the countries of Europe by immigration from neighboring nations. The presence of a lately enslaved race keeps away, in nearly all of them, all but traders and a few handicraftsmen and farmers.

Now, there are, at this moment, in the Southern States vast tracts of uncultivated land, within reach of good markets, fertile and easily tilled, extending over an area which includes almost every variety of climate, and it would seem, in every respect as likely to attract immigration as are the Western lands which are being so greedily taken possession of by German, Scandinavian, English, and Irish immigrants.

That the great river of immigration should have so persistently flowed past the fair fields of the South, to vitalize the less promising regions to the Westward, is easily comprehensible. Slavery barred the door against free labor, and kept the lands it held back from the tide of progress as firmly, as it did the men who owned them. But slavery died twenty years ago, and still the influx has not sought out the new channels which apparently the changed conditions afforded it. It is recognized of course, that the reason for this is to be

found in the presence of a prolific, easily satisfied laboring class, already domesticated and at ease with the soil and their surroundings. This, then, being the case, why is the South not already on equal terms with the West, and what to her would be the advantage of peopling her uncultivated lands with men who speak another language, and are the product of a different civilization? Mr. Chamberlain suggests the answer when he says:

"The greatest danger would seem to be that the mingling of all elements, with a resulting evolution of a single nationality, will not proceed without interruption. No greater danger can threaten than that the population will split into two or more castes, with caste hatreds and conflicts. Whenever in any place a tendency to such a condition seems to be arising, all the proper influence of the State and of society should be brought to bear against it."

The Southern Negro, in spite of his three hundred years of life on American soil, is still a foreigner of the foreigners. His language, his religion, his habits, are those of his white neighbor; but there is no such process of assimilation going on as has fairly set in between all other races and the native born American. The half breeds of slavery are dying out, and the color line is becoming physically more and more marked. The "split" already exists, and the danger from caste hatred is not to be ignored and is as great to the one race as to the other. Would immigration lessen this danger and how, is a question that many a Southern landowner is asking himself, and its answer is of the most vital importance.

The situation from the point of view of the employer that is, of the man who holds in his hands the capital which will sooner or later control the labor market, is this: "The colored population of the South represents a laboring class, in the main untrained, with few wants, with plenty of physical power, but little natural energy, who, living on the most responsive of soils, with a range of varied and genial climates, know absolutely nothing of the stimulus of competition.

Competition among themselves can hardly be said to exist at all, there are no grades of skilled labor, it is all alike in the rough, and the causes which have prevented foreign immigration have shielded the Negro from what, under healthier conditions, would be the natural result of his own ignorance and lack of energy.

It is pretty certain that there is no force known to man which acts more powerfully upon the majority of the human race than wholesome competition, and when it is remembered that not only has the Negro been kept beyond the reach of this force, but that also the simplicity of his wants enables him to supply himself with all he needs by the minimum of labor,—the result goes without saying.

The average employer, finding himself thus at the mercy of unskilled and unambitious labor, is not likely to devote himself with much zeal to its improvement, but will rather consider first the possibility of availing himself of the superior labor which, he has reason to believe, a little exertion will put within his reach.

It is a fact that isolated attempts are being made all through the South to introduce foreign labor, generally German or Scandinavian, and the experiment means more than the face of it. When a farmer, after a year's experience of a couple of imported hands, sends at one shipment for fifteen or twenty others from the same source, it is evident that there is an opening, and a fair show in the opinion of both employer and employee. If this should continue it will have a definite effect upon the future of the Southern Negro, and there are some among his friends who believe that it may be an important factor in his development. A pressure would thus be brought to bear upon him which would possibly affect him more powerfully than anything that has yet come within his experience, and produce in him, by a natural and

wholesome process, that capacity for intelligent and persistent work, the lack of which makes him his own worst enemy. And further, the presence of even a small class of whites who have no inherited race prejudice would do more or less toward breaking up the dangerous caste divisions, and might exercise a decisive influence for good.

It must be confessed that all this is, as yet, largely problematic, but it is certain that the future of the South is not to be as its past, and that the Negro has no guarantee to his place within her borders unless he can make good his claim by showing himself to be an essential agent in her development. The fact that other men are ready and able to do the work at which he still has the first chance, ought to act as the strongest of stimulants, and the Negro in working side by side with the foreign laborer, may find just the training which he needs to stimulate and direct his own growth.

About a year ago we referred, in our editorial correspondence, to Albuquerque, New Mexico, as the proper place for the leading industrial school for Indians in the Southwest, and to the fact that its citizens had contributed four thousand dollars toward a site for such a school.

A large brick building is being completed by the Government to accommodate one hundred and fifty Indian pupils, who are expected to enter October 1st, to be under the charge of Professor Bryan, who has, for years, taught in miserable adobe buildings. The work has been encouraged by Indian Agent Major Pedro Sanchez, who has been doing all in his power to advance the cause of the education of the Pueblo Indians, (of whom he has the care) who live in the immediate neighborhood of Albuquerque. Children from the Pima, Mesquely, Apache, Navajo and Colorado river tribes will also attend. Much is to be hoped for from this new light for the Indian in New Mexico and Arizona.

We understand that the Presbyterian church selects and supports the teachers, while the Government erects buildings and furnishes food and clothing for the pupils. This mingling of public and private interests is most wholesome; the only permanent part of the work for Indians is that which is not maintained by public aid.

## Editorial Correspondence.

Front's Neck, Coast of Maine, Aug. 1884.

Within forty years after the landing of the Pilgrims, early in the seventeenth century, this coast was frequented by English fishing craft, who prospered exceedingly in their trade, using many of the picturesque islands that lie along the shore for curries, and storing their catch, and building their homes upon this and other advantageous points, where they could carry on their trade in furs with the neighboring Indians.

Gradually this place, then known as Black Point, became one of the most important on the coast, and in 1671 there were fifty houses, probably not less than three hundred people, and a quantity of stored materials. The "Collections of the Maine Historical Society" furnish much interesting information of these early days, mentioning the first "Maine Liquor Law" passed in 1676, which forbade liquor dealers to sell to "neighbors, laborers, or servants except men invited, or laborers upon the working day for one hour at dinner, or strangers or lodgers there" under penalty of ten shillings. The record goes on to state that there was much hard drinking in those days without serious bad effects, which was considered by a famous pioneer, John Jocelyn, to be due to the climate's favorable influence upon their constitutions.

One of the earliest laws passed required every planter to "do his best endeavor to apprehend, execute or kill any Indian that hath been known to kill any English, spit their cattle, or in any way spoil their goods, do them violence and will not make them satisfaction."

The Indians in this region are of the Saco tribe, "well formed, highly painted warriors, the best figures in the whole colony." They finally removed to Canada, and are now part of the St. Francis tribe. Squando and Assacambit were their most famous leaders; the latter used to boast that

with his own hand he had slain 150 English. "Massacre Pond" mainly commemorates this bloody day when all but one of the French whites engaged were killed. The Indian name of this locality was "place of much grass" so called from the extensive marshes. It should be known that up to 1675, there was generally peace between the Indians and whites in Maine, and an interchange of friendship, hospitality and confidence until King Philip attempted the extermination of the New England colony. He found it hard to bring the Maine Indians into his schemes, and Squando, the leader, acted like a genuine Christian convert, till his wife and child were recklessly overboard in a canoe and drowned.

Squando at once declared himself the enemy of all Englishmen, and hard fighting was the order of the day, in which the colonists, after many losses, were victorious. In 1688 the Anglo-French war began, and the Indians, instigated by French priests, attacked the settlements. In spite of the fact that these were in better condition than ever before, having been fortified, the combined French and Indian forces made terrible havoc, destroyed nearly every town along the coast, and scattered the settlers among strangers, where they made new homes.

The second set, seven in number, came in 1702 under pledges of peace, but soon after the whole eastern country was on fire, not a house standing, not a garrison unattacked, a band of 300 French and Indians devastated the coast, killing, capturing and burning till they reached the spot from which I am writing, where, though the garrison consisted of but eight fighting men, the brave John Larabee refused to surrender, and drove back the enemy.

As soon, however, as the war ended, settlements were again begun, farming being confined to small parcels of ground in protected situations, while the salt marshes furnished hay for cattle, and the sea did as much as the land in the way of food.

There were some men of note in those days. The record tells of famous hunters and marksmen, some of whom, after their wives and children had been murdered by the Indians, devoted themselves to shooting every red man they could find.

After nearly nineteen years of comparative quiet, there began, in 1720, new attacks upon the Eastern settlements, instigated of course by the French, and a sudden attack upon Black Point resulted in the loss of some valuable lives. But in 1725 peace was again declared, after the successful campaign of a small army of colonists. In 1730 a town government was organized here, and lumbering became the principal business, lumber-seeming to have been the currency of the day, even the school master being paid in lumber. Maine settlements flourished during this, the longest peace they had enjoyed, but war between England and France, forced them again in 1745, into hostilities with Indians who were brave French influence, and who did much destructive work while avoiding open battle. The capture of Louisburg, the French strong-hold, ended the war, and Black Point suffered no more, for the Indians fought frequently on the war path, avoided fortified towns.

The people were plucky and patriotic. After the battle of Lexington every available man was enlisted for the struggle, and of 171 males, from sixteen upwards, a large proportion were enrolled. It is interesting to read accounts of the joy with which the people hailed the capture of Burgoyne and the surrender of Cornwallis.

"Two of the most respectable of the townsmen could express their delight in no other way than by dancing together on the top of a small round table in the middle of the room."

Burning tar barrels were hoisted to the top of the liberty pole, all the powder in town was consumed, with a good deal of liquor, and the celebration closed with an all night dance.

Sitting in front of the Cammock House in a pleasant arbor, on the edge of a bluff looking across the water to Old Orchard which with its hotels, crowds, and civility aspect, is forever lost to simplicity; seeing the sunset beyond three miles of intervening quiet water, which is marvelously tinted by the slanting rays, and musing upon the past, the thought comes, that here at least, with the Saco tribe, the strongest of their race, the longest peace with the Indians was from the first settlement till 1675, a period of nearly fifty years. It was broken by the willful wrongdoing of the wife and children of a chief, Squando, who had been trying to lead a Christian life.

If the oldest and ablest of our fighting officers are to be believed, Indians are not disposed to be aggressors until excited by wrong; then their retaliation is terrible.

Proctor's Neck is, in effect, an island, the breezes from every direction but one being freshened by coming over the sea. There is the best of surf-bathing and a glorious beach, especially when illuminated by a big

bon, fire made from the drift-wood gathered along the shore; a bold rocky front on the north-east side, which beats the waves of the open Atlantic; while the west side forms an opposite shore across the bay which is shallow or an extensive sand flat, according to the tide. When bare, scores of clam diggers make a picturesque scene; when the tide is coming in, at sundown, the play of the light upon the advancing wavelets as they break in graceful curves, is indescribably lovely.

Speculators have been kept out by the family that has owned the Neck for generations; the place is decidedly undeveloped, and hence its charm. It must, perhaps, yield in time to the fashionable crowd, with their equipages and dress, that will sadly change this restful, delightful resort. Interesting local characters now control the place, and lose nothing by having their own way, for people will always come to this unconventional and remote place, which is five miles from any railroad, for the bathing and fishing and air, and for the privilege of wearing the most comfortable summer clothing. It is recreation such as I have seldom found, to ramble through the pine woods that cover half the ground, sit on the rocks and watch the waves, or plunge into the breakers, fish for cormorants in spite of aggravating sculpins and forget, for a few days, the care of the "despised races."

S. C. A.

"For upward of twenty-five years the Rev. J. H. Brooks has looked after the spiritual welfare of a large flock of colored people in Washington, D. C. He was an able preacher, an ungrudging worker, and an honest man. Among the citizens of African descent, as Baptist faith Mr. Brooks was a leader, and as such he occupied one of the foremost positions among those of the cloth. For some weeks he has been slowly wasting away from the combined effects of overwork, age, and disease, and finally on Saturday he died. His funeral was held at his church yesterday, and in many respects it was the most remarkable private funeral ever seen in this city."

The body of the deceased pastor lay in state in the church over which he had so long presided, for twenty-four hours, and although the ceremonies were advertised for 1 o'clock P. M., there was a crowd of several thousand people around the church as early as 8 A. M. By noon this crowd had swollen to such proportions that every approach to the building was blocked. Squads of mounted policemen were called out to keep order, but so eager was the multitude to enter the church that the police were of no avail. When the services finally began the crowd outside had been augmented by the addition of at least five thousand more. The procession moved about 5 P. M., through a double line of colored people of all ages, which extended nearly a mile from the church, and the line of dirges was followed by thousands of dusky mourners on foot. Washington has about 75,000 colored citizens upon its population. It is safe to say that fully 20 per cent. of the number attended the funeral of the Rev. J. H. Brooks. Probably no colored man was ever before followed to the grave by so vast a throng."

The man, whose life gave him such a hold upon his people that he was thus honored in his death, accomplished his work by the force of character and purpose. Although we knew nothing of him personally, the numerous notices of him, which have lately come under our observation, have been so interesting that we are glad to publish extracts from them, and to increase, if possible, the knowledge of a life which seems to have been spent freely in the service of others.

"No man can, in twenty years, attract so many followers, hold them and be so universally mourned as was the late Rev. H. Brooks, without possessing the essentials of a strong character. He came here in the dark hours of the war, one of a despised class, hated by the Bourbon whites, regarded by the more fortunate of his own race as an interloper outside of the pale of social recognition or affinity. But he did not succumb, he did not lose heart, he did not long for a place among those who loathed him as 'a contraband,' but he contented himself by working among his own people."

And to-day we behold him mourned as the founder and pastor of one of the largest of our congregations, a builder of one of the two of the forty or fifty colored churches on fashionable avenues—a church with a debt of only a few thousand dollars, which will be paid at its maturity next spring.

He lived to see the reproach taken away from the section in which his people dwell. He lived to see many of the children grown up to manhood and womanhood, some with the highest honors of their classes in our high and normal schools. He lived to see many of his congregation the owners of their

own homes and respected members of the community in which, years ago, they were both hated and despised. Such is the work of Rev. John H. Brooks as viewed from a secular stand-point.

How did this man, with little or no learning, with no acquaintance with books, secure and maintain such a hold upon his flock and become such a power for good in the community, a central and commanding figure in our midst? By his simple Christian character, by his confident, sympathetic position, by his knowledge of human nature, by his devotion to duty, by fidelity to the trusts reposed in him. These are the secrets of the success of the life of Rev. John H. Brooks. These, in the first place, made the opportunity which he improved, so that his career from the log cabin of the poor slave in Hanover county was as conspicuous in comparison as that of Lincoln or Garfield to the first place in the gift of the Nation.

Count this no exaggeration. Had Brooks, with the qualities of mind and heart he possessed, engaged in politics in a great constituency, he could have risen to the greatest civic heights. There is a lesson in his life for us all. It is not brilliancy that in the long run ensures the most enduring success. —People's Advocate.

"Rev. John H. Brooks, one of the most popular preachers in this city, died at his late residence last Friday. Rev. Brooks came to this city from Richmond in 1863, and located in what was then the most abandoned portion, known as 'Hell's Bottom,' where he gathered a few people into a small room and organized what is now the Fifth Baptist church. The great influence for good exerted upon the neighborhood by the deceased minister, through his church, has quite recently been hitherto forsaken locality, where they worship. Under the pastoral charge of Mr. Brooks, the membership of the Fifth Baptist Church grew to nearly 2,000 in number, and a large and magnificent church edifice has been erected. The pastor has been sick for the past two years. He was greatly beloved by his congregation, and his death has cast a gloom of sorrow over the entire vicinity in which the church is situated. Never before has the church been so united, and no person of color by the city priests. At the time of his death Rev. Brooks had attained his 53d year. His funeral took place to-day from the scene of his labors, and the past twenty-two years. Six thousand people were in attendance." N. Y. Globe.

"One of the noblest characters in the Washington Clergy was the Rev. John H. Brooks, of the 5th Baptist Church, better known as Brooks' Church. This church is situated in a section of the city bearing the classical and euphonious name of 'Hell's Bottom.' It is largely inhabited by colored people, and it is said that not many years ago, neither life, limb, nor property was safe either by day or night. This good man came with the Bible, his philanthropy, and all the zeal of a reformer, and ability commensurate with the demands of his work. Now the section of town named is clean, quiet and orderly, and the church numbers 1,000 members. The good man 'Brother Brooks,' is revered as something a little lower than a god."

The changes wrought by the labors of this man are strongly suggestive of 'Ho Presto,' 'Open Sesame' of the Arabian Nights transformations. His accomplishments in his chosen field will endure when monuments of brass and marble shall have been crumbled.

E. J. Waring's letter to the Plain Dealer of this week.

A reply to "B."

Hilton Head, S. C. Aug. 21st, 1884.  
To Editor Southern Workman.

Dear Sir:

Please allow me space in your very valuable paper, to call your attention to some apparently very bold and untrue assertions which I have noticed in one of the graduates' letters, dated "Jan. 5th, 1884," found in the Aug. No. of the *Workman*.

The letter that I have reference to, is headed—"From South Carolina. A Teacher in the Black Belt" etc, and signed below, "B." B has never had enough pupils at any time to keep him busy, not even numbering whom to establish a very effective system of instruction. Many, who live on the plantation where his school is, say that they have never seen over 35 or possibly 40 pupils attending his school. In the state of B's work giving universal satisfaction, it gave almost universal dissatisfaction.

No one seems to know of B's ever having been connected with one of the Sabbath schools on this island in any capacity. The two Sabbath schools that are referred to must have been mine and that of the Methodist church; he taught in neither of these.

I do not believe a word of it, that the religion of our people of this island, nor of any other part of the South "is more of the demonstrative than real," nor do I believe that their "manner of worship" is "wild and sensual." I will admit that they have many little peculiarities about their religion, but when they are urged down to a fine point, they truly regard them as being quite unnecessary to salvation and quite subordinate to the plan of God, through Christ, as arranged in the Bible. It is my very strong belief that there is no Christian denomination or people in the world, whose religion is more strongly and truly founded upon the Gospel of Christ than ours. They accept every part of the Apostles' Creed. Our colored people of the South are not just a people a few years since brought from the jungles of Africa or Asia or any of the islands of the sea, but to the contrary, they have been here over two centuries and a half, and have been educated in the same common religious schools along with their slave masters, and in addition to this religious training, they have had the experience of the last twenty years, than to meet.

I believe they will only be saved upon their true belief in the love and omnipotent power of Christ and their obedience to His will. I will not need to say more of their faith and frankness and less ambition.

It says there is one or two Methodist members here who are doing much for religious elevation.

There are only two denominations on this island, they are the Baptist and the Methodist. They are in the ratio of about fifteen Baptist to one Methodist.

I have the honor to be, yours most respectfully,  
J. D. WESTON GILES.

"A HISTORY OF THE UNITED STATES OF AMERICA," by Horace E. Scudder: for use in schools and academies.

Nothing is more refreshing to a reviewer whose trade has not altogether embittered him against the makers of books, than to meet with a volume like the above, of which there is really nothing but good to be said.

Mr. Scudder takes the true view of his work when he says, "There is a logic in events which, it is the business of the historian to unfold, and the secret of success in any history must lie in the power of the author to conceive the development of life and to discover the critical passages, the transition periods, the great epochs."

History, as it has been studied under the average teacher in the past, has meant simply an assemblage of dates, and the dryest possible statement of facts, without regard to their value or effect, but simply in their chronological order. A very different thing it will be when a child, beginning at the roots of the world's life, and following the whole sweep of its growth, shall learn how logical has been the evolution of nations, and how unerring the laws which govern every phase of development. It is not events themselves, but the meaning of events, that makes history, just as it makes individual life, and it is Mr. Scudder's comprehension of this which makes the first value of his book. He has grouped his facts so that they give their due impression of relation, and has earned for himself the blessing of his readers, by so far as possible, omitting dates while emphasizing clearly those which he retains as of importance.

To teachers the topical analyses will be helpful and suggestive, and the thoughtful among them will accept and work upon Mr. Scudder's "conviction that the most which a text-book maker can do is to furnish a clear outline which a wise teacher may fill with details."

For the rest, the maps and illustrations are sufficiently ample, and are excellently supplemented by the suggestions as to books of reference and for general reading, contained in the appendix. The index is full and clear, and although the eyes of an adult are not always to be trusted, it seems as if Mr. Scudder's long literary acquaintance with the children of his country had enabled him to write for them a history which will be thoroughly to their minds.

The criticism of intelligent children upon such a book ought to be final, and we believe that in this case the author has little to fear at their hands.

Correction.

The September No. of the *Workman* contained a letter from General Marshall, the former treasurer of the School, which, by my mistake, was dated Kendal Green, BOSTON, Mass., instead of WESTON, Mass. Thinking that some of his many correspondents might be misled by my error, we make this statement and give his address in full:

J. F. B. MARSHALL,  
Kendal Green,  
Weston, Mass.

### The Southern Press, Both sides.

How evident it is that no man is fit to be a voter, who cannot give intelligent consideration to the vote which he casts, and does not feel that his political opinions, as an individual, are of some value. And yet, we can imagine some entirely disinterested and unprejudiced observer taking up the records of the present campaign, is it not likely that his first, and not improbably his last, impression would be, that voters thus qualified are the exception in this country?

What a curious state of things is indicated by the following, from the *Norfolk Landmark*:

"One of the bad signs of the times is that you hear men on every hand talking about the different 'votes' in this country, not as 'votes' expressive of opinions, but of nationalities, or color. In the present canvass we have the Labor vote, the Greenback vote, the Prohibition vote, the Democratic vote, and the Republican vote. These would seem more than enough, especially as a large number of the colored people are voting for the people on a basis entirely too narrow for potential organization. But this, unhappily, is not all. We have the German vote, the Irish vote, the White vote, and the Black vote."

And the climax would seem to be capped when we find that not only must a man vote as Black or White, as Democrat or Republican, as Prohibition, Protection, or German or Irish, but also as Baptist or Presbyterian, before he can cast his vote as an individual with independent convictions.

"The Democratic party has recently given great offence to the Baptists of the State. In making the nominations for State officers, they not only failed to put a Baptist on the ticket, but substituted an inferior man in the place of Bro. — the popular and efficient Superintendent of Public Instruction; and yet one-half of the votes that will be cast in the election will be Baptist votes. We know why the Baptists are thus ignored and insulted, but we will not go into that at this time."

—Religious Herald, Va.

That the ex slaves of the South should be forced almost *en masse* into the party to which they feel that they owe their freedom, is to be expected, but that men who have no such past to cast its shadow of dread upon the future, should persist in making party lines their only measure of political right and wrong, seems to show that organization and party seems to have become a mania rather than a controlling power.

The colored voter when he speaks for himself, has, from his point of view, many good reasons to give for his position, which indeed is none of his choosing. There is much truth in such declarations as this:

"The colored voter of to-day is forced, to assume about the same attitude toward political parties that he assumed fifteen years ago—that of fealty to the republican party and opposition to the democratic party. As a voter, the colored citizen has advanced in all that pertains to a full appreciation of the political needs of the country. His material and educational progress has been almost phenomenal and his high appreciation of his social relations is such that marks a studious and rapid development."

Notwithstanding these changes which he has undergone as a political, social and intellectual character, he has not found that healthy change in political parties which would give him an opportunity to exercise a keen discrimination, commensurate with his advanced development, as to a choice between political parties. He finds the republican party still holding out its arms to embrace him as a man and a brother. Its principles and its practices proclaim and encourage, in so far as is possible, the theory of the equality of citizenship. It builds his school houses, it stimulates in him a desire to develop all the nobler instincts of his nature. Wherever it maintains power, the colored man is protected against insult in a moral sense, as well as against the encroachments which his enemies are constantly endeavoring to practice, in a political way.

The democratic party has not changed its ancient attitude toward the colored people. It has opposed every measure proposed, looking to the advancement of the colored man. It opposed his emancipation. It opposed his

enfranchisement, it opposed and still opposes his education, it ignores his social rights and opposes his civil rights. Its methods of administration are aimed at the humiliation of the colored man, and it seeks power by base resorts, which inflame and re-ignite race prejudices and race antagonisms.

It is by reason of the existence of the democratic party, that we are made to hold to the republican party. When Bourbonism gives way to a wise conservatism: \* \* \* \* in a word, when it dies and is buried, without hope of resurrection, then, and then only, can the colored man think of deserting the republican party. It is our duty to stand by the republican party until the last rebel dies, or is regenerated; until the prejudices which now seriously interfere with our full development and which are now mountain-high, are wiped out; until the Nation is united into one people, with sympathies, aspirations and motives, harmoniously blending, and with a common pride in its institutions and an abiding faith in one another. Until then, Republicanism must be our ship, for "all outside is the sea"—a roaring, seething waste, with uncertain depths and distant shores. The *Post* and *Review* are right.

The *Virginia Star* believes in the growing importance of the colored vote, and its tendency to mass itself within the lines of one party or the other, but, it is to be hoped, overvalues the effect of antagonistic race feeling on the future of American politics.

"Remember that less than twenty years ago, the people described above were held in hopeless slavery; that less than that number of years ago they were turned loose without skill or learning in the art of self-government and providing for the future. Turned loose, not amongst friends, but amongst their bitter enemies, their former owners, who were filled with prejudice and chagrin at having what they called their property taken away; turned loose without a dime, without a foot of ground or a tent to shelter them. Remember all this and more, and compare the condition of the colored citizen of twenty years ago with his condition to-day, and then write your answer as to whether or not the colored citizen has progressed since his emancipation. We tell you the colored citizens are coming. They are coming seven millions strong!"

Whichever of the national political parties can control the vote of these seven millions of citizens will control this country. The rising generation of colored people will understand this fact in all of its force. And when they do, understand it properly and act upon it, they will constitute a power in this land that will not be contemned, and the world at large will be compelled to acknowledge that the colored citizen has progressed."

That there is room for a difference of opinion among representative colored men in regard to this prejudice of the two races against the other, is shown by the expressions of kindly feeling found even in the midst of the campaign bitterness:

"The Southern white people are not all a bad lot. Some of the most generous, high-souled, law-loving citizens in this country reside in the South, and were born there. The warmest friends the colored people have are to be found among this class. Show me a colored man holding office in the South, and I will show you his bondsmen from this class of Southerners. Colored papers should be careful not to stigmatize the whole white population in the South on account of the lawlessness of those who disregard the protest of the loyalists of that section." *N. Y. Globe.*

That the present campaign does not differ from any that have gone before it in the element of personal bitterness, is shown by the *Memphis Appeal* in a brief resume of the scandals through which various presidential candidates have been obliged to fight their way to the coveted distinction:

"It seems that a Presidential election is the signal for turning a calcium light upon the character of presidential aspirants. No man's character, however long established, is pure and unquestionable, is a defense against the most outrageous slander and unblushing vilification. Juvenile politicians in their ignorance consider the idea that the defamations in their candidates is something new—that Blaine and Cleveland are the first victims that have been assailed. But they are passing through the same ordeal to which every candidate for the presidency and every President-elect have been subjected since the organization of the government. Washington, Jefferson, and both the Adamses were maligned. There were scandals and bickerings in their Cabinets. A remorseless war was made upon Andrew Jackson. He

was called a gambler, horse-racer, duelist, and accused of stealing another man's wife. Clay was stigmatized as an immoral monster. Webster was branded as a drunken libertine and as dishonest in money matters. Every vile epithet in the English language was applied to Martin Van Buren, and the candidate elected to the Vice-Presidency on the Van Buren ticket was charged during the campaign with having a Negro wife. Grant was vilified for eight years, and defamation was the cause of Greeley's death. Garfield and Hancock had their names dragged through the filth of the canvass. Blaine and Cleveland are passing through the same terrible ordeal.

And the *Appeal* hardly puts the case too strongly when it suggests that, "judging from the pot names used in the presidential canvass, foreign nations may well be impressed with the belief that we are fifty millions of fools and knaves led by a few rascals."

A leading Southern paper, the *Augusta Constitutionalist*, sums up, as follows, the reasons for counting in a sweeping Democratic victory; it says:

"The demand of the people upon the Democratic Convention was for a thorough representative of wise and honest government. No man so completely and availed himself that demand as Grover Cleveland. If that demand is met, no Democrat could be. We believe however that the Democratic masses and the Independent voters of the country will rally to his standard."

"Beyond the fact that the Republican party, closely united in 1880, elected GARFIELD by a mere scratch, we have the certainty of a large Independent element that will vote for CLEVELAND this time, and this element, added to the Prohibitionists, who were never so earnest and formidable and numerous, will more than offset any possible Democratic backsliding."

Again, the business situation is different. In 1880, there was an apparent commercial prosperity, and the Republicans took advantage of it. They claimed that their policy brought it about, and that the Democrats proposed to disturb it. The whole aspect of affairs is changed, and the Republicans cannot escape responsibility for it. A change of administration is the only hope for a revival of business prosperity. That was Tilden's winning card, allied to reform in the civil service, and it will, with the same auxiliary, prove CLEVELAND's talisman. Other potent reasons are found in the fact that four years ago nearly all the important Northern States had Republican administrations in power. Of these New York, Pennsylvania, Ohio, Kansas, Connecticut, Michigan, California, and Nevada, all now have Democratic Governors, whose influence and patronage, widely extended as it is in each of the Democratic candidates.

Still further, and not less important, the Republicans are "out of soap." They cannot buy the election as they did in 1880. Against all such crooked procedures the clamor of Ex-Gov. POUND is raised and he will summon many thousands to his standard.

With the factions reconciled, as we expect at an early day, the Democracy of the Union, with their honorable allies all over the country, will march to certain victory."

One must be of a very hopeful spirit not to find an intimate acquaintance with the details of campaign work thoroughly discouraging, and were it not for the conviction that it is not republican institutions that are at fault, but rather human nature, the dangers of freedom would seem greater than its benefits. The *Norfolk Landmark* has not far to look for proof of its assertion that

"Intelligent men of color should realize that their race can never be elevated by contact with the sort of degraded white people who drink and hob-nob with Negroes only to purchase votes."

The recent arrest of a colored man for attempting to pass a fifty dollar Confederate bill which he had received at a late election in exchange for his vote, points the moral to this without much comment.

### Horsford's Acid Phosphate.

ONE OF THE BEST TONICS.

DR. A. ATKINSON, Prof. Materia Medica and Dermatology, in College of Physicians and Surgeons, Baltimore, Md., says: "It is a pleasant drink, and is one of our best tonics in the shape of the phosphates in a soluble form."

We reprint the following notice of the death of Mr. Robert Hoe, of New York, which is most appropriately placed in the column of the *Southern Workman* for the reason that the gift of a fine large Cylinder press from the firm of R. Hoe & Co. eleven years ago was, in part, its foundation. The press has ever since been in constant and satisfactory use, having served in a true sense, as a teacher of many a Negro and Indian apprentice who has worked upon it. It has been the means of circulating millions of pages of information upon the ideas and operations of the Hampton school, creating an interest of untold value to the work itself and to the cause it represents. Such a press may almost be said to have brains—it certainly has force and purpose, and may be most efficient in human progress.

### Death of Robert Hoe.

Robert Hoe, of the firm of R. Hoe & Co., died September 14, at his summer house, in Tarrytown-on-the-Hudson, on Saturday, in his seventieth year. Mr. Hoe was born in New York city, and was the son of Robert Hoe, an Englishman, who came to the United States in 1803, from Hove, in Leicestershire, England, and founded the business house of R. Hoe & Co., well-known manufacturers of printing presses. When quite a young man the late Robert Hoe, with his brother Richard M., succeeded to the business established by their father, which has become the largest of its kind in the world. He was always a public-spirited, liberal-minded citizen. While an active member of a number of charitable institutions, as well as business corporations, he gave much of his time and means to individual charities. It is doubtful whether one of the more than a thousand hands in the employ of his firm can recall a harsh or unkind word spoken by his late employer. Mr. Hoe was of a quiet and retiring disposition, and although taking much interest in political matters, never assumed any prominent public position. He served, however, as a member of the Committee of Seventy organized to reform the city government. He was a member of the Fifth Avenue Presbyterian Church (Dr. John Hall's). Mr. Hoe leaves a widow, one daughter, and one son, Robert Hoe, jr. *Evening Post.*

Capt. Pratt, Superintendent of the Indian Training School at Carlisle, Pa., reached that city on the 24th inst. from New Mexico, with seventy-seven young Indians of the Pueblo tribe, ranging in age from 9 to 20 years. The school opened on the 1st of September with 400 pupils.

It is of interest and worthy of note that a colored man is present dean of the Diplomatic corps here, a position of high honor and dignity. It is Mr. Preston, the Haytian Minister, resident in Washington, and on all state occasions he is given precedence of entrance. The Minister who has been longest in continuous service is regarded as Dean of the Corps—Washington correspondence *De Witt Planchard*.

### Horsford's Acid Phosphate.

ADVANTAGEOUS IN DYSPESIA.

DR. G. V. DORSEY, Piqua, Ohio, says: "I have used it in Dyspepsia with very marked benefit. If there is deficiency of acid in the stomach, nothing affords more relief, while the action on the nervous system is decidedly beneficial."

A beautiful ENGRAVING in SIX COLORS, representing TWENTY (20) PORTRAITS of the most FAMOUS

### CONFEDERATE COMMANDERS,

IN THE CIVIL WAR, 1861-65.

Every PORTRAIT has been carefully verified, and have been prepared at great expense and in the most ELABORATE and ARTISTIC manner by ENGRAVERS. The PORTRAITS of the GENERALS will be RECOGNIZED at a glance, they are in FULL UNIFORM and true to life. The HISTORIC GRAY, the GRAY BROTHERS, and the GRAY HISTORIC BACK GROUND. Only a few of these PORTRAITS are now being printed, and as true Southerners should have a possession of one of these valuable MEMORIALS. They are appropriate for the Parlor, Library, Hall of Office, and will compare favorably with the finest OIL PAINTINGS.

The PORTRAITS are PRINTED ON HEAVY PLATE PAPER, beautifully tinted (ready for framing) 2 1/2 x 3 1/2 inches and will send to any address. (Postage of Express paid) carefully packed in tubes, and sent by Registered Mail. Address THE SHEPHERD PUBLISHING COMPANY, 89 Broadway, New York.

### Agents Wanted.

The *Horsford Almanac and Cook Book*, mailed free on application to the Rumford Chemical Works, Providence, R. I.

## Letters from Hampton Graduates.

FROM SUN TO SUN. TWO VIEWS OF CHRISTMAS. TEACHING HIS SCHOOL-FELLOWS. THE DARK SIDE. THE BRIGHT SIDE. A TEACHER WHO READS.

FROM SUN TO SUN.

A teacher who does not wish to be bound to teach only six hours a day, but on the contrary finds that the day-light hours not sufficient for the work that is to be done, is evidently in earnest and "means business."

DEC. 12, 1883.

Dear Friend and teacher:

I was real glad to hear from you, and delighted to think that though I for sometime have been away from Hampton, I am still interested in my getting along. I am still teaching, but not the school I taught last winter. My school is very large, numbering eighty-five; so large that I had to employ an assistant teacher. I am getting along very nicely considering the disadvantages under which I labor, having so many pupils, and not a map nor a chart. In order to do my work as I wish to do it, and think it should be done, I find it impossible to follow the school rules, beginning at nine and closing at three o'clock, but come much nearer to the farmer's rule "from sun to sun."

This, like the neighborhood in which I taught last term, is almost entirely composed of colored people, who are just striving to work their way up. Notwithstanding their being an industrious and hard working people, their progress is slow, owing largely to their having sold their crops, some of them before they are planted, and to their wastefulness, all of which may be summed up in the little word *ignorance*.

The church and school at this station are the largest in the county, but it is almost painful to think that the school year at its longest will be about three months. Thus you may see that our greatest need here still is education. The people themselves are not able to support independent schools and the children are bound to grow up in ignorance, for teachers cannot afford to teach for nothing as they have expenses to bear. That is what I have been doing from March to August. The people, most of them, at harvest time were unable to pay their liens and could not pay any debts before they were paid, and of course if any body waits until next fall or perhaps forever, it must be the teacher. Notwithstanding my many disadvantages I am still in good faith and hope that the time will come when the South Carolina school system will be improved. My free school term will close in about two months. It is possible, I shall keep up a pay school, and if not I shall look out for another.

Hoping that you will excuse my delay in answering, and write me when you are at leisure.

I am, as ever, your friend,

E. F. E.

## TWO VIEWS OF CHRISTMAS.

How the unchristly, unmeaning and often harmful Christmas-keeping of the past can be made to give way to the beauty and joyousness of a Christmas kept in reverence and thankfulness, is shown in the following letter. And with it comes a realistic bit of description which throws a strong light upon the obstacles to progress in the South.

Tenn. 1883.

Dear Miss C.

You were very kind to think of me amid so many demands on your time. I hope the holidays have brought you much happiness. Yours and similar kindly greetings from unexpected sources helped to make them very pleasant to me. I received several very nice presents from friends at the North. But that which gave me most pleasure was the Christmas gifts sent to my children from friends in Weymouth and Haverhill, Mass.

They were never happier I think than when they were ushered into the room where the tree stood laden with gifts for them. A Sunday school class in Wellesley, Mass. sent some beautiful Christmas cards which were distributed among the children, and the many visitors who came to see the children had a good time. But we thought we would give them a little pleasure other than that of seeing others happy, so we had prepared a programme in which Christmas carols and recitations on the beautiful subject of Christ's birth were the order. "Afterward came the cards."

So passed Christmas-day with us. And when compared with former ones, when drunkenness and disorder prevailed, it was a blessed day to all.

Yes, strange as it may seem to you to whom the day is fraught with sacred meaning, Christmas-day is looked upon by these people as a time to get drunk and do all the mischief possible. It is an old custom of the place to free the people from all restraint of law on that day. They can break any of the rules of the corporation without being called to account for it, and as a result, lawlessness is the order of the day. Some even thought it would be unsafe to have the Christmas tree, but I did not feel afraid to venture it. I felt that I could nothing better than provide some entertainment to take the place of the usual mode of enjoying(?) the day. And the happy faces of the children, the beautiful story of "Peace" and "Good will," and the cheerful songs were, I hope, an ample substitute.

I have enjoyed the days of rest that followed. Rest is very sweet to those to whom it is a luxury. I was very kindly entertained for a few days at the home of my assistant in Nashville, Tenn. Visited Fisk University, and saw and heard much that was interesting and entertaining.

My school has reopened with a number of large scholars, grown up persons. It seems such a pity to me that they had to wait so long to begin. The path of learning is by no means smooth, but to them, burdened with other cares, it is indeed rugged.

The people in this part of the country are not thrifty. Their surroundings in a measure account for it. In a country in which the chief industry is the manufacture of whiskey, and a town where saloons are in the majority, one would scarcely hope for a people just emerging from the thralldom of slavery to grow into thrifty and prosperous citizens, especially when added to these disadvantages, is the fact there have been very few advantages for education among them.

I imagine this picture, which can be reproduced many times with new subjects: A horse, the outlines of whose skeleton can be plainly seen, hitched to a cart very much the worse for wear, and driven by an individual whose ragged though patched clothes bespeak extreme poverty.

Mark the dialogue:

"How do you get on?"

"Works on about."

"How do you divide the produce?"

"Massa takes one row of corn and I takes de odder; dat is he gibs me every odder row."

"Who comes out ahead at the end of the year?"

"De boss; he give me an order to de sto' for meat and sick like, and when de year is out it takes my half of de corn to pay him back."

Think of the poor souls working on from year to year and seeing no fruit of their labor—always coming short. I will not say that they are not improving, but that much of the year's "corn" does not go for whiskey and other necessities, but they are to be pitied with it all. My work here is a varied one. The school work, the Sunday-meeting and the visiting among the cabins, when the weather will allow, all this is a great tax on my time, and strength, but I enjoy it so much. Again and again I have thanked the dear Master that he has given me such work to do for Him.

Now I feel that you will forgive my tardiness in writing. I am always glad and grateful to hear from you.

Yours, S.

## TEACHING HIS SCHOOL-FELLOWS.

To go back as a teacher to those among whom one has spent one's childhood and youth, is always something of an ordeal, but when those scholars rank the teacher in point of age, and in many other respects are on an equality with him, it is no wonder that he should be apprehensive of "hard times."

Ya.

Nov. 26, 1883.

Dear teacher:

Yours came go hand, and I was overjoyed to hear from you. I intended writing soon. Would have, but I wanted to see more of my work, as it is a new work to me.

I commenced teaching Oct. 8th, but was examined in July. I opened with 28 children, of whom a great many had been my class and school-mates before going to Hampton. I thought I was going to have a hard time, when I was appointed to the school that I used to attend before going to Hampton, but I can say I am getting along well with the children. I am astonished at the way I am treated by those who were my class-mates once. They show no unpleasant feeling toward me at all. They seem to put forth efforts to do what I tell them to do. I opened with 28, now I have on roll 80. About two thirds of them belong to the church, so you can judge the size of my children.

I have more than I can teach, but I keep them and do the best I can. Next year the

people are going to help me to put a piece to the house, and the Board say if we will put a room to the house they will give another teacher next term.

"I have some very smart children, and if I am successful in getting the piece to the house next summer, I want to have my school a kind of a graded school next year."

My school-house is a very good one, plastered nicely inside, with a good stove, and good writing desks, but blackboards and maps are lacking. I got a man to make me two large blackboards, but he has not delivered them yet, so when I get them I will be straight about boards. I have nothing like a map nor can I get any just yet. Every thing like maps and charts the teacher has to get himself if he wants them.

I am a teacher in the Sunday school, and now nearly all of my children belong to it. Before I opened school the children seemed to care nothing for Sunday school, but I have then interested in that work. These are some of my ways of getting them interested. I would select pieces to sing at Sunday school, that were strange to them, and practice in the week, and say let us see how well we can sing this piece. Sunday, I got the Sunday school to send for the Sunday school Quarterly. I would go over the lesson with them, and give rewards for the best lesson. Now they don't look for rewards, but hate to be called on and not to know the lesson. Also children who do not come to day school, I meet them, talk with them, and get them to be missionaries and bring with them to Sunday school some who do not belong to it. These I reward by giving some good little book or Sunday school paper.

(By these and other similar methods I have a good Sunday school. I am now on the eve of starting the young people's society. The older people are generally Christians and are glad to see good work go on. They are coming to see more and more every day, the need of education. When I sit and tell them about Hampton, what Hampton is doing for the colored people, they answer that is what they have longed and prayed for. They are all the time after me about getting a place in Hampton for some of their children. I send two this year, and three next year. In my school I want to send next term. Now must close, good by.

T. C. W.

## THE DARK SIDE.

Occasionally our graduates find their way into districts where there has been no awaking, and there is discouragement in the very air. Then indeed the struggle is hard, and often unequal, but we are glad to say that these experiences are rare.

Md. Dec. 1, 1883

Miss—

Your letter has been received. I left W. the spring of eighty two, and the school has been in the hands of Jerome B. ever since. I taught during the last school year at Parsonsburg, Md., and would have returned, but the Examiner is trying to get some of the people here in the work, and so he sent me here as he said "to prepare some young ladies," whose abilities and so forth are such as he thinks will make good teachers. I can't see however that the people take any more interest, in fact hardly so much, as where I was last year, in school affairs. I have tried time and again to get some to send some of their children off to school but it seems useless. My school is not so large as my last one, though it may pick up during the next term. I am doing what I can for them, and may be able to build up a school, for I have not got it now. I thank you for your kind wishes and pray that some good may come of my labor.

Respectfully,

Y. W. C.

## THE BRIGHT SIDE.

To have done much hard work, knowing that there is yet harder to be done, and still to believe that "the sun is always shining behind the clouds" shows a spirit which will not easily be "crushed." The value which the writer sets upon the books and papers she receives, and the use she makes of them, ought to encourage the friends to whose generosity she looks for further help.

Dear Miss C.

Your letter of the present month is received. I thank you for the greeting of the new school year, and am happy to inform you that I am yet in charge of the same school that I have been for three terms. I responded on the 15th of this month, with a goodly number, and a fair promise of a successful

term. Am also blessed with a comfortable school house with three large glass windows which afford thirty-three, and a large heater. I attended the Institute which was held at Staunton, Va. last summer; was there during the entire session. I feel much strengthened and benefited by it, and have entered into my work with better views and ideas than I ever had before, and I hope I may be able to attend the Institute every summer.

This will make my fourth term teaching here. I have worked hard among these people, and yet there is plenty of hard work to do. Every year there is something new to take hold of, which tends to the building up of the race. My Sunday school is getting on splendidly, and I am glad to say that I have been fully supplied with Sunday school matter all the summer, from Northern friends, to whom I return many thanks. I give papers out every Sunday in my school, after they are taken home and read, I caution my scholars to return them to me in good order; these I take and send away to other Sunday schools who have no way of getting any papers at all.

My occupation is teaching, and I desire no other branch of business. The work is hard and sweet. Though my path is often overgrown with clouds of distress, and discouragement, yet I remember that the sun is always shining behind the clouds, no matter how dark they may appear. I shall write to Miss—in regard to reading matter, as I am always pleased at having something to read. I shall be glad to write to you again Miss C. when I have something more interesting.

Yours respectfully  
M. A. B.

## A TEACHER WHO READS.

How dear to this lonely little teacher must be the faces of the few books with in her reach. There is certainly a strong appeal in the picture of the long quiet Sundays, spent with the "Pilgrims Progress" and the Bible, and the busy days wherein time is found for Longfellow and Bryant, and their companion poets.

Va. Oct. '83.

Miss C.

Please forgive me for not answering any sooner. I am teaching at home, but I don't get any mail regularly. Sometimes I get it once a week.

Brother A. J. J. S. is teaching about 4 1/2 miles from home, and comes home every afternoon. Brother D. is the Commissioner of Revenue, and that takes his time. An interesting letter from you now and then cheers my lonely hours. I am teaching in the same school house in which I taught last term. It was repaired in the summer, and we have a warm room.

Three of my scholars are at Wayland seminary. They went from Carlsby, Surry Co. Va. I believe I have improved in teaching, but I am far from being a good teacher. We will have a two days Institute in this month. I like to attend them. Besides gaining information, I meet Hamptonians. Do you hear from many of the 82's?

I am lonely sometimes, especially Sundays. I go to Sunday school, and after it closes I come home. I read some library books from Cook's establishment, Pilgrim's Progress, and the Holy Bible which is my nearest comfort. I am so busy in the week that I have not time to be lonely. I miss my father very much but I hope our loss is his gain. Brother A. says he will write you before long. When I have time, I read Whittier's and Longfellow's poems, and others such as Poe, Bryant, Holmes and Lowell, Shakespeare and the Fool's Errand.

Respectfully,

A. S.

In connection with the Physician's report on Indians as given below, it is satisfactory to be able to show a remarkably good health record for the entire school during the summer. Up to date there has been no serious illness of any description, and there is no doubt, that after certain necessary improvements in arrangement of buildings, drainage, etc., have been made, the school will be, by virtue of its location and the very favorable climate, on as good a basis in respect to its sanitary condition, as any institution in the country.

GEN. S. C. ARMSTRONG.

Sir: I have the honor to send you the following Medical report of the Indian Department, of the Hampton Normal and Agricultural Institute.

The health of the Indians, both boys and girls, has been remarkably good during the summer months. No acute cases of illness have occurred among them, and the condition of those suffering from chronic diseases has been very favorable. Excepting for a day or two at a time none have been confined to the house.

The thirteen Omahas sent early in August, arrived in very good physical condition, with the exception of a tendency in two of the boys to incurable disease of the eyes. Two more were suffering from mumps from which they speedily recovered. One of the girls had tumours in the lobes of her ears, which have been removed, and she is much improved in looks.

There are twelve of those brought to us in June, who have incurable pulmonary disease. These with several others who have been here for a longer time, and cases of chronic eye trouble, will be returned to their homes on account of physical disability.

Respectfully submitted,

A. A. ANGELL,  
Resident Physician, pro tem.

The harness mentioned in the following letters was a light buggy harness, with solid nickel mountings, the cost of which, without collar, was \$55.00. It was ordered by Major Gibbs, U. S. A., for Miss Wolfe, and by her was presented to Bishop H. C. Potter of New York. Major Gibbs had previously ordered one for himself, and we ask no better advertisement of the work of our Indian students than the orders which we receive from such sources. Maj. Gibbs says:

"The harness you sent me has arrived in good order. I am very much pleased with it, and shall take great pleasure in showing it as the work of the Indians in your shop."

Bishop Potter writes:

"The harness you sent has been kindly presented to me by Miss Wolfe and I admire it every time I drive behind it. Nothing could be more creditable as a piece of workmanship, and I am proud to think that it is a Hampton product."

The chief obstacle in the way of manual training everywhere, is the difficulty of making it, to any extent, self supporting, and at Hampton we need every possible help in that direction. Nothing encourages our students so much as to have tangible evidence, in dollars and cents, of what their work will be worth to them, and with the Indians especially it is a necessary adjunct to their training, for their knowledge of commercial principles is, as a rule, of the crudest.

They have to be taught, step by step, the relation between their labor and their earnings, before they can understand the value of money or its reasonable uses, and until they have acquired some practical acquaintance with the fundamental laws of trade, they are at the mercy of any one who chooses to cheat them. Fortunately they are not lacking in shrewdness, and a little practical experience in honest trade, proves to be by no means their least valuable resource on their return to frontier life.

MARRIED: In the Church of the Holy Fellowship, Yankton Agency, Dakota, Wednesday, Aug. 27th, by the Rev'd Joseph W. Cook, Mr. Edgar M. Keith and Miss Margaret Goulette.

Mr. Keith of Phelps, N. Y., has for a year past been the industrial teacher at St. Paul's School, Yankton Agency, and Miss Goulette is a student of Hampton Normal Institute, who returned home a year ago. They took their wedding trip to Pine Ridge Agency where Mr. Keith has an appointment as Government teacher.

#### Historic Hampton.

The following essay on "Historic Hampton" was delivered by its author on the 22nd of May last, the fifteenth anniversary of the establishment of the Hampton School, and the interest shown in it at that time by the audience of students and guests, leads us to publish it for the benefit of a larger circle of readers.

In the early days of this Institution the students differed in some respects from the students of to-day. This difference did not exist in complexion, for the eyes that watched with an eagerness that can only be found where the heart is realizing a long concealed desire, and the ears that were bent with almost breathless attention upon their instructors, belonged to a group as varied in complexion as the classes of to-day. The difference most marked lay in the experience and purpose of the individuals. Those were men and women from whose lives the shackles of slavery had just been severed, men and women whose lives had been one continued dream of the privileges they here enjoyed, and who felt the critical and troubling eye of a watchful public upon their every movement, wondering the while if it would result in success or failure. So with double energy they strove to acquire all the knowledge here afforded, that they might the better enable themselves to meet the stern realities of the life before them; and we are glad to say that many of our early students have helped make the Negro's ability to acquire an education no longer a question. We feel that it is well to bring before the minds of the present students a knowledge of the facts, that used to be so well known, concerning these gentlemen and their surroundings, for the accounts of war and of slavery which we have but imperfectly learned from the lips of parents or from the study of history, were upon the minds of our early students indelibly impressed by observation and personal experience.

Most of the students then as to-day were Virginians, and to me this location which is historically so important, seems a very fitting place for an Institution like ours. The story of the founding of the colony in which Capt. John Smith and Pocahontas are so dramatically associated is too well known to need repetition.

There was little that the colonists could ask that Nature had not herself provided; indeed she seems to have most generously bestowed her presence everywhere, as is shown in the fertility of her soil, her genial climate and the beauty of her James and York Rivers. The valley of the Shenandoah by its surprising loveliness, and the important part performed there in the late war has become famous in American History.

Very many of Virginia's beautiful old rivers and towns are important in history, as the York rivers on which is situated the old town where Washington with Rochambeau gave the blow which proved so fatal to the British and ended the Revolutionary War. The Virginian aristocracy, wishing to offer the advantages their sunny climate offered without physical labor of their own, thought to accomplish their desire by appropriating whatever they came across in the occupation. For this reason the Red men the Aborigines of America, were enslaved. But rather than be "bearded thus in their dens," some resorted to suicide, others refused to eat till death, which was far more preferable than to suffer the indignities of slave life, came to the rescue.

In 1620, passing between Old Point Comfort where now stand the Hygiea Hotel, and Rip Raps, a Dutch trading vessel laden with human freight landed its cargo of twenty Negroes at a trading post near Jamestown. Ah! could Holland have realized the dreadful extent to which their beginning would be carried, unless she had been void of human feeling; I believe she would have returned her cargo to the homes from which she had brought them and sought employment less odious, for there never was an institution that gave more anguish to the oppressed or laid more misery at the door of the oppressor than did that of slavery which began with twenty victims and ended with millions. To-day as we look from our windows to the mouth of the beautiful "Historic James," on whose banks the first of our people were landed and bought, we thank God that those waters are no longer a vessel for the slave-trader's vessel, and that they no longer witness the shocking sights of encounters with sword and bayonet, which they beheld in the struggle to blot out the curse from our land.

Let us turn to the waters surrounding us, which were infested, in the early history of Virginia, by the notorious Pirate Blackbeard and his marauding band, till Governor Spotswood, who was determined to punish all evil doers, succeeded in having him captured and beheaded, after which his head was placed on a stake and set up just opposite the Soldiers Home on a point now known as the Armstrong Point. To the left of Armstrong Point is

the beautiful Ivy Home, so called from the ivy which has clambered over its walls, till one end is almost totally covered, not only on the outside but in many places it has penetrated the crevices between the bricks and extended its growth over the inner walls. The bricks, which form the walls over which the ivy climbs, were brought from England in the old colonial days when America manufactured nothing.

Seven miles from here is Shellbanks, our school farm, the house of which was built before the Revolutionary war, and it is said, as I thought to be the case regarding some house in nearly every old village or town, that Gen. Washington spent the night there.

On the way to Shellbanks we pass the St. John's Church one of the oldest churches in America, which has borne severe treatment in both the Revolutionary and Civil wars, being burned in each. Connected with this church is an ancient burying ground where rest the remains of many of the Old Virginian aristocracy.

Hampton and its vicinity were especially interesting and eventful to the Negro during the rebellion. The hope cherished by the mass in the general exodus from all parts of the south, was to reach Fortress Monroe, three miles to the N. W. within and around which the slaves should receive both refuge and protection. This hope they realized through the shrewdness of Gen. B. F. Butler, who seemed equal to any emergency.

The hard work within the Union lines with promise for pay lasted only a short time, during which the despondency manifested by some was banished by the cheerful words of the more trueful and God loving among them, whose faith in the Union lived through the darkest hours, which proved to be just before the breaking of the glorious day of freedom.

The grounds now occupied by the Stone Memorial Building and the farm beyond, were occupied during the war by Union hospital barracks. When the Confederates found that they could no longer depend Hampton from the soldiers, the masters in many cases set fire to their beautiful dwellings and watched them perish, rather than have them fall into the hands of their enemies. Not satisfied with destroying personal property they also burnt the bridge to obstruct the passage of the Federal troops, so that at the close of the war all that remained of the once beautiful town was a multitude of blackened chimneys which flames had no power to destroy.

A few miles to the W. lies Newport News, off which occurred the engagement between the Merrimack and Monitor. About ten miles in another direction is Big Bethel, the north and almost within calling distance from this building stands the old summer resort of ex-Pres. Tyler. At the breaking out of the war he left his property in charge of a trusty slave belonging to one of his neighbors, who was to care for it till he returned. This slave man was old and generally called Uncle Peter. He is still living, and almost any night you can find Uncle Peter at his home across the creek, in a very small house, nearly hidden among the vines and shrubbery and from which he goes day after day to his old occupation of mowing.

The war went on and Pres. Tyler did not return, and at last, says Uncle Peter, I knew he was dead, for I seemed to feel his presence about me everywhere on the place and I wasn't afraid, for he always seemed pleasant to me while to others his ghost was always frightful. He seemed to have something to say to me and I shall always believe he wanted to tell me to take his property, because his ghost was so partial to me. This man is doubtless superstitious but he held a decided advantage over his fellow servants in his ability to read, and you shall see how noble and unselfish he was and how earnestly he endeavored to enlighten his less fortunate brothers with his limited knowledge. The story of his effort in acquiring this knowledge before the war shows great perseverance, but is much the same as is told by almost all who learned to read in slavery. He gained his first knowledge from associating with his young master, and then by persistently studying after hard days of toil till the late hours of night, aided only by the flickering light of a pine torch. Even then he was obliged to keep an ear open to guard against the approach of any who would detect and expose him. Often, as he has told me, at the sound of footsteps he used quickly to extinguish his torch and feign sleep till all was again quiet, when he would relight and resume his study. During the war one room in the Tyler mansion was left for his use, and in this room, as he was with no one to interfere, he at once started a school where, from miles around he gathered his friends night after night, and gave them freely of the little he knew.

Uncle Peter's school, the first ever opened thus to the bondsmen, was followed by the opening of another by a colored woman, under a tree near what was then known as the Chesapeake Female Seminary and now the Soldiers Home at Fiske, for that was her name. She was very anxious and determined to help her people, finally succeeded in securing shel-

ter for herself and pupils in a building belonging to the former Seminary, where she taught very successfully till her strength, which had never been great, was spent in the service of the race which she loved and from which she was called "From labor to reward." A little later, Gen. B. F. Butler, who was then in command at Ft. Monroe, succeeded in securing Gov't funds sufficient for the erecting of a building which has since borne his name, and which accommodated about six hundred contrabands. The ages of the pupils varied from six years to sixty and of course the school was poorly disciplined. In 1865 the school was turned over by the Gov't to the American Missionary Association; afterwards the trustees of this school, which was established in 1868, purchased the Butler school, and it has since been used as a preparatory department for the Normal course and a training school for the graduating class. Hampton Institute was for years devoted to the uplifting of the Negro race alone, till our principal who, we believe, would if possible place every man in a position to obtain his rights, united with us another and more oppressed race, namely, the Indians, whom you see with us to-day.

On the grounds where once the tomahawk and scalping knife turned on the Indian aggressiveness had driven from the Indian his hospitable spirit and where afterward the driver's horn and the slave whip were ministers of terror and misery to the Negro, now stands our Institute united in its efforts to enlighten both Indians and Negroes, whose constant prayer is long life and prosperity to Hampton and the kind friends who support the work.

IDA V. LEE.

#### The New Orleans Exposition.

As the time approaches for opening the doors of the World's Exposition at New Orleans, encouraging reports from various foreign and domestic commissions indicate that the riches of the great fair have been by no means over estimated. The scheme has grown so rapidly that it has been found necessary to erect additional buildings in a short time, in order to accommodate the increasing number of exhibitors. Three and possibly four of the buildings will be found to be larger than any similar erections of any age or country. This fact gives the Exposition a pre-eminence among world's fairs that will be potential in drawing strangers from far-away lands. Those who have made up their minds to see one world's fair have now the opportunity of seeing the best example that has yet been devised in America or Europe.

There can be no such thing as failure now. With abundance of money in hand, and the largest number of exhibits ever booked at an exposition, and thirty-five States and fifteen foreign countries participating, the management may well feel proud of the success already achieved. In addition to the products of art, science and industry of the old world, such as have made other fairs renowned and attractive to remote dwellers of the round globe, the New Orleans' creation has the unique features.

The Mexican garden of five acres will contain one hundred and four varieties of trees from every part of the Republic. Many of the woods have a high commercial value and yet, strange to say, some of them are practically unknown in the United States. The Mexican cedar, mahogany, Camptech logwood, saffron and linseed, they have a perfume that never leaves it, are all trees of great value in commerce. The timber growth of Mexico is practically unlimited, and there is boundless wealth in many untouched forests awaiting the hand of enterprise and industry.

Should the Exposition succeed in making known to the people of the world the riches of the North, Central and South American forests, it will have accomplished at its close a highly important mission. But what is said of trees may be repeated in different and more precise language of tropical fruits that are to be brought to the great Exposition. The different varieties of figs, grapes, oranges, mangoes, bananas, pine-apples and many rare fruits will be shown growing upon plants or trees, thus presenting a rare spectacle to the North. While the departments of forestry and horticulture will be the largest yet seen, the other features of the Exposition such as the cotton, sugar, mineral, machinery, government and live-stock exhibits, will attract scarcely less attention.

The actual results already obtained are quite sufficient for the management to base a prediction upon, to the effect that the Centennial is to be the largest, most complete and satisfactory of the nineteenth century.

#### Horsford's Acid Phosphate, AS AN APPETIZER.

Dr. MORRIS GIBBS, Howard City, Mich., says: "I am greatly pleased with it as a tonic; it is an agreeable and a good appetizer."

## On Coney Island.

Our artist went up to the top of the tall observatory in Coney Island a few days ago, and took a bird's-eye view of a portion of that popular resort, where thousands of people from New York, Brooklyn, and other cities find daily relief from summer heat. No beach in the world furnishes greater facilities for rest and refreshment. Easily reached by several lines of railroad and excursion steamers, with miles of safe bathing grounds, with hotels of every variety, from the cheapest to the most expensive and luxurious, Coney Island attracts visitors of every class. As a rule the beach is well policed, and in the day-time crowds of ladies and children resort there without fear of disturbance.

There is much complaint, however, of the presence of gamblers on the beach, who apparently play their tricks upon unsuspecting countrymen without hindrance from the police or from the proprietors of the hotels. They are a source of great annoyance to decent people, and although they are careful to make no disturbance, they should be driven from the island without ceremony or delay. *Harpers Weekly.*

## Horsford's Acid Phosphate.

FOR OVERWORKED FEMALES.

Dr. J. P. Cowan, of Island, O., says: "It proves satisfactory as a nerve tonic, also in dyspeptic conditions of the stomach, with general debility, such as we find in overworked females, with nervous headache and its accompaniments."

## Frank Leslie's Sunday Magazine.

This most interesting publication is conducted with liberality, enterprise and talent. In fact the name of the editor, F. De Wit Talmage, D. D., is a voucher for its excellence. The October number is filled with contributions in prose and poetry by some of the most popular writers. Among the contents are articles by Rev. Ties. J. Rider, Mrs. Robbins, A. E. Alexander, Harvey, J. Ales, Pattee, etc.; sermons by the editor and D. L. Moody; poems by Mr. G. W. Hervey, Longfellow, Mabeline S. Bridge, etc.; and serial and short stories, sketches and essays, replete with interest. "The Thruway South Island," "Historical Attractions of Inwood," "Titanic Religious Paraphrase," "Children of All Nations," etc., will well entertain and instruct. The Magazine should find its way into every family circle. A single copy is 5 cents, or \$5.00 a year, postpaid. Mrs. Frank Leslie, publishers, 35-55 and 57 Park Place, New York.

## Horsford's Acid Phosphate.

INCOMPARABLE IN SICK HEADACHE.

Dr. Fred Horner, Jr., Salem, Va., says: "To relieve the indigestion and so-called sick headache, and mental depression incident to certain stages of rheumatism, it is incomparable."

**AGENTS** wanted for The Liveoak of all the Presidents of the U. S. The largest, handsomest, best book ever sold for less than twice our price. The fastest selling book in America. Immediate profits to agents. All in intelligent people want it. Any one can become a successful agent. Terms free. HALL'S BOOK CO., 112-124 East Main.

## Horsford's Acid Phosphate.

A VALUABLE REMEDY FOR GRAVEL.

Dr. T. H. Newland, Jr., St. Louis, Mo., says: "I have used it in disease of the urinary organs, such as gravel, and particularly spermatorrhoea, with very good results, and think it a very valuable remedy in those diseases."

T. A. Williams & Dickson,  
WHOLESALE GROCERSCommission Merchants,  
2 & ROANOKE SQUARE.

6-84. Norfolk, Va.

## DENTISTRY.

Hampton, Va., Oct. 1883.

Dr. T. H. Parramore begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton. Office in King St., opposite Barnes' Hotel.  
11-85-10-84.

## PATENTS

MUNY & CO. of the Scientific American, continue to act as Solicitors for Patents in America, Trade Marks, Copyrights, for the United States, Canada, England, France, Germany, etc. Good book about Patents sent free. MUNY & CO. are now making a new and complete list of Patents granted in the United States, and will send it free to any one who sends them a card. Address MUNY & CO., Scientific American Office, 35 Broadway, New York.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia has four stories in height, substantially built and comfortably furnished; has two Otis hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 44° in winter, and 32° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful sorceries of the Hygeia.

For further information address by mail or telegraph,  
H. PHOEBUS, Prop.

## National School Supply Bureau

Baltimore, Wis., July 31, 1883.

National School Supply Bureau:  
Last April, being in charge of a large public school, but desiring a position in some good academy or college I placed my name with your Bureau. During the first part of the present month I received notice from you of a vacancy in such a place as I desired. Putting myself in communication with the party concerned I received the appointment. I am well satisfied with the management of the Bureau, and feel sure that it fills a useful and necessary place in our school economy. You are at liberty to use my name if you wish.

Respectfully,

EDWARD O. FISKE.

Headmaster Markham Acad., Milwaukee, Wis.

For application-form and circular, address:

Nat'l School Supply Bureau, Chicago, Ill.

VOL. XIII.

HAMPTON, VA., NOVEMBER, 1884.

No. 11.

## Notes on the Shenandoah Valley.

No. III.

By ORA LANGHORNE.

The Valley was looking its loveliest during my visit in the last soft, sweet days of May, and one of the pleasures of the trip was a long ride into the country to see some old friends, whom I had not met for years. It is about six miles from my sister's home in Harrisburg, to the beautiful grass farm, where my friends, the Harrings, have lived since the early settlement of the country. It was a fine, sunny afternoon, when I set out on the long drive, taking some of my sister's children with me to see the young folks at Mr. Harrings, the friendship of four generations between the two families being particularly ardent with the children of the present day.

Being accustomed to Lynchburg charges for conveyances, which are about the same as in other cities, I was quite surprised when ordering a carriage, to find how very moderate were the prices asked at the livery stable. A comfortable open carriage with a handsome pair of blooded horses was furnished for the half-day we wanted it at \$1.50. I presume the rich, abundant country, which exports large amounts of grain and lumber, accounts for the cheapness of stable bills. The town and neighborhood are annually filled with Summer Bachelors now, and the stable men do a flourishing business in liverying strangers to visit Weyer's Cave, Ravely and Taylor Springs, and the various battlefields, and other points of interest in the vicinity.

The children sprang into the carriage, as merry in the prospect of the ride as Mrs. Gilpin's party on the famous wedding-day, and the horses danced and pranced so at starting, that I feared we were going to have some of Gilpin's adventures, but my young nephew who drove us, was skillful and strong, and we were soon trotting smoothly over the hard turn-pike. One of the great advantages of the Shenandoah county, compared with most districts of Virginia, is the excellent macadamized roads, for which the abundant limestone affords the best material, leading from the coast in various directions to adjacent villages and summer resorts.

We passed through a smiling country, with green meadows, ripening wheat fields, and corn rows just marking their soft outlines, stretching away on either side into uplands, which gradually rose into mountains, the valley at this point being from seven to fifteen miles wide. We saw many fine orchards along the road, the apple crop being one of the important interests of the county.

Our swift steeds brought us in a half-hour from a pretty little hamlet, within sight of Dayton, a tidy little hamlet, containing five or six hundred people, nearly all descendants of the thrifty Germans, who were the first settlers of the valley.

There is a great mill-pond at Dayton, and a pretty little stream flows in and out of the town. The shining waters, and the trim houses of the "Dutch folks," as their neighbors call them, with the surroundings of richest green, made such a picture of calm rural life, that it seemed hard to realize the fearful scenes of civil war, which memory brought vividly before me. In the autumn of 1864, Sheridan, then in possession of the Valley, ordered every house within five miles of the spot, where one of his favorite officers was killed, to be burned, and Dayton being within the prescribed limits, was condemned to destruction. The terrified people, many of them devoted Unionists, as were all the members of the Tunker church, were sternly ordered to leave their houses, and women and children, with all the old people, carrying with them such things as they could hastily collect, rushed into the streets, each moment expecting to see their houses in flames. Several large houses in the country around were already burning, and the fire-drums were beginning their dreadful work in the village, when a messenger galloped up from the army with orders to stop the burning. The soldiers readily obeyed, and the people were told that it was owing to the representations and entreaties of the Colonel of an Ohio regiment, that Sheridan's fierce wrath was stayed, and the homes of the villagers spared. The Ohio soldier was afterward well known to the country as President Hayes, whose name will ever be remembered in Dayton, Virginia, with gratitude. No promises in

the Scriptures are sweeter than those addressed to "the merciful" and "the peace makers" and surely the honest and true hearted man who stayed the arm of vengeance amid the cruel scenes of civil war, and sought to reconcile opposing factions in the no less trying times of reconstruction, can claim them all. Noble indeed is the example set by such a man to the youth of our people if Mr. Hayes could have been nominated in this canvass for the Presidency.

The thrifty and sensible community, living in and about Dayton, lost no time in going to work after the war closed, and the little town is full of life and energy now. Several important manufacturing establishments have been successfully begun there, and the place is destined to be the centre of a busy district, occupied with various industries. At Bridgewater, a somewhat larger village four miles beyond Dayton, lying along the north branch of the Shenandoah, which carries fine water power, already numerous flour, woolen and saw mills are at work.

The sober, industrious character of this community, with the fine soil and climate, make it especially attractive to northern settlers, and several families who have made homes here, found a ready welcome and have identified their interests with those of their neighbors.

Dayton has a carriage and wagon factory, an organ factory, and the large printing and publishing house of Keller & Co. I had often heard of a little paper printed in the mountains of my native county by a family of Germans, named Finck, called the "Musical Million," said to have a large circulation through the West, and as it had recently been conducted in Dayton, I felt interested in seeing the establishment and editor. We drove up to a frame building on a side street, to which we were directed, and being politely invited, entered the printing office. Two or three young men were very busy at a steam press, in an atmosphere so different from the breath of the hills and dales we had been inhaling with such delight, that we seemed at once to have dropped from the realms of beauty and pleasure into a very hot, hard part of the work-a-day world. One of the workers said civilly that he would take us to the book-binder, and we willingly encountered, to a steep stairway leading to a much pleasanter region above. Here we found ourselves amidst piles and piles of books, in all stages of manufacture, so neat and fresh looking, it was hard to believe they had ever had anything to do with the grime of the printing press.

In the centre of one room was a long table covered with loose pages, which four quiet, respectable white girls were folding and arranging for the binder. When introduced to the steady workers, who handled their pages busily, while talking to us, the German names sounded very familiar, and I learned that the owners thereof all lived close by. They earned four dollars a week so we were told, which sounded like small wages, considering that they had to pay their own board. The country is so abundant, however, that provisions are cheap and I presume that the daughters of the farmers around.

Mr. Keller, the editor of the paper, and head of the establishment, was seated at a high desk when we entered, but laid down his pen and received us very kindly. He has large contracts for printing religious song and note books, using a musical system, which he has invented and patented, and which he claims is much simpler and easier to learn than the old system.

The paper he edits, called the "Musical Million" is a neat little 12 page monthly, and is a "Journal devoted to Music, Poetry and chaste Home Literature." The price is 50 cts. a year, and each number contains several hymns or songs, set to music, with the patent notes of the new system. Mr. Keller certainly has versatile talents. He attends to the printing office and bindery, is part manager of the organ factory close by, edits the paper, and finds time to write poetry besides. When we left he gave us a copy of the paper, one of his nice little song and note books and a book of his poems, called "Vigils and Visions." I wish I had space for some of his verses, and may perhaps be able to send copies of some of the poems, which especially impressed me, to

the *Workman*. The paper he prints has a circulation through more than twenty states and territories, being popular among the music loving Germans, whose ancestors brought their Zithers and other simple instruments from the old country to their homes in the new world. They have cultivated the art all the time they were building up fortunes, so many of them have done, in America, and now that the younger generations are many of them leaving their Virginia homes for "fresh fields and pastures new" in the far West and the far South, the little paper, with its music and songs, its stories and familiar notices, follows them in their wanderings and gives them news of the friends of their youth.

Our friends, the Herring family, were less fortunate than their neighbors in the adjacent hamlet, in escaping the burning orders of Sheridan in 1864. The large and comfortable brick house, which had been known as the abode of hospitality and abundance, was reduced to ashes, and as the family were only allowed a half-hour to move their furniture, much that was valuable, besides the home, perished in the flames. As there is a comic side to most that is tragic in human affairs, one of the ladies recalled with much amusement, when things had grown calm, and they were comfortably settled in an old house on the farm, that during the burning of their home, whilst much property of great value was destroyed, some one at great personal risk, preserved from the fire a large jar of pickles. Mr. Herring, although an old man when the war began, did not give way to depression when his house with most of its contents was burned, he cared for his stock, his flocks and herds as usual, and his beautiful estate over-run by an invading army. The memory of all those dreadful times seemed like a dream to him, as we approached the handsome brick house, where peace and abundance are the order now as in days of old, and found the family cheerful and cordial, entertained us, friends from a distance, and ready to give us a hearty welcome. The estate is one of the best in the county, and the owner, though now past eighty, is still fully able to attend to business, and in spite of rheumatism, leads an active life. He has long been considered one of the best farmers in the district, and his farm products have always commanded the highest market price. His plan has been to raise large crops of grain, with some cattle, sheep and hogs, besides giving due attention to fruit. The ladies of his family have always been noted house-keepers, their butter, fowls, etc. being in great demand. In spite of the difficulties of the labor question in recent years, Mr. Herring has kept up this system of farming, and like most old people he clings to his accustomed methods, and is the farm manager, thinks the day has gone by when grain can be profitably raised in Virginia, western products regulating prices here, and making it impossible for our farmers to compete with the West in cereals. The younger man realizes fully the great changes the rail roads have wrought in the country, and wishes to devote his lands, naturally adapted to grazing, chiefly to raising stock. It seems probable that such ideas will eventually control the Valley, which bids fair to become the rival of the famous blue grass region of Kentucky, in raising cattle, horses, hogs and sheep.

Mr. Herring, junior, thought it much easier labor to conduct stock farming with, the means of his neighbors are importing specimen of fine stock of various kinds and beginning the business with good prospects of success. Blooded stock of all kinds were not so common as they are now, and we seemed to hear of little but thorough-bred horses, short-horn and Jersey cattle, with discussions as to the relative merits of various breeds of sheep, hogs, etc. Harrisburg is becoming a noted horse market, and people from all parts of the country come there to buy the fine horses raised in Rockingham, and the adjoining counties, "Sam Purdy" and "Dan Sporting" the famous race horses, now retired from the turf and owned by Capt. Daingerfield, are considered among the attractions of the place, and a few persons visit the town with the out calling on Sam Purdy, the "King of the Turf," in his palmy days in California, where he once sold for fifty thousand dollars.

## The Followers of El Mahdi.

(See picture on next page.)

The obstacles before the expedition which England has sent up the Nile to reinforce General Gordon in conducting the evacuation of the Sudan by the Egyptian garrisons, are forcibly set forth in the September "Century," by Gen. R. E. Colston, late Bay on the Khedive's staff.

He thus describes the advantages which the wild Arab followers of the "False Prophet" have over the civilized soldier, in the terrible desert where they are at home.

"Immediately after leaving the sea-coast or the Nile, one enters the 'Waterless Land,' where there is not a stream, a creek, a rivulet, or even a living spring,—nothing but deep and scanty wells at long intervals, with here and there a few natural, rocky reservoirs in narrow ravines, away from the line of march and known only to the natives. In the six thousand miles of travel, I saw not more than five living springs, and their waters disappeared in the sand within sixty yards of the observable source. Therefore, in addition to all its supplies, ammunition, etc., an army would be compelled to carry water enough to last it on the journey from well to well, sometimes a distance of ten days for a caravan moving without opposition. Droughts of long duration are common all over the Soudan. When I traveled over these desert routes it had not rained for three years. Many of the wells were dry, and multitudes of camels and cattle had perished. Water must be carried in goat-skins and ox-hides, on camel's back. Hicks Pasha's army of ten thousand Egyptians had six thousand camels, a large proportion being water camels; yet I believe he had transportation only for one day's supply.

In the 'Waterless Land,' water is the paramount question. It is asked how a large body of Bedouins like the ten thousand who nearly destroyed the British squares at Tamai manage to subsist, the reason is plain.

The enormous train required for a European army. They are the most abstemious of men. Each man carries a skin of water and a small bag of grain, procured by purchase or barter from caravans. Their camels and goats move with them, supplying them with milk and meat, and subsisting upon the scanty herbage and the foliage of the thorny mimosa, growing in scattered wadies. These people could live upon the increase of their flocks alone, which they exchange readily for other commodities; but being the exclusive carriers and givers of the water, where a few barrels of water collect, some shaded ravine, and they can scatter, every man for himself, to fill their water-skins. On my first expedition, near the close of the three years drought, I reached some wells on which I was depending, and found them entirely dry. It was several days to the next wells. But my Bedouin guides knew some natural reservoirs in the hill about six miles off. So they took the water camels at night-fall, and came back before daylight with the water-skins filled. An invading army would find it hard to obtain guides, and even if they did, they must keep to the line, and could not leave the line of march to look for water. Besides, the Bedouins, accustomed from infancy to regard water as most precious and rare, use it with wonderful economy. Neither men nor animals drink more, than once in forty-eight hours. As to washing, they never indulge in such wasteful nonsense. When Bedouins came to my camp water was always offered them. Their answer would frequently be: 'No, thanks; I drank yesterday.' They know too well the importance of keeping up the habit of abstemiousness. No wonder they subsist where invaders would quickly perish.

El Mahdi, flushed with success, is steadily advancing. The theological university of El Azhar at Cairo, which is to the Mussulman world what the Pope and the College of Cardinals are to Roman Catholicism, has just recognized his mission as from God. No true Mussulman will oppose him now, and

EXULTATION.

[From Harper's Weekly.]

# SOUTHERN WORKMAN,

**TWELVE PAGE MONTHLY.**

(Reduced to eight pages from July to October four months.)

Printed on the Normal School Steam Press by students trained in the office.

S. C. ARMSTRONG,  
H. W. LUDLOW,  
M. F. ARMSTRONG, *Editors.*

REV. H. B. FRISSELL, *Chaplain,* *Regular*  
MR. W. N. ARMSTRONG, *Contributors.*  
MRS. ORRA LANGHORNE,  
F. N. GILMAN, *Business Manager.*

**Terms: ONE DOLLAR a year IN ADVANCE.**

Specimen copies sent upon application. To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent. A limited number of advertisements inserted at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1-4 column.	2 75	7 50	13 50	25 00
1-2 "	5 00	13 50	25 00	40 00
1 "	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

The Workman office will be glad to give estimates for printing periodicals, pamphlets or books of all sorts. Special attention given to Society and Association Reports. Prices always reasonable and made with a due regard to material and workmanship required. Proofs furnished without extra charge. Expressage paid on finished work. Address all communications or orders,

Normal School Press, Hampton, Va.

Entered at the Post Office at Hampton, Va., as second class matter.

The editors of the *Southern Workman* propose (beginning with the December number), to establish an "Indian Department" of the paper, with a view to obtaining and diffusing trustworthy information in regard to Indian affairs in general. While the work done for Indians at Hampton will receive special consideration, it is hoped that through the various channels which are, directly and indirectly, open to the School officials, much may be learned about the conditions now controlling Indian life, and that close and thoughtful study of these conditions may thus be made possible.

There is so much to be done in the way of making the Indian known to his friends; that is, the facts in regard to him are known to so limited a number even among those who are avowedly interested in securing justice for him, that light from any source should be welcome. How many American citizens are there to-day who know anything, specifically, about our Indian treaties, about the agency system, the division of tribal reservations, of mission work among Indians, of their opportunities for education; in short, how many of us know anything of the real life and possibilities of these helpless thousands whom we are pleased to call the "wards of the Nation?" There is a strong and apparently a growing demand for authoritative information as to the Government's treatment of the Indian, and his attitude towards it, for upon these two factors must depend, primarily, all work done for him, either now or in the future.

New force and effort will, at the same time, be put upon the other department of the paper, to make it more characteristic, original and valuable as a representative of the condition and interests of the freedmen. With the changes contemplated, we believe that the *Southern Workman* will be an increasingly good place for good work of the friends of both the Negro and the Indian.

The Hampton school opens again more hopefully, strongly and in better shape than ever, with five hundred and ninety boarding students (besides twenty-eight day pupils), representing twenty-eight States and territories; their average is between seventeen and eighteen years; two-fifths are girls and one hundred and twenty-seven are Indians. The three grand divisions are as follows:

Normal classes (a three years' course)—Colored 317; Indians 22. Indian classes, preparatory (a three years' course) 98. Work classes (one to three years' course) who work days and study nights—Colored 174 Indians 7.

For further details see full account below.

By the first of next January all are expected to be well accommodated. Four girls are now crowded into small rooms meant for only two, awaiting the completion of the new brick cottage which will hold sixty young women. It will cost seventeen thousand five hundred dollars, of which fourteen thousand five hundred are already given or pledged. The three thousand needed will, we hope, soon be made up by friends; the pro rata cost of one room for two girls is three hundred dollars.

## CURRENT EXPENSES.

Fifty thousand dollars must be raised this year to meet current expenses.

For half of this we look to annual scholarships of seventy dollars, the tuition or cost of education for each student, which they, having their own board and clothes to provide, cannot pay. Last year \$21,000 were contributed in scholarships.

For the other half, we hope for donations of any amount for general purposes and for legacies, without which, of late years, the school would have been unable to pay its way.

Besides government payment for board and clothing of Indians, the annual expenses are sixty-five thousand dollars. The state of Virginia pays ten thousand dollars yearly interest on the Agricultural College land scrip fund (assigned to Hampton Institute to expend for the colored race), and interest on the endowment fund amounts to five thousand dollars.

Seventy dollars educates a student for one year.

Fifteen hundred dollars educates one perpetually.

The condition of the enfranchised Negro points to the black teacher as the man for the hour. Hampton's graduates have proved, as a class, successful, exemplary and self-supporting leaders of their people towards a Christian civilization.

In the exigency of the Indian, citizenship, labor and law, are the only hope. To teach them English and industry, and to secure to them lands in severalty, is the objective point of their friends.

Of the one hundred and three trained Sioux and others sent home since 1881, eight have died, eleven have relapsed to wild life, and thirteen have returned for more instruction in books and tools. The rest are teachers, mechanics, farmers and employees chiefly in the Government service at the agencies. The great majority have turned out well in spite of the low life around them.

Ignorance of and faithlessness in the capacity of the Indians is part of the nation's crime against them.

The school has been filled with students in faith in the friends of the race which it is trying to lift up.

No reduction of numbers has been made because of the business depression which threatens our income this year. Efforts will be made to extend interest in the school, as well as to make it more worthy of the confidence and support which we ask.

The entire Negro race has, since emancipation, unquestionably advanced. Its promising youth deserve a chance: Who will give it them?

HAMPTON INSTITUTE re-opened Oct. 1st with full numbers and promising material for the coming year. The enrollment as we write is 598; 248 girls

and 350 boys, or dividing by races, 491 Negro and 107 Indian students. The corresponding numbers at this time last year were, total, 560; 247 girls and 313 boys; or 470 Negroes and 90 Indians. The quota of Indian students for whom partial provision is made by Government appropriation is 120, and will be shortly filled up this year—as it was last by new Indian students to replace 25 just returned to their homes after three years' course at Hampton. Twenty are expected from Dakota under charge of Rev. Mr. Gravatt of Hampton, and five later, from Indian Territory. This will bring up their number from 127 to 132, and the grand total to 623; 595 of whom are boarders.

As we said a year ago, Hampton Institute has thus reached its desirable limits as to size. Its work for the future is for security and permanency for what has been attained, and to develop in the direction of quality instead of quantity; in the perfecting of its methods and facilities, and in the material rather than the number of its students.

About a hundred applicants were refused admission to the entering examinations after the lists were full. The principal feeder to the regular Normal classes of the institution is its own "Night School" of work students, who, on the farm or apprenticed for from one to three years in the training shops, have been helping themselves at once to a trade and an education. Outside of the supply from the Night School, only 75 applicants were examined for admission to the day classes. Of these 45 were admitted to the Junior class, 5 to the Middle, 9 went by advice into the Night School, and 15 failed to pass. For the Night School, 148 applicants were examined: 87 boys and 61 girls; of whom 126 were admitted. Twelve more, 10 boys and 2 girls were received as work students on the Hemenway Farm.

The Night School is thus not only the chief feeder of the day school this year, but receives most of the supply from outside, is the main inlet into the Normal School. It is best so. Self-help is the best start in life. While, as might be expected, there are some excellent, clear-headed workers who are not quick at their books, the more general observation is that the best material all round and in the long run is that which has come up through the working class. Education at Hampton is thus virtually, for the majority, a four years' course in the training of head and hand. The average age is from 17 to 18, with a somewhat increasing proportion of younger ones who will be the better, whether as teachers or mechanics, for the longer experience of the school's training and influence.

The whole enrollment of the Night School at present is 171; boys, 105, forty of whom are Indians; girls, 66. Forty-five remain in this school from last year, of whom 7 are repeating on account of their scholarship, and 38 stay to complete their apprenticeship at various trades, expecting to make the Middle class when they enter the Normal School next year. All now entering to learn trades apprentice themselves for three years instead of two as heretofore, which will be better for them in the end.

The examinations in general compare favorably with those of last year. There will be some weeding out as usual, but the material is, on the whole, very promising.

The reorganization for winter work has never been effected more promptly and smoothly. In consideration of the unusual number of changes in the corps of teachers this year, and the loss the school has sustained of some of its most valued and responsible officers, this is a very encouraging fact, proving a solidity and efficiency in the constitution of the school which is one assurance of permanency.

In the removal of the school's efficient commandant, Lieut. Geo. LeRoy Brown, U. S. A., and the decision of Government to send his successor to the white Agricultural College at

Blacksburg, Va., instead of to Hampton for the next three years, the duties of acting commandant have been assumed by Mr. Geo. L. Curtis of Yale College, class of '78, while Mr. Arthur T. Boykin, a Hampton graduate, who has acted very efficiently as commandant during the summer, will be instructor of the battalion in drill and tactics. The student officers' court will assist in the discipline of the school as heretofore, trying cases brought before them, and awarding sentences subject to approval by the school authorities. The spirit of the young men seems good. The superintendents of all the departments speak cheerfully of the outlook.

## THE FARMS.

The school farm employs 56 from the day classes, an average of 11 a day, each boy working one day in the week, and every other Saturday. Eleven from the Night School work on full time, in charge of the barn, stock, etc.

The Blacksmith and Wheelwright shops are under charge of the farm manager, each with a competent foreman. The former employs at present 10 colored and 3 Indian students, the latter 5 colored and 1 Indian. Carts and wagons are made and repairing is done for the school and outside customers. Work has been brisk all summer and continues to be so.

At the Hemenway Farm, 12 work students are employed, 10 boys and 2 girls.

## THE GREENHOUSE.

This pleasant and hopeful branch of industry at Hampton, so well started last year, will be continued, and though under new hands, we expect it continued success. It will give work to one night student under the manager, and gives him a good trade, besides being of prospective profit to the school.

## HUNTINGTON INDUSTRIAL WORKS.

The Steam Saw Mill employs 17 colored young men, night students, on full time for one year, and 14 from the day classes for two days in the week. Of the 15 night students employed through the summer, all have entered the day classes this fall, except one who is in his second year of apprenticeship. All the other hands are new, but seem to be taking hold well.

Outside business has increased during the summer, in selling lumber and building materials, and the mill has held the contract for the new Girls' Cottage. The superintendent has "no complaint to make" of his employees—"good workers, fully equal to any he has ever had." His only trouble is, when sometimes his best hands fail to pass on their school examinations; or when they all "pass" at once, and leave him with an entire new set of green hands.

The Wood-working Shop, above the Saw Mill, is now employing 11 colored night students on full time, and those from the day classes two days in the week. Five of the eleven are new apprentices entered this fall for three years. All are doing fairly well. Outside work has been brisk this summer, and the shop is now very busy on joiner's work for the new cottage.

## ENGINEER'S DEPARTMENT.

This department employs at present two Indians and five colored students; of the latter three are new hands, two entering for one year, and one for two years apprenticeship. All are doing well; considered by the superintendent the best new material he ever had, of either race. The summer work has been general overhauling of boilers and steam heating apparatus, putting up the new kitchen and bakery, fitting the fire engine house with piping, and making 25 new iron bedsteads, the work on which was done entirely by two Indians. The winter work will be the steam, gas and water piping for the new Girls' Cottage. Four of the seven outside hands employed last year have been replaced by student labor. Besides the above force on full time, five colored students work two days in the

week. Two more work students will be employed in the winter, and probably two more Indians.

#### PRINTING OFFICE.

This office employs its full force of 7 colored students, 2 ex-students, and 4 Indians, with an occasional outside hand in a press of business. Its book-binding is carried on as usual by a veteran from the Soldiers' Home, and a young white woman from Hampton as an assistant. The office has been and is now full of business.

#### KNITTING ROOM.

This department is employing 20 colored young men; 10 work student apprentices for one year, and 10 from the day classes, 2 days a week; 1 outsider; also 8 colored girls, finishing mittens, and 1 outside forewoman.

#### INDIAN TRAINING SHOPS.

The *Shoe Factory* is employing 3 colored students, 2 on full time, having completed their apprenticeship of two years, but asking to extend it to three; the third works two days in a week. Twelve Indians are employed, five of whom work half a day and are in school the other half. Two are regular work students in the Night School, one of these having entered for two years on his recent return from Massachusetts. Five others are new students who came from Dakota in June. These are reported as being "as well behaved a lot as I ever had; willing, bright, and industrious." On the 25th of August this shop finished a contract for 3,000 pair of brogans for Indian agency use. It is now busy only on school work, and has plenty of it, in repairing and orders.

The *Harness Shop* employs 6 hands, 3 colored, and 3 Indians, two of the latter being new hands, one doing very well, the other rather slow. The shop has just closed a contract for 200 double sets of plow harness for agency use. It has also done a good deal of fine work, filling orders for an \$80 set of double harness for Boston, and a \$50 set for Baltimore, a \$55 set of single harness for Newport, and a \$38 set for Boston.

The *Carpenter Shop* employs 3 colored and 13 Indian students. Of the colored one is a new hand, two in their second year, and two in their first. Of the Indians, one is a new hand, and one a Night student, the rest working half the day, or one or two days a week.

The work through the summer and at present is chiefly repairing, on the place and at Fort Monroe. The apprentices have done fairly well.

The *Paint Shop* is employing the same hands as in the summer; 2 Negroes and 3 Indians working on the place and outside; all have worked well.

The *Tin Shop* is employing 1 colored Night student and 4 Indians, all old hands but two. The shop completed in September the year's contract for 13,560 pieces of tin ware for Indian agencies. It is now working on the roof of the new Girls' Cottage, and on repair work for the school and outside. The apprentices have done well.

#### GIRLS' INDUSTRIES.

The *Sewing and Tailoring Department* employs 12 Night students on full time; 60 are detailed from the day classes, about 12 each day. Six of the twelve are in the tailoring department, apprenticed for two years; all are colored girls. Besides the forewoman but one outside hand is employed, in a press of work. During the summer the shop has turned out 110 uniform coats, 90 pairs of pantaloons, 50 vests, 121 shirts, besides other under clothing. Two parties of returning and incoming Indians have been fitted out, and a large amount of home linen made up for school use. The spirit of the girls has been excellent during the summer, and the new material seems very good. The department has just sent a creditable exhibit to the colored State Fair at Richmond, a specimen uniform suit, shirts, undergarments, dressed dolls, with pottery painted by the Indian students.

The *Laundry*. The superintendent of this department reports that "thirty girls in the student's laundry and three

in the teachers' did the summer's work more satisfactorily than it has been done before. The addition of a 'French mangle' from the Walworth Manufacturing Co., and an Oakley and Keating 'washer,' so increases the facilities that only 24 girls are now employed on full time, for both laundries, who will, with the detail of 70 from the day classes working 2 days in a week, do all the work this year."

*Household Industries* in general occupy all the girls. The cooking class under direction of an experienced assistant of Miss Parloa, will be begun in November. The character of the new comers seems very promising, though there are more younger ones than usual, of whom full work cannot be expected.

#### INDIAN STUDENTS.

In the Normal School proper there are this year, 22 Indian students: 13 boys, and 9 girls; in the Senior class, 5, Middle, 4, Junior 13. In the Night School are four more boys working all day to learn trades by their own desire. Few have physical strength enough for this. The Indian classes, containing those who have to learn English, study half the day, the other half being spent in work. The first division of last year having passed into the Normal School, and the second mostly gone home, there will probably be none to enter the Normal classes next year. Those who were left in Massachusetts for a year have all returned but two; most are improved. Twenty new ones are expected from Dakota, and five from Indian Territory.

*Indian Girls' Industries.*—During the summer, the Indian girls' sewing room has turned out clothing for the girls of two parties of new comers. Besides their own sewing, mending and in part making their own clothes, the girls do their own washing and all the cleaning in Winona Lodge; care of rooms and halls.

#### Pastors' Class.

This class, started last year, to give colored pastors the advantage of Bible study under the school's chaplain, assisted by ministers from the neighborhood, now numbers fifteen, and more will come later. Rev. H. B. Frissell in charge, gives instruction in preparation of sermons; Rev. J. J. Gravatt in the study of the Old Testament; Rev. Dr. Woodfin in the New Testament; Rev. Albert Tolman in practical theology, and Miss Alice Bacon in Sacred history. Of the twelve pastors, four are Hampton graduates; ten of them board at the school and repay their way by manual labor, like the other students. The interest in the class is well kept up, and its usefulness is undoubted.

#### BUTLER SCHOOL.

This primary school taught on the Normal School grounds, and furnishing a training class of 40 for its Seniors, has opened fuller than ever, with a present enrollment of 35. The teachers are as last year, 4 Hampton graduates under superintendence of the Normal School training teacher and her assistants. With the Butler children, the total number of youth studying on the Normal School grounds is over 900.

#### THE NEW GIRLS' COTTAGE.

This new building, long a serious need from the very desirable increase in the number of colored girls, for whom no additional accommodation has been provided since 1875, is now nearly completed, and we hope will be ready for occupation in January. It will contain sleeping rooms for 40 girls and 7 teachers, two hospital rooms, and an assembly room for girls' meetings. This will relieve the great crowding of Virginia Hall, which is dangerous to health, but could not otherwise be relieved except by shutting out from all chance of education young colored women, every one of whom is needed as the light of a whole community of her people.

#### Farewell to Friends.

George and Eunice Dixon, devoted friends of the freedmen, who have worked long and faithfully for the colored race, and to whom the Hampton

School is deeply indebted for services and aid, especially during its earlier years, have recently left Hampton to return to England. Mr. Dixon's native country. "Raby Lodge," their modest and very attractive home, where (such gracious hospitality has always been extended to their friends, has passed into other hands. Many an overworked teacher will miss the kindly welcome and the restful atmosphere of that quiet, pleasant home, and the helpful sympathy of its occupants. Their places will not be filled, but the memory of their kindness and good deeds will abide. They have richly earned the rest and comfort which we trust they will find in their home across the sea, where children and more than a score of grandchildren impatiently await their coming.

Mr. Dixon was, for many years, the head of the Friends' Agricultural school at Great Ayton in Northallerton, England. His son succeeded him in this position about the close of our Civil War, and Mr. Dixon, with a daughter, came to this country under the auspices of the English Friends' Freedmen's Aid Society to do Missionary work in establishing colored schools in the South. While engaged in this work, he met the present Mrs. Dixon, then a teacher of colored schools in the South; their experiences in this work just at the close of the war, before the passions and prejudices of the Southern people had subsided, were full of interest and peril, and we hope may some day be made public. After their marriage, Mr. Dixon returned to England with his wife for a visit, and came to the Hampton School enroute. They became greatly interested in this work, and decided to solicit contributions among the English Friends, for the purpose of giving some of their former pupils the benefit of its instruction. They succeeded so well in this endeavor, that they were enabled to send over sixty young men and women to the school for a full course, paying all their bills, amounting to over \$7,000, cash, a great help both to the students and to the Normal School. Most of the graduates whose education was thus secured, are now doing good service as teachers of their race. On their return from England, Mr. and Mrs. Dixon settled at Hampton so as to have an oversight of the students who were being educated through their efforts, and Mrs. Dixon took charge, for a few years, of the Butler School, where she rendered valuable service in the good cause. Mr. Dixon has continued to devote himself to the cause of the Freedmen, and his counsels and aid will be sorely missed by the colored community. His papers on "The Flora of Hampton," published in the *Southern Workman*, are a valuable contribution to botanical knowledge.

#### Conference on Indian Affairs at Lake Mohunk.

The Lake Mohunk Conference on Indian matters held its second annual session on the 24th, 25th and 26th of September, at the popular resort in the Catskill mountains of which Mr. A. K. Smiley is the proprietor.

At one side of the hotel, which is loftily perched just under the crest of Sky Top, reposes the beautiful Lake Mohunk, the loveliest sheet of water in the land; on the other side is the Walkill valley lying far below, and beyond are ranges of mountains, peak developing a deepening blue. Nowhere can be found a more charming spot.

The successful proprietor has instituted an annual gathering of those engaged in practical efforts for the Indian race, making them his guests for the three days session. The attendance this year was much larger than last, about fifty responding to the invitation, representing a wide range of Christian and philanthropic efforts; the religious societies, the leading schools, the press, the Indian Agencies, the Indian Rights Association (both ladies and gentlemen) and the Board of Indian Commissioners,

which was represented by a majority of its members.

The meeting was organized, General Clinton B. Fish being elected president, and Mr. Herbert Welsh, secretary, and an order of business was adopted. Its two divisions were, 1st, Citizenship as the solution of the Indian problem; 2d, Criticism on existing methods. Miss Alice Fletcher began with a full statement of her experience in establishing the Omaha Indians of Nebraska on land in severalty, showing that the presence of an earnest, determined worker was sufficient to lead one tribe of Indians in a few years into civilized ways. Her account of life in their midst, of their customs and social laws, was extremely interesting and profitable.

She was followed by General Milroy, Indian Agent in Washington Territory, whom Captain Pratt introduced as his old commander in the war: the hero of the defence of Winchester, Va., where, with ten thousand men, he delayed Gen. Lee's march into Pennsylvania for three days, and escaped with his force. General Milroy, who had been for thirteen years in the Indian service, spoke of the readiness of the Indians of the Pacific Coast for civilization, of the importance of providing them with land in severalty: of the need of more educational advantages for them, and of his strong assurance of the capacity of the Indian to become, with a fair chance, an intelligent citizen. He believed that while some might need protection against white men around them and their own folly, by being incapacitated from selling their land for twenty-five years, many would be able to hold their own without such restriction in far less time. With late speakers, he condemns the present reservation system as a mere hindering process, ineffective and to be abolished as soon as practicable.

The two opening addresses occupied the morning session of three hours, and contained a variety of information of rare interest and value.

Afternoons were devoted to driving about over the mountain roads, of which Mr. Smiley has laid out over twenty-five miles, bringing many picturesque views and much grand scenery within easy access.

The evening and the remainder of the session were occupied in ten minutes' talks about citizenship for Indians and how to secure it. A great variety of experience was brought out, and while there was absolute uniformity in opinion as to the end in view, there was some difference respecting means to that end.

Some of the best and ablest workers declared their belief that the Indians never would voluntarily give up the tribal relation for citizenship, and that therefore any law would amount to little which should provide that only by a two-thirds vote in favor of it could the tribes proceed to divide up their lands and sell the rest to government, to be held as a fund for their benefit; they said that immediate action is necessary in order to secure to Indians the good lands on their reservations which white aggressors will soon grasp and leave the slow moving red man nothing worth having when he is ready to select a homestead: that the object of the treaties is to save the Indians and that immediate compulsory settlement of their land in severalty is imperative. The hopeless condition of the so-called five civilized nations in the Indian Territory was instanced to show the fatal tendency of Indians to fixed tribal life, and the mistake should not be repeated; we must save the Indians from themselves, cut the Gordian knot and secure them at once, what is good upon their reservation. Miss Fletcher, Rev. Dr. Kendall, Capt. Pratt and others took this view.

On the other hand it was urged that the voluntary principle is the true one, that the Convention should respect the treaties to which its members had so often pointed out delinquent Congressmen.

### The Southern Press. Both Sides.

"It is doubtful," says the Philadelphia *Telegraph*, "Republican," "if there were so many voters in a state of mind as to what they shall do and where their neighbors will do. Party lines everywhere are broken down and voters are wandering about with a vacant can't-find-the-way-home air that is as novel as it is significant."

Before our present number reaches most of its readers, the campaign will be over and the prophetic souls of our much-tried political seers may find a brief interval of peace. Whether it be to one man or the other that victory is given, the nation will at least know for a time the luxury of rest from the personal excitement of the election, and men will have time to realize that the great principles and ideas which our system of government represents, remain radically unaffected, and as worthy as ever of our confidence.

The chief danger of partisanship is that it blinds men to facts, and it is hardly possible that such deductions as the following could be made by intelligent observers except as the result of sight was beclouded by the dust of party conflict.

"We cannot forget that the party which oppressed the southerner, which trod on him when he was down, the Republican party. We cannot forget that the party which was his friend was the Democratic party. We cannot forget that the value of property when the southern States were under the dominion of the Republican party was just about one-half the value of property now while these States are under the dominion of the Democratic party. We cannot forget that the value decreased with every year of Republican power and increased with every year of Democratic power. The prosperity of the South only began when the Republican party, its natural enemy, was driven from its borders. While in many instances when the South was still under the rule of the carpet-bagger, farming was carried along in a struggling way; manufacturing was not carried on at all. Iron cooking utensils, the farming implements, tools, stoves, house furniture, and indeed, the whole list of such articles were imported into the South from the North. The skilled workmen found no work in the border. How is it now, when the States are under the protection of the Democratic party? *Richmond State*."

"The people hold fast to a faithful, honest and efficient official, and for the same reason they cling to the party which substitutes honesty for corruption, economy for extravagance and reform for abuses. It is therefore natural that the people of the South should be solid for the party that has lifted them up and placed them on the highway to progress. The following interesting statement of the material progress of the South in verification of our claim is taken from the *New Orleans Times-Democrat*:

	1883-84.	1882-83.
Alabama.....	\$177,000,000	\$175,320,118
Arkansas.....	116,000,000	127,177,377
Florida.....	62,500,000	53,210,311
Georgia.....	215,275,000	201,155,400
Kentucky.....	97,000,000	371,554,979
Louisiana.....	100,000,000	202,728,493
Mississippi.....	137,620,000	128,754,927
North Carolina.....	225,710,000	301,831,207
South Carolina.....	120,111,000	145,625,619
Tennessee.....	227,985,877	228,067,073
Texas.....	560,000,000	527,840,000
Virginia.....	340,000,000	320,000,000
Total.....	\$2,987,851,861	\$2,788,118,885

These figures show that during the past year the assessed wealth of twelve Southern States increased about \$200,000,000, and we learn from the same source that the increase in the value of the taxable wealth of those States from 1873 to 1883 was \$640,707,038, an average of \$160,176,757, per annum. No section of the Union can make a better showing. Within this time at least three States have been under Democratic rule, and their prosperity is greatly due to the wise and honest administration of affairs. Since the advent of the Democrats to power in these States poverty has been converted into abundance, and repentance, economy and reform have taken the place of robbery and wastefulness. The laws have been faithfully and humanely administered. Justice has been dispensed with firmness and without delay. Taxes have decreased and educational facilities largely increased. These blessings are the results of home rule and the ascendancy of the Democratic party of the South. Instead of throwing away the fruits of Democratic policy which have brought happiness and prosperity to the Southern people, by restoring to power the Republican party, the people will uphold the party under which they have prospered. *Memphis Appeal*.

"Is the South then indebted to the Democratic party for her fertile soil, her genial climate, her rivers and water-courses? And are her vast seaboard, her magnificent ports, her shining suns and fresh breezes at the mercy of a handful of politicians?"

Surely the thinking men of the South are not likely, in their cooler moments, to admit any such absurdity as is involved in the statement that their unexampled prosperity is "due to the ascendancy of the Democratic party of the South." The simple common sense of the matter cannot be better given than in the words of the *N. Y. Evening Post*.

"All this is a most gratifying confirmation of the views of those, like ourselves, who have steadily maintained that it was material progress which was to eradicate the social and political evils left by slavery."

The beneficent influence of equality before the law acting on an Anglo-Saxon race living on a fertile soil has never yet failed to produce material prosperity sooner or later, and the material prosperity of a free community always means the growth of gentler manners and purer laws, and the formation of higher social and political standards."

The material progress of the South is the result of conditions which are largely beyond the domain of politics and cannot be interfered with by any party whatsoever. Not even the actual disruption and dismemberment of the body politic could put the Southern States back where they were a quarter of a century ago, and while the soundest policy in every direction should, of course, be the standard, it is childish to ascribe to this party or that a power over natural laws hardly inferior to that of Him who made those laws.

It is certainly overshooting the mark to say, as does the *Augusta Constitutionalist*, that

"The South does not desire Democratic success for mere partisan advantages. Neither the spirit of revenge, nor the spoils of office have any controlling influence in the eager desire of our people for party triumph. A higher, nobler, more patriotic aspiration inspires the Southern people in their advocacy and support of the Democratic cause."

Democratic success does not mean the mere triumph of a party. It means a wholesome and pure administration of the Federal Government. It means a healthy and remunerative development by the restoration of confidence in all the varied interests and industries of the country.

It will benefit the stagnant industries of the North. It will develop the dormant resources of the South. It will mean the brotherhood of fifty-five million of people and the union of hearts and the union of States harmonized and crystallized in a higher civilization and a better and purer administration of the Federal Government.

In a moral and material point, the blessings and benefits that will flow to the South and to all sections of our common country cannot be estimated. The race question that clouds the present and the future with its darkening and portentous color line will be eliminated from our political horizon, and we will leave to those who come after us the happy spectacle of both races living in peace and happiness, each in its proper sphere—the one the guide and controller, the other the follower and co-worker in the development and prosperity of the most favored section of the Union."

Whether the year of grace 1885 shall see Blaine or Cleveland in the presidential chair, is yet uncertain, but it is certain that neither the men nor the parties they represent, have the power to seriously disturb the basis on which rest the beginnings of Southern prosperity.

It is to the signs of the times as indicated in such items as the following, that we must just now look for trustworthy information, rather than to political editorials and campaign documents.

"The Hon. J. L. M. Curry, agent for the distribution of the Peabody Fund, in his report to the trustees, read at their meeting on Wednesday last, gave a very encouraging account of the advance that is being made in all branches of education at the South. He says that in West Virginia the school system grows in efficiency and popularity. During the year fifty-four county and district institutes were held. The Hampton Normal and Agricultural Institute is having

extraordinary success, its last report showing 554 students from ten States and four territories. The Normal and Collegiate Institute at Petersburg, with colored instructors, is well sustained. A State Normal School for girls will soon be opened at Farmville. In North Carolina people are becoming more alive to the advantages of good schools, and are demanding that they be improved. The fund has materially aided the Normal Institute in South Carolina. In Georgia, teachers' institutes were held in Norcross, Macon and Dalton for four weeks. In Florida five institutes were held in the summer. Alabama is leading the other Southern States with three white and three colored normal schools. An industrial institute and college for white girls has been founded at Columbus, Miss. Five institutes for white and colored people were supported in Tennessee in June and July by the Peabody Fund. Education grows in popularity throughout the State. In Arkansas thirty-two institutes were held. About 1900 teachers attend the forty-two institutes held in Texas. —*Memphis Appeal*.

And consider how broad a field, in more ways than one, is covered by these "small farms," upon which the introduction of the new system of tillage is revolutionizing whole neighborhoods and waking up many a sleepy or half despairing landholder.

"There has been a very remarkable increase in the number of small farms in the South since the war. In no direction has there been a more striking change in our industrial life than in the division of the old-time plantations into numerous small holdings. Just how large a farm should be and how much capital a man should have before he can afford to invest in it, farming lands, depends of course upon his individual circumstances, and the kind of farming to which land and labor are to be devoted. For instance, one man can as easily manage 1000 acres of grazing land as he can 100 acres devoted to grain growing. Fruit growing and market gardening demand vastly more labor and attention than ordinary tillage. A fruit farm of twenty acres judiciously divided between apples, peaches, pears, and small fruit will demand as much care and labor as two hundred acres devoted to miscellaneous farm products, or five hundred acres in grass; and usually it will yield as much clear profit as either. But whether the farms are large or small, remarks the *Charleston News and Courier*, the success of the farmer must depend upon the character of his crops, the careful selection of the best seed and thorough tillage. It is a waste of labor to attempt the cultivation of more ground than can be tilled thoroughly. It is better to raise 60 bushels of corn on one acre than 30 bushels on two acres. —*Norfolk Virginian*."

One of the most interesting and in some respects, one of the most complete, expositions of the opinions of a large class of Southern whites that we have lately seen, comes to us in the *Charleston News and Courier*, and we re-publish full extracts from it, believing that they will repay careful reading.

We will admit that the thrusting upon us in legal equality of such a mass of festering ignorance, without warning, without reason and without our assent, was a great and unpardonable wrong; but it is done; there is no redress, there is no retreat. Shall we conquer it, or by our supineness and indifference, allow it to conquer us? It is a waste of our strength to dwell on the bitterness of our losses, of our defeats, of our struggles to regain a competency once enjoyed, and perhaps never to be regained, and have no heart and no purpose to lift a hand to ameliorate the condition of the unconscious authors of our misfortunes.

Some of us, rising above these unmanly considerations, have exerted ourselves in their behalf, have given of our substance and time and effort, unreservedly, to the extent of our ability, but without any immediate or apparent good result, and are discouraged and faltering.

Again, there are some who, while giving something of their means and influence in aid of public education, and never outwardly opposing it, yet secretly have no hope in it, or trust and believe and hope that in some way, mysterious, undefined and providential, we shall be relieved of the great incubus of immorality and ignorance.

There are others more honest, who do not disguise their hostility to the Negro, who, like Alison, have no faith in popular education, and who, when asked how otherwise the people can be improved mentally and morally, reply "by suffering for whom the Lord loveth He chasteneth." Moreover, they have an abiding faith that this is to be in the future, as it has been in the past, a "White

Man's Government," (as it undoubtedly will be if we trust to our own civilization,) and will maintain it peacefully if they can, forcibly if they must, even if it shall be necessary to drive the Negro into the Gulf of Mexico.

And there are still others, perhaps of the whole class most dangerous to the public welfare, and who are utterly indifferent to the Negro, who say in the language of Dr. Noble: "I don't care for him. I don't care for his education. I don't care for his morals. I don't care for his thrift and comfort. I don't care for his Christianization; he can go his way and live as he pleases, and die at last like a beast, and it is all nothing to me."

Now it seems to us that in the position of these classes there is very much that is unreasonable, unphilosophical and unpatriotic. As we have not the space at our disposal to examine each one in detail as fully as it deserves, it is our purpose to show as briefly and as forcibly as we can the unchristian, the impolitic and dangerous position of those who are indifferent to our increasing illiteracy, and who declare openly their indifference to its greatest factor, the Negro.

We do not intend to follow the Christian or the philanthropic argument, which, to many, no doubt, is the most touching and the strongest, but we will put it aside entirely for one that is utterly and supremely selfish.

We all, with sorrow, realize that the Negro is here. He is extremely ignorant, extremely immoral and easily influenced. With his peculiar and unfortunate circumstances, conditions and environment, it is much easier for him to be immoral than moral, illiterate than literate, and consequently he raises enormously our percentage of illiteracy. He crowds our chain gangs and penitentiaries. He debases the standard of our public morals. He puts the State to a great annual expense in maintaining the administration of the laws. He annually increases the difficulty and responsibility of good government.

If his immorality is doubted, it will be seen that wherever the Negro swarms there will be found a great preponderance of the black prisoners over the whites, in excess of the ratio of the black to the white population. In the neighboring State of Alabama it will be found that the black prisoners outnumber the whites five to one! In Georgia seven to one! and in South Carolina, where there is in the total population a black majority of 65 per cent, there is an excess of black prisoners over white of ten hundred and forty-six per cent!

How this state of things retroacts upon us, and is subversive of justice in preventing the proper punishment of criminals among the whites, is worthy of a separate inquiry. We all know how ignorant the Negro is, but cannot properly realize it, nor the terrible retroactive influence such a mass of illiteracy must have upon us, until it is put before us in some tangible shape.

The census returns show us that seventy-six per cent, of the Negroes in our Southern States cannot write their names, and that nearly forty per cent, of the entire population of these Southern States, both white and black, cannot read.

We have said that the Negro is here, and by every argument based upon common sense and the common experience of man kind here, he is bound to remain, as a great, important and increasing factor for good or ill, in our social system.

It is hardly possible, and highly improbable, that in our day he will be driven into the Gulf of Mexico as the Spaniards drove the Moors into the Mediterranean, as some of us affect to believe; neither by a war of races will he be again reduced to bondage. But admitting the probability of either of these events, they are not likely to occur in this generation, nor before this swelling mass of illiteracy and immorality will ripen into a community which will know no God but the basest of passions.

What, then, are our obligations (not as Christian men and women, we have waived that argument) on purely personal and selfish considerations to our families, our government and our property?

We declare our first obligation in regard to them to be to accept the burden of responsibility put upon us at once. However much we may desire or wish it otherwise, we cannot separate ourselves from our environment and lead double lives, one for ourselves and another for the community. We are bound together into one indissoluble whole, for weal or for woe, by an absolute community of interests; that which is good or evil for a part is good or evil for the whole, for the whole is the sum of the parts, unequal and incongruous as they may be.

A tree is judged by its fruits, and the standard of public morals, public education and public sentiment in any society is shown by its criminal records and its records of illiteracy, without regard to the purity and cultivation of any individual members of the community. Authentic statistics show us,

[Continued on page 116.]

## Letters From Hampton Graduates.

NOT ALL TEACHERS. A LESSON IN THRIFT. A TEACHER WHO WILL NOT DESPAIR. AN ANALYSIS OF "POWER."

NOT ALL TEACHERS.

The letters which we give from our students and graduates, do not always fully show the advantages of an educational system which trains muscle as well as brain and makes work as important as study. The two following letters we have therefore chosen because they present evidence of what our scholars can do, when for one or another reason, they have not devoted themselves exclusively to teaching. A good object lesson in farming, in house-keeping, in carpentry, in any trade or honest occupation, may sometimes find a large and more appreciative audience than could be put into any schoolroom.

—Md. Nov. 2nd, 1883.

Miss —:—  
Your letter was received, and I am very glad to learn that you still remain our correspondent representative of Hampton Institute, and I am sure all her graduates often think of you, and love the Northern people who think of Hampton's sons and daughters. The day will come when our Northern friends will be proud of us.

I am very well, and doing well. I have no reason to complain.

I have taught school four years since I graduated at Hampton, Va.

Kept a small store of my own for two years, and cultivated strawberries for the Northern market, and raised large hogs. You see Hampton's sons can do something else besides teaching school, and I believe it was never intended for all of us to do nothing else but teach. I am holding a commission as trustee of our public school of S— my own town.

I have bought three houses and lots since I left Hampton; last year I raised 845 lbs. of pork, and 3200 quarts of strawberries. I must say in conclusion, the colored people are doing well generally all over the Southern States so far as I can bear, both in wealth and education.

Yours respectfully, R.

—Fla. Nov. 13, 1883.

My dear Miss:

I received your welcome letter a few days ago, and need not say how I appreciated it. I suppose you wish to know what I have been doing since I left Hampton. I taught part of two terms only after trying it thoroughly. I found there was not a living in it, and having a family to support, I was compelled to do that which there was a living in. On coming to P— 3 years ago I met with great opposition and I was compelled to go to something to let the people know that I did not depend only upon teaching for my living. I was taught if there was not an opening, to make one, and so I have done it. I will state to you my condition when I came to Florida. Three years ago I was married in Hampton and came to this State. I did not have much money after getting here. That year I taught school in O— Co. 4 months at \$20.00 per month. I had to sell my school warrants, some at a discount of 25 per ct. so you see how much I made in that operation. We came back to P. in the spring of '81, and did not do anything that summer owing to taking care of myself the first summer in the State. That fall I went to work at \$1.00 and \$1.25 per day. I worked until Christmas and then I finished up a term of two months and went to work again; so I have been at it ever since until this summer. Since that time we have bought a lot in town and have built a small house on it; have also bought two cows at \$25.00 apiece and I have sent my wife to Hampton to school this year. I am not quite through paying for my lot yet but have paid nearly two-thirds on it and have 'over a year' on the balance. That is what I have been doing in the 3 years, and my prospect is better for the future than it has ever been.

Yours truly, R.

A LESSON IN THRIFT.

"A strong desire and inclination to accumulate something to go upon," seems in this instance to have fully justified itself. The results, as given below, show what a young man who is determined to "get ahead" can do for himself, even when he has been obliged to forego his most valuable year at

school, and to attack his work with even less than the usual preparation.

—Va., Nov. 10, 1883.

Miss A—

Dear Friend:  
Yours of Oct. 30, came promptly to hand. I am more than glad to learn of the continued interest you manifest in corresponding with the Hampton graduates and ex-students. Indeed, I received your kind and good circular and read it with intense pains and care. Being engaged at the time in the county canvass, riding around with the circular in my pocket I lost it before I could commit your address to memory; for which I hope you will pardon me. I spent three years at Hampton, lacked one year of finishing up there. I often regret my not having the time to spend more months in school, owing to a strong desire and inclination to accumulating something to go upon, my father being old. I am glad to inform you, that by my industry and energy I have been made able during these three years at home to buy and pay for a very handsome little plantation of over a hundred acres of land. I have also purchased me two very young and good horses, wagon and buggy, all of which cost me several hundred dollars, paid. As a general thing the people around me are poor, white and colored, but work very hard for a living. I have been teaching ever since I left school, with the exception of two summer months in each of the three years. We have more schools in this Co. than ever heretofore; as a general thing are getting on nicely, with this exception:—we have been using Holmes; Venable's and other text-books for about eighteen years, and this year the school board decided not to use them longer, adopted new series altogether, making it a rule if not law, that no pupils shall be allowed to come to school unless he or she is well supplied with all necessary new books. This sudden change of course found quite a number of parents unable to send any of their children as yet, possibly, not before the ensuing school term; since, in many instances, one pupil's books will cost from four to five dollars. The idea is, that most of the parents have just bought a lot of the former school-books, Holmes and others, and now they are compelled to get other books before they can send their children to school. So, you will not be surprised at hearing of such small numbers attending our schools in this Co. My school was opened later this year than usual, but was among the first opened. I commenced teaching 17th Sept. with a pupil number of 10 and now I have on roll 35 pupils. My average daily attendance for the 1st month 23.25, second month ended yesterday, Friday 24th, with a daily average of 25.30. Several years back, (even last year) I rarely ever had a less number than 65 or 75 in the same school-house, and they kept me and my assistant busy. All the school-houses in my District are very good, comfortable and warm. I am striving each day to do my duty in the education of my race, and feel very plainly I have done but little after all that direction. Indeed I should be very glad to hear from you at any time.

I am respectfully yours, R.

A TEACHER WHO WILL NOT DESPAIR.

A graduate of Hampton who, in the pursuit of his calling, is obliged to turn his back upon all the aid and support to which he has become accustomed in his school life, and go out into the midst of a darkness sometimes greater than that of heathendom, must perforce have some trying and depressing experiences. Such letters as this show how much can be done for these teachers by keeping up the connection with Hampton, and through the school machinery, giving them occasional assistance.

—N. C. Feb. 2nd, 1884.

Dear Miss C—

Your letter surprises and gladdens me very much. Your words of encouragement and hope were worth more to me than you can think. I know that there is a big work to be done in this town. The subjects here, and it is impossible for one, who professes Christ, and is a professed factor in solving the problem before the Christian part of our own country, to escape doing his duty.

Sometimes the task looms up before me in such proportion that I feel like giving up in despair. That thought is momentary. I am now determined to see and know my imperfections. One is an irresistible spirit of impatience. I should have said almost instead of making it absolute, for I do muster up more patience than both of my teachers, who daily despair. Nothing but true faith can overcome these little things. You see we are away off South; there is no genuine fountain nearer than those good Northern communities, and when I receive such

good letters my happiness is increased. Two men have been here, tried to work and left in despair. They now occupy positions in Institutes in this State. I shall try and avoid the slough through which they went.

Yes, I still say that if these people would put together they would need no help, but the time is not yet. They must be tutored up to that point. I am after the young people and I think I have got them. I can take my school and do most surprising things. They are ready to follow me in anything I suggest. Children in such a position as that will not let the older ones rest until they pay heed to their entreaties. I will tell you, as a secret, what I have in my mind; it may be an air castle and it might be a reality. For several counties around there is no school of any importance. Thirty counties, I suppose, ought to be stocked with teachers. Any kind of teachers are employed. I say that will not do for this day. I should like to see this place the centre of educational advantages for this section.

This is no new idea of mine. It has been growing ever since I came here. So many from other counties want to get better training. This might as well be the place as any other. I will tell what we want: it is just twice our present capacity for school work. We charge tuition for every child or grown person who comes from outside a five mile radius. Our board of trustees is an incorporated body. They are appointed by the State Legislature. What more do we need? I think this can be made the centre. I may take the field in support of the measure, it seems to me to be how many supporters I have after I whisper it around.

Well, now about the ten dollars. I think we are fit subjects of charity, and that it will do us no harm to get something more than the confidence of the people. I would say send us twenty-five Gospel Hymns, No. 1, 2, 3, 4, board cover, without notes. They retail at 22 cents a copy. For my benefit you may include in the order two with notes. These books will add more to my Sunday and day school than anything else.

I have means of protecting all my school outfit from destructive parties. We have plenty of good locks. Am going to try and make the Sunday School buy its own lesson leaves and papers. We have from forty-five to fifty scholars that come regular. To-morrow I expect seventy-five or a hundred. The weather has been bad, and a little opposition by ignorant preachers has to be set aside. We have a lyceum of sixty members, all alive and in earnest, and you could hear their debate. One question more I must answer. One of my teachers helps me in Sunday School. I work my older scholars in for the rest. The singing books will not use up your appropriation, but for the present I must let you keep the rest. If you can get more than twenty-five books for half or a little more of the money, so much the better; we need fifty, but we need other things.

This letter has been written with no arrangement. Hope you will excuse it.

Yours truly, D.

There are no Hampton graduates in this section that I know of. One, you know, Mrs. R—, is with me.

MISS A. E. C—

Estimated Friend:—Agreeable to your request of me on the 25th ult., I will endeavor to comply.

After a long absence from my school of five months' vacation, spent, I trust, in usefulness to others and myself, I came back to this place and opened my same school on the 1st day of October, with 19 pupils enrolled. Before saying more about my school, I must give a brief sketch of my vacation. After leaving the pleasure of teaching a six months' session in Appomattox, I thought to take pleasure riding around and visiting several of my friends where I had taught prior to this place; but when I got home (which is in Charlotte county), there was no school, as I term it, for me.

The church of which I am a member, had appointed me superintendent of the Sunday school, which position I held up to my leaving home for public school teaching. I had connected with my Sunday school 75 pupils, beside parents in daily attendance, which was very creditable to themselves and the

noble work in which we were engaged. I had many visits and encouraging suggestions from good friends. My reading matter was the Bible lesson monthly, and the Intermediate Quarterly, in connection with good papers sent from the North.

I had a very fine garden, and also a large watermelon patch, which kept me busy during the week.

My people at home seem to realize the fact, that the road to success depends greatly or entirely upon power; which consists in education, good morals, and the accumulation of real estate. Some have bought from two hundred and upward acres of land, and are building frame houses for comfortable living. But I am afraid that I am drifting too far from the nature of my subject.

My school numbers at present 43 pupils in daily attendance. It is not altogether as flourishing as I would wish to see it; have been unwell since I commenced teaching, and cannot use the energy I wish to. The trustees, parents, and myself are working smoothly together so far. They will keep a spring school for me, when this closes, which will be about the 1st February, 1884, if nothing prevents. You will please pardon dullness of expression, &c., as I am unwell, as I have stated. When you write to Miss T., please say in favor of me, that any good reading matter would be gladly accepted by me from her.

Sincerely, H. C. E.

Mr. Samuel Taylor Miller, a Hampton graduate, who has, for some years, done excellent service as a missionary to Africa, writes this interesting account of recent hardships at the hands of savages, which will enlist the sympathies of our readers. Mr. Miller is the only Negro at this station; there being besides four white missionaries and their families from the United States.

Benguela West Coast Africa,

Aug. 11th, 1884.

Dear Sir:

For the last two months we have had experiences common to pioneer missionaries. You see from the head of this letter that I am not in Baidundu. Peculiar circumstances have brought us all to this place. On 13th May, Kwikwi, King of Baidundu, sent us a letter notifying us to leave that country. Investigation showed that a Portuguese trader, had circulated false and malicious reports against us. The King, believing them to be true, gave orders to have us plundered and driven out. On July 4th we left our homes in Baidundu with only a few clothes and provisions. Carriers were few and unreliable, many of them taking loads only to steal their contents. Mr. Saunders, Mr. Fay and myself had to walk to the Coast. The ladies had only 3 or 4 men to each to help them when they should have had each, consequently they too had to walk some. After an unusually long march of 23 days we reached Benguela on 27th of July. Mr. Stover, wife and child will remain in the United States, also Rev. W. E. Fay. The loss in Baidundu is about five or six thousand dollars. We have put our case in the hands of the Governor of Benguela who says he will try to make King Kwikwi pay damages.

The charges against us are too many and foolish to enumerate; the following are a few examples.

"They are fugitives from justice." "They are fetchmen." "Their object is to take the country, kill the King and old people, and make slaves of the young." "They will blow up the country with gun powder." "Reinforcements will also come from their country."

The King has been in his war camp since 1882 expecting yearly to go to war but having near his palace such "reputed warriors" he concluded his first and wisest policy was to expel us. Now it is hard for me to think King Kwikwi really believed these reports. I rather think he used them to carry out his purpose of robbing us. He knew we had a great supply of goods and he and his people wanted them. Hence the far-fetched belief in the above charges.

We can't tell yet whether or not the field will be given up; there are yet signs of continuation. Bible and Chivula are good places to work in. The King of Bible has not been heard from recently. The King of Chivula invites us to build up his country.

I cannot write you the details of this strange and peculiar affair. I only give a few facts from which you may draw some idea of our situation. We intend to remain here till we see how matters go. If the mission continues, a station will be established here as a base of supplies, while other stations can be established in the interior. At the present all is darkness and uncertainty. It is vain to predict; man proposes but God disposes, as is true as ever. All well.

I am respectfully yours, S. C. MILLER.

in the matter of getting children. Masters were in a disturbed state, and the people were excited. While I was talking to the chiefs in council, an immense woman strode into the room with her knife in her hand and talked most rapidly and excitedly for some minutes. She had heard that I had come to take her girls from the boarding school on the reservation to Hampton. She followed me in my visit to the school. We have here quite a nice company of Hampton graduates, most of them doing well and working at their trades.

The native missionary, Rev. Luke Walker, is doing a good work here, and will be a great help to the boys on their return. To-morrow morning we take the train for the East. Sincerely yours,  
H. B. FRISSELL.

#### Correspondence.

MOUNTAINS AND RELIGION. THE BEST PLACE TO EDUCATE AMERICAN BOYS. GERMAN CHRISTIANS' ESTIMATE OF THE AMERICAN FAITH.

We take the liberty to make a few breezy extracts from a private letter, touching some subjects of interest to American citizens.

REICHENHALL, BAVARIA, ALPS.

Aug. 28, 1884.

"This is a pretty watering place among the Alps, resorted to especially by Berliners and Rumanians, and min gives me a chance to write a little, as when it is fair we must be out.

As at all Germans baths—great salt works are here—there is the *Curhaus* [Cure house] and regulation concerns, which we avoid, having them all the year in Wiesbaden, and preferring to enjoy the beautiful scenery and fresh air in Nature's own way. So we go where we can feast our eyes on mountain, stream and pasture; patronizing 'Milk Cures' for indeed one seldom finds such rich sweet milk as this; and we enjoy these rural scenes. Before coming here, however, I over into the Austrian Tyrol, and there I realized my idea of the Tyrol in its wildness and picturesque. In the Gastein valley were high Alps, waterfalls, dashing streams, [Bismarck does not regulate their flow], fields of wild flowers thick with pansies, shrines by the way side to which our driver touched his hat, and picturesque costumes, 'Maud Mullers raking meadows sweet with hay' in Tyrolese dress.

The children in their freshness were a pleasure to behold and there was an interesting quaintness about it all. On many houses, verses of scripture were painted in large letters, and on others pictures of saints, etc. The queer looking wardrobe in the house on the valley side where they stayed, being unable to find rooms in the hotel, was decorated with pictures from Bible scenes, and the religious atmosphere of the region impressed me.

Religion and mountains seem to go together, and a fervent Catholic spirit is pleasant than an indifferent Protestant one. As we drove away down the valley in the early morning, I looked up with reverence to the purple heights so suggestive of 'everlasting hills.' We were nerved by mountains at the 'Islands,' and our infancy was lulled by sea waves, so no wonder we love Nature; a love which grows stronger with years. Paris cannot charm like the Alps.

We shall be here a week or more longer, as it has been a very hot summer in Wiesbaden, and we all want fresher air. As soon as it clears, we intend to take a trip to Berchtesgaden, said to be very beautiful; and there intend to go into a salt mine. The snow came down on the mountains yesterday, making it so cool here below, that this morning there was a fire in the tall *ofen* [stove] in the breakfast room, which was cheerful.

Hawthorne is right. For a man without occupation, Europe certainly offers far more inducement than the other side of the ocean. But we shall probably return to the States next year.—It is for D. that a change seems needed. For his welfare I think and feel much. It is the longing of my life that he may become a man of character, and how can he unless he is under suitable influences. Soon he will be seventeen, when he will become liable to military duty. He is utterly unwilling, and the more we know of it the less desirable it seems; the influences are such. Besides this, he fully intends to make his career in America, and he will be at a disadvantage if he does not receive part of his education there; not only to learn English, but to know men and things. The experience of others proves this. Then, you know the state of religion in Germany, and what the European Sabbath is. The longer I live here, the more I see the value and necessity, physically and spiritually, of the Christian Sabbath, to a nation.

The *Gustav Adolf Verein* [Gustavus Adolphus Society] has just had a great meeting here, to which pastors and laymen from all parts came. They advocate stricter observance of the Sabbath, and it is strange that it is relaxing in the States. Germany finds it does not do.

[Continued from page 115.]

as we have seen, what our condition is in these particulars. Our common experience and observation prove to us their truth. Since the abolition of slavery the two races have been growing gradually apart, and our interest in the Negro has gradually waned. He has done our work, we have paid him his wages, and the greater part of his educational expenses and of his maintenance, and here our ways have diverged; he has gone his and we ours, each without any special thought of the other. With what result?

A lamentable and constantly increasing deficiency in morals, a continued absence of any true comprehension of Christian teachings, or of any active sense of virtue or vice as such, or as principles of action.

Now, we ask, to what height can this tide of immorality, of iniquity, of vice and vulgarity rise, before every individual in the community will feel its baneful retroactive influence?

As we have already suggested, the State feels it to-day in her reputation for illiteracy and in her debasement from the high moral and intellectual standard that she should hold. She feels it practically in the enormously increased expenditures for her criminal courts, and in the maintenance of a police. She feels it in the daily increasing difficulty of maintaining an honest, upright, and intelligent administration of government.

The day is close at hand when every citizen of the State will have it brought home to him by finding himself a member of a community in which neither the honor of his family, nor his rights of property, nor the justice of his government will be respected.

And who will be the losers in this state of anarchy? The answer is a simple one—those who have property to lose. Our duty to our Government, to our manhood, to our families and to our property, then demands that we shall accept the burden of educating this race; that we shall do so heartily, ungrudgingly, and with the thorough understanding of his needs which our experience has given us.

The Negro needs our pity, our care, our interest, our direction in his pathway to the place of a decent and respectable citizenship, and if we do not give it to him, he will fall deeper than any depths yet sounded by the carry us with him. Permit us to declare, that in a vital question of this nature, a question which comes home to every man, to every woman and every property-holder in the State, indifference is stupid, easy, almost criminal foolishness!

We do not withhold our sympathy from that class, now fortunately a small minority, which is still absorbed in the contemplation of its former prosperity, and its present difficulties and struggles. Time is the great healer to such, and we say to them let 'your working be your prayer.'

Of those who are discouraged in well doing, who have given of their means, and time, and effort without any apparent result but indifference, impudence and ostentation, we respectfully request a calm reconsideration.

Let us ask, have you given full weight to the fact that you are dealing with a race in the very infancy of its development, or at least of its re-development, a race whose present mental horizon is bounded by the advent of his ancestors to this land of promise, from the Paganism and Fetichism of Central Africa; a time which is not yet beyond the memory of some now living?

Can you rightly expect, from him the same quick response to your efforts, the same intelligent acknowledgment of your high purpose, as you do from a race which in the very two thousand years of continuous progress?

Have you given any close thought to your methods, and inquired if they were right, or wrong?

Have you not paid your school taxes and administered your charities without thought, upon the accepted theory, knowing it to be false, that the white and black boy are mentally and morally equal, and, being equal, should be subjected to precisely the same methods in education?

In doing this, have you not practically ignored the history of the races and denied to the white child any advantage of inherited ideas, in the mind, in morals or religion, slowly gathered in the growth of centuries? Have you not, to the injury of the black child, and to your own disappointment, equally ignored in the latter any consideration of his environment, of his feeble moral sense, of his poverty, his improvidence, and the entire absence of any home influence, or family culture, or inherited habits?

To secure the best results, has it ever occurred to you that you must supply the place of good home influences, and proper religious training, and that your mental and moral educational work must go on together, otherwise, in cultivating his intellect alone, you are putting edged tools in the hand of a child?

Have you not given of your substance and energy without thought, without care, without real sympathy, in a perfunctory way, and looked for returns which, from an inferior race, you had no right to expect?

With those who treat this question in a pharisaical and indifferent spirit we have little patience.

As sensible men they should know that they are playing with fire; and if they 'trust in Providence' to rid us of the Negro we suggest to them the wisdom of 'keeping their powder dry' for any 'unlooked-for emergency.'

We can respect the honest, if misled, class who openly avow and declare their hostility to the Negro.

It is this class which originates the ingenious circumventive laws which deprive the ignorant Negro of his franchise.

It is this class that builds upon the sand of expediency.

It is this class whose method of culture is the heroic one of digging up the roots.

It is this class which is continually raising the devil of hateful ignorance, forgetting the common experience of mankind and the philosophy of the ancients and of the moderns. It is easier to raise the devil than to lay him.

It is useless to repeat to them the argument already advanced. It is useless to point out to them that they cannot always control by expedients an ignorant and immoral suffrage. It is useless to declare to them that without public education there can be no government of true law, nor any protection to legitimate liberty, or to suggest that the immoral and ignorant voter wields a positive poisonous influence of vast proportions upon society.

It is useless to show them that in spite of all their temporary expedients, under the lead of demagogues and political adventurers, this ignorant suffrage can repudiate their State and county securities, and the most sacred obligations of civilized society, without compunction or remorse, before they will have the opportunity of driving it into the Gulf of Mexico.

In short, this is a class of blind, inveterate pessimists and fatalists, with whom argument is useless, and which will only be convinced of its error when its peace and property have vanished, and it is too late to remedy it.

There are others, and they are the dangerous majority, who quietly and unconsciously sleep on while the volcano mutters. So long as their bonds and stocks are good, their banks solvent, their money is not stolen, their barns are not burned, or cattle purloined; so long as there is nothing in their immediate neighborhood to excite alarm for the safety of their families or property, they will sleep on in fancied security.

But cannot they read the signs of the coming time as to the security of their bonds in so sophisticated an captivating argument addressed to the ignorant Negroes by political demagogues in a neighboring State in a recent election, and which had its effect: 'You had no part in creating this debt, and why should you help to pay it?'"

Can they not see the wide application and the dangerous and destructive tendency of this argument, when they for a moment consider that of the five hundred counties of Georgia, Alabama, South Carolina, North Carolina, Mississippi, Florida, and Louisiana, nearly one-half have absolute Negro majorities, some of them as high as forty thousand?

How long, we finally ask, will they live on in peace and comfort in the new quiet community if they persist in allowing the rising generation of Negroes to grow up indolent, improvident, uneducated in the mechanic arts and steeped in immorality and ignorance? It will not do for us, if we value our property, our honor, or our peaceful existence, to be indifferent; for, 'by whatever road we travel, however wide our excursions, we come round to the same point, the august fact of our membership in each other.'

We may stupidly ignore the membership, but we cannot get away from it. We are interlinked and interrelated to such a degree that it is a concern of each man in the community, in the nation and the world over, that every other man be intelligent, moral, industrious and trustworthy.

A man may refuse to be his neighbor's keeper. Sooner or later what his neighbor does will come home to his own life and tell on him, and he will see that after all he had some motive for being his keeper. Property, virtue, public order, opportunities, the perpetuity of cherished institutions, the vigorous transmissions of national character are always at stake, to be affected favorably or unfavorably by the opinions and actions of each in the body politic.

We need then no longer ask what our self-interest obligations are, if all that we hold dear is based upon this educational question; and let us, at the risk of becoming tedious, earnestly plead once more on purely selfish grounds for the manifestation of a greater personal interest in, and a greater sympathy for, those who are dependent upon us, but equally our equals.

We give abundantly of our means, but too little of our thought and time. We give too much heed in what we do to their mental and none whatever to their moral training, that to them and to us is by far the most important.

In all we do in future let none of us forget that the Negro is our especial ward, and, however disinclined we may be to accept him, we of the South and North are bound by our common humanity, by the credit of our superior race civilization, by our sacred obligations to our wives and children, by our public obligations to our Government, our country and our property, to raise him morally and mentally to a higher plane than he now occupies, and to fit him for an exercise of his civil rights which shall neither be revolutionary nor dangerous.

G. R. S.

#### A Memorial Service

For Mary Anna Longstreth.

On Sunday evening, Oct. 12, a pleasant service was held at Hampton Industrial School of this beloved friend whose name will always be revered and cherished in the school to refresh our hearts with memories of her beautiful life and loving deeds, to acquaint the new comers with the debt of gratitude the school will always owe to her, and to give appropriate recognition to the generous gift which occupied her last thoughts of Hampton, her parting gift to the school, a fine crayon portrait of its honored friend and treasurer, Gen. J. F. B. Marshall.

Two essays on the platform held, the one this portrait and the other, the beautiful crayon of Miss Longstreth herself from the teachers' parlor. The two genial faces smiled lovingly upon the assembly. We rejoiced to feel that one of them will often cheer us still in bodily presence, who can tell that in spirit and in truth the other was not lovingly near us as it seemed that night.

Rev. Mr. Tolman—for eleven years the school's first chaplain—sweetly upon the beauty and significance of such a life of unselfishness and Christian love. Our present pastor, Mr. Frissell, spoke of the deep interest Miss Longstreth always took in the religious work of the school, the help it had been in his own efforts; the letters that came from her hand every year to the graduating class; the deep solicitude she expressed that every graduate should go out as a soldier of Christ, a teacher of righteousness. The Principal gave the history of Miss Longstreth's connection with the Hampton school from its early days; the many generous, gracious, devoted deeds which, with spontaneous, untrifling kindness, she had scattered along its way; the cheer and inspiration she had given to its work, her interest growing with its growth, following its graduates, and her little school houses with helpful gifts, and even with invaluable letters of counsel from her busy hand; her broad nature finding room for many other benevolent works, the tributes brought by hundreds who rise up to call her blessed. Not hers the bare gifts without the giver. The deepest gratitude owed her by the many she helped and blessed is for the loving heart that went with all she gave, large or small. One of those rich souls of whom the Christ will say:

"Who gives himself with his gifts feeds the many."

Himself, his hungry neighbor and Me."

#### A Pleasant Word for Hampton Students.

Seven Hampton students, young women, were employed during the past summer at the Woodland Park Hotel, in Auburn, Mass. At the close of the season, they were pleasantly surprised by the kind gift from the guests of the house of a sum of money to be distributed among them, and a still more valuable testimony to their faithfulness, and to the interest felt in them and the school, in the following note which accompanied the donation.

"To the Hampton students at Woodland Park Hotel,

We the undersigned, guests of the Woodland Park Hotel, recognizing your efforts to please and contribute to our comfort during our stay here, and knowing that you are about to leave us, cheerfully give the sums against our respective names, hoping that the amount thus contributed may serve to aid you in your laudable efforts to acquire an education, and fit yourselves for teachers. With our best wishes for your success in the future, we herewith annex our names."

#### Card.

Miss Emily L. Austen, Superintendent of the Austen Industrial School, Knoxville, Tenn., desires to thank "The Southern Workman" for her letter and donation to that school, for which her interest was aroused through a report of it published in the last July number of the Southern Workman.

were broken up, many houses were erected

by side with other citizens in respect of

ns 53, 55, and 57 and a face, new form

Respectfully,  
CHARLES NASH,  
ELIZABETH S. NASH.

We welcome the gift; the school needs a large map of the world which will be at once purchased on the strength of it. The Hampton School could most usefully expend tens of thousands of dollars in a way that no one could call sectarian.

100

### Independence Day in Liberia.

On the 26th day of July, 1847, the representatives of the people of Liberia declared themselves a free and independent State, to be known as the Republic of Liberia. Treaties have been made with Great Britain, France, the United States, Sweden, Italy, Brazil and other Nations.

The Constitution of Liberia resembles that of the United States. The Legislature consists of a Senate and House of Representatives. The Senators are chosen for four years and the Representatives for two years. The President is also elected by the people directly and holds office for two years.

The Constitution states that Liberia was intended "to provide a home for the dispersed and oppressed children of Africa" and "to regenerate and enlighten" the benighted continent of Africa. None but persons of color are admitted to citizenship in the Republic. The Constitution also provides for the "improvement of the native tribes, and their advancement in the art of agriculture."

Liberia fronts the Atlantic Ocean for six hundred miles, from the fourth to the seventh degree of latitude north of the Equator, and from the seventh to the tenth degree of longitude west of Greenwich, and from the sixty-seventh to the seventh degree of longitude east of Washington.

The President of Liberia, Hon. H. R. W. Johnson, is a native of the Republic and was elected by a vote almost unanimous. There are four "Dean districts," namely, Montserrado, Grand Bassa, Sinoe and Maryland. The capital, Monrovia, is named after James Monroe, whose friendship while President of the United States secured the foundation of the Negro State. Methodist, Baptist, Presbyterian, Episcopal, and Lutheran churches abound through the Republic. As a gateway to reach the populous tribes of Central Africa for trade and missionary operations, Liberia presents an inviting field for American merchants and missionary societies. Founded by American philanthropy, Liberia deserves our sympathy and co-operation.

Our friend, Mr. Wm. Coppinger, Secretary of the American Colonization Society, prefaced with the above statements, an account of a recent celebration of Independence Day, in a town in Liberia, written by the daughter of the prominent colored clergyman and U. S. Minister to Liberia, the late Rev. Henry Highland Garnet.

#### HOW WE CELEBRATED OUR NATIONAL BIRTHDAY.

At Brewerville, Liberia, July 26th, 1884, the sun rose bright and clear, but soon the sky became overclouded and throughout the day we had fitting showers intermingled with sunshine. The weather on the 26th at Brewerville was a fair type of an April day in New York.

At 9 A. M. the drum corps called the soldiers and citizens together and the procession was formed in front of the residence of J. B. Mendenhall, Esq., who is justly styled the "Father of the settlement."

Captain Manson S. Wynn was Marshal of the day. The procession was headed by the volunteer company, under command of Capt. Brishand. Immediately following came the clergymen and leading citizens who were led by Father Mendenhall and Mr. John Smith, the first settlers of the town. Then came a long line of visitors from Clay-Ashland and Virginia, followed by the militia and the school under the care of Mr. N. C. Armstrong; other citizens falling in line made the procession complete, numbering between two and three hundred. After parading the principal streets, the procession halted in front of Zion Grove Baptist church. There they found an arch, through which Father Mendenhall, Mr. John Smith, Mr. Isaac Woods and others led the way to seats on the platform for the distinguished guests. Rev. J. O. Hayes and Rev. J. S. Washington occupied the pulpit. Father Mendenhall presided. On the left were seated the speakers and visitors, among whom were Lieut. Col. D. A. Jones, school commissioner, Mr. T. C. Lenox, Mr. John Rix, Mr. H. M. Rix and two of the grandsons of Elijah Johnson, Mr. Cornelius Miller and many others. On the right was seated the "Choral Union" of Brewerville, consisting of the young lady pupils of the "Garnet Memorial School" and young gentlemen of the settlement, led by Mrs. M. H. Garnet Barboza.

Marshall Wynn then assigned to each company, school and individual a seat, and the church was soon crowded to overflowing. At 12 M. the entire audience, at the suggestion of the choir, joined in the grand old hymn "Praise God from whom all blessings flow," and the notes rolled heavenward, coming from glad and grateful hearts, an earnest of joy and freedom such as only

a Negro can feel, and feel only in his aboriginal home.

Rev. J. O. Hayes then read in a full clear voice the thirty-third Psalm. Afterwards he led the assemblage in a comprehensive prayer. The choir then sang "Rising as a people." Mr. Henry Phelps read the Declaration of Independence in a creditable manner. "My country tis of thee" was next sung by the audience. Mr. Isaac Woods, the orator of the day, was then introduced by Marshall Wynn. The oration was brief but soul-stirring. He told of the birth of Brewerville, of the privations and sufferings of its first settlers, giving their names and histories; and touchingly alluded to those who, having borne the burden and heat of the day, had gone to rest. Then he told how wonderfully God had preserved so many who had with their own hands cut the first brush. He closed his remarks with words of encouragement to those who had newly arrived, hailing the joyous event that brought us together on the occasion. Thanking God and the American Colonization Society for the untold blessings resulting from their efforts in returning the exiled Negro to his original home, with a tribute of praise to our President, in whom the nation reposes the utmost confidence and who was the first "Son of the Soil" who had won that high distinction, he took his seat amid great applause. The Liberia National Anthem was then sung by the Choral Union. Mr. A. J. Mathews was then introduced to the audience. He spoke as follows:

"Dear friends and fellow citizens: I feel myself highly esteemed that by and through the well directed hand of Providence I am before you on this 37th Anniversary of our Independence. It was on this day thirty-seven years ago that the independence of Liberia was declared, and it has since been recognized throughout the civilized world as a free and independent Nation. I imagine that when we read the Declaration of Independence, this great composition—our Declaration of Independence—was presented and received on earth it was so much the will of God that heaven itself also made recognition of the event and the angels said amen! to one of the first steps toward the civilizing of a great heathen Continent. We feel and know or fondly trust that those who composed this great work and thereunto affixed their signatures are still living in the bright realms of Paradise. And they rest from their labors and their works do follow them." Let us hail with joy the festival day and give unto God thanks. Let us build on their well begun way, and go on and be encouraged to press onward and upward. We are "new comers." Our settlement is new and we are yet to be established. We deem it our right and privilege to come together on this day and talk over matters of this kind; to arouse our minds from a drifting state; to review the past, to realize facts of the present and to plan for the future; to know and to feel more deeply that we are at home. We have attempted this day to fill our programme entirely with local talent. Yet we cordially welcome all the visiting friends who are with us to join in our glad respect, dear friends, we hold that we resemble the framers of our Declaration. We have done this in order to bring about a more perfect union among ourselves, to unite the factions that we may count the whole number; to establish confidence, self-reliance, love and peace in the settlement of Brewerville, the county of Montserrado and the Republic of Liberia. We believe it to be our duty to come together as often as this anniversary may find us on this side of eternity, and dying to commend it to our children.

Looking over this assemblage, I see white headed fathers and mothers who have but recently come here. They come not expecting to reap what they might sow here, but while in the land of strangers, far distant America, they were imbued with the idea they would bring their loved offspring home where, untrammelled by any reminiscences of their parents' wrongs, they might, in their own God given land, look from Nature up to Nature's God. Let us give thanks for all we see and enjoy at this time. May God enable us to let the world know that we are not dead to our interests or to the knowledge of the blessings of civilization and Christianity in this our own free Negro nationality, entirely governed by the Negro, from the president down to the constable. God speed us on in this way going forward. Amen!"

"Nearer my God to Thee" was then sung by the Union. Mr. Chas. Wilson next addressed the audience. He spoke at length from a manuscript which evinced much thought and careful study. We quote from him as follows:

"The grand objects of the founders of the American Colonization Society, as I have always understood it, and which, as far as I know, has never been departed from, were to establish an asylum on the West Coast of Africa, where such of our children as might choose to rid themselves of slavery might find a free and happy home, and in

this connection they would fairly test the capacity of the Negro for self government and the maintenance of free political institutions.

2nd. That through the instrumentality of a country thus established, composed of men who had themselves been the victims of cruel servitude, additional facilities would be afforded for the extirpation of the slave trade, then rampant with all of its attendant horrors, at nearly every prominent point along the West Coast.

3rd. By means of Christian settlement in the midst of this people, to introduce the blessings of civilization and Christianity among the heathen tribes of this benighted land. These were grand conceptions, embracing nothing less than the founding of a great Empire with Negro nationality and the redemption of a Continent from paganism and idolatry. Of course a work of such magnitude required large natural resources and suitable men as emigrants to assist in conducting the work in a manner promising successful results. We can therefore readily imagine the serious misgivings which must have weighed heavily on the minds of these good men when they engaged in the enterprise. But they were men of great faith and energy, fully imbued with the spirit of their mission in behalf of humanity and religion, and they therefore hesitated not to devote the success of their enterprise to the discretion and support of an All-wise Providence.

In this manner Mr. Wilson spoke at length, reviewing the history of Liberia and of the men who had gained distinction as leaders of the people. Alluding to the father of our President he said: "Remember this fact: that Elijah Johnson, responding to the British officer, when he offered his flag as protection, boldly replied 'I refuse it. It would be easy to put it up but hard to pull it down.' Had this been accepted, the British lion would have swept the grasp of the United States out of our hands and to-day Liberia would have been a dead letter among the Nations."

Let us remember the sons and daughters of Elijah Johnson. I am proud to repeat that his son is our Chief Magistrate, a son of the Soil he has received the highest gift of the Nation, and his title is A. M., L. D."

Then he spoke of the educators of the land who were developed on the soil, among whom were our President H. R. W. Johnson, Rev. Doctor E. W. Blyden, Prof. A. B. King, Rev. A. D. Ware, Hon. Thad. M. Wilkins and many others. He referred also to the brave defenders of our land, also to the ministers of the Gospel of Christ, who would, as pulpit orators, vie with the clergy of any other land. He closed his very able address with a synopsis of the issues of the day, discussing the north-west boundary controversy, and other important questions that must come up before the next Legislature. His vocabulary was an earnest appeal for concentrated efforts, unity of sentiment, and integrity of purpose which only could, with the blessing of God, make us successful as a nation and respected as a people.

The Choral Union then sang an "Ode to our President," arranged for the occasion by Mrs. M. H. Garnet Barboza, which was much good feeling. A collection was then taken for the benefit of the church; during the time thus employed the choir sang "Joy! Joy! Freedom to-day."

Mr. J. S. Capehart as chairman of the committee of arrangements, completed the programme in a few happy remarks complimentary to the orator, the speakers and the audience.

Rev. J. O. Hayes under whose direction the whole Celebration was organized and carried on to perfection, then announced to the company assembled that a repast was ready in waiting at the M. E. church, and that thither he would lead the way, the invited guests following him. After the benediction was pronounced by Rev. J. S. Washington, the line of march was again formed and stopped at the M. E. church, which was decorated. A well filled table, surrounded by kind friends, welcomed all to partake. The many guests as well as the citizens and children of the different schools were supplied with a bountiful feast, the expenses of which were defrayed from private subscriptions of the people of Brewerville. During the exercises, the reading of the Psalm and prayer, a letter from Mr. C. T. O. King was read, in which he regretted the fact that it was impossible for him to be present in person, although he was in spirit and in sympathy with us, but as Mayor of New York via the duties of the day required his presence in Monrovia.

M. H. GARNET BARBOZA.  
Sec. Com. of Arrangements.

#### Horsford's Acid Phosphate

MAKES A COOLING DRINK.

Into half a tumbler of ice water put a teaspoonful of Acid Phosphate; add sugar to the taste.

### The Indian Art Class.

The interest which our Indian students show in drawing, modelling, carving and similar work, has made it seem worth while doing the past two summer vacations to keep up special classes for them, and to make some experiments with such material as could easily be procured, in order to test their capacity for the simpler forms of art work. The results have been more satisfactory than was expected, and the teachers who have had charge of them in their classes are quite enthusiastic in regard to the talent shown by some of their pupils.

In her report for the summer of 1883 Miss S. C. Smith says:

"I have never visited Carlisle, and I do not know if drawing has been taught there at any of the agency schools, but judging from my little experiment, it certainly appears evident that a taste for drawing is as characteristic of the Indians as that there is of the Negro. I think that they have the opportunity and encouragement they need. \* \* \* they will make original drawings that will be very interesting."

Miss Parke, who taught both Indians and colored students during the summer of 1884, agrees with Miss Smith in her opinion of the ability of the former. While she found among her colored pupils a few individuals of decided talent, the taste for art was much more general among the Indians, and they were especially successful in modelling. She considers that one Indian boy who worked under her direction with much enthusiasm, deserves a thorough art education, and that if it could be obtained for him, he would undoubtedly make a name for himself as a landscape painter.

Both Miss Smith and Miss Parke are in the opinion that there is a practical side to the whole matter, which ought to be considered, and it is to this that we should like to draw the attention of our readers.

Miss Smith says—  
"I could easily explain to them the meaning of 'decorative' by alluding to their pottery and their moccasins, etc. I was so fortunate as to obtain a pair of moccasins beautifully wrought by a young Sioux woman, the wife of one of my pupils. The design, in small beads, graceful in shape, and displays a nice eye for color that would be valuable in any decorative work. This faculty is probably a common one among Indian girls, and will, I doubt not, enable them some day to rival some of their whiter sisters in embroidery."

The Indian's love of color makes it more desirable that he should be taught to draw as one means of civilization. From my short acquaintance and limited observation, I should say that if they could have a common education and the special training needed, two or three of these boys would be more likely to make good artists or designers than good mechanics, because they have the natural ability, and they would like it better. If the Onondaga boy is a fair specimen of his tribe, the day is not far distant when the Cooper Institute, or the "Art Students' League," or some similar school in New York will have pupils from among those native New Yorkers."

Miss Parke suggests that their eye for color and aptness in modelling could be utilized by teaching them to work in clay, making vases, tiles, plaques, etc., with their own hands, and from their own designs.

Their work, when original, is so unique and has often such genuine art value that it would be certain of at least a modest success, could it be brought before the public under favorable conditions. The means to do this are not yet at the command of the school officials, but if the expense necessary to introduce such an undertaking could be met, (as we trust it may ultimately be) by some generous friend who combines an appreciation of art with an appreciation of Indian possibilities, we believe that the investment would pay a good interest.

In moulding and decorative work of various descriptions, both boys and girls might find a perfectly practicable outlet for their talents and the establishment of some regular system of instruction in these lines of work, which would have great practical value would be carefully considered, seems very desirable, though just now beyond our reach.

## At Home.

It is not surprising that in the Middle Ages the Jews, with their frequent ablations, should have escaped epidemic diseases to which the unwashed non-Jewish communities fell an easy prey. Not only did the monks endeavor to afflict their souls by a deliberate avoidance of soap and water, but the general public seem to have avoided washing from inclination. The filth in which people then elected to live must have been frightful, when we find that even the wealthy and high-placed were frequently eaten up by vermin. Moquin-Tandon, in his "Zoologie Medicale," gives a list of historical personages whose lives paid the penalty of their uncleanness—a list comprising such names as Philip II. of Spain, Cardinal Duprat, and Bishop Fouquet. Substantially the Mosaic laws of personal cleanliness are still observed by Jews. It is often made a subject of remark that the ghetto, in certain towns appear dirty and unwholesome, yet there cannot be the slightest doubt that the classes of Jews inhabiting them are infinitely more cleanly in their personal habits than the classes of non-Jews inhabiting similar squalid lanes and back-streets. The truth is that the Jews so situated have not and never have had any authority beyond their own thresholds, and it is only now that public sanitation is beginning to utilize that "legalism" for purifying the public thoroughfares which the Mosaic code taught thousands of years ago. It would be superfluous here to recapitulate the different features of the "legalism," inasmuch as the Jews have so long been debarréd from taking advantage of it. Suffice to say that its general system anticipated the modern dry method of disposing of sewage; that in its laws of cleanliness we find a complete prototype of the regulations laid down by Sir James Simpson in 1838 for stamping out smallpox, and now generally followed, and that the principle of small "cottage" hospitals at present being everywhere adopted is one clearly set forth in the Levitical laws. The strict observance of this hygienic system during their national existence must have formed in the Jews a comparative immunity against zymotic diseases, and this capacity they have no doubt been enabled to preserve under less felicitous circumstances by their observance of the more personal details of the system which were within their control. To the general value of the whole system of Mosaic hygiene Dr. Carpenter bore suggestive testimony in an address delivered before the Sanitary Congress held at Brighton in 1881. He said, "Obedience to the sanitary laws laid down by Moses is a necessary condition to perfect health, and to a state which shall give us power to stamp out zymotic diseases. If these laws were observed by all classes, the zymotic death-rate would not be an appreciable quantity in our mortality list"—would be less, in fact, than among Jews at the present day.—*Fortnightly Review.*

A letter from Germany to the Boston *Athenaeum* speaks of the not altogether agreeable lot of the peasant woman. The native American family," says the writer, "however poor and lowly, could not live as the working people live here, huddled with their beasts and fowls, indecent according to our ideas in their habits. And the woman! We sometimes talk of the drudgery of the wives of American farmers. Fancy her driving wagons, cutting the hay, spreading the dressing on the land, planting and digging the potatoes, barbed and barbed, carrying on her head or her back the farming tools and the sweepings of the road, harnessed to a cart with a dog! Fancy that, and that is but a part of the drudgery of the wife of the European farmer, who must also tend her babies, cook her food, and bear sons to be compelled to do military service when most she needs them to rest her weary hands. No wonder she cannot tidy her house, clean her children, make her own person womanly or smart. She merely exists to labor; and every little farthing village in Germany, in all its filth and bad order, grows on each window ledge a box of blossoming plants, carefully tended. It seems to be the one outlet of that feminine love of grace and beauty which every woman has.

A good relish to take with a lunch is made of ham. Pound some pieces of ham in a mortar, just as fine as you can. Season it with pepper and spice, and moisten it with clarified butter. Put this into a mould, or earthen bowl, and press it in very tightly. Put it into the oven for half an hour. Let it get perfectly cold. It can then be cut in thin slices. It is nice if used for a filling for sandwiches.

## Health and Honesty.

### Put Yourself in the Horse's Place.

It is worry and not work that kills. Let every owner of a horse think when he buys his team to the stable at night how much vital force has been expended in work and how much in worry, and then strike a balance. And let him consider himself to be put in the horse's place, so that he may better know how it is himself. As thus:

A man goes out to work in the morning after having all night fought flies of the most pestilent kind, breathing hot, foul air, reeked in the sweat and dust of the previous day's work, eaten a breakfast in haste, without any sufficient cleansing of his skin, and with boots and clothing ill-fitting and galling the tenderest spots upon his person.

He is then, from the filthiness of his body exposed all day to the venomous attacks of flies, which he fights with hands and feet, but which, from the exigencies of his work, he can only drive off for the slightest moment, after which a cloud of them settle upon his face and exposed parts and sting him severely.

He works on from hour to hour in the broiling sun without water to moisten his mouth or to quench his raging thirst until midnight, when he rushes home, swallows a drink of dirty water and hastily eats a dinner in the foulest-smelling and worst ventilated part of his premises.

The afternoon is like the forenoon, and after this has been occupied in the same way, the man, all foul with gathered dust and sweat, eats his evening meal as he dined, and lies down to rest (if he can, on a filthy floor, in an apartment that is hot, close and swarming with flies, which he vainly fights as he catches an odd wink or so of sleep).

And so, again from day to day, he fights it out on this line all summer. Then how much of the resting week and rest is due to the worry and how little of it to the work?

Something like this is the wretched condition of the average farm horse. No note is taken of the cruel lashings, the over-working, the injudicious feeding and watering, the torment of check-reins, the hindrances of blinders, the bad treatment of the feet by the blacksmith, and other mistakes which produce actual disease, nor of the truly horrible nostrums and poisonous stuff which are made use of as "remedies" for these complaints.

"Thinking of all these things, who can wonder that the average farm horse, whose useful life is natural twenty-five to thirty years, gets into a hole in the corner of the farm and is consumed by prowling dogs in less than half his allotted term of life.—*TPH.*"

### Girls In A Garden.

The age of ten to thirteen is the time for leading young minds and young activities into the wonders and pleasures and profits of the vegetable kingdom. They take up then with avidity the arts which they see older people busy with, and by which we derive from the plant-world almost all our food and most of our clothing, shelter and adornments. Two industrious little cousins here, who have themselves marked out, bought and planted beds of twenty-four plants each, of Manchester and Cumberland strawberries, and who visit them daily to look for the first appearance of weeds, runners or crusted sprouts, found one day at an older bed, scissors in hand, clipping out, not only runner points but old leaves or fruit stems, where they were shading the new ones. They asked why I cut the leaves off. "I want," my plants to look as green and healthy as yours" I said. But for better answer I took them to a bed of shrubbery and flowers near by, and showed them how stems and flowers were largest on the shoots which had the largest and thickest and greenest leaves, and how there was no growth at all on such as had no leaves or faded ones.

They soon understood from what they saw the importance of healthy entire leaves. Next we searched to find whether any leaves were perfect that were shaded by or by the others. The children clapped their hands and poured out exclamations of surprise and delight when they saw how cunningly every leaf stem was turned so as to face the light of the leaf in as full sunlight as possible, and how good natured each seemed to be satisfied with just its share, making all the room possible for others. None but the well-lighted ones were healthy. We went back to the strawberry rows with these observations fresh in mind, and my ardent little visitors saw for themselves that wherever a green leaf was shaded by older ones, or by dust, or by being bent away from its light, its usefulness to the plant was lost. Their faces became reverent with respect felt for these main agents of plant growth. By way of adding booklore to the object lesson I read a paragraph from the "Wonders of the Leaf," and promised another when they called again. For the present they had quite enough to meditate upon, and to guide their further plant-care by.—*Quartus A. Broker.*

## Teachers' Table.

For teachers to read to their scholars.

### Wonderful Intelligence of a Dog.

The large Newfoundland dog "Heck," belonging to the St. Elmo Hotel in the oil town of Eldred, Penn., was known throughout the Northern oil field for its great strength and almost human intelligence. The porter of the hotel, a kind-hearted but intemperate person, was an especial favorite with the dog. The porter, a small man, slept in a little room back of the office. The dog slept in the office. On Thursday night last the porter was drunk when he went to bed, and soon fell into a heavy sleep. Some time in the night he was awakened by the loud harking of "Heck," who was jumping frantically on the porter's bed and seizing the pillow with his teeth. The still drunken and drowsy porter tried to make the dog go away, but the animal persisted in his efforts, and it finally dawned on the befuddled mind of the porter that the house was on fire. His room was full of smoke, and he could hear the crackling of the flames. He sprang from bed, but was still so drunk that he fell to the floor. The faithful dog at once seized him by the coat collar, the porter not having removed his clothing on going to bed, and dragged him out of the room and half way to the outer door of the office, when the man succeeded in getting to his feet, and, unlocking the door, staggered into the street. The fire was rapidly spreading over the building, and the hotel was filled with guests, not one of whom had been aroused. The dog no sooner saw that his helpless friend was in danger than he dashed back into the house and ran barking loudly up stairs. He first stopped at the door of his master's room, where he howled and scratched at the door until the inmate was made aware of the danger and hurried out of the house, as there was no time to lose. The dog gave the alarm at every door, and in some instances conducted guests down stairs to the outer door, each one of these, however, being a stranger in the house, which fact the dog seemed to understand in looking out for their safety. All about the house seemed to have lost their heads in the excitement, and it was said that the hotel dog alone served complete control of himself, and alone took active measures to save the inmates of the house, in and out of the building. He kept continually dashing, piloting some half-dressed man or woman down stairs, only to at once return in search of others. Once a lady with a child in her arms, tripped on the stairs while hurrying out, and fell to the bottom. The child was thrown on the floor of the hall some distance away. The woman regained her feet, and staggered in a dazed way out of the door, leaving the child in the midst of the smoke that was pouring from the office door. The brave dog saw the mishap, and jumping in through the smoke, which was now becoming almost impassable, and seizing the child by its night clothes, carried it safely out. Notwithstanding this rescue, the mishap that made it necessary led to the death of the noble animal. The mother of the child being restored by the fresh air, first became aware that the child was not with her, and crying out wildly that "Anna was burning up in the house!" made a dash for the building as if to rush through the flames to seek the child. "Heck" had already brought the little one out, but it had not been restored to its mother. The dog saw the frantic rush of the mother toward the burning building, and her exclamation that some one was burning up in the house, and, although the building was now a mass of smoke and flames inside and out, the dog sprang forward, and as a dozen hands seized the woman and held her back from her insane attempt to enter the house, disappeared with a bound over the burning threshold. The faithful animal never appeared again. His remains were found in the ruins. There is no doubt in any one's mind that but for the intelligence and activity of "Heck" the fire in the hotel would not have been discovered in time for a single inmate to have escaped.

It is not probable that the dog, who had the noble animal understood from the half-crazed movements of the child's mother that there was still another one in danger, and a rescue whom he gave his own life, accepted as certain. The remains of "Heck" were given a fitting burial, and his loss is regretted as that of a useful citizen might be.

*The Christian at Work.*

Mr. C. M. Hovey expresses the opinion that all the progress could be produced at the South. The question is whether we can compete with China in preparing it for market.

## Agricultural.

### More of Stable Manure.

It indicates a lack of business ability if not of common sense, to spend money for plant food in commercial fertilizers, and at the same time neglect the care and preparation of the very same kind of plant food in the stable manure of the barnyard. This neglect is still far too common in our more Eastern States, where manure must be either saved or bought if any sort of respectable farming is to be carried on. The waste is perhaps often unintentional; the farmer who throws manure out in the open yard where sun and wind may play upon it, does not fully realize that this manure will produce so many bushels less of corn or wheat than if he should provide some simple means of sheltering it, even if rude and cheap, or should, which is doubtless the next best thing, cover it in the field as soon as possible.

What makes the present price of wheat so low is the large crop in England. This year they have had a good harvest there and forty bushels to the acre is looked upon as quite a small yield; which is, considering that a good many farmers in good years produce as much as sixty-four bushels to the acre. Our average is about eleven bushels per acre. New York and Ohio and even of Michigan and Wisconsin, run lower than this and seven bushels in some counties is an average; twenty-five bushels in a rare yield of wheat or forty is rarer, but the fact that some farmers reach up to it shows how consistently some others are reaping wheat growing as a small business. It is easy to get out of our smallness by enlarging our pastures, and the land more liberally and trebling the yield. What man has done, man can do. Solomon said: "In times of prosperity rejoice; but in times of adversity consider." And "average" wheatgrowers may profitably do a good deal of considering just now, but not all to the disadvantage of the wheat.—*Triticum.*

A new idea has been started in bee-keeping. It has long been a grievance among farmers that a neighbor should keep a large number of bees without any pasturage of his own and gather honey from crops planted and sown by others. It is not that any loss or damage was inflicted, but it was a clear case of reaping where one had not sown and gathering where one had not scattered, and therefore had a large element of injustice in it. No doubt the unfounded charges against the bees, that they injured the crops and the fruit, especially grapes, were thus originated, and more from prejudice than from any real belief. A Mr. Heberington of Schoharie County, N. Y., is one of the most extensive bee-keepers in the world, and it is said keeps 2,500 swarms, a large number of which he purveys among farmers to whom he pays a rent for the use of the pasturage, clover, buckwheat, &c. grown upon the farms. This is a new departure, which will commend itself to farmers who do not keep bees, as an example which other bee-keepers might follow.

A new thing has just been started in England, and that is to attach a dairy school to each of their dairy factories, where the peasantry of both sexes can be taught dairying in the most perfect manner. They have also traveling dairies, which go about the country for the purpose of teaching those people at their homes, or near by, who cannot attend the schools. Dairying is getting to be one of the most important interests of the United Kingdom, and noblemen and rich landed commoners, bishops and their clergy, are now taking hold of the thing with a will. Even Queen Victoria has her model dairy.—*San-dia.*

### Children's Clothes.

At the London Health Exhibition, Miss Ada Ballin delivered a lecture on children's clothes. She quoted statistics to show that in 1871, 18,000 infants under the age of one year died for want of common sense and care in this important matter by their parents or nurses. The lady also pointed out that enormous injury was done to the little pieces of humanity by shaking them to stop their crying. She protested against rocking-cradles, for though the violent motion might have the desired effect of making the "quicker" sleep, it was at the risk of making him an idiot for life, his little brain being but a jelly. It was terrible, she said, to think what number of embryo poets and great men of intellect had been entirely destroyed by this silly, ignorant custom of daddling the infantile brain.

### Horsford's Acid Phosphate,

A RELIABLE ARTICLE.

Dr. E. CUTTER, Boston, Mass., says: "I found it to realize the expectations raised, and regard it as a reliable article."

"LOST."

[From Harper's Weekly.]

## A Visit to the Valley.

BY MRS. ORRA LANGHORNE.

My sister and I took the afternoon train on the B. and O. road on one of the balmy days of June, proposing to stay a night in Lexington on our way to Lynchburg. The town is beautifully situated on the north bank of the James, surrounded by rugged hills and mountains. An English traveller who visited Lexington in the early part of the century wrote of it, "The town, as a settlement, has many attractions, it is surrounded by scenes of beauty and stands at the head of a valley flowing with milk and honey. House rent is low, provisions cheap, abundant and of the best quality. Flowers and gardens are more prized here than in most places," and this description still holds good of the pretty village nestling among the hills.

It was about dark when we reached the tidy and comfortable hotel, where good Mr. Brown soon provided us with a quiet room, and promising to send a note to our aunt Mrs. Ruffner, early in the morning, left us to welcome repose. By the time breakfast was over the next morning, the messenger had returned from Dr. Ruffner's farm, about two miles in the country, to say that the family were at home and said we must come out immediately; and in a few minutes we were enjoying a ride through the quiet streets of the orderly little town.

A general tone of soberness and propriety in Lexington must always strike the stranger, and seems remarkable when one remembers that in the winter seven or eight hundred boys are there at college. In visiting the place I often recall a remark my father used to make of the town, that "when he attended the law-class there, the Presbyterian religion seemed to be established by law, and if he called to see a young lady in the evening there was always a probability of being invited to join a prayer-meeting."

## ROCKBRIDGE COUNTY.

The tone of the place, indeed, the whole of Rockbridge county, is evidently derived from the character and habits of the Scotch-Irish emigrants who were the first settlers of the country, and built up, a God-fearing and culture-loving community, which has been a blessing to their descendants and has excited a wide influence in our land. All who have approached the subject have been impressed with the strong and honest character of the founders of this settlement among the Virginia mountains, and some of the best writers have dwelt lovingly upon the sturdy virtues of these mountaineers, so that it is needless for me to enter upon a theme already fully treated.

At the season of our visit, the air had that delicious quality of freshness which forbids short of being cold while bracing every fibre of the human frame, and the country was beautiful in its robes of verdure, when leaving the town we entered a country road, smooth and pleasant then, but capable of unutterable deeds of mud in winter.

As RUFFNER.

A winding lane soon brought us to the farm house at Tribbrook. Dr. Ruffner's beautiful and well cultivated farm, which has been his home for many years, and where his summers were spent, was occupying the place of State Superintendent of Public Instruction. The snug farm house stands on a little terrace above a sloping lawn filled with handsome evergreen and other ornamental trees, and is surrounded with green meadows, seeming the very abode of thrift and comfort.

A gurgling stream winds around the lawn and in and out of the farm, giving a soft lullaby to the sleepers in the white cottage hard by, charming to calm the weary and sorrowful spirit of man. A hedge of sweet roses borders the stream at the edge of the lawn, and a fringe of willows shows the windings of the brook as it loses itself in the meadows beyond.

Dr. Ruffner and other members of the family came out to meet us, and we were soon seated on the sunny porch, the pleasantest part of the house at that early hour, discussing various subjects of private and public interest.

The Doctor had recently been appointed Principal of the State Normal School for female teachers, and had thrown himself into the work of preparation for his new duties with his accustomed energy.

He had just returned from a long visit through the Northern States, where he had been examining Normal Schools with a view to the arrangements of his plan for the Virginia Institute; part of his object being to secure a competent and experienced lady as vice-president in the school. Scores of applications had been made to him for the position, many of them under Dr. Ruffner's references which proved the candidates to have many desirable qualifications, and showed that there was no lack of learned women in the land. One of the applicants had studied a term at Oxford, England; another was a

graduate of Harvard, with numerous teachers from the highest American schools.

Within the last few days, Dr. Ruffner has called at my house in Lynchburg, with Miss Bush of Hartford, Connecticut, the accomplished and experienced lady, whom he has decided upon for his chief assistant.

This appropriation for a Normal School for females is a good step in progress for Virginia, and is the first distinct effort to improve the condition of Virginia women made by our legislature, which has always given liberally of the public funds in favor of masculine education. No class of our people have suffered more from the consequences of the Civil War and the violent changes in our social system than the Virginia women, and I think a close examination will prove that no class has shown more fortitude in submission to the reverses of fortune, and none more perseverance and energy in the effort at recuperation that has restored our people to comparative prosperity, than the daughters of the Old Dominion.

## RAMBLING TALKS ON TWO RACES, ETC.

Our visit in Lexington was extended longer than we had at first intended it to be, and I had opportunity for much pleasant discussion of affairs, past, present and future. Dr. Ruffner spoke with strong interest and approval of Hampton and the excellent results he has seen among the colored teachers from her faithful work in the cause of the colored people. In discussing the Negroes, the Doctor recalled an incident of his early life, which he said was so completely among the things of the past that until this conversation brought it up he had almost forgotten it.

It seems that the African Colonization Society once had an agent in Lexington, and must be now over forty years since the Rev. Rufus Bailey urged the claims of the association upon the devout and conscientious people of that community. This gentleman, a writer of text-books and a man of decided ability, labored diligently in the interest of the Society which was thought by many good people of that day to hold the solution of the problem of African slavery, then beginning seriously to agitate the country. Many members were added to the Society by Mr. Bailey's influence, and not a few of the sturdy Scotch-Irish, when their consciences were roused to the duty of sending the Christianized Negroes back to Africa to convert their heathen countrymen, were willing to make the pecuniary sacrifice involved and give up their slaves to this promising work. The churches began to educate Negro boys for missionaries, and it was not uncommon for slaveholders, when dying, to set their Negroes free with the proviso then required by the laws of Virginia, that a portion of the estate should be devoted to the purpose of sending the freed slaves to Liberia. A lady living in one of the south-western counties made such a will about 1843 or 44, the agent of the Colonization Society in Lexington being made executor of that portion of the will referring to the slaves. Dr. Ruffner was about eighteen years old at this time, and being, like most of the Lexington people, deeply interested in the Liberian scheme, he was desired by the elders of the congregation to undertake the task of sending these emigrants, as involuntary as had been their ancestors on the shores from Africa, back to that tropical land to display to their savage compatriots the advantages they had acquired by civilization. The plan decided upon by the trustees of the estate was to bring the freed slaves to Lexington and send them by way of Richmond to Baltimore, whence a ship was soon to sail for Africa. Sundry unavoidable delays occurred, and it was mid-winter and bitter cold when the Liberian travellers reached Lexington expecting to go by canal to Richmond.

A hard freeze had set in, no boats could travel on the canal, and time was pressing. After much consideration, Dr. Ruffner, then in the full vigor of youth, with abundant enterprise, decided to take his charges to Richmond by bateaux on the river, a mode of conveyance which had been abandoned after the opening of the canal, and always considered dangerous, was now doubly so, from the difficulty of finding skilled boatmen.

Some of the old bateaux men were hunted up, however, and the party made the trip successfully in spite of the ice in the river and the difficulty of shooting the rapids at Bacony Falls, one of the wildest and most beautiful scenes in the mountains. They reached Richmond in safety, and went at once to Baltimore, where the ship was just ready to sail, and the Africans left Virginia for the land of their forefathers.

The story of a Virginia Negro who was destined for the career of a missionary in Liberia, which ended very differently from this expedition under Dr. Ruffner's command, came to my knowledge recently, and thinking the readers of the *Workman* may find it as interesting as I did, "I will tell the tale as it was told to me."

(To be continued.)

## The Mountaineer's Lament for his Lost Cow.

From the French of Ousimé Dalavigne.  
To the Swiss peasant, even more than to the Scotch Highlander, his cow is his greatest wealth and dependence, which, like the Arabian's horse, or the Irishman's pig, shares her master's friendship and the best the house affords. The poet has feelingly expressed the dismay and grief occasioned by her loss.

Ah, from the mountain lonely  
Return my Nera now;  
Reply, my comrade only.  
Answers alone my calls.  
Thy master's voice imploring,  
Nera!  
Art thou so soon ignoring?  
Ah, Nera!

Return, for wolves come prowling  
From woods as evening falls;  
My dog with mournful howling  
Myself of waiting begs.  
From him wilt thou still wander,  
Nera?  
What friend, save me, is fonder?  
Ah, Nera!

Tell me if in thy manger  
I ever failed to spread  
Fresh herbage, though in danger  
Myself of wanting beg.  
While hungry we were going,  
Nera,  
Thy crib was overflowing,  
Ah, Nera!

When for thy milk at table,  
My little child shall cry,  
And see thy empty stable,  
Who shall his need supply?  
For want of one to cherish,  
Nera,

Wilt thou then let him perish?  
Ah, Nera!  
When all at home united  
Our Twelfth-night feast to make,  
Thou ever wast invited,  
My lass, to share my cake.  
When next 'tis celebrated,  
Nera,  
Thou'lt not its queen be feted,  
Ah, Nera!

Oh, when with ague shaking  
My fingers stiff would be,  
My goat's hair mantle taking,  
I've spread it over thee.  
Ingrate, wilt cold November,  
Nera,  
Alone make thee remember?  
Ah, Nera!

The night is falling faster,  
Alone I must return;  
Go seek some other master,  
Richer than he you spurn.  
Go, go—my heart is rending,  
Nera!  
Yet God be near, defending,  
Ah, Nera!

My prayers shall ne'er forsake thee:  
To curse, my heart would fail;  
No, seek some storm to strike thee,  
No darkness in the vale.  
Grazed long in pastures growing,  
Nera—  
We perish by thy going  
Ah, Nera!

When storms the pass are blocking,  
Some night thou'lt stand forlorn,  
Upon my window knocking  
For entrance with thy horn.  
If all are dead who knew thee,  
Nera,  
Who'll rise and open to thee?  
Ah, Nera!

HELEN W. LUDLOW.

## Testimony to "B."

A letter from a Hampton graduate printed in the *Southern Workman* a few months ago, brought out a sharp reply from a colored resident of the neighborhood who recognized its authorship and felt himself and others misrepresented by some of its general statements. Our graduates' letter in the *Workman* have done much good by their simple and graphic pictures of the Southern field. For the most part private letters, not written for publication, they are submitted by them for use at our discretion, and for their protection and other's, care is taken to avoid personalities, and names are generally suppressed. We of course intend never to publish from any on whose good sense and purpose we cannot rely. Mistakes may sometimes

be made, and on the very rare occasions when a graduate's letter has been called in question, we have, in fairness to the other side, published the protest, as we did last month an answer to "B." We cannot open our columns to a personal dispute, but very willingly publish the testimony "B" send us from a prominent citizen to his character and that of his work. Such testimony is better defence than any personal expressions, and we trust that our graduate may commend himself by good work, good nature and tact, to all.

LINCOLN UNIVERSITY PA. Nov. 5th, 1884  
Editors Southern Workman.

I am sure you will allow me space just once, at least, in your columns to respond to an article written by Mr. J. D. W. Giles, and published in the October No. of your Journal, denying certain statements written by myself and published in August No. of your paper.

Of my work, its success and my estimate among my people, I can furnish testimonials if necessary, but will content myself with one from the Chairman of the Board of Trustees, under whom I taught during my stay on that island, and in whose yard my school house was situated.

Enclosed find his letter, which I trust you will publish in my defence.

J. T. BROWN Class of '78

It is as follows:

HILTON HEAD S. C. OCT 31st, 1884.  
S. C. Armstrong, Esq.:

DEAR SIR,

My attention having been called to a letter from J. D. W. Giles, published in the *Southern Workman*, that casts reflections on the veracity of J. T. Brown, I wish to state for the benefit of whom it may concern that Mr. Giles' letter, is, as far as the number of pupils taught by Mr. Brown is concerned, a gross misstatement of facts. I have consulted the books, and find that the school of which Mr. Brown was principal teacher, is credited with an average daily attendance of pupils as follows:

For the Month of Nov. '83	59 pupils
" " " " Dec. " "	78 " "
" " " " Jan. 84	86 " "
" " " " Feb. " "	84 " "

I will also state that the Trustees were entirely satisfied with Mr. Brown's teaching, and furthermore, I have yet to hear the first word of complaint from the pupils' parents. As regards the Sunday school, I will say that Mr. Brown did start one, and kept it in operation till lack of interest of the children compelled him to discontinue it.

The Sabbath school and day school were both held in one building, said building being on my plantation and not over 100 yards from my residence.

Very Respectfully

F. E. WILDER.

Chairman Board of Trustees School District No. 5, Hilton Head Township.

## A Great Newspaper.

The *Pall Mall Gazette*, of London, England, did not overstate the case when it said that *The New York Independent* is one of the ablest weeklies in existence. It is as overwhelming as a monthly or quarterly magazine, with all the matter in its many departments. Any monthly might indeed be proud if it could show as distinguished a list of contributors as *The Independent*. In a single department—its story department—we find, among Englishmen, such contributors as Sir Samuel W. Baker, the celebrated Egyptian explorer; Thomas Hardy, W. E. Norris, James Payn, F. W. Robinson and Henry W. Lucy, the well-known and deservedly popular novelists; while among Americans we notice the names of Edward Everett Hale, Frank R. Stockton, H. H. Boyesen, Sarah O. Jewett, J. S. of Dale, Rebecca Harding Davis and Harriet Prescott Spofford. *The Independent* printed also, recently, the last story from the pen of the late Ivan Tourgenieff, having secured the only translation from the Russian into English. This department is but a sample of the others. It would seem to us that *The Independent* offers not only a fifty-two dividends during the year, but in addition, a stock dividend with each department. We advise our readers to send for a free sample copy.

# SOUTHERN WORKMAN,

TWELVE PAGE MONTHLY.

Reduced to eight pages from July to October  
four months.)

Printed on the Normal School Steam Press  
by students trained in the office.

S. C. ARMSTRONG,  
H. W. LUDLOW,  
M. F. ARMSTRONG, Editors.

REV. H. B. FRISSELL, Chaplain, Regular  
MR. W. N. ARMSTRONG, Contrib-  
MRS. ORRA LANGHORNE, tors.

F. N. GILMAN, Business Manager.

Terms: ONE DOLLAR a year IN  
ADVANCE.

Specimen copies sent upon application.  
To secure safety, it is important that money  
should be sent by checks, Post-office orders, or  
registered letters. Write plainly; give name  
in full, and name of Post-office, County, and  
State to which the papers are to be sent.

A limited number of advertisements inserted  
at following rates:

SPACE.	1 MO.	3 MOS.	6 MOS.	1 YEAR.
1 square.	1 00	2 75	5 00	9 00
1-4 column.	3 25	7 50	12 50	23 00
1-3 "	5 00	13 50	23 00	40 00
1 "	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

The *Workman* office will be glad to give  
estimates for printing periodicals, pamphlets  
or books of all sorts. Special attention given  
to Society and Association Reports. Prices  
always reasonable and made with a due re-  
gard to material and workmanship required.  
Proofs furnished without extra charge. Ex-  
pression paid on finished work. Address all  
communications or orders,  
Normal School Press, Hampton, Va.

Entered at the Post Office at Hampton, Va., as second  
class matter.

Our new departure, as promised last  
month, begins in this number, with the estab-  
lishment of a distinct In-  
dian department in the *Southern Work-  
man*, to which four full pages will be de-  
voted, beginning with the seventh of  
each number. The Indian department  
will be under special editorial charge  
of Miss Elaine Goodale, who needs no  
introduction to our readers, though they  
may be surprised to find the young  
muse of Sky Farm descended to the  
sea level of Hampton. Miss Goodale  
has been for a year a teacher of Indians  
at Hampton Institute, and, like H. H.,  
finds enough in them to touch a poet's  
soul to enthusiasm and effort. Regular  
and occasional contributors have been  
secured from among the best and most  
experienced friends of the Indian cause,  
for this department, and we believe that  
it will be found of increasing interest  
and value.

In our next number, we shall begin with  
a new year and volume, an important  
change in the make up of the *Southern  
Workman*, which will, we hope, be de-  
cided an improvement. Leaving out  
the picture, the first page will be de-  
voted to brief editorial paragraphs, in  
recognition of the increasing demand  
of busy readers in this busy world for  
short measure in words—the gist of  
what appears elsewhere at length, or  
glances at the deeply interesting prob-  
lems and conditions which surround us.  
The second page will contain the longer  
editorials, and the third be occupied by  
extracts such as we have been publish-  
ing for some months from the Southern  
press—white and colored—and of all  
sides. We call attention to this broad-  
side, entirely unpartisan and impartial,  
as of special, almost unique, interest.  
The fourth and fifth pages will be of  
lighter nature, the fourth having sketch-  
es of Southern life by our regular  
contributor, Mrs. Orra Langhorne, a  
Southern woman, of birth and talents;  
the fifth page, sketches of life and char-  
acter from inside and around the school,  
under special charge of Miss Alice M.

Bacon, daughter of the late Rev. Dr.  
Leonard Bacon of New Haven, Conn., her-  
self one of the Hampton corps of teach-  
ers. Letters from our graduates will  
fill the sixth page as usual. They have  
always attracted attention and done  
good by their simple and graphic pic-  
tures of their field of work, and the con-  
dition of their people, the more valu-  
able for not being written for publi-  
cation usually.

The next four pages will be devoted  
to the Indian department of the paper;  
the first of these to the editorials, the  
second to incidents of Indian life at  
Hampton, and kindred matter. The  
third will be given to facts from the  
field; reports of returned students, com-  
munications from our regular, and oc-  
casional correspondents in this depart-  
ment, from missionaries, agents and other  
expert thinkers and workers in the In-  
dian cause. The fourth page—the tenth  
of the paper—will be occupied for some  
time to come by views of Indian life  
and history, collected for the paper  
from original reports to the Indian  
Bureau. Much of really interesting  
and valuable matter lies buried under  
statistics and official formalities in these  
reports, unread because they are official.  
We believe that we are doing a service  
to the public by presenting them in  
more readable form.

These four pages of the paper  
being devoted to the Indian department  
will leave the eleventh for miscellaneous  
articles, and the twelfth for advertise-  
ments as at present. Our June number  
is usually chiefly taken up with the  
annual report of the school and its an-  
niversary, and during the four following  
months the paper being reduced to its  
vacation size from twelve to eight pages,  
there will be more or less contraction of  
its different departments. With allow-  
ances for exigencies, the above arrange-  
ment will be the general make-up of  
the twelve page, edition, and every effort  
will be made to sustain its interest in  
the important fields which are especial-  
ly its own.

In giving, perhaps for the last time,  
a first page picture in the *Southern  
Workman*, we take the occasion to ex-  
press once more our great indebtedness  
and gratitude to the friends who have  
so long enabled us to add thus to the  
attractions of the paper; especially to  
the Messrs. Harper Brothers, who have,  
with characteristic liberality and gener-  
osity, given us freely, electroplates of  
their fine engravings, bearing with our  
limited means of reproducing their  
beautiful works of art, for the sake of  
the help they might give to the cause  
for which we are working. To our  
friends of the New York *Christian  
Weekly* also and others, we are indebted  
for generous terms in allowing us the  
use of their illustrations. Pleasure and  
good have been thus carried into many  
little homes and school houses in the  
South. The proportion of our readers  
who do not need these illustrations in  
the *Workman*, and to whom any except  
at first hand and of first rate workman-  
ship are not desirable, has been for  
some time increasing, while, with the  
increase of means and ability to read,  
the best pictorial papers of the day are  
more and more within reach of the  
masses of the people; certainly of such  
as would take the *Workman*; and while  
we want to increase our list of colored  
subscribers, believing that it is for their  
interest to be intelligent in Hampton's  
work and all efforts for their race, and  
to learn of what is done for others, we  
know that the chief mission of the  
*Southern Workman* must still be to work  
for both races by making public sen-  
timent. To this end we need all the  
space and strength we can put into the  
paper, and therefore try the experiment  
of giving up the pictures for more solid  
matter.

An old colored man on being told,  
recently, that Cleveland had been  
elected President, exclaimed, "I reckon  
judgment day's come." The notion  
that an evil day has come to the colored  
man, and that Mr. Cleveland's admin-  
istration will be extremely sulphurous

for the colored race, is very generally  
entertained by them. The older Ne-  
groes have a simple, abiding, and un-  
swerving belief that their freedom is  
due to the Republican party and that  
loss of power by that party, puts their  
liberty in jeopardy. Many of them be-  
lieve that they are about to lose their  
civil liberty, and be reduced to serv-  
itude. Their own leaders, have, in many  
instances, forced this argument on them  
in attempting to control their votes.  
It has force, because it is addressed to  
their reason. It will be some time be-  
fore they will be assured of the utter  
groundlessness of their fears.

Aside from any fear of the loss of  
their liberty, the colored men believe  
that a democratic Federal government  
will, in some way, enact laws which are  
hostile to them. These fears are based  
on ignorance of our theory of govern-  
ment, which is that we are ruled by  
laws and not by men, and that human-  
ity takes no backward step, however it  
may seem to at times; the wheels of civ-  
ilization are not reversible, though they  
appear to the ignorant to retreat. That  
the colored man will have an easy time  
of it socially or politically is out of the  
question. The white man does not, and  
will not, until all things are perfect.  
Irregularities and injustice will prevail,  
so long as the imperfections of men con-  
tinue.

The race issue, as a political question,  
is dead. During three preceding presi-  
dential elections, it was the only issue.  
In the recent election, attempts to raise  
it were utterly ignored by both parties.  
The abandonment of this issue is an  
extraordinary event. It shows to the  
Negro, that those who befriended him  
now consider him so completely out of  
real danger, that they will not discuss  
it. The organic law of the Republic  
has been solemnly amended, and noth-  
ing but revolution can change it, so as  
to impair the political condition of the  
Negro. Any attempt to alter it would  
instantly cost any political party its  
power and its life. The politicians  
know this perfectly well. New ques-  
tions are pressing on the thoughts of  
men, and the foundation of new parties  
are being laid.

In an exciting political election, men  
lose their heads, and believe many fool-  
ish things. The men of one party be-  
lieve that the men of the opposite party  
are ignorant, selfish, evil disposed and  
unpatriotic. In science, religion and  
politics, along the line of reason are  
Negro, hanging low the clouds and fogs  
of prejudice and personal feeling.  
Facts are received without evidence;  
opinions are formed without reflection.  
A French writer observed that on read-  
ing the political papers during a Presi-  
dential campaign, it appeared to him  
that each party had nominated a scound-  
rel. On the second election of Wash-  
ington to the Presidency, his party  
opponents, among whom were men of  
great ability and purity of character,  
accused him of acts, which, if done by  
him, would have unfitted him to live in  
decent society. This same Frenchman  
also said, that although each party  
claimed most strenuously, that the elec-  
tion of the candidate of the opposing  
party would result in the ruin of the  
country, it was very extraordinary that  
immediately after the election, the men  
who were defeated went about their  
business as usual, and acted as if they  
did not expect any trouble.

As men come to a better understand-  
ing of their political relations, they are  
more disposed to concede that there is  
some good in every political party.  
Bad laws, passed by a democratic  
government, for instance, injure demo-  
crats as well as republicans. A hundred  
democratic and a hundred republican  
merchants are equally affected by bad  
legislation. Men who are pure in life,  
honest in business, and are under every  
incentive to right conduct, will not in-  
tentionally injure the country, whether  
it be of one party or another.

It is not disputed that the election of  
Mr. Cleveland is due to the votes of

the Independent Republicans. He is,  
therefore, under a pledge stronger than  
ever given before by a candidate for the  
Presidency, to administer the executive  
branch of the government in a just and  
wise manner. This pledge was sought  
from him, and he freely gave it. What-  
ever his partisans may expect, the Inde-  
pendent vote which elected him, will  
watch, with great solicitude, his con-  
duct in office, and will prefer to pass  
judgment on him after he has proved  
himself, rather than before. He may  
grievously deceive them, or he may  
justify all they expect. In these days  
of growing political independence, every  
man in high office is like the conspirator  
in Bulwer's play, to whom his adviser  
said, "Take no mistake. Behind thee  
stalks the heads-man."

The close of Mr. Cleveland's admin-  
istration will probably find the colored  
men entering the democratic party in  
large numbers. As they discover that  
no harm comes to them by democratic  
success, they will divide on many ques-  
tions, and from one motive or another  
will enter that party. It is clearly evi-  
dent that there is about to be a recon-  
struction of parties and the colored  
men will unite with those who suit them  
best socially, intellectually and morally.  
Their votes will be in demand and they  
will give them according to their under-  
standing. Their best friends look with  
anxiety, and some apprehension, on  
what they will do. From their experi-  
ence in republican political institutions,  
they will make unfortunate blunders,  
but if, as Emerson said, all success is  
founded on failure, they will gradually  
grow stronger, and in the end be val-  
uable elements in the life of the nation.

James Wormley.

Intelligence of the death of this well  
known and universally respected rep-  
resentative of the colored race, came  
just too late for notice in our last issue.  
He was a man to whom his people  
may point with honest pride and whom  
their young men may well strive to  
imitate. His funeral, from the famous  
Wormley's Hotel in Washington, of  
which he was the founder and prop-  
rietor, was attended by a large con-  
course of leading citizens of both races.

The Washington correspondent of  
the Philadelphia Press says:  
"Among the white friends of the dead  
nearer present were such distinguished  
names as W. W. Corcoran, Rear Admiral Al-  
my, Chief Justice Carter and Mr. Charles  
Sherell. The leading hotel proprietors  
of the city were also present as honorary  
bearers. Mr. Corcoran was accompanied by  
Miss Eustis, sister of Senator-elect Eustis of  
Louisiana. The previous day, Mr.  
Wormley's remains were lying in the north-  
east parlour. Mr. Corcoran came alone in his  
carriage to view them and sat beside the  
casket for a long time. He said reflectively  
"In Mr. Wormley, Washington has lost one  
of her most useful and valued citizens," then  
added, "My friends are rapidly passing away.  
I feel the sand slipping from under my feet."

Mr. Wormley's three sons will continue the  
business left for them by their father. His  
daughter is a wife of a \$1,000 clerk in the  
Pension office; a fine looking colored man.  
Mr. Wormley had a large circle of relatives,  
yet probably few white men of his wealth  
have had smaller demands on their purse  
from poor relations. One of them said, with  
not unbecoming pride, on the day of the fu-  
neral, "We had great regard for Uncle James,  
and knew we could call upon him if we were  
in need, but we are a self-helpful family  
and know how to stand alone."

Although but 65 in years, Mr. Wormley  
had twenty-five grandchildren, and as many  
of them as were old enough were present at  
the funeral, following the elders two by two  
in the procession from the house to the car-  
riages, and completing the patriarchal aspect  
of the scene. In that well-known triple suite  
of parlors, which can be thrown into one and  
where so many elegant historic banquets  
and receptions have been given, lay the com-  
ing central figure of the occasion, the found-  
er of his house's prosperity, the valued friend  
of Sumner, in whose arms the great states-  
man yielded up his breath. He looked like  
a recumbent statue in bronze, and his face  
was heaped with rare floral tributes from  
white as well as colored friends, including  
one from the White House conservatories.  
To a familiar spectator the pageants that  
those walls have looked upon could not

otherwise than pass in review before the mind's eye like a troop of gentle ghosts.

At Wormley's Hotel, Garfield was tendered the most elaborate of the banquets which celebrated his election to the Senate. At the one by Congressmen Amos Townsend and Anson G. McCook. There the now deceased Spanish Minister, Senor Mantilla, and his radiantly handsome wife, gave the memorable reception and fete in honor of King Alfonso's accession to the throne and his marriage with the fair Mercedes, so soon to perish out of life. Her full-length portrait, in bridal robes, adorned the wall on that occasion, nearly facing a life-sized portrait of Charles Sumner by the gifted Ulke.

There Mr. Blaine, as Secretary of State, his half even then whitening day by day from the fresh horror and grief of Garfield's assassination, entertained as guests of the nation one evening in October, 1881, the party of French and German visitors descended from our Revolutionary allies.

But more impressive than any of these memories or than the invited throng of aristocratic colored circles that crowded the parlors of the mansion was the large concourse of the uninvited, who blocked the streets adjacent to the hotel to look upon the procession as it issued from the house and formed enroute for Harmony Cemetery between 3 and 4 P. M.

Washington's average colored population, on whom so much of our domestic and exterior comfort depends, were there. The kitchens, laundries, workshops and colored schools were emptied of their denizens, and the eye could not fail to mark in their faces the growth of an enfranchised race. There were old crones among them, with eyes pitifully drawn out of shape by weeping over the fumes of the wash-tub and hands still parballed from their morning's labor, whose faces grew sublime as they looked upon the school children of their race, pausing in their homeward walk with their books in their hands. Some of these very spectators have been sold on the block in the streets of this city, and the Wake Nicodemus' look in their old faces was telling. One such looker-on nudged your correspondent's arm in passing, in response to the careless salutation, "How do you do, Auntie," and said, "Praise de Lawd, honey! jess see dem blessed chillun wid dere books in dere hands, all-a-comin' from dere school. 'Twan't so in my days! Ole Frances mos' ready to depart in peace, fo' mine eyes habseen Thy Salvation."

There is a growth, a gathering vigor, from year to year, independent of the fluctuations in politics, which is, in the main, encouraging to a lover of humanity.

Mr. Wormley was the first leading colored man who showed a cordial appreciation of the Hampton School, which, by its refusal to admit the dead languages into its curriculum, and by its demand upon students for manual labor, was for a long time not in apparent favor with prominent Negroes. Mr. Wormley was a self-made man and knew how men were made. He once told us that he had watched the course of the white boys of his own age and neighborhood. The mere studious, learned fellows he saw were, most of them, still poor men, hanging around waiting for something to turn up, but those who went to work after a good school foundation, own to-day most of the city of Washington in which he himself was a prosperous owner. Often has he spoken to us of his championship of the work at Hampton among his own people who, he said, did not appreciate it. He several times brought prominent Negroes from Washington on purpose to see it, and always with good result.

Had he been a young man, he would probably have built a hotel near Fortress Monroe upon a fine tract of land he owned lying upon Hampton Roads, which would have rivaled the famous Hygeia in quality if not in quantity. He knew how to keep a hotel, which is said to be the chief test of American genius.

Mr. Wormley was so modest and non-aggressive and full of tact that he never made one conscious of his color, and was one of the Negroes whom one in intercourse with never thought of as a Negro but rather simply as a gentleman. He kept his grievances to himself and had cordiality and a smile for every one. Above all, he had the rarest of gifts,—common sense.

Self-help makes such men. We see the promise of many more like James Wormley among those who come to

Hampton with nothing in their pockets, and work their way up to an education without a dollar from charity.

### "American Questions. Black and White."

By T. Thomas Fortune.

The standpoint from which Mr. Fortune has written this somewhat disappointing book can best be stated in the words of his preface. He says:

"In discussing the political and industrial problems of the South, I base my conclusions upon a personal knowledge of classes in the South, as well as upon the ample data furnished by writers who have pursued in their way, the question before me."

In the discussion of the land and labor problem, I but pursue the theories advanced by more able and experienced men. The primal purpose in publishing this book is to show that the social problems in the South are, in the main, the same as those which affect every civilized country on the globe, and that the future conflict in that section will not be racial or political in character, but between capital on the one hand and labor on the other."

We speak of the book as "disappointing," and we have found it so because we should have expected, and indeed we feel that we have a right to demand from a man of Mr. Fortune's known intelligence, a juster and more sober-minded view of the questions at issue, especially as he must himself be fully aware that heated and intemperate advocacy is of no advantage to any cause; above all, this is no time for setting up men of straw for the pleasure of demolishing them, and a man of Mr. Fortune's influence owes it to the public to weigh his words well before he casts them in the one scale or the other. To quote fully from his own utterances is the only way to do him justice, and this we propose to do, being confident of the interest of our readers.

The first three chapters, "Black; White; The Negro and the Nation," can be summarized in the following extract:

"It was not sufficient that the Federal Government should expend its blood and treasure to unfetter the limbs of four millions of people. There can be a slavery more odious, more galling than mere chattel slavery. This is just what the manumission of the black people has accomplished. They are more absolutely under the control of the Southern whites; they are more systematically robbed of their labor; they are more poorly housed, clothed and fed, than under the slave regime; and they enjoy practically less of the protection of the laws of the State, or of the Federal Government." Thus it seems rather a high flown view of the situation, and we cannot follow Mr. Fortune when he declares a little further on "that the system which constitutes the real grievance is the appropriation of fertile acres which create and maintain a privileged class, a class that while performing no labor, wrings from the toiler in the shape of rents so much of the produce of his labor that he cannot on the residue support himself and those dependent on him."

It is this great wrong which has crowded the cities of the South with an ignorant pauper population, making desolate fields.

It is where now the towering oak and pine tree flourish instead of corn and cotton which gladdened the heart and filled the purse. The fallacy of this seems evident, and Mr. Fortune comes much nearer the truth and is far more just to his own people, when he says in the chapter "The Triumph of the Vanquished" that "the magnificent plantation has in many instances been cut into a thousand bits to make homes for the former slaves, now freemen and citizens, the equals of the lord." In the chapter on "Illiteracy" that "illiteracy in the South is one of the worst legacies which the rebellion bequeathed to the nation. It has been the prime cause of more mis-government in the South than any other one cause; \* \*

it has nerved the courage of the assassin \* \* \* \* \* wholesale murders have been committed and sovereign majesties cowed into silence and inaction by reason of the wide-spread illiteracy of the masses." For this evil Mr. Fortune can see the possible cure and his views on education strike us as sensible and foresighted. He says "I do not inveigh against higher education, I simply maintain that the sort of education the colored people stand most in need of is elementary and industrial. They should be instructed for the work to be done." The whole chapter on "Education" is thoughtful, and taken in connection with that on the "Political Independence of the Negro" is very suggestive, for it is certainly true that "the black man and white man of the South have a common destiny."

It is therefore to their mutual disadvantage that anything but sympathy and good will should prevail. Mr. Fortune's political creed for his people as presented in this chapter is full of common sense and fine spirit. He finds that the solution of manifold difficulties of the situation is not "in standing solidly opposed to the sentiment, the culture, the statesmanship, and the possession of the soil and wealth of the South" but "in cultivating more cordial relations with the white men of the South, in hastening by a wise policy the day when politics shall cease to be the 'shibboleth' that creates perpetual warfare." And although in the "Solution of the Political Problem" we think the writer again overshoots his mark and is carried away by his prejudices, yet he is certainly not far wrong in saying that the South must use less powder and buck shot and more law and equity, must pay less attention to politics and more to the development of her magnificent resources \* \* \* \* \* and must find in mutual forbearance, elevation and assistance the panacea for which she has sought in vain down to this time."

Of the remaining chapters of the book, the "Analysis of Classes in the South" stands first in interest, for the "Labor Problem" is not in any of its multifarious forms, distinctively Southern question, and we are glad to be able to concur in Mr. Fortune's conclusion that "the future landlords and capitalists of the South are no longer confined to the white race; the black man has become a factor and must be counted." As a whole, there is much sound thought in Mr. Fortune's work, but as a critic is nothing if not critical, we must reiterate our belief that in the warmth of his championship the author has not only over-stated his proofs of what he feels to be the blind injustice of the whites, but in so doing has failed to be completely just to his own people, even to the extent of making us doubt his acquaintance with the real facts.

In closing, we must express our appreciation of Mr. Fortune's testimony to the success of the Hampton-Industrial system, which we are glad to find he considers to be worthy of reproduction in other parts of the South.

### Card.

With the coming of winter, many poor little children are kept from school for want of clothing; many who still go, suffer greatly from the biting cold against which they are so scantily protected. Our graduate teachers have sometimes sacrificed part of their own clothing to cut into garments for the poor little ones. Our graduates' correspondent, a former teacher of Hampton, now in charge of this important branch of its work, that of keeping in relation with the workers it sends out, asks us to say that if any benevolent friend would like to contribute to the little Christmas trees which some are trying to set up in the barren soil of poverty, she will be glad to put them into communication with some Hampton graduate teacher—if they will address her,

Miss A. E. CLEVELAND,  
Poughkeepsie, N. Y.

On the 16th of October, the Hon. Mrs. Charles R. Bishop, a native Hawaiian, died at Honolulu, Hawaiian Islands. She had in her veins the blood of the highest of the old Hawaiian chiefs. Her youth dated almost in the darkness of paganism, but her womanhood was under the light of Christianity and civilization. She was the foremost woman of the Hawaiian race, the full blossom and fruit of all that had been done by the philanthropy of alien races. She would not accept as the standard for the measure of her own character, anything lower than that which was highest in the more advanced races. By that standard she was measured and was not found wanting. She possessed all of the simple, attractive grace of the women of the tropic zone, and yet had the strength, the culture, the refinement of the higher average of the Anglo Saxon. In the United States and Europe, where she made a number of visits, no concessions were needed for her Polynesian antecedents, because her bearing, her intelligence, secured more than respect; it commanded admiration. She came from a race where women were kept on the lowest plane of life, morally and socially, but she reached a higher plane, and kept it during a life which ended in her fifty-third year. In early life she married Mr. Charles R. Bishop, an American, who became, and now is, the wealthiest resident of the Kingdom. His life of remarkable purity and upright, associated with clear and sound judgment, aided greatly in forming the character of this remarkable woman. The predecessor of the present King Kalakaua, on his death bed desired to have her successor be an American, who became, and now is, the wealthiest resident of the Kingdom. His life of remarkable purity and upright, associated with clear and sound judgment, aided greatly in forming the character of this remarkable woman. The predecessor of the present King Kalakaua, on his death bed desired to have her successor be an American, who became, and now is, the wealthiest resident of the Kingdom. Dec., 1884.

## The Southern Press. Both Sides.

To an entirely peaceable election, with some local excitement and much local rejoicing at the result, has succeeded, in the South, a chorus and to most people an unexpected state of affairs. Probably no white person can fully comprehend the genuine anxiety, not to say terror, with which a majority of the colored people of the South regard the dominance of the Democratic party, and the very unreasonableness of the fear makes it the more difficult to meet. Southern newspapers everywhere have given descriptions of scenes and incidents which indicate such a misapprehension of the situation, as might clearly have culminated in a panic, and personal observation on all hands corroborates their testimony. The following article from the *Memphis Appeal* would seem exaggerated were it not that it is only one of many similar statements, and as such we give it to our readers.

The writer, after some criticisms on the attitude of the colored people since they became citizens, goes on to say:

"The ignorance of the colored people would be amusing were it not pitiable. In voting they never consulted either the public interest or their own. The only inquiry they made was which is 'de Publican' ticket and they voted it straight, could not be induced to scratch it even if it offered candidates who were not of their own color. The Democratic opponent a friend and benefactor. The whites could not understand such blind and obstinate fidelity. But the problem has been solved by the election of Cleveland to the Presidency. When the negroes first secured their freedom they were impressed through the Loyal Leagues, the adventurers and the carpet-baggers, that the ascendency of the Democratic party to power meant their restoration to slavery, and this secret fear has been the cause of their persistent and immovable opposition. That they have been honest in the fear and belief that the Democrats would again enslave them so soon as they got control of the government is evidenced by the alarm they have manifested at the possibility of Cleveland's election. On Wednesday and Thursday there was a general panic among the colored people. In all parts of the city they manifested a dismay, a nervousness, restlessness and consternation ridiculous as it was painful. They congregated in groups and gangs to discuss the crisis that was upon them. Every demonstration of Democratic joy added to their fright. They seemed to regard the booming cannon as sounding the death-knell to their freedom. Some indicated their determination to fight to the death; others talked of seeking safety in the Northern States. Many colored women abandoned their positions as cooks, house servants and nurses to discuss the best means to avert the impending danger. Several selected their new masters, and begged that they might be allowed to follow them. The consternation was similar to that which pervaded Carthage when it was decreed that the city must be reduced to ashes. Their white employers appealed to their good sense, and endeavored to convince them that there was no cause for alarm; that they would be as secure in their freedom with Cleveland as President as if Blaine had been elected. The white Republicans, whose teachings had instilled into the minds of the ignorant negroes the belief that a Democratic triumph means negro slavery, made no effort to relieve the agony which their deception had created, by calling the colored people together and telling them they were safe in their freedom and to return to their vocations in serenity and contentment. The *Appeal*, speaking for the National Democracy, and especially for the Democrats of the South, takes pleasure in assuring the colored people that the election of Cleveland will not take from them any of the rights and liberties that they now enjoy. On the contrary, they will be benefited by the change, and in less than two years they will be ashamed of having been denigrated, and see how they have been deluded by the adventurers who have used them for selfish purposes. The sad scenes of the past few days show most conclusively that the blacks were honest in the ignorant belief that their freedom was involved in the election for President, and for the first time the whites readily excuse them for casting a solid vote against the Republican party is election. Now that the Democratic party is destroyed beyond the hope of resurrection, the whites and blacks will come to a better understanding. They will soon discover that their destinies are the same, that their interests are identical. During the past week the whites have learned why the blacks so persistently and obstinately banded themselves together in opposition to the whites,

and the blacks will soon learn that the Democrats are not hostile to the negroes, but to the Republican party. There is no wish or purpose among Southern whites to restore slavery. All that they desire is freedom for them and for their children, now, henceforth, and forever more.

But there are other reasons and other guarantees which are on the surface, and which nothing but terror and ignorance combined could have obscured from the minds of our colored friends.

We repeat with emphasis: *We don't want them as slaves; we wouldn't have them as free gifts if they were offered; slavery is dead and will never be resurrected.* On this point there is no doubt, and the Negroes know that The NORFOLK LANDMARK has not flattered or cajoled them; that it speaks the truth; and deals with them in a spirit of absolute candor on all occasions.

But, apart from the sentiment of the Southern people, whose feelings are those of kindness towards the Negroes, we could not make them slaves if we desired to do so. We have ratified the act which gave them freedom. We have entered into an agreement on this point which cannot be broken, and which we do not wish to break. The Constitution of the United States and the Constitution of each Southern State secures the freedom, and their privileges as citizens; and with all these safeguards around them it is foolish to think their present condition could be changed for one of servitude.

This is plain enough it seems to us, and ought to be plain enough to the Negroes; and we call on them to dismiss their fears, to throw aside their apprehensions, and to realize that the honest white people of the South are their real friends.

I indeed, we are so firmly convinced of this that we have more than once pointed out in that we have more than once pointed out that the "white folks" of the South will stand between the Negroes and the "white folks" of the North, some of whom (not all) have already been making a good deal of nonsense about sending all the Negroes to Africa. We say "nonsense" because it couldn't be done; and as we have to live together, we, the Democrats of the South, heartily desire to be friends with so large and so valuable a part of our population.

Let the Negroes dismiss this pernicious notion from their minds. Let them realize that their freedom is secured to them—*secure to them, men, women and children, to the remotest generation and for all time.*

Let those of their head men and leaders, who are honest and true, realize their relations to the race problem before us. Let them consider how much better it is to have the minds of their people calm and tranquil and their hearts at peace. Let them consider, above all, what sort of men have been ruling these false and foolish notions in their heads; and if they will measure these fellows justly they will see that this dead question of slavery has been dwelt on by them for the basest purpose.

No, a thousand times no! The Democrats of the South are done with slaves and slavery. The institution of slavery has disappeared from the land and never to reappear; and the Negroes of the Republic will never be disturbed under their vine and fig tree by the Democracy of the South or of the Republic—*Norfolk Landmark.*

The New Orleans *Christian Advocate* gives the same assurance, in fact, the white journals throughout the South are almost unanimous in their attempt to re-assure the colored population.

"So recently in rebellion, we have been distrusted as to the sincerity of our patriotism and the purity of our fidelity to the federal Constitution. Now our people can demonstrate their loyalty to the general government and their kind consideration for the lately enfranchised negroes. We believe they will do it, and, forgetting the points of the compass, emulate the truest patriot of the North in advancing the prosperity and glory of our common country. There will be no disposition or effort to reverse the legislation of the past for the negro's protection or to defy the amendments to the Constitution. Large liberality will be shown these 'wards of the nation,' and the fact demonstrated that the colored man has no truer friends in the North than in the South."

The colored papers are most unwilling to concede the election of Cleveland, although in most instances, confessing that the election was a fair one. The *Virginia Star* says,

"On Tuesday, November 4th, the citizens of this good old commonwealth, were permitted, as we know, to cast their ballots in favor of their choice for the next President and Vice-President of this country. This great privilege was embraced by the voters of this State in an orderly manner for which they deserve much credit.

"We understand that many of the Negroes, who ought to know better, are seriously alarmed at the notion that Democratic success means trouble for them and theirs. We are told, on good authority, that numbers of this race seriously believe their personal and political freedom to be threatened; that they will lose their rights, and be turned back into a state of slavery.

It is difficult to understand how these extravagant errors have arisen in the minds of the Negroes; but it is a fact, as here stated, that the notion is entertained; and on this we have a few words to say to them. The idea has been put into their heads by the unscrupulous white men who pretend to be their friends, and it is a crime against the Negroes and against Society to instill so false a belief into their credulous minds as that of which we speak.

It is at once our duty and our pleasure to correct this wild impression, and we do it with alacrity, partly because we have sense of responsibility, and partly because some of the cases of alarm which have come under our notice, or of which we are informed, are really pathetic.

We say, then, to the Negroes, and people of color, one and all, that the whole story is an *absurd and cruel lie from beginning to end.* We have no desire to re-enslave them. The experiment of free labor leaves us convinced that slavery was an economical misfortune to the white people. The present

system is cheaper than the old, and in this sordid view alone the Negroes ought to see that our selfish interests, as well as anything else, are on the side of freedom for them and for their children, now, henceforth, and forever more.

But there are other reasons and other guarantees which are on the surface, and which nothing but terror and ignorance combined could have obscured from the minds of our colored friends.

We repeat with emphasis: *We don't want them as slaves; we wouldn't have them as free gifts if they were offered; slavery is dead and will never be resurrected.* On this point there is no doubt, and the Negroes know that The NORFOLK LANDMARK has not flattered or cajoled them; that it speaks the truth; and deals with them in a spirit of absolute candor on all occasions.

But, apart from the sentiment of the Southern people, whose feelings are those of kindness towards the Negroes, we could not make them slaves if we desired to do so. We have ratified the act which gave them freedom. We have entered into an agreement on this point which cannot be broken, and which we do not wish to break. The Constitution of the United States and the Constitution of each Southern State secures the freedom, and their privileges as citizens; and with all these safeguards around them it is foolish to think their present condition could be changed for one of servitude.

This is plain enough it seems to us, and ought to be plain enough to the Negroes; and we call on them to dismiss their fears, to throw aside their apprehensions, and to realize that the honest white people of the South are their real friends.

I indeed, we are so firmly convinced of this that we have more than once pointed out in that we have more than once pointed out that the "white folks" of the South will stand between the Negroes and the "white folks" of the North, some of whom (not all) have already been making a good deal of nonsense about sending all the Negroes to Africa. We say "nonsense" because it couldn't be done; and as we have to live together, we, the Democrats of the South, heartily desire to be friends with so large and so valuable a part of our population.

Let the Negroes dismiss this pernicious notion from their minds. Let them realize that their freedom is secured to them—*secure to them, men, women and children, to the remotest generation and for all time.*

Let those of their head men and leaders, who are honest and true, realize their relations to the race problem before us. Let them consider how much better it is to have the minds of their people calm and tranquil and their hearts at peace. Let them consider, above all, what sort of men have been ruling these false and foolish notions in their heads; and if they will measure these fellows justly they will see that this dead question of slavery has been dwelt on by them for the basest purpose.

No, a thousand times no! The Democrats of the South are done with slaves and slavery. The institution of slavery has disappeared from the land and never to reappear; and the Negroes of the Republic will never be disturbed under their vine and fig tree by the Democracy of the South or of the Republic—*Norfolk Landmark.*

The New Orleans *Christian Advocate* gives the same assurance, in fact, the white journals throughout the South are almost unanimous in their attempt to re-assure the colored population.

"So recently in rebellion, we have been distrusted as to the sincerity of our patriotism and the purity of our fidelity to the federal Constitution. Now our people can demonstrate their loyalty to the general government and their kind consideration for the lately enfranchised negroes. We believe they will do it, and, forgetting the points of the compass, emulate the truest patriot of the North in advancing the prosperity and glory of our common country. There will be no disposition or effort to reverse the legislation of the past for the negro's protection or to defy the amendments to the Constitution. Large liberality will be shown these 'wards of the nation,' and the fact demonstrated that the colored man has no truer friends in the North than in the South."

The colored papers are most unwilling to concede the election of Cleveland, although in most instances, confessing that the election was a fair one. The *Virginia Star* says,

"On Tuesday, November 4th, the citizens of this good old commonwealth, were permitted, as we know, to cast their ballots in favor of their choice for the next President and Vice-President of this country. This great privilege was embraced by the voters of this State in an orderly manner for which they deserve much credit.

We have heard of no serious cases of violence or bloodshed in any part of the State."

On the other hand, occasional charges like the following show how sore the feeling is and how difficult it is to adjust the new relations which the election has created and with which the victorious party has to deal.

"Every State south of Mason and Dixon's line should be cast out in the summing up for the result of the recent election. Our country should not be represented by men elected by fraud and foul means. The country will not be safe while such a gang is sent to administer the affairs of the government. In Louisiana the old rebel element seeing the prospects growing brighter for Blaine and Logan, at once set at work in bulldozing the colored population. In New Orleans 1,000 colored men were arrested and crowded in prison. Democratic policemen were appointed for the purpose, and their acts were worse than the patrols with their blood-hounds catching runaway slaves. At New Iberia white Republicans were thrust into prison, and at other places colored men were mobbed and murdered. Such is Bourbon Democracy. Then brag of giving a fair administration! We should sooner live in a den of tigers than among Bourbon cut-throats of most of these States. In Mississippi the bull-doing ran to such an extent as to have compelled the Hon. John R. Lynch, the colored candidate for Congress in the Shoe-string district to withdraw from the canvass and leave the State. In Virginia the tissue ballot was used to thwart the will of the people."—*Va. Critic.*

The *People's Advocate*, under the heading "A Hint," offers its solution of the difficulty.

"The South which is claimed to be the habitation of the colored people, has proven the only field in which they have been tyrannized over and denied the results of legitimate competition, in a material sense and their legal prerogatives in a political sense. They are handicapped in every possible way and to-day they are but little nearer the hoped-for results of war and reconstruction than they were in 1860."

Previous administrations have been powerless to engrave upon the sentiments at the South, an acknowledgment of our political equality; and it is quite time for us to examine with closer scrutiny our real solution. Manfully speaking, something must be done."

Our children are growing up without these helps so necessary to their proper growth. Is it not time to set about seeking another abiding place where men, whether white or colored, are treated as men, where fields are fertile and broad, where labor is well paid, and where the spirit of competition is generous? Are the millions of emigrants who flow West and take up lands, any more entitled to them or more willing to suffer hardships than we?

Have we not suffered all the torture and privation that ordinary beings could possibly suffer? Can we not stand the storms as well as others?

A generous hand has been extended to us in the West. Can and will we accept the invitation? A free country is open to us. Can we not appreciate its benefits?

The laws are justly and wisely administered. Can we not appreciate them?

The future is full of promise. The shackles of political servitude, of social and political ostracism and the fires and the men which forged them will disappear as we recede from the South.

WHAT IS OUR DUTY?"

## The Latest from Tuskegee.

A letter from Mr. Booker T. Washington, Principal of Tuskegee Normal School, Ala. received as we go to press, brings the cheering news that of the \$10,000 required for building "Alabama Hall," \$9,100 have been secured. The school has opened fuller than ever, the Assembly room and carpenter's shop having to be used as dormitories till the new building is ready. Mr. Washington says "We trust God and the friends Hegivus us for the remaining \$900. Our young men and women have stood womanly when necessary so manfully and womanly that we think there is no harm in saying we wish some of our friends could aid us to make them a merry Christmas." We hope they may have it.

## Horsford's Acid Phosphate.

IN LIVER AND KIDNEY TROUBLES.

Dr. O. G. CILLEY, Boston, says: "I have used it with the most remarkable success in dyspepsia, and derangement of the liver and kidneys."

## Letters From Hampton Graduates.

GRATEFUL MEMORIES OF MISS LONGSTRETH AND GENERAL MARSHALL. A GOOD TRADE BETTER CAPITAL THAN POLITICS. FROM A HAMPTON STUDENT.—A HUSBAND, FATHER AND PASTOR. AN ANSWERED PRAYER. FROM ONE OF MISS LONGSTRETH'S BENEFICIARIES. A SEWING SCHOOL AND BIBLE CLASS. FROM A HOME MISSIONARY. WANTS BIBLES. FROM ONE OF HAMPTON'S DAUGHTERS. FROM A TEACHER AND PASTOR. A CIRCULATING LIBRARY.

The circular letter sent out this fall as usual, to our graduates, conveyed to some of them the first intelligence of the death of our dear friend, Miss Longstreth, and of the resignation of General Marshall. From many have come expressions of sorrow and grateful remembrance, which we are sure will ever be cherished.

—N. C. Oct. 12th, 1884.

Esteemed Friend: I received your circular to Hampton Graduates, and read it with pleasure. I am sorry to say, I am one of the great number who have failed to write to you. It would not be like me if I did not feel a great sorrow in learning of the death of our friend, Miss Longstreth. I well remember her kind words to all of us while I was a student at Hampton, and it was with deep regret that I learned of her death. It is not for us however to mourn the death of the just, but rather to rejoice that the loved one who taught us gentle grace and charity has, in leaving us, passed to the better land to receive her just reward.

Gen. Marshall, ah! I know the boys will miss him; so good and so kind, whether at his desk or as a Santa Claus at our Christmas tree; it was always the same genial, big hearted General; all the boys and girls' friend. And Mrs. Marshall, I remember how I used to up-braid her furniture while she fed me on goodies from the pantry; dear good lady, she knew the tender place in a school boy was his stomach.

What have I done? Well a good deal. I taught school two terms after I graduated, and kept store in this city for three or four years. I was only moderately successful. I am now a Postal Clerk on one of the lines running into Charlotte, N. C. My salary is \$1,000 per year. It is a political position. While it is quite a lucrative position, it is one of worry, and the young man who expects to live on politics may depend on having a hard time of it.

There is a disposition among young colored men to ignore every thing else in life but Federal office. How many are successful? One in a hundred. For five years I have been among office holders and politicians and my observation are, that the young man who is maker of a good trade is the only man with a sound capital.

The colored people in this part of the state seem to be doing very well, but are not so successful here as they are in the eastern part of the state, where they are more numerous. There are two points among them which are highly commendable: their zeal for religion and their desire for real estate. They will build churches and attend meetings, and it is rare, very rare to see or hear of a colored man selling land after once getting it. I hope I have given you my experience and observation in a manner that will be approved by you.

Yours, C. Class of '76.

## FROM A HAMPTON STUDENT SINGER.

—N. C. Oct. 16th, 1884.

My dear friend: Your kind letter is before me. It is truly gratifying that the dear friends of Hampton's past are still remembered with kind words. When the cares and responsibilities of life have so narrowed our minds to the things around us, that we seldom think of our dear old Alma Mater, like a fond mother she sends through some representative, words of cheer and comfort for her many sons and daughters now toiling and suffering for the uplifting of humanity.

This is encouraging, dear friend; it strengthens us for the heat of the day.

We have lost a trusted and tried friend in Miss Longstreth. I remember almost as though it was but yesterday, how she talked to the "Hampton Singers," in Philadelphia in 1873; how her earnest face beamed with an unselfish anxiety for our welfare, and after presenting each with a copy of Long after poems, how she prayed with us. I have often thought that the Lord answered her prayer and suffered us to be ten minutes late, which saved us from the Stonington wreck in that year.

As I must not weary you with much writing I will close, but before doing so I must

answer your request as to how we are getting along. I finished at Hampton in 1875. In 1876 I married a schoolmate. We both taught school in the same awhile and then in St. Mary's County, Maryland. I have taught every year since leaving Hampton. In 1882 I entered the ministry in the A. M. E. Church, was ordained last November, and am now in charge of three churches, with a membership of about two hundred. My wife has the Sabbath School in charge at one church. Seventy-three have professed faith in Christ this year in my work, twenty-five of whom are from my wife's Sunday School. We have four children, two boys and two girls. My people are poor and cannot or do not give me a good support, nevertheless I teach and make it up that way. I will send you the minutes of our last Sunday School Convention, and Annual Conference if you would like to see them. I am desirous of educating my children when old enough.

Please pardon this long letter quickly written. I beg an interest in your prayers that I may be a workman needeth not to be ashamed; approved of the Lord.

Very truly your friend, C.

## FROM ONE OF MISS LONGSTRETH'S BENEFICIARIES.

—S. C. Oct. 17, 1884.

My dear Miss C. Your letter was received. You have not any idea how happy I was to hear from you after the vacation was over. I am indeed pained to hear of dear Miss Longstreth's death. I feel her loss keenly; it was she you know, who paid for my schooling while I was at Hampton, and oh! such cheering letters I received from her since I have been teaching; even up to June. Yes, and even my school will miss her. I have her photograph, and now it is as dear to me as anything on earth. I wrote a letter to her the same time I wrote yours. I did not know she was dead until your letter came.

A SEWING SCHOOL AND BIBLE CLASS. My school is getting on nicely so far. I opened the first day with twenty (20) that is the greatest number I ever began with in the country. I am very much afraid cold weather will thin them out, for quite a number are very poor. The sewing class began Monday afternoon. We have changed it a little by having each person joining pay ten cents; then we take the money and purchase cloth and make up little articles of clothing for the poor children of the school and Sunday School. We will have a Christmas tree and put the things upon it. Do you think that is a good plan? My idea in doing that way is to teach them to first try and help themselves and one another, and then I would ask you to help us with the tree. Eight came Monday, and since then several gave me their names. Quite a number of the scholars are not able to get their books. I have met very near all of the parents and they seem to think a great deal of me. There has not been a Sunday School since we taught a Bible class in the Sunday School two years. It has been said that the teachers are afraid of the place. I do not know why, it is a very healthy here. I do not know money. The school has never had less than from one to three months, but the Trustees wrote to me that if I would come and teach they would run it six months. I asked your help in this work. How sorry I am to see that our dear Hampton has lost Gen. Marshall; I am glad it is not altogether. Hoping to hear from you ere long.

I remain, yours sincerely, R.

## FROM A HOME MISSIONARY.

—Va. Oct. 23d, 1884.

Dear Friend: Your very interesting letter to hand. I am always glad to hear from the friends of Hampton. I am sorry to know that Hampton has lost one of its strongest and warmest friends (Miss Longstreth). She will never be forgotten by those who knew her. I am teaching near the above Post Office, with good success; have 55 pupils on roll and average 40 daily. I am appointed by the association (of which I am a member) as a Missionary for Charlotte and the adjoining counties. Have had good success in leading souls to Christ. Last September I was engaged in a meeting five miles from this place which resulted in forty-five professing hope in Christ. I am now engaged at this point. Fifty have confessed that they have found the Saviour and a great many are enquiring the way to Jesus. Twenty of those that have come to Jesus are my pupils, and can read the Bible. Pray for us that we may grow strong, and be useful workers in Christ's vineyard. Our Sunday School is not doing as well as we desire on account of not having Testaments and Bibles. We need help in that direction. If you know of any that

can help us and will, I am sure that it will be as "Bread cast upon the waters." I would like to have a Christmas tree; but I am afraid we are too poor; at any rate, will I strive to take the Lord in my work, and I am thankful to say that he has wonderfully blessed us.

Yours in Christ, H.

## FROM ONE OF HAMPTON'S DAUGHTERS.

BALTIMORE, MD. Oct. 15, 1884.

Dear Miss C. Happy am I to say that I have received your very welcome and interesting letter; but sorry am I to know that you were the first to write when it was my duty to have written, by the 1st of October. I assure you that it would not have been so, had not circumstances, over which I had no control, prevented me. My health has been very poor since I left Hampton, in June, and does not seem to be improving as yet. This cause prevents my carrying out some desires which I have, among which are these, viz, teaching (that is away from home) and corresponding regularly with many of my dear friends, many of whom Hampton has made. However, I shall not be an idle worker, or rather an idle soldier in this world of battle. I shall keep my position as a Sabbath School teacher, and work with more zeal than ever. I am studying music and shall try, when I have completed the study, to teach that also, for I think it a real charm in life, as well as developing. I shall continue to work and learn all domestic affairs; and not only learn them but exercise them in my little school as far as possible; for I have not forgotten Hampton's theme: Educate the hand and the heart, as well as the head.

I am sorry to hear of the death of Miss Longstreth, but am not surprised, as she was very feeble. I have, I believe, that she is housed in the Kingdom, where all faithful workers receive their reward. She was, indeed, a faithful worker in the cause of the education of the colored race. I rejoice to know that I have a token by which I shall always remember dear Miss Longstreth; it is a hymn book I received last year, from her. I am sorry too, that Gen. Marshall resigned, but I am glad that I was so fortunate as to have been in his last class in Book-keeping, for he was a whole-souled, good, and interesting teacher.

I regret that I cannot write you a more interesting letter, however, I have performed my pleasant duty, and I am happy to sign myself as one of Hampton's daughters.

Class of '84.

## FROM A TEACHER AND PASTOR.

A young man who, after graduating from Hampton, studied for the ministry of the Episcopal church, he and two companions being the first of their order to receive their ordination in the State of South Carolina, writes of his new field of labor where he finds use for his gift of teaching as well as preaching, for his own benefit and his people's.

—Ky. 11-30 1884.

Dear Miss T. It has been some time since I wrote you, and since I heard from you. I am hard at work. The my field is a city of about 23,000 inhabitants. About 13,000 of these are colored. In a competitive examination I won the principality of the Eastern division of the city schools. So I have been teaching ever since the first of Sept. I have a nice little church and a Sunday School numbering about 100. My day school numbers 130. You see that I am hard at work. I have about 20 members of the church. They have a building on which they have paid \$1,000 and they owe \$6,000. This is a field that which there are none finer for missionary work. This is a fine country, indeed. Every prospect pleases and only man is vile, for the people have taken more pains in training horses than they have in training children.

I get the *Living Church* and the *Churchman* so kindly sent by Mr. B. through your active interest in my work. For these I thank you.

Gratefully yours, H.

## A CIRCULATING LIBRARY

Useful and readable books, whose interest is exhausted or outgrown for Sunday School or families, might be renewed their mission for good with double value, in such hands as this and other earnest young colored teachers' in the South.

—N. C. Oct. 15 1884.

## Dear Miss C.

Your "greeting has" been received, and I

am very much pleased to know that I am still remembered by you and the friends at Hampton. I commenced a letter to you last week but did not succeed in finishing it. I have been sick ever since July, and have not been able to resume my school duties. My sister is substituting for me and if I am able I will begin my work next month. As I've not been in school this term, I can't tell you very much about the work though I hear from it every day. There are over 300 pupils enrolled in our school (the Williston Graded School) since Oct. 1st. From the report of the principal and other teachers, of whom there are six, everything seems to be working smoothly.

I am so used to teaching and like it so much, that I feel quite out of place staying at home. I don't know what I will do if I am compelled to stay at home all the winter. I can find a plenty to do, but then I will miss the children.

I have the fourth Grade, and last term started a Circulating Library, for my room. We have over fifty books and it is my earnest desire to get as many more if I am spared to get back in school. The books that I have are very nice and useful ones. I've always loaned them such books as I possessed and knew would interest them. So last winter we gave a concert and the proceeds I used in purchasing books. One of my Hampton teachers, Miss Tyler, gave me a few, and some of my friends here gave me a few. I am a poor hand at begging, or I might have done better than I did. I teach sewing and fancy work, so I thought I'd fair some time during the term. I expect to go into an industrial school the first of next year, and, if possible, I want to get one hundred or more books before I leave. The children are delighted with the Library, as I let them take books home on Fridays.

If you find time to write me, I wish you would suggest some plan for me to contribute to, or if I am not asking too much, will you or some of your friends give me a few books? If they are not new it does not matter so they are good and useful.

There are four of Hampton's graduates in the public schools of this city; their work seems to give general satisfaction.

I am, yours, sincerely, H.

We acknowledge with thanks the gift from President Charles Platt, of the Insurance Co. of North America, of a handsome circular lithograph of the New York Cotton Exchange, which is said to be now by far the largest and finest Cotton Exchange building in the world, the New Orleans Cotton Exchange having heretofore claimed that honor. The lithograph is worthy of its original, is itself a costly and beautiful work of art, an ornament to our walls and an object lesson to our students.

## Horsford's Acid Phosphate.

FOR WOMEN AND CHILDREN.

Dr. Jos. Holt, New Orleans, La., says "I have frequently found it of excellent service in cases of debility, loss of appetite, and in convalescence from exhaustive illness, and particularly of service in treatment of women and children."

## A good Paper.

The *Youth's Companion* is a paper which it is a pleasure to praise. For it demonstrates that it is not necessary to poison a boy's mind in order to stimulate him. The pulse is made to throb, but with an impulse to do right and to fill a high place in the world's estimation. That this can be done and that *The Companion* has been able to achieve a circulation of 325,000 copies, is no small testimony to the skill and liberality with which it is edited. Those who know the paper best wonder how any American family is willing to do without it. The price is \$1.75 a year. Subscriptions sent in now will entitle to copies of all the remaining issues of this year, as well as to the whole year 1885.

## Horsford's Acid Phosphate.

TONIC FOR OVERWORKED MEN.

Dr. J. C. Wilson, Philadelphia, Pa., says "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."

## Southern Workman.

### Indian Department.

ELAINE GOODALE, *In charge.*

Regular Contributors:

HERBERT WELSH, *Cor. Sec'y. Indian Rights Association.*

ALICE C. FLETCHER.

REV. JOHN J. GRAYVAT.

You teach a bright boy and think only of him, but you have to teach in him all his grandfathers.—*Rev. A. L. Riggs.*

Miss Fletcher believes that, as a rule, we must wait for the second generation to fit an Indian for one of the learned professions. It's a great thing to have an ancestor or two.

Mr. Standing contradicts the old adage about a little learning, at least so far as our Indians are concerned. There are some now, he says, who have had a year or two of schooling; perhaps the results are scarcely perceptible, except in the use of a few English words, yet these are the ones who are first to send their children to school. "Those boys and girls who have been with you only a few months, and have gone back to the blanket, perhaps, on their return, in a little while will be offering you five-year-old babies!"

HOW IT BEGAN.

Dear Bro. Armstrong:

Please have your Professor of Music send me the words and music of the blessing that your pupils sing at the table.

We have now 41 boys and from 30 to 55 girls in the boarding department of our Industrial School at Sitka. I wish you were here to give us a more thorough organization. Kind regards to all the friends.

Your Bro. in Christ,

SHELDON JACKSON.

The letter speaks for itself. From Dr. Jackson's address, before the National Educational Association, a year or two ago, we learn that the school at Sitka was opened in April, 1878, and again dropped in December of the same year.

In the spring of 1880, it was reopened by Miss Austin of New York City, with 103 children. This number was soon increased to 130. After awhile some of the parents applied for admission, but could not be received for lack of room.

Dr. Jackson says;

"In November some of the boys applied to the teacher for permission to live in the school house. At home there was so much drinking, talking, and carousing, that they could not study. The teacher said she had no accommodations, bedding or food for them. But they were so much in earnest that they said they would provide for themselves. Upon receiving permission, seven Indian boys, thirteen and fourteen years of age, bringing a blanket each and a piece of tin for a looking glass, voluntarily left their homes and took up their abode in a vacant room of one of the Government buildings. Thus commenced the boarding department of the Sitka school."

The entire address, containing much other interesting information in regard to this school and to the history of Indian Education in Alaska, is to be found in the Circular of the Bureau of Education at Washington, D. C. No. 2, 1882.

THE HISTORIC RED MAN.

The inscription prepared for the proposed monument to Red Jacket, the celebrated Iroquois chief, best illustrates, says an exchange, the popular ideal of him.

Red Jacket,  
(Sagoyewatha.)

The  
Resolute Champion  
of a Wronged and Hapless  
People.

The inspired Orator  
"The Rienzi of the  
Iroquois."

Died at Buffalo Creek,  
January 20th, 1830.  
Aged 78.

"When I am gone and my warnings are no longer heeded, the craft and avarice of the white man will prevail. My heart fails me when I think of my people, so soon to be scattered and forgotten."

"Who then lives to mourn us?"

None!

What marks our extermination?

Nothing!"

A statue of the Indian chieftain surmounts the shaft. He is described as standing "with his bow at rest in one brave hand, his staff in the other. He has a contemplative, statesmanlike face, with high forehead, and shrewd, but not unkindly eyes."

These note-worthy lines were written for the occasion.

RED JACKET, (From Aloft.)

Improvement on Buffalo City's commemoration of and monument to the old Iroquois Orator, Oct. 9th, 1883.

Upon this scene, this show,  
Yielded to-day by fashion, learning, wealth,  
(Nor in caprice alone—some grains of deepest meaning.)

Haply aloft, (who knows?) from distant sky—  
clouds' blended shapes,  
As some old rock, or tree, or cliff, thrilled  
with its soul.

Product of nature's sun, stars, earth direct  
show how the earth and woods, the attrition  
of storms and elements, and the exigencies  
of life at first hand, can train and fashion men,  
indeed chiefs, in heroic massiveness, imper-  
turbability, muscle, and that last and highest  
beauty consisting of strength—the full ex-  
ploitation and fruition of a human identity,  
not from the culmination-point of culture  
and artificial civilization, but tallying out  
race, as it were, with giant, vital, gnarled en-  
during trees, or monoliths of separate hard-  
iest rocks, and humanity holding its own with  
the best of the said trees or rocks and out-  
doing them.

There is something about these aboriginal Americans,  
in their highest characteristic representa-  
tions, essential traits, and the ensemble of their  
physique and physiognomy—something very  
refined, very lofty, arousing comparisons  
with our own civilized ideals, something that  
our literature, portrait painting, etc., have  
never caught, and that will almost certainly  
never be transmitted to the future, even as a  
reminiscence. No biographer, no historian,  
no artist has grasped it—perhaps could not  
grasp it. It is so different, so far outside  
our standards of eminent humanity. I should  
not apply the word savage, (at any rate in the  
usual sense,) as a leading word in the de-  
scription of those great aboriginal specimens,  
of whom I certainly saw many of the best."

The Indian will not respect our civil-  
ization the more for being taught to  
despise his own—in some points to be  
compared with those of the beautiful  
Greek and the war-like Roman—and as  
much as these a part of the past.

WALT WHITMAN ON INDIANS.

In a few remarkable sentences we  
get some further illustration of the typi-  
cal "savage." They are culled from a  
rambling account of Whitman's experi-  
ences in the Indian Bureau at Wash-  
ington, in 1865.

"About this time there came to see the  
Great Father an unusual number of aborigi-  
nal visitors. \* \* \* the most wonderful proofs  
of what nature can produce. \* \* \* as if to  
show how the earth and woods, the attrition  
of storms and elements, and the exigencies  
of life at first hand, can train and fashion men,  
indeed chiefs, in heroic massiveness, imper-  
turbability, muscle, and that last and highest  
beauty consisting of strength—the full ex-  
ploitation and fruition of a human identity,  
not from the culmination-point of culture  
and artificial civilization, but tallying out  
race, as it were, with giant, vital, gnarled en-  
during trees, or monoliths of separate hard-  
iest rocks, and humanity holding its own with  
the best of the said trees or rocks and out-  
doing them."

There is something about these aboriginal Americans,  
in their highest characteristic representa-  
tions, essential traits, and the ensemble of their  
physique and physiognomy—something very  
refined, very lofty, arousing comparisons  
with our own civilized ideals, something that  
our literature, portrait painting, etc., have  
never caught, and that will almost certainly  
never be transmitted to the future, even as a  
reminiscence. No biographer, no historian,  
no artist has grasped it—perhaps could not  
grasp it. It is so different, so far outside  
our standards of eminent humanity. I should

usual sense,) as a leading word in the de-  
scription of those great aboriginal specimens,  
of whom I certainly saw many of the best."

The Indian will not respect our civil-  
ization the more for being taught to  
despise his own—in some points to be  
compared with those of the beautiful  
Greek and the war-like Roman—and as  
much as these a part of the past.

A NORTH AMERICAN MYTHOLOGY.

Charles G. Leland, the student and  
exponent of the Gypsies, has lately  
turned his attention to the wandering  
red men, and offers us a rather remark-  
able collection of what he terms the  
"myths and folk-lore" of the New Eng-  
land Indians.

These very ancient tales have been  
gathered from a variety of sources;  
many were found in old Indian-English  
MSS., and many taken down by the au-  
thor and others from the lips of living  
Indians. The illustrations, which are  
certainly unique, are fac-similes of draw-  
ings.

"Algonquian Legends of New England," by Chas. G.  
Leland. Milford & Co. N. H.

ings scraped upon birch-bark by an In-  
dian, and in their delicate wild fancy,  
which often borders on the grotesque,  
embody much of the spirit of these leg-  
ends.

There is no elaborate effort to explain  
the origin of the Algonquian mythology,  
but its points of resemblance to the  
Norse are frequently commented upon  
and emphasized by quotations from the  
Edda. Mr. Leland's own theory is that  
the Indians learned much direct from  
the Norsemen, at the time of their semi-  
fabulous discovery of the New World.

But he does not insist upon it overmuch.  
The main classification is into stories  
about Glooskap, the Indian divinity,  
and Lox, the mischief maker, or  
Indian devil. With much that is fantas-  
tic, childish or coarse in the adventu-  
res of these personages and of their  
servants or friends the Animals, the  
character of Glooskap is not lacking in  
dignity, nor that of his opposite in sly  
humor and fertility of resource.

A remarkable legend of the Penob-  
scots, which comes under neither of  
these divisions, may serve as an exam-  
ple of the more impressive of the tales.  
It gives, says Mr. Leland, the Fall of  
Man from a purely Indian standpoint.

Of the Girl who married Mount Katahdin,  
and how all the Indians brought about  
their own ruin.

Of the old time. There was once an In-  
dian girl gathering blue berries on Mt  
Katahdin, and, being lonely, she said, "I  
would that I had a husband!" And seeing  
the great mountain in its glory rising so  
high, with the red sunlight on the top, she  
added, "I wish Katahdin was a man, and  
would marry me!"

All this she was heard to say ere she went  
onward up the mountain, but for three  
years she was never seen again. Then she  
reappeared bearing a babe, a beautiful child,  
but his little eyebrows were of stone. For  
the spirit of the mountain had taken her to  
himself, and when she gently desired to re-  
turn to her own people, he told her to go in  
peace, but forbade her to tell any man who  
had married her.

Now the boy had strange gifts, and the  
wise men said that he was born to become a  
magician. For when he did but point his  
finger at a moose, or anything which ran, it  
would drop dead; and when in a canoe, it  
he pointed at the flocks of wild ducks or  
swans, then the water was at once covered  
with the floating game, and they gathered  
them in as they listed, and through that boy  
his mother and everyone had food and to  
spare.

Now this was the truth, and it was a great  
wonder that Katahdin had wedded this girl,  
up a child who should build up his nation,  
and make of the Wabanaki a mighty race.  
And he said, "Declare unto these people  
that they are not to enquire of thee who is  
the father of thy child; truly they will all  
know it by seeing him, for they shall not  
grieve thee with impertinence." Now the  
woman had made it, known that she would  
not be questioned, and she gave them all  
that they needed, yet, for all this, they could  
not refrain nor restrain themselves from  
talking to her on what they well knew she  
would fain be silent. And one day, when  
they had angered her, she thought, "Truly  
Katahdin was right; these people are in no  
wise worthy of my son, neither shall he serve  
them; he shall not lead them to victory;  
they are not of those who make a great  
nation."

And being still further teased and  
tormented, she spoke and said, "Ye fools, who  
by your own folly will kill yourselves; ye  
must weep, who sting the fingers which  
ye even pick you out of the water, why will  
ye even trouble me to tell you what ye well  
know. Can ye not see who was the father  
of my boy? Behold his eyebrows; do ye not  
know Katahdin by them?" But it shall be  
to your exceeding sorrow that ever ye in-  
quired. From this day ye may feed your-  
selves and find your own venison, for this  
child shall do so no more for you."

And she arose and went her way into the  
woods and up the mountain, and was seen  
on earth no more. And since that day the  
Indians, who should have been great, have  
become a little people. Truly it would have  
been wise and well for those of early times  
if they could have held their tongues.

"Nothing is so contemptible in In-  
dian eyes," we are told, "as a want of  
dignity, and idle loquacious teasing;  
therefore it is made in the myth the  
sin which destroyed their race."

OUR BULLETIN BOARD.

Indian Items—Sept. 28th.

Sitting Bull, with two wives and several  
warriors, Mrs. Major Mc Laughlin,  
Major Newson and Lieut. Allen are in  
New York. It is hoped that they will  
visit Hampton before leaving this part  
of the country.

An interesting illustrated article on  
Carlisle may be found in the St. Nicholas  
Magazine for October.

Bishop Whipple has ridden 30,000  
miles on horse-back during his 40 years  
of missionary work among Indians, in  
Minnesota.

Sen. Cokes' bill for allotting lands un-  
der a protected title has passed the  
U. S. Senate.

Congress has appropriated \$25,000  
to employ farmers to teach the Indians.

Oct. 5th. The first Bible ever printed  
in America was John Eliot's Indian  
Bible.

Agent McGillicuddy of Pine Ridge,  
Dak., tells us that since the year 1879,  
the Indians have built 625 houses, engaged  
500 wagons in freighting, built 135  
miles of telegraph lines, and raised 1500  
head of cattle.

Fifteen Indian boys and girls under  
the direction of Prof. Riggs, from Santee  
Agency, Neb., were present at the  
National Educational Association, Mad-  
ison, Wis.—where they sang in Dakota  
and in English, one of them playing  
the organ.

Oct. 12th.—The Indians at Sisseton  
Agency have adopted a constitution  
patterned after the Constitution of the  
U. S. Three distinct departments of  
government, the legislative, judicial and  
the executive, are provided for.  
These Indians bid fair to become qual-  
ified for American citizenship.

Oct. 19th. The remains of the famous  
Indian chief, Red Jacket, were lately  
reinterred at Buffalo, with interesting  
exercises.

Two hundred and seventeen of the  
Indian pupils under the care of Capt.  
Pratt at Carlisle, have been placed out  
on farms and in families during the  
past year.

Three car-loads of harness, tinware,  
wagons, etc., made by the Indian boys  
at Carlisle, were shipped last month to  
different Agencies in the West, some  
going as far as the Pacific coast.

Oct. 26th. The 39th Session of the  
Indian Mission Conference was held in  
Indian Territory last month. Bishop  
Hargrove presided.

An Indian Territory Educational As-  
sociation has recently been formed, and  
resolutions adopted in favor of the es-  
tablishment of an Industrial School at  
Fort Gibson.

The Digger Indians are learning to  
read and write. Some of them have  
become musicians, and have given an  
entertainment in San Francisco, under  
the care of their teachers.

The Indian gets \$3456.000 in cash  
from the Government this year.

Nov. 2nd. It is said that in all the  
deeds of land in New England which  
were given by the Indians, they reserved  
for themselves the privileges of  
gathering nuts and taking fish!

Mr. Dorsey, who has lived among  
the Omahas for many years, is prepar-  
ing a dictionary of the Omaha lan-  
guage, which has never before been re-  
duced to writing. He is also collecting  
their legends from the old and wise  
men of the tribe.

There is a young Choctaw Indian  
studying theology at Yale College.  
He is a graduate of Roanoke College,  
Va., and a B. A., in full standing.

Dear Miss R.—

CROW CREEK, OCT. 4th. 1884.

Dear Miss R—

## Indians of New Mexico & Arizona. Their Past and Present.

GATHERED FROM INDIAN BUREAU REPORTS.

THE history of the North American Indian from the day when, on either coast, he first faced the white man, who, by a law beyond the reach of human legislation, was destined to witness his extinction and become his heir, has been full of pathos and tragedy. From Maine to Mexico, we may search alike the records of English colonists and Spanish invaders without finding a single common-place incident in the strangely cruel story, and as the years go by and civilization, by one or another force, completes its work, the American people are coming to realize that they have borne a part in a conflict of races, so dramatic as to be without parallel.

No essential detail of tragedy has been wanting, and while it goes without saying that the chronicles of Alvar Nunez in Bartholomew Gosnold read like romance, it is equally true that there stand unread on many a library shelf in this country, Government reports, prosaic, ill-written, possessing, indeed, no virtue but that of truth (and that, alas, not always in its perfection), which catch the eye as do the pages of Cooper or Longfellow. And nowhere today is the charm of romance more effective, the mysterious past more mysterious, or the uncertain future more full of possibilities than in the new south-western territories, in the country where, nearly a century before the English landed on the New England coast, the Spaniard Coronado found a strange people, who wore garments of their own weaving, who tilled the soil and lived in many-storied houses of stone, with pictured walls, wherein were always chapels dedicated to some evil genius.

From that day to this, the wild ranges and rich valleys of the even now but half-known regions which United States surveyors have written down for us as New Mexico and Arizona, have been the theatre of vivid enactments, and deeper shadows than any other division of our national territory; insofar, that is, as these lights and shadows have been cast upon a native race of unusual strength, standing in an almost unique relation to savagery on one side and civilization on the other.

Castaneda, the historian of Coronado's expedition, has undoubtedly a charm of his own for the curious student, but the Indian Department at Washington can furnish volumes of Reports dryly dated 18—, which give as strange pictures as are to be found even in Castaneda's quaint pages, and he who runs may read.

For, as we turn the leaves, the dull facts, the dry bones of statistics, spring somehow into life, and against the great, sombre background of the crime and misfortune and injustice of the past, stand out with a stern meaning.

When, in 1680, the Spaniards were temporarily driven from the fertile river-bottoms and fabulously rich mines for whose possession they had risked so much, their power over the people to whom their tyranny had become unbearable, was, to an appreciable extent, weakened, and although they regained their foothold and nominally held the territory until it was ceded to the United States, yet they never succeeded in entirely subduing the wild tribes who, after their own fashion, were as proud and stiff-necked as were their foreign oppressors. Attractive as are the records of these two centuries with their story of Spanish rule and misrule, we cannot linger on their shadowy traditions, for it is not with padre or caballero that we have to do, although along with their vineyards and wheat-fields they planted the seeds of that distrust of the white man of which we are still reaping the harvest. Our work of retrospection goes back, for the present, no further than the date at which the United States Government assumed the

responsibility of these fierce Southern tribes, and for the first time put its dealings with them upon record. The change began when, in 1848, by the treaty of Guadalupe Hidalgo, the first boundary line between Mexico and the United States, was agreed upon, to be followed in 1853 by a second treaty, which finally established the boundary in question.

A Report furnished in 1855 to the United States Government by Major Emory, U. S. A., and U. S. Commissioner, was accompanied by a personal narrative, which has gained rather than lost in interest during the thirty years which have passed since it was written.

For our present purpose, however, we are justified only in quoting from this Report the impressions of Major Emory and his companions in regard to the native Indians, which are valuable by reason of the point of view.

The officers of the Commission seem to have been fair-minded men, who, though forced for the time at least to consider the Indian chiefly in his capacity of horse-thief and murderer, were yet endeavoring to secure him in his rights as a possible future citizen of the United States, and were not altogether forgetful of his past. Major Emory found, as he believed, good causes for the peculiar ferocity of the Indians whom he met. He says:

"Under the Spanish rule, prior to 1825, the military system was combined with the missionary power of the Catholic Church; and all those Indians now running wild from the Gulf of Mexico to the Gulf of California were brought under the benign influence of the church, and about the beginning of the present century had attained a state of civilization which may truly be called the golden age of this vast, now deserted, country. Under the Spanish dominion, a cordon of military and ecclesiastical stations extended from sea to sea over a distance of fifteen hundred miles. Military parties passed regularly from station to station, and at each station great structures were erected for the accommodation of troops, for religious worship, and for the storing of provisions, the remains of which are still to be seen. Among them are some of the most beautiful specimens of architecture on the American continent."

"The Indians were required to cultivate the soil, and their families were domiciled in the immediate vicinity of the station. The most active and intelligent warriors were incorporated into the ranks of the military. The downfall of this magnificent cordon of military and ecclesiastical establishments, and the return of the Indians to a savage life, tenfold more ferocious than ever, is directly traceable to two causes. First, the revolution, when both the Monarchists and Republicans courted the co-operation of the Indians, and thus invited them to insubordination. Second, and more prominently, the attempts at amalgamation by intermarriage of the whites and Indians. This last cause which is now operating so beneficially on the whole of Spanish America, I do not think has been sufficiently estimated in the attempts to account for the decline and retrograde march of the population of that entire region."

As an effect of the first of these causes, Major Emory found the Indians well aware of their importance as allies, and he speaks often of the relation between the Indians of this region and the various Mexican towns on the border. He says:

"These relations are peculiar, and well worth the attention of both the United States and the Mexican Governments. The Apaches are usually at war with the people of both countries, but have friendly leagues with certain towns where they trade and receive supplies of arms, ammunition, etc. for stolen mules. This is undoubtedly the case with the people of San Carlos, who also have amicable relations with the Comanches, who make San Carlos a depot of arms in their annual excursions into Mexico. While at the Presidio we had authentic accounts of the unrelenting march through Chihuahua, towards Durango of four hundred Comanches under Bajio Sol. It seems that Chihuahua, not receiving the protection it was entitled to from the central government of Mexico, made an independent treaty with the Comanches, the practical effect of which was to aid and abet the Indians in their war on Durango."

The importance of the second factor, viz., the amalgamation of the two races, it is impossible to fairly estimate. It is the old story of lawless men, strong in their lusts and

greed, corrupting a weaker people, whose barbarism was healthier than their false civilization, and Major Emory at least, was led quickly to the conclusion "that the only way, in which a country can be benefited by the introduction of the white race, is by the introduction of both races, with proper guards upon morals." This means of course, the establishment of the Christian family life, and it is interesting to notice how this, the highest ideal of modern mission work, comes as the simplest of practical suggestions from a man who was neither missionary nor idealist, but simply a shrewd observer.

Of the various tribes with whom the Commissioner came in contact, the following summary is given:

"There are within this territory four settlements: one the Navilla valley settlement, containing about fifteen hundred inhabitants of mixed Spanish and Indian races, all engaged in the pursuit of agriculture. At Tucson there is a settlement of about seventy families all engaged in the same way. South of Tucson there is a small settlement of semi-civilized Indians called Papagos, and further on at Tomacacori, a small settlement of Germans."

"The most considerable and interesting settlement in the new territory is composed of a confederacy of semi-civilized Indians, the Pimas and Cocopas. Their population is variously estimated at from five to ten thousand. They are located on the Gila river, and form the most efficient barrier against the incursions of the savages who inhabit the mountains to the north of the Gila."

"I became acquainted with these people in 1846, and in another work eulogized their advanced state of civilization, their proficiency in agriculture and the art of war, and their morality. While at Los Nogales, a delegation consisting of the chiefs and head men, visited my camp, nearly two hundred miles distant from their homes, to consult as to the claims to their lands and if disposed to make a war upon the frontier of a very serious character. I hope the subject will soon attract the attention of Congress, as it has done that of the Executive, and that some legislation will be effected securing these people in their rights. They have always been kind and hospitable to emigrants passing from the old United States to California."

Here follows a copy of the statement made by Major Emory to these Indian chiefs, which confirms them in all the rights which they had possessed under the Mexican government, and promises them as much as could fairly be offered by subordinate officials in the name of the U. S. Government. There is something very pathetic in the picture of the group of chiefs, whose melodious Spanish names Major Emory gives in full, gathered about the United States officer, who is in their eyes, the representative of unknown and unmeasured power, forecasting, perhaps with a half curious dread, the results to them of the changes which they could feel were in the air.

Lieut. Mitchell, the associate of Major Emory, devotes several pages of his report to his impressions of the native Indians, of which we can give only the briefest summary. He says:

"On the road to Fort Yuma we passed through several settlements of the Diegens tribe. These Indians were converted by the Jesuits, became partly civilized and collected many comforts about them. Naturally lazy and incapable of self-government and deeply imbued with all the traits of the wild Indian, they easily degenerated after the missions had fallen from under the rule of the church, and have become absolutely worse than in their original condition. They were simply children of nature, with few comforts and fewer wants; now they have learned enough to be exceedingly avaricious and unscrupulous, a herd of drones and beggars. \* \* \* The degradation of the Indian women is only surpassed by that of white population who wander over the country. \* \* \* From about sixty miles above Fort Yuma to within a few miles of the most southern point of that part of the Colorado forming the boundary, live the Cochis and Yumas. A belt of land a few miles in width forms neutral ground between them and the Cocopas. These with the Maricopas, who now live on the Gila among the Pimas, originally formed one tribe. \* \* \* The Yumas and Cocopas are said to be very

treacherous.

"The association of the Indians with the whites tends to cause a rapid decrease by the introduction of diseases among them, heretofore unknown. War, too, among themselves, is a great exterminator, but has the advantage of making them more dependent on the whites. Thinking the military will protect all, they draw near to the posts, and from presents, learn the use of various articles of clothing and food; these, now regarded as luxuries, will, in time, become to them necessities. They, too, learn and see the advantages which the whites possess over them in every respect and are not slow either to admit or account for it. They say that whites and Indians were at one time all one tribe, equally well informed and acquainted with the use of implements of husbandry and of all useful articles. Differing upon the choice of a chief, they quarreled, and during the night the whites stole a march on them, carrying away every thing and leaving the poor Indian in the dark. \* \* \* Nothing is known of their religions; at one time they profess to worship the sun and the moon; at another they say that the white man and Indian have the same God; then you find them making pilgrimages to the tomb of some departed chieftain, elevated for deeds of valor or civic loyalty, and to their government, they are divided into bands, each having its own head. There is one principal hereditary chief, presiding over the whole. Each of the former with the advice of its members, decides upon all affairs relating directly to the band to which he belongs. Any important business affecting the whole, is acted upon by a council of chiefs, the principal chiefs governing their deliberations. \* \* \* Their agriculture says Maj. Heintzelmann, 'is simple; with an old axe, (if they are so fortunate as to possess one) knives and fire, a spot likely to overflow is cleared; after the waters of the annual rise subside, small holes are dug at proper intervals, a few inches deep, with a sharpened stick, and seeds are planted. They cultivate melons, pumpkins, corn, and beans. What is planted in the same way and grass seed for food. \* \* \* The great dependence of the Indian for food, besides the product of his fields, is the mesquite beans."

"On the Gila river are the Pimas and Maricopas. The former are further advanced in the arts of agriculture and are surrounded with more comforts than any uncivilized Indian tribe I have ever seen. Besides being great warriors, they are good husbandmen and farmers, and work laboriously in the field. The women are industrious, not only attending to their household duties, but they also make superior baskets, cotton blankets, belts, vails, etc. Their huts are very comfortable, being of an oval shape, not very high, built of reeds and mud, and furnished with wheat straw. They are the owners of fine horses and mules, fat oxen and milch cows, pigs and poultry. \* \* \* The Pimas consider themselves the regular descendants of the Aztecs, and claim 'Montezuma' to have been of their tribe. One of their legends speaks of his leaving them on horse-back on his pilgrimage to found a new country; as the Aztecs in all human probability never saw any horses until their introduction into Mexico by the Spaniards, this seems to be a fabrication. The Aztecs too, had a form of religious service, but, to this day, have none. As we journeyed along this portion of the valley of the Gila, we found lands fenced in and irrigated by many miles of acequias, and our eyes were gladdened with the sight of rich fields of wheat ripening for the harvest;—a view differing from anything we had seen since leaving the Atlantic States. They grow cotton, sugar, peas, wheat and corn. \* \* \* A little hillock stands near the village, and as a look-out, from which you have a beautiful view of rich cultivated fields. As I sat upon a rock, admiring the scene before me, an old gray-headed Pima took great pleasure in pointing out the extent of their domains. They were anxious to know if their rights and titles to lands would be respected by our Government, upon hearing that their country had become part of the United States, M. F. A."

## Frank Leslie's Popular Monthly.

The December number, closing the eighteen volume, fully maintains the meritorious character of this favorite magazine, and will doubtless secure a large subscription for the next volume. The publication is remarkable for its comprehensiveness and cheapness. Among the prominent illustrated articles are: "Dramatists of To-day," "A Ramble Through the Island of Jersey," "Fornas of Salsitana," "The Great Etor of Brandenburg," "The Great Schools of Merio England," etc., etc., written by popular authors. The interesting serial, "The Death-Mark," is continued, and there are several short stories, sketches, adventures and poems, furnishing very pleasant reading. There are also an abundance of brief articles, paragraphs, anecdotes, etc.—indeed, the 128 column pages present literature of a high order, and the embellishments number over 100, besides a handsome colored frontispiece, "Fitzcarraldo." The price is only 50 Cents a number, or \$4.50 yearly, postpaid. New York, LEXINGTON, 55, 56 and 57 Park Place, New York.

## Teachers' Cable.

FOR THE READING CLASS.

### The Mantle of St. John De Matha.

A LEGEND OF THE RED, WHITE, AND BLUE.

A. D. 1194-1196.

A strong and mighty Angel  
Calm, terrible and bright,  
The cross in blended red and blue  
Upon his mantle white!

Two captives by him kneeling,  
Each on his broken chain,  
Sang praise to God who raised  
The dead to life again!

Dropping his cross-wrought mantle,  
"Wear this," the Angel said;  
"Take thou, O Freedom's priest, its  
sign—  
The white, the blue, and red."

Then up rose John de Matha  
In the strength the Lord Christ gave,  
And begged through all the land of  
France  
The ransom of the slave.

The gates of tower and castle  
Before him open flew,  
The door-bolt backward drew,  
The draw-bolt backward drew.

For all men owned his errand,  
And paid his righteous tax;  
And the hearts of lord and peasant  
Were in his hands as wax.

At last, outbought from Tunis,  
His bark her anchor weighed,  
Freighted with seven-score Christian  
souls  
Whose ransom he had paid.

But torn by Paynim hatred,  
Her sails in tatters hung,  
And on the wild waves, rudderless,  
A shattered hulk she swung.

"God save us!" cried the captain,  
For naught can man avail;  
"O, woe betide the ship that lacks  
Her rudder and her sail!"

Behind us are the Moormen:  
At sea we sink or strand;  
There's death upon the water,  
There's death upon the land!"

Then up spake John de Matha:  
"God's errands never fail!  
Take thou the mantle which I wear,  
And make of it a sail."

They raised the cross-wrought mantle,  
The blue, the white, the red;  
And straight before the wind off-shore  
The ship of Freedom sped.

"God help us!" cried the seamen,  
"For vain is mortal skill;  
The good ship on a stormy sea  
Is drifting at its will."

Then up spake John de Matha:  
"My mariners, never fear!  
The Lord whose breath hath filled  
her sail  
May well our vessel steer!"

So on through storm and darkness  
They drove for weary hours,  
And lo! the third gray morning shone  
On Ostia's friendly towers.

And on the walls the watchers  
The ship of mercy knew,  
They knew far off its holy cross,  
The red, the white, and blue.

And the bells in all the steeples  
Rang out in glad accord,  
To welcome home to Christian soil  
The ransom of the Lord.

So runs the ancient legend  
By bard and painter told;  
And lo! the cycle rounds again,  
The new is as the old!

With rudder foully broken,  
And sails by traitors torn,  
Our country on a midnight sea  
Is waiting for the morn.

Before her, nameless terror;  
Behind, the pirate foe;  
The clouds are black above her,  
The sea is white below.

The hope of all who suffer,  
The dread of all who wrong,  
She drifts in darkness and in storm.  
How long, O Lord! how long?

But courage, O my mariners!  
Ye shall not suffer wreck,  
While up to God the freedman's  
prayers  
Are rising from your deck.

Is not your sail the banner  
Which God hath bled anew,  
The mantle that De Matha wore,  
The red, the white, the blue?

Its hues are all of heaven,—  
The red of sunsets' dye,  
The whiteness of the moonlit cloud,  
The blue of morning's sky.

Walt cheerily, then, O mariners,  
For day-light and for land;  
The breath of God is in your sail,  
Your rudder is His hand.

Sail on, sail on, deep freighted  
With blessings and with hopes;  
The saints of old with shadowy hands  
Are pulling at your ropes.

Behind you, holy martyrs  
Uplift the palm and crown;  
Before you, unborn ages send  
Their benedictions down.

Take heart from John de Matha!  
God's errands never fail!  
Sweep on through storm and darkness,  
The thunder and the hail!

Sail on! The morning cometh.  
The port ye yet shall win;  
And all the bells of God shall ring  
The good ship bravely in.

JOHN. G. WHITTIER.

## Health and Humanity.

### A Horse School.

BY ALLAN FORMAN.

I have always been a lover of horses since the time my grandfather used to put me on the back of an old mare considerably on the shady side of twenty and let me sit there while she ambled leisurely around nibbling the grass in the close yard, in front of the old farm house down on the east end of Long Island. I was aware that a horse could be trained to do many things, but I never knew until I saw Prof. Bartholomew's exhibition, that one could be taught to take a piece of chalk in his mouth and write legible figures on a blackboard and then add them up and put down the result. I must confess that when I first saw it I thought as if I was dreaming, and then I concluded that it must be some trick. So convinced was I of the unreality of the performance that when it was over I sought Prof. Bartholomew and after introducing myself expressed my doubts. He laughed good-humoredly and assured me that I had been awake, then added seriously:

"I am as yet but on the threshold; there is apparently no limit to what a horse can be taught. Mine already understand all I say to them and Cesar begins to answer me in language which I believe all horses will eventually be able to learn. You doubt? 'Nellie,' he added, calling off. In a moment one of the prettiest little mares I ever saw trotted lightly on the stage and stopped beside the Professor.

"Shake hands with the gentleman," said the Professor.

"She looked at me shyly and lifted her left fore foot.

"Which foot do you shake hands with?" said the Professor in the tone that one would use toward a child. I could see the expression of embarrassment that came into her intelligent eyes as she corrected her mistake and offered the right foot.

"Now get the gentleman a chair." Nellie trotted obediently to the side of the stage, and picking up a chair in her teeth brought it over and set it down by the Professor.

"Now go and bring Cesar." Again Nellie turned and left the stage. In a few moments she came back followed by a large and not so bright a looking horse.

"He is not so intelligent as the little one," I remarked to the Professor in a whisper, for the almost human understanding of the animals caused me to lower my voice unconsciously, as if I had been speaking of a child instead of a horse.

"Yes, he is, but in a different way; he is not so nervous, and consequently does not look so bright," answered the Professor.

Then he added, turning to the horse, "Cesar, did you have a good time to-day?" The horse responded in a sort of subdued whining.

"Should you like to go for a walk?" Another whining and a lively expression of anticipation was the horse's reply. The Professor asked several more questions which Cesar answered with apparent correctness. I say apparent, because while I could not understand what the horse said, I could perceive a difference in the expression of his eyes, and also that a negative was shorter and sharper than an affirmative.

Professor Bartholomew noticed my surprise and said, as he laid his hand caressingly on the horse's neck:

"This is only the beginning. In the horse we have an animal with a larger brain than a man. Some of his faculties are much more acute than a man's. His memory, for example, is simply marvellous. For instance, you

drive along a country road to-day, and then in a gate and stop to call on somebody. Go along the same road with the same horse in a year's time and he will remember the place and want to turn in. Few men have as good memories as horses. The trouble is men are put in charge of horses who are not fit to have charge of anything. From constant association with low, brutal men the horse becomes contaminated. Then even the best horse owner rarely takes much pains with his horse's education. He is broken, and if well 'broke,' that is regarded as sufficient. The poor animal is given over to the tender mercies of some ignorant fellow who should be obliged to serve a year's apprenticeship on a saw-horse before he is allowed to touch a live one. He is beaten, kicked and yelled at until the equine race has come to such a pass that when you see real, natural horses you are amazed. These things are common in Arabia. The Arabian makes a companion of his horse and talks to him as he would to a friend. He does not shout at him or use abusive language. A low quiet tone in speaking to a horse is one of the surest tests of a horseman. A man who yells at a horse not only betrays his coarse, brutal nature, but his ignorance as well. A horse's sense of hearing is so much more acute than a man's that this shouting at them is doubly absurd. When I hear, as I often do when driving away across the fields, shouting at the patient team, 'Come over here,' often accompanied by profanity, do you know the impression it makes on the mind of any real horseman? It is as if the man had shouted at the top of his voice, 'I am a coarse, ignorant fellow, not fit to have charge of horses. For I know nothing about them, and by my yelling and shouting and swearing at my animals I propose to show the world what a rough, uncouth, ignorant boor I am—but I fear I am keeping you too long,' said the Professor, making up himself.

After some further conversation I arose to go, after I had shaken hands with Nellie and Cesar. The Professor followed me to the door. I used to say to the boys who read your story, that the evidence of a good horseman is uniform and patient kindness, and that while they may not be able to teach their horses as much as I have taught mine, they can teach them something, and the more the horse is petted and talked to, the better servant it makes. None of my horses came to put them in farm work of any kind, and do good work, too, without the slightest 'breaking,' simply because they are educated, and their trained intelligence enables them to understand at once what the uneducated animal has to learn by rote. Urge your readers to try and see what they can do with the animals under their care.

The Christian at Work.

To free canaries and other cage birds from the insects which infest them, the following method is recommended by one who has successfully practiced it for years. Every night just at dusk the cage or aviary is covered with a white cloth. During the night the parasites will crawl from off the birds on to the cloth where they may be seen running about when the cloth is removed at daybreak. The insects may be killed by putting the cloth into boiling water. A repetition of the process will soon clear away the pests without injuring the birds. Insect powders will no doubt kill parasites, but the birds as well.

The Christian at Work.

**Boiled and Raw Milk.**

The cookery of milk is very simple, but by no means unimportant. That there is an appreciable difference between raw and boiled milk may be proved by taking equal quantities of each (the boiled sample having been allowed to cool down), adding them to equal quantities of the same infusion of coffee, then critically tasting the mixtures. The difference is sufficient to have long since established the practice among all skilled cooks of scrupulously using boiled milk for making *café au lait*. I have tried a similar experiment on tea, and find in this case the cold milk is preferable. Why this should be, why boiled milk should be better for coffee and raw milk for tea, I cannot tell. If any of my readers have not done so already, let them try similar experiments with condensed milk, and I have no doubt that the verdict of the majority will be that it is passable with coffee, but very objectionable in tea. This is milk that has been very much cooked.

The chief definable alteration effected by the boiling of milk is the coagulation of the small quantities of albumen which it contains. This rising it becomes solidified, and forms a skin-like scum on the surface, which may be lifted with a spoon and eaten, as it is perfectly wholesome and very nutritious.—*From "The Chemistry of Cookery,"* by W. MAXTED WILLIAMS, in *Popular Science Monthly*.

## Agricultural.

### Alum for Founder.

A gentleman once told the writer of this that he had completely cured several cases of founder by the use of alum. He put one tablespoonful, finely powdered, as far back in the animal's mouth as possible as soon as making the discovery that the horse is stifened. Not only does he claim that he has cured several severe cases, but strongly affirmed that he had never known the remedy to fail if given immediately after the trouble has developed itself.

### Feeding Clover Hay.

A correspondent who has been troubled by coughing horses, says that from observation he has become convinced that the manner of feeding clover hay has been the entire cause. His custom, like that of many others, has been to let the animal draw the hay down through a rack, thus stripping off the fine dust, which was drawn into the lungs in respiration and produced the cough. He believes the remedy for this trouble to be in giving the animal his feed in the natural way, i. e., allowing it to gather the food from the level of its feet. Since changing his racks to mangers the writer says he has had no further trouble with coughing horses.

### Eggs in Winter.

Give fowls warm drink every morning; and see that they have an abundance of gravel. Concoct a pudding for them two or three times a week, not often, with the following ingredients: Place an old pill out at one side, and into this throw the meat scraps that are good for nothing else, egg-shells, beans, hominy, bread-crusts, corn parched very brown, coarse meal sifted, and when the day arrives to serve up this dish, take the water in which you have parboiled your pork and beans, or other greasy water, stirring into it bean sufficient to thicken well, allowing it to cook a few minutes, pouring the whole over these saved-up scraps. Let it stand a short time after it is thoroughly stirred and feed while warm. Aside from this, give warm drink every morning, and you will have plenty of eggs.

### For Fence Posts.

A writer in an exchange says: "I discovered many years ago that wood could be made to last longer than iron in the ground, but thought the process so simple that it was not well to make a stir about it. I would as soon have poplar, sassafras, or ash as any other kind of timber for fence posts. I have taken out basswood posts after having been set seven years that were as sound when taken out as when first put in the ground. Time and weather seemed to have no effect on them. The posts can be prepared for less than two cents apiece. This is the recipe. Take boiled linseed oil and stir in pulverized coal to the consistency of paint. Put a coat of this over the timber, and there is not a mouse will live to see it rot."—*Scientific American*.

SUCCESS IN FARMING depends very largely upon the amount of manure that is made and applied to the farm. Simon Hunt, a farmer of considerable experience, remarked that the best manure that he could purchase was corn; and that fed to farm animals produced manure, was better than to spend money for commercial articles. As is quite true that every process that is calculated, either to increase the quantity or quality of the manure heap, is commendable, and in the use of corn feed, there is a sort of double advantage coming from the production of beef, pork, poultry, milk, or butter, and the improved condition of animals, and the increased value of the manure. But would it not be much better, all things considered, if the corn consumed could be produced upon the farm? In this way the labor of production would be converted into cash, or which is the same thing, would result in the saving of such an amount of cash as is required in the purchase of corn of the dealers.—*New England Farmer*.

### Frank Leslie's Sunday Magazine.

THIS December number closes the sixteenth volume of this admirable publication, and is even more than usually volume promises to be of a brilliant character. In the present number "Raffaello Sanzio Da Urbino," the Capital City of Georgia," "Schiller, the Poet of Freedom," are prominent articles, beautifully illustrated. Also, "The History of the XIXth Century," the editor, Dr. Talma, has a continuous series of articles, "The Epitaph of St. John," and a sermon in the Home Pulpit, "The Dumb Prayer." There are also several short stories, and a number of essays and poems by favorite writers, and a miscellaneous and entertaining collection of numerous and fine specimens of art. The price is only 5 cents a number, or \$2.50 per year, post-paid. W. MAXTED WILLIAMS, Publisher, 55 and 57 Park Place, New York.

# Southern Workman.

VOL. XIV.

HAMPTON, VA., JANUARY, 1885.

No. 1.

THE SOUTHERN WORKMAN begins its fourteenth year with this New-Year number. While the illustrated papers that make American art famous are keeping the festive season in all the glory of holiday numbers, the Workman justifies its name by dropping the borrowed plumes which some of them have kindly lent it for so long; taking off its fine coat, as it were, and addressing itself to work with new effort. The space of our first page picture will be devoted, henceforth, to editorial notes and comments, saving room for some enlargement of both departments of the paper whose staff of editors and contributors is also increased. We are happy to say that our subscription list also is growing, slowly, and we earnestly ask the co-operation of the friends of the paper and the interests it represents, in securing the audience which it seeks.

In these days, when almost everybody takes twice as many providentials as he has time to read, a new one may be subscribed for in charity, or to get rid of an importunate solicitor, but one must have peculiar merits to get itself out of its wrapper.

What are the Southern Workman's claims on the reading public?

Right here, at Hampton, focus some half-dozen of the most important and deeply interesting problems which are pressing upon the attention of the country: the great problem of the Negro and his future; the problem of Indian civilization; the relations to both of Southern and Northern public sentiment; the question of industrial education; questions of educational methods and results of race differences and development. Many visit Hampton every year, some from foreign lands, sometimes sent by their governments—to get even a glance at these questions, recognizing the fact that there is no better place to study them. This is our field of observation and work, with an experience of six years practical effort for one race and sixteen for the other. Through our colored graduate teachers and returning Indian students it broadens in both directions, and theories and practice receive their final tests. To represent this field, with the aid of expert contributors South and West, is the Workman's aim and its increasing effort. If our present readers, who believe in its mission and find food for thought in its columns, will become its agents to the extent of securing each even one new subscriber who will promise to read at least the first number that comes to him, its influence and opportunities will perhaps be doubled if not its subscription list.

THE PANIC occasioned among the more ignorant-colored people by the Democratic victory, is subsiding here as elsewhere. Some of them, indeed, have not yet given up Blaine's election, and when the Democrats took down their flag, in Hampton, there was great rejoicing among their hopeful ones who regarded it as evidence that the party had finally struck its colors. Many of their more educated and thoughtful leaders—among them the editors of *The People's Advocate* and the *New York Globe*, (now the *Freeman*) whose excellent editorials are quoted in our views of the Southern Press, on another page—are taking, we are glad to see, a broad view of the situation, counseling calmness and courage, perceiving the great fact which it is no wonder the masses, so new to citizen-

ship, do not see, that in a government of the people popular reforms cannot go backward, or constitutional liberties once given be withdrawn. This is by itself a valuable lesson. The results of a Republican defeat may not be exactly all that either party expects, but there will be education to all classes. The great principles underlying our national life will go on to their ultimate development; while, between the anxiety of the party on trial to prove its fitness for power, the sharp watch upon it that will be kept by the defeated one, and the responsibility felt by those whose independent action gave away the party victory, failing public interest in the Negro's cause will receive new impetus, and he will share in the general progress to which we believe all these are together working.

PROF. PAUL PASSY, of the Normal College of the Province of La Seine, France, sent by the French government recently to study the American school system, devotes a special part of his official report to its bearing upon the education of the three colored races in our borders which he well says "has become one of the questions most directly affecting the future of the American Union." This part of his report, copied into the *Revue Pédagogique* of Paris, reaches us from M. Passy, who visited Hampton in the course of his extensive journey of investigation, emphasizes its industrial system and quotes from its reports. With the industry and energy characteristic of his nation, M. Passy has collected a great number of interesting and valuable facts and statistics with very few inaccuracies, one of the most noticeable of which is that we *italicize* in his statement that, "In Alabama where, nevertheless the whites are one-third the most numerous, three of the four State Normal Schools are for the colored people, and the four private schools also admit them." Another that might be questioned is, that color prejudice does not exist in New England or in the Far West. We fear that the "mountaineers of Wyoming" were taking frontier liberties with the inexperienced of an Eastern stranger when they said to M. Passy, "Oh, as for us, we don't care whether a man's skin is white, black, or red, so long as he behaves himself." As characteristically, perhaps, M. Passy's theories of the development of the problem before us are purely speculative and visionary, looking to the complete fusion of all the races, probably including the Chinese, as its only and certain solution. His suggestion that, to avoid the disadvantages of separate schools for the white and black races, "could not the condition be affixed [to the grant of National aid to instruction] that no State could profit by it except on abolishing completely race distinctions in the schools," leaves out equally the practical factor of public sentiment by whose consent alone the bill could be passed. The value of M. Passy's interesting paper is in its carefully collected facts and its evidence of the world-wide demand for such information.

MR. JOAQUIN MILLER has been making a tour of the South, and thinks things, in general, are all well enough if people wouldn't bother. His views are quite poetic and pleasant, but as the subject wears him in a column or so, comment may be proportionately brief.

PROF. G. W. GILLIAM, of Maryland, whose startling calculations of the African problem have been widely copied and commented on, goes through the mathematics of the census again in the November number of the North American Review to arrive at the same conclusion: that, in eighty years the Southern blacks will so far outnumber the Southern whites, with disproportionate gain in wealth and education, and less skill in morals, that the South will be an "African waste," and "only three courses open to the whites: to submit, to emigrate, or to remain and struggle hopelessly with an alien race." Prof. Gilliam's only suggestion to offer in this dismal out-look is "African colonization, enforced if need be." If the question is to be mathematically settled, we do not see why the mathematics of the Southern Churchman are not as good as Prof. Gilliam's, viz: that, "If we had one hundred steamers passing between the United States and Africa, each making ten round-trips a year with three hundred sent out in each trip, they would take away but three hundred thousand a year, while the natural increase is more than two hundred thousand a year. At this rate how long would it take to carry away six millions?" The Southern Churchman sees that the black people are here to stay, but that, with wise laws, kind treatment and the education of the logic of events through which the white race itself has had to learn to work and behave itself, they will become a blessing not only to themselves but to the country, as other citizens—some good, some bad, but all in the main wanting to advance in fortune, in station and in the respect of the community, and especially in the respect of the white community.

THE resume of Indian Reports which we offer in this number, enables those of our readers who are willing to give a half hour to the subject, to become familiar with the principal facts in the history of the largest Indian reservation in the United States, these facts being gathered, as we have before stated, entirely and directly from official reports. We have given precedence to the Navajo Agency not only on account of the large number of Indians under its control, but also because these Indians have been and are especially deserving. In intelligence and industry they are above the average, while their docility and friendliness under the most adverse conditions, make their story one of peculiar interest. As to the merits of their case, the official statements speak, we believe, more loudly than any special plea.

We copy the following item, adding to it our good wishes for Mr. Fortune in his new enterprise, from the *Christian Recorder* (colored)

"The *New York Globe* and the *Indianapolis Leader*, ranking among the very first of journals edited by colored men, have suspended. Instead of the *Globe*, which Mr. Fortune has edited with great ability, he now edits the *Freeman*, a new paper which he promises to make equal to the *Globe* in freedom from political trammels and in usefulness to his race and the world. The *Leader* and the *Globe* will be missed.

The deep interest taken by the people of the North in the conditions which have resulted from the Democratic victory, is apparently entirely sectional, that is, their apprehensions as to possible danger are limited closely to the Southern States, and the reasons for this lie on the surface. There is no denying the fact that the past record of the Democratic party is not such as to make it absolutely certain that they will, now that their opportunity has come, give to the freedmen of the South the same justice that they accord to their own race, and yet every Northern man knows that anything less than complete justice is likely now to be followed by immediate and terrible results.

It is hardly possible to take up a Northern journal which does not in one form or another, contain some allusions to these possibilities, and never was there a time, not even at the close of the war, when the necessity for careful and at the same time generous action was so deeply and universally felt.

Northern men, as a matter of fact, have not the slightest anxiety as to the effect of Democratic rule, upon their local prosperity, but many of them are honestly anxious as to what may come of it in the South, and out of this anxiety, we believe, destined to grow certain very excellent results.

For example, the *New York Times*, declares that many of the leading insurance companies are thinking seriously of withdrawing from the South, on account of heavy losses, chiefly caused, it is believed, by incendiarism. Here we have a painfully tangible instance of cause and effect and one which it is not easy to dispute. Incendiarism is the safest of revenges; a match in the hands of a man who believes himself injured, is a weapon to be dreaded, but it is possible that it is only by the light of fires thus kindled, that men will learn to read the lesson set before them. It is ignorance which uses these weapons, and whether the ignorant class in a community, be black or white, makes little difference, the shot gun in Ireland and the torch in South Carolina stand as sign posts on the same road.

It is well that these sources of danger in the South should be brought to the surface, and it is just this that has been, with almost startling abruptness, accomplished by the election of a Democratic President.

Even the staunchest Democrats are tacitly confessing that unless the tactics of the party have undergone considerable reformation since last they were on trial, there is real and imminent danger, and it is in this recognition of danger by North and South, that we find good hope for the future.

We take at random from three Northern newspapers, extracts which may be said to define the situation.

Gen. Gordon of Georgia, writing to the *New York Commercial Advertiser*, in reply to a request that he should "discuss certain grave questions," says:

"That the course of the South under President Cleveland's administration will be such as to overwhelm those who, for party advantage, if such there be, are seeking to inflame the Northern mind against the Southern people, I do not for one moment doubt; and I rest with such unflinching faith in the good sense, the temper and conservatism of the Southern people, in their profound desire for peace between the sections and races; in their fixed purpose to enforce the laws, both State and Federal; in the interest and for the protection of all, in their sense of justice and acts of justice, toward the black race, in all departments

political, educational, industrial; in their fidelity to the public credit to the pledge of the nation, to its soldiers and sailors and to every legitimate result of the war, that I wish now to record the prediction that before the end of President Cleveland's administration hundreds of thousands of Republicans, who love truth and justice and country more than party, will rejoice that this election has at last furnished the South its opportunity to demonstrate to the country and Christendom the unfairness, the injustice and the unwisdom of the charges and suspicions from which she has so long and so patiently suffered.

And in speaking of actual existing conditions.

"I state here as a fact, and hold myself responsible for furnishing the proof, that since Georgia passed to the control of the whites, the colored people have accumulated and own in their individual right millions of property real and personal. They are proprietors of farms, of plantations, of city property and of comfortable and happy homes.

"I do not believe that a parallel to the prosperity which, under Democratic rule, has been attained by this liberated slave population can be found in any other liberated race in the world's history."

The *Syracuse Journal* gives us a directly opposite view.

"The colored people of the South are put under the feet of their former masters, and their last hope of protection in a friendly administration of the government gone. . . .

Since the result of the election was known, there has come up from the South a wall of anguish and despair from the colored people, who are left powerless and hopeless against their old-time oppressors, and who, ever since the degree of emancipation and the gift of the franchise, have been brought gradually and surely into a condition of vassalage but little removed from actual bondage. This being the condition with a friendly administration of the general government, which to some extent has kept the aggressions from reaching the furthest extreme, what now will be the condition of these people with all the barriers to their debasement swept away and full license granted to the white oppressors."

The *Springfield Republican*, recognizing truth both in the prophesy of danger and in the assertion that it is the policy and honest desire of the South to avoid it, says,

"But whatever be the outcome of the long future, however the 'color line' may work itself out, one thing is indispensable, an eminent and pressing necessity. The black and threatening cloud of illiteracy charged with portentous disaster must be scattered. It is a national responsibility. This illiteracy in the southern states, where it is chiefly massed, averages 60 or more per cent of their voters, and these states represent 76 per cent of a majority in the electoral college, in the House of Representatives, and in the Senate of the United States. That is a portentous fact, even more than the census makes it as to its figures, and immeasurably bad in its threatening outlook. The time is past when we can play off the free man against the rebel by any party games of politics. That policy of reconstruction is a gone-by failure. The time is fast passing when the idiotic shotgun policy of a 'white man's government' and 'keeping the nigger in his place' can remain seated on the safety-valve. The only way out of this threatening complication of race caste and ignorance is Washington's way, emphasized in his farewell address, 'Promote, as an object of prime importance, institutions for the general diffusion of knowledge,' and Jefferson's ways, 'If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be. Let the appeal be made unceasingly to Caesar, till the legislators and the executive of the American people hear it from the people, and compelled an aroused public sentiment, give national aid to public education and its allied moral forces. We have made the slave a free man. We must do that other thing—make the freedman a citizen with all that that implies."

#### Correspondence.

The following is from the hand of our always welcome correspondent and friend, Hampton's honored ex-treasurer General Marshall.

KENDALL GREEN, WESTON, MASS.,  
Nov. 19th, 1884.

The election is at last over. The suspense which followed it, when such tremendous issues hung upon the possible miscounting of a few hundred votes, is ended,

and the Democratic party, after a vacation of a quarter of a century, are again to assume the great responsibilities of the administration of the great Government of this great Republic. It is not to be wondered at that a feeling of distrust and uncertainty should prevail among the large class of voters who have been taught to believe that the Republican party embodied all the virtue, and the Democratic party all the vices of citizenship. Neither are the fears of the colored population in the South, that under the new regime they are to be remanded back to slavery, at all unnatural. But the feeling among the best informed and most clear-sighted citizens of all parties is, that we are to have a wise and beneficial administration. I have great faith that President Cleveland will show himself a true believer in civil service reform, and that he will avoid the dangers of the spoils system which has wrecked the Republican party. The closeness of the election and the fact that Cleveland owes his success to Republicans who could not conscientiously vote for the nominees of their own party, teaches a lesson that he will probably heed, notwithstanding the tremendous pressure from hungry aspirants of his own party, who are already "putting their feet in the trough," in their struggles to be first at the Government railings. . . .

Thus we shall never again have such a discreditable campaign as this, in which personal slander and vituperation seemed to have run riot. I hope, too, that a more sensible way of urging the claims of their candidates to the Presidency, than the Republic will be adopted in future, than that of fireworks, torchlight processions and other childish extravaganzas, which have cost enormous sums, at a time of universal depression and want, and have led to no good result.

As to the effect on the colored population of the South by the accession of Democrats to power, I am more inclined to believe with Mr. Chase, the editor of the *Washington Bee*, that the "change will inure to the benefit of his race in the South," he says: "The presence of an office-holding class of white men in the South, whose chief endeavor has seemed to be to stir up strife and set the whites and blacks by the ears, will be done away with, thus removing a great cause of feeling. While his condemnation of Southern Republican office-holders may be sweeping, there is much truth in what he says of the influence of many of them. I am sorry that Fred Douglas has taken so different a view of the situation, and has said so much to needlessly excite the fears of the colored men of the South. He does not show as much good sense as Ex-Congressman Rainey, of S. C., who says: 'Were I in a position to speak to the six millions of negroes in the United States, I would say to them, "possess your souls in peace; your liberties are not in danger."'

But we shall see what a Democratic administration means, if we quietly wait. The great lesson for both parties which this campaign teaches, is that in the very equal division of numbers, the party who puts up the best man will be most likely to succeed, as against Cleveland, Blaine would have been elected by a large majority, but for his public record, and as against Blaine, Cleveland would have received a very much larger majority but for his private record. Let us hope the lesson will be heeded and that our next candidate, of whatever party, will not need a campaign of excuse, apology, and defence to induce citizens to give them their votes.

The ground is white, and the pure flakes fill the air, and winter is upon us. With none other than all Hampton friends and the hope of meeting them before Washington's Birthday.

Yours Truly,

J. F. B. MARSHALL.

#### "Thorns in the Flesh."

This is the title of a work recently written by Capt. N. B. Floyd of Lynchburg, Virginia. The author states in the preface that it is intended as an answer to Tourgee's books on the South. The writer is a Southern man by birth and education, and the book is full of provincialisms and sectional prejudices. The "Thorns in the Flesh" were all who in any way interfered with slavery and its results.

The style of the whole book is a trifle out of fashion, with a flavor of Simms and the earlier romance writers of America. The story, one but too common in the sorrowful annals of the civil war, follows the hero from the home where all was sunshine and happiness before the hateful strife began,

until he returns to find it all ruin and desolation, and weary and worn, takes up the burden of life again to find his task too difficult for mortal hands. On the whole, in spite of some defects of style and sentiment, the book is of unusual interest. As the record of the author's personal experience it is of much historical value. From his standpoint it truly "paints the manners of the times," and will tell to those who come after us, of the Southland as it seemed to those who loved it in their day and generation. In one respect the book is invaluable, that is in showing the tender affection that often existed between the master and slave in days that have gone forever.

"Dick," the faithful Negro who followed his master through good and evil, is admirably drawn, as is also Peter Dillard, a slave who, in ante-bellum days, occupied the important position of headman on his owner's plantation. Peter suffers anguish of mind before he can bring himself to give up the trust confided to him by his dying master, and his story is naturally and most forcibly told.

It would seem impossible to those who have heard only of the cruelties of slavery to realize the kindly and affectionate ties between Stewart and his Creole chattels Fox and Manerine, and also the dear old Mammy, whose character is evidently taken from life with a loving hand, and is beautiful in its tenderness. It may be said that Captain Floyd paints only the sunny side of slavery, but such a side did exist in spite of the shadows that obscured it; and that such noble characters as were often found among the slaves, were developed under it, proves not only that the African had admirable traits but that slavery was not all evil, and fostered rather than repressed them.

Those who have read Judge Tourgee's interesting books on the South, should also read Captain Floyd's book, in order to know both sides of an "owre true tale."

ORRA LANGHORNE.

"Thorns in the Flesh" is published by Hubbard Bros., Philadelphia, Cincinnati, Chicago, Boston, New York and Kansas City.

The *New York Evening Post* has been publishing a number of interesting and suggestive letters from a Southern correspondent upon the national and educational progress of the South since the war.

The following extract shows the spirit and gives the gist of these excellent and timely articles, all of which are well worth reading.

"Material progress is to eradicate the social and political evils left by slavery. Material progress has done, and is to do, more than this for the South. It is a most important factor in our educational status. That the whole South in the last few years has had a genuine industrial awakening, no sane man who has taken the trouble to look into the matter will pretend to deny; and that the South too in the last five years has been making such material progress as, taking into consideration the wonderful odds, is almost unparalleled by any people in modern times, is equally patent. But many, even down South, while recognizing this, have lost sight of the fact that, going hand in hand with and largely due to this material advancement, there has been a corresponding social and educational progress.

Slavery was woven with our society, and largely affected our institutions in ways in which we were unconscious. If the notion that we of the South constituted the highest type of gentility and cultured independence in contradistinction to a working, money-getting race, and that we were rather the guardians of a generous spirit of lavishness and of chivalric ideas, was not openly recognized before the war, it in practice at least, had in fact a strong hold upon us, and an active, aggressive, industrial movement, such as we now have, would have been incompatible with the whole spirit of our ante-bellum tendencies. Not that there were not some good things in our former society and institutions—we have since the war seen the decay of a whole-souled hospitality the like of which will not soon again be found in any people—but in the main our institutions were founded upon radically erroneous principles. There was among the slave-owning

class a false estimate of the respectability of labor; there was everywhere in the South a too great disregard for business methods—a shirking of that attention to details and want of that unflinching application to business so necessary to success; there was a lack of interest in and care for the social and educational needs of the masses; and there was the mistaken idea that any great industrial activity was the concomitant of a sordid, debasing material spirit.

The war destroyed some of these illusions. Necessity did more, and forced a people who had held a material idea in contempt to look to their own material welfare with an interest never before manifested. The war was thus the cause of our material growth was becoming visible, which were then applauded to the echo: "From the close of the war," he said, "and all through the dark days of reconstruction, advice to us free as the winds. To build up our material prosperity—to dot our land with manufactures—to turn the South into one great wealth-seeking people to whom the ring of the almighty dollar sounds sweeter than Cynthia's lute, appeared to them to be our only duty," etc., and these will serve to show with what distrust the industrial movement was then received in some quarters. But now the material age is upon us, and the race of old fogies is fast dying out. We do not object any longer to the ring of the almighty dollar, and we greet the manufacturer or capitalist. We like the one and invite the other.

But the industrial movement in the South has added the educational no little, and the South educational progress is favorably with the South industrial. And North Carolina, the State that has the largest number of cotton mills, that leads the world in the ring of the almighty dollar, has recently the greatest industrial exhibition ever known in the South, and which, if not first, is certainly second in the new order of things, takes first rank in this educational movement. The last five years have seen a new impetus imparted to education here. Everywhere, from the "free school," held only from two to four months of the year, (and often taught by a \$15-per-month teacher), up to the collegiate university, very marked progress has been made. As many as twenty graded schools have been put in successful operation in as many leading towns. Scientific societies, reading circles, and various other means of literary improvement have been devised. Four or five normal schools and a number of county teachers' institutes have been held at different and easily accessible points during each summer since 1880, by which the art of teaching has been improved and encouraged.

Perhaps, however, as true an index of North Carolina's advancement educationally as any other will be found in the open and material manifestations of progress seen in improved school equipments and appliances. Many important changes in and valuable additions to the old school buildings have been made within the last few years, and numbers of new and tastefully constructed academies, with all modern comforts and conveniences have been erected, and many of them filled with the latest and most approved school appliances. The Bingham Military School buildings have been rebuilt on an enlarged scale, and a very complete gymnasium has been added. The University of North Carolina is just now completing in a manner very worthy of the institution a magnificent "Memorial Hall," which is to contain the largest auditorium in the State. Almost every prominent college, male and female, since 1880 received valuable contributions to libraries and laboratories, and made notable additions in the way of buildings.

Leaving the leading institutions out of account, Shelby, a town of 1,200 inhabitants, has built a \$10,000 building for a female school. Lenoir, a little town of 600 inhabitants, has rebuilt and refurnished at perhaps half the cost, another similar school. Dallas, with 800 inhabitants, only this summer laid the corner-stone of an \$8,000 high school building. La Grange, in Lenoir county, has in the last five years firmly established two excellent schools with commodious buildings, sheltering now over two hundred and fifty boarders. Biddle Institute (colored) at Charlotte, this summer dedicated a new "University Hall," costing \$4,000; and Fayetteville, Durham, and a number of other towns have erected a new school buildings. This is only a partial summary of the work going on in this line, for I have merely mentioned such as either came under my own eye or were of sufficient importance to invite attention."

**A GOOD THING.**

Dr. Adam Miller, Chicago, Ill., has recommended Horsford's Aesclephate to my patients, and have received favorable reports. It is one of the really valuable preparations now offered to the afflicted. In a practice of twenty years I have found a few good things, and one of them."

RATHER TWISTED:

day's lessons. As we watch the students who come and go, we earnestly see them, how anxious to get something which will be of use to them in their studies. There are many North who, with seven hours of hard study and recitation daily, beside much daily physical labor, would feel that they were getting no benefit. And yet the library has outlasted the time between 130 and 140 books. If we allow up for teachers, the result remains too insignificant. There are many, many hundred students who can read English, are reading all the time a book from the library; and when we consider the little time that is not included there, that is, the time that is not included there, that is, the time in the reading room, but is simply the record of the books drawn from the library, it shows a zeal for learning in the land.

# Letters From Hampton Graduates. OLD FRIENDS AND TRUE. SHALL I GIVE UP SCHOOL TEACHING? THE "WORD METHOD" IN NORTH CAROLINA. A TOWN WHICH NEEDS A TEACHER.

OLD FRIENDS AND TRUE.

It is a great happiness to those of us who are still connected with the work here, to see how the seed sown in past years by the dear friends who are no longer with us, has taken root and springs up near and far. How constantly we receive evidence of the steadfast quiet goodness of Miss Longstreth, and the strong, wise helpfulness of Gen. and Mrs. Marshall, can be known of course, only to a few, but the two following letters show something of the gratitude of which such frequent expression reaches us.

—Md. Oct. 29th, 1884.

Miss A. C.

My dear friend,

I was truly glad to hear from you, as I have often thought of you since I left New York and come home. I like your letters very much and I would like much better to see and talk with you, than I could tell how I have endeavored to discharge my duty as a wife and teacher since I left dear old Hampton. I feel that the Lord has blessed the work which Mr. L. and I have been engaged in, and we have seen some of its fruits. We have a school connected with our church work here, and have a daily attendance of eighteen. We need more money to carry it on during the winter than we see any way of raising and must have to give up our work here, but our Heavenly Father knows our needs, and it may please him to raise up some friend or friends to help carry on this glorious work.

We are still struggling to build a new church. In the meantime I am trying to improve myself all that I can. I am paying particular attention to both vocal and instrumental music, although my husband and I get little to live on.

I was more than sorry to hear of the death of our beloved friend Miss Longstreth. Her dear face and pleasant manners will never be forgotten by me. When the Hampton students first started out, well did I remember how she labored among the people of Philadelphia for our welfare, and the pleasant visits she would make us during our stay there, all seasoned with good words of counsel, encouragement and prayer. She has fallen asleep in the arms of Jesus, and passed over the river and rests from labor and enjoys the bright scenes of the beauties of heaven.

General Marshall and his noble lady will be very much missed from all the circles of Hampton. Miss Longstreth did a great deal for me when I was there and has given me more since I married than I have from any one in this world. I hope Gen. M. may live to enjoy many more pleasant visits there in the years that he has to live. I have worked quite hard for the last ten years, until I greatly feel the need of rest mentally and physically, and I know no place that I would rather go to get a little refreshed than Hampton.

I am trying to follow your motto and will continue to do so.

I think our Sunday school is the best part of our church. I shall take great pleasure in helping any way I can to help Mr. L. form a Christian Association. We shall work hard to make it a success.

We intend to have a Christmas Tree. Hoping this may find you well and with the best wishes to you and yours, I am

Yours respectfully,

A. M. L.

—Va. Oct. 31st, 1884.

Kind friend,

Yours is to hand, and I will at once reply. I was indeed glad to hear from you, and to feel that you are interested in me, and my work. I have been engaged in the work of teaching for one school term. Although my pay was larger, yet I never felt as if I was doing my duty as I do when I am trying to teach. Last winter I was in the mail service for nine months yet I felt there was the lack of my Sunday School work, (as I had to run Sundays like any other day) I am now teaching near the City of Portsmouth, and I have a very large school (40 on roll). I also take part in the Sunday Schools in the city. I hope for much this winter, and believe that the Lord will bless my work. I have a good assistant (Mrs. Sadie Williams (Miss Mackie that was). Our work moves on slow yet we feel hopeful. Speaking of the death of Miss Longstreth, oh how can I feel it more than I do. I have been blessed so much in my work by her timely

and useful gifts. Not only her gifts, but I have also had her good Christian advice, which she used to write me, until she got too weak to write much. Her letters followed me to Africa, and I trust her good advice will follow me to my grave. I also feel the loss of Gen'l Marshall who is a personal friend of mine yet I feel that he is not beyond my reach, for I shall write him when I find more time. I have many good books which were given to me by Miss Longstreth, the which I shall ever hold dear for her sake. While I feel sad over her death, my sadness is mingled with joy, to think that she is beyond pain, or sickness, but is happy. My school was taught very badly last year; as the teacher was often sick, he seemed to lose heart. So it will take us some time to get it in running order. The Supt. told me he gives me all this term, 8 months, to get it in order, and he shall want me to teach it next term. But I have already taught some, and expect to teach more before this term is out. We are much in need of maps, and such things, but we see no way to get them till we get able to buy them. I hope to be able to write you a longer and a better letter the next time I write.

I hope that you will accept this as I am in haste, and will write me when you feel like it. I had some papers from Miss T. not long since, for which I was very thankful. With many good wishes,

I am Yours Truly,

A. E. W.

## SHALL I GIVE UP SCHOOL TEACHING?

The attraction which the work of teaching has for our graduates is manifested often in the most practical way by their refusal to give it up for work which pays better and promises more for the future, and while we in no way object to their taking up an honest work, and indeed are glad always to know that our boys and girls have a variety of strings to their bows, yet we want them to realize always that where the need is greatest there their duty lies.

W. P. S. C. Oct. 20th, 1884.

Dear Miss C. —

It has been quite a long while since I heard from you, though I have forgotten whether I wrote last or not.

However, I am teaching again at the place where I have spent two terms. I am glad to be here again, and trust that I shall be able to do better work than ever before. I think I told you in my letter before that I was reviewing certain studies in order to take a course in medicine, but as I have met the bright, smiling faces of the children, at times when visiting the Sunday School here last summer, I have often asked myself if I should give up school teaching for any thing else. I some-how, for a long time felt that school teaching was my calling and can say that I like it more and feel better prepared for the work this year than ever before.

I told you of the Sunday School which I organized here in '82 and have been working hard since that time to keep up — I am glad to say it numbers about sixty and is getting along very nicely indeed. We had a grand "celebration" last Friday, 17th inst. It was exactly two years since the first day that I opened school here. Quite a large crowd was present though not so many of the white friends as we had expected, on account of a burial which took place in the neighborhood that day. Miss Schofield of Aiken attended the "celebration" and delivered a very interesting address in behalf of Education, and every thing passed off very nicely indeed. One of the trustees was also present with us. He said that he could "hardly believe" what his eyes saw; he spoke of my school in the highest terms, and styles it "The Principal school of the district." Many many interesting things were spoken here on that day, which I have not time to tell.

My school outnumbers any other school in the district though it has not filled up yet. I began here last Monday. Have 22 on roll; when cotton-picking is over, guess I shall have about sixty or seventy if not more.

My trustees are, or seem to be, highly pleased with my work. I get along very well with both white and colored people here. I am glad to say that all seem to be unusually friendly toward me. I will tell you more about my school-house, my visit to the Institute, &c. in my next letter to you.

I suppose you heard of the death of Willson which took place August 30th.

Are the same teachers at Hampton that were there last year? Aiken has another representative there among the students in the person of Fannie P. She is from our school in Aiken. Hope she will do well.

I remain very truly yours,

F. A. P.

## THE WORD METHOD IN NORTH CAROLINA.

The neatly written letter which gives us this picture of a summer school in North Carolina and the "parents who want their children to spell words of four syllables before they begin to read" does credit indeed to the brave little hand that wrote it.

W. — Va. Oct. 30th, 1884.

Miss C. —

Dear Friend, It was with inexpressible pleasure that I received your kind letter and the pleasant greeting of Hampton. I had opened my winter school before I received your letter, but it made me feel more encouraged; to know that my old Hampton friends were so much interested in my work.

In my last letter to you, I promised to give you a small bit of information concerning my summer school which was taught in Gates County, North Carolina. After passing a satisfactory examination, I opened school on the 16th of July.

As this was to be my first attempt to teach, I own that I felt quite nervous the morning that I started to open school, but when I reached my school-house, I was obliged to appear cheerful to see how pleasant my pupils looked and how delighted they were to be in school.

On the first day, I had fourteen pupils, and my number increased daily, until at the end of three weeks, I had forty-eight pupils enrolled. The parents informed me that it had been two years since they had any school and that they were very glad that I had come. When I first began, I was obliged to teach in their church, because their school-house had been, by some means, burned and they had never had another built; but as I did not think it proper for me to teach in their church, they rented a house for me to teach in. The house was a very good one, but I had no seats or desks, only such as we could provide out of planks and blocks that the boys saved. Notwithstanding these difficulties, I took up my work with more courage each morning, because I felt that if I wished to be successful as a teacher, I must learn to overcome difficulties.

At first, it was quite difficult to classify them because they were coming in daily, and nearly every scholar brought a different kind of book; but I told them the books that were to be used, and in that way, I managed to classify them pretty well. As nearly half of my scholars could not read, I thought that I could introduce the Word Method as the easiest method of teaching them to read in the short term of two months, but as I had no blackboards or crayon it was not so easy a task as I had thought.

When I had gotten a black-board I found that the parents thought that it was more necessary for their children to learn to spell "ba" and to remain in their Alphabets several months than to learn to spell such words as were of service to them in talking and to read short sentences. They would always buy a Spelling Book for their children, and thought that they should learn to spell words of four syllables before they began to read. By giving frequent lessons and much hard study to prepare them so that they could be easily grasped by the minds of children, I managed to start most of the small ones reading in Primers of quite small words and short sentences. Four of my scholars may be able to enter the Junior Class at Hampton if they continue studying during the winter. Although the school terms were short and sometimes it was over two years between them, the children were still anxious to learn all that they could without a teacher.

I took a part in their Sabbath School, which was generally attended by many scholars but owing to the limited number of books, we could not accomplish as much as we might have with more. As my first experience in teaching was so pleasant, I can say that I enjoy teaching, and although my school is now quite small I am encouraged to have a few scholars and hope to have more soon. Where I am teaching now, we have quite a nice Sabbath School except we are not supplied with as many books as we need. I am trying to do my very best to make the Sabbath School interesting so that the scholars may be encouraged to come regularly. I think the motto that you suggested for us is an excellent one, and feel that if we would be successful in teaching, we must devote our whole time to it, and trust the result to our Father.

I want to have a Christmas Tree for my scholars because several of them have never seen one, and I am glad to do anything that possibly can that is of any benefit to them.

I received a very interesting letter from Miss T. also a nice bundle of papers which were very helpful to me.

Sincerely Yours, L. T. B.

## A TOWN WHICH NEEDS A TEACHER.

Among all the varied experiences of our graduates, there are probably none so hard as that of a girl with refined instincts and strong conscientiousness, whose walk takes her among a class of her own people so degraded as to make her almost helpless as to their future. And yet, in reality, no work is so hopeful as that done by some of our young women graduates.

—Nov. 24th, 1884.

Dear Miss L. — You will know that I am troubled about something, for I never write to you until I get into trouble! I know you have all you can attend to without my troubling you with my letters, so I write seldom. My trouble is, my time is nearly out in which I promised to pay the money borrowed last summer. You remember they promised if I would come South they would give me \$20, but they failed, and I failed to get a situation in Tennessee, so returned to Virginia. Now I have been teaching here nearly two months and they have not paid me. They say they don't know when they will get money enough to pay us. Please tell me what to do about the loan. I think perhaps in two or three months, or may be sooner, we will get our money. But I don't want the lady who so kindly loaned it to me to think me careless about my promises.

I have never imagined why the Superintendent of the school would treat me as he did. I wrote him after I went to school saying that I would come at any time he notified me. But he never wrote me a line one way or the other. Dear Mrs. — too was disappointed at my failing to get a place. She wrote me that she had given me a home at the "Orphans' Home" and wished me to be assistant matron of the same. This and many other kindnesses are due to the recommendation given me from you and your friends. Believe me, I shall ever strive hard to hold myself worthy of these praises. Mr. —, the Superintendent here, wrote to Hampton for my recommendation; it came, and it was such a fine one that he would not examine me.

We have a very large school. There are about two hundred and forty enrolled in the colored school, with an average daily attendance of about two hundred. There are four teachers to manage this great number; while here in the white school they have enrolled two hundred, and give them six teachers.

The people are very much degraded here. It seems to me that all the mean people have come here.

There are three colored churches here, and these are made up of some of the lowest characters under the sun. I am here as a teacher and have to be with them that I may teach them.

But I endure many things that are very hard. For instance, in the Methodist Church they asked me to play for the church — the gallery is on the front end of the church — I went and played for them. After they sang several hymns the minister commenced his sermon; two of the young men took off their shoes and went to bed on the seats nearest me with their feet right in my face without any apology whatever. Out of the great number of children in school not more than fifty have good mothers and fathers. I never saw so many bad characterized women in one place before. There are between three and four hundred colored families in and near, and not more than ten are nice, good families.

I am boarding now with Mr. —, of 72. His wife is a very nice lady indeed, and tries to make everything pleasant for me. Mr. — and I teach in the sabbath house.

This is the second boarding place I have had since I opened school. The first would bring me more than a mile from my school, so I thought best to move nearer.

I furnished my own room and fire and get board at six dollars without washing; my washing costs me \$1.60 per month, making my board and all cost me less than \$10 per month, while in — they have to pay \$14 without washing.

I forgot to say that I attend two Sunday schools and take an active part in both.

I have been very well ever since I came here. In fact, I believe my lungs have felt better than they did last Spring.

Hoping that you are well and not too busy to write me.

I am very gratefully,

M.

## Horsford's Acid Phosphate. AS A REFRIGERANT DRINK.

Dr. C. H. S. Davis, Meriden, Conn., says: "I have used it as a pleasant and cooling drink in fevers, and have been much pleased with it."

Indian children in school, December, 1884, 11,994.  
Indian children out of school, 28,006.

Such proportions in and out of school, says Captain Pratt, would unhinge the civilization of Boston, and set it drifting back to savagery.

The Carlisle Morning Star comes to us this month doubled in size and greatly increased in interest. Its strongest point, made again and again, may be put thus: "Don't treat the Indian as an Indian. Treat him as a man."

General Beale, of California, says in the Evening Post: "It angers me when I hear persons say that this or that man understands Indian nature. There is no such thing as Indian nature! It is human nature with them as with us."

We have been promised several new contributors to our Indian Department. Among them are Mrs. A. S. Quinton, president of the Philadelphia Women's Branch of the Indian Rights Association; Dr. Sheldon Jackson, the well-known laborer among the Alaska Indians; and the excellent Indian agents, Majors Gasmann and McLoughlin.

The new Indian Training School at Lawrence, Kansas, is favorably mentioned in various quarters. In a letter from the Superintendent, Dr. Jas. Marvin, to the Morning Star, he says: "We now have 168 on roll—others are expected soon. With all diligence, I have pushed at the putting in of heating appliances. The radiators were in last month; ground was broken for boiler and coal house yesterday. I find very little trouble in managing the Indian students."

James Murie, an Indian graduate of Hampton, and for some time assistant teacher at the Pawnee (I. T.) school, left it recently in charge of a party of twenty-one children, to take a position at Haskell Institute. The Pawnee New Era speaks of him as a faithful and efficient worker. In a letter from Murie to the Era, which he formerly helped to print, he says: "We have arrived at this school and the children all like it."

\* \* \* There are three large buildings here—one school house, one for boys and the other for girls."

At Albuquerque, New Mexico, 164 children are on the roll of the new Industrial School. Prof. R. W. D. Bryan, the efficient Superintendent, expects to increase the number to over 200, although the accommodations provided are for only half that number. The buildings are also destitute of many necessary conveniences, and Professor Bryan has made an appeal to public charity to supply the deficiencies of Government aid.

The Industrial Department of the school is well sustained. Each boy is taught a trade, and most are learning readily. The Indians make good wood workers, on account of their trained eye. Some are already quite proficient as carpenters. The boys have taken contracts for house painting, etc., and have been able to earn quite a little sum of money. Professor Bryan says that he intends, as soon as possible, to start a carriage paint shop at the school, as well as a shop for all kinds of wood working.

THE INDIAN NOT A CITIZEN.

A good deal of dissatisfaction has been expressed with the recent decision of the Supreme Court of the United

States that the Indian is not and cannot become a citizen under the law.

The fatal difficulty consists in the fact that, although born within the territory of the United States in the geographical sense, he was born as a member of an Indian tribe, and therefore not "subject to the jurisdiction" of the United States. Even though he separate himself entirely from his tribe and take up his residence among white men, he is not a citizen. Such is the construction of the Fourteenth Amendment, as given by the highest tribunal in the land.

Two of the Judges dissent from this view, and argue that Indians born in the United States, even if born in the tribal relation, are citizens the moment they "become subject to the complete jurisdiction of the United States." As the law now stands there is still in this country a despised and rejected class of persons, with no nationality whatever, who, born in our territory, owing no allegiance to any foreign power, and subject, as residents of the States, to all the burdens of Government, are yet not members of any political community, nor entitled to any of the rights, privileges or immunities of citizens of the United States.

Moreover, under our naturalization laws, as they now exist, they have no way of escape from this condition. These laws are applicable only "to aliens being free white persons, and to aliens of African nativity, and to persons of African descent." The Indian, like the Chinaman, is neither white nor black.

Nothing develops character like responsibility. The ballot has already civilized swarms of foreigners, ignorant of republican institutions. It is capable of civilizing the red man. The Indian can no longer be treated as an independent power. The original American must become an American citizen.

#### THE COMMISSIONER'S REPORT.

The report of the Indian Commissioner, Price, for the year 1884, is upon the whole a hopeful one. "More Indians," he says, "are living in houses and fewer in tepees than there were one year ago. More are cultivating the soil and fewer following the chase, than when I made my last annual report. There are more in the carpenter, blacksmith, and other mechanical shops, trying to earn an honest living, and fewer at the war dance, scalp dance and sun dance than in October, 1883. There are also several hundred more Indian children in industrial, agricultural and mechanical schools, fitting themselves to become useful, intelligent citizens, than there were twelve months since."

The Commissioner shows that the expense to the United States Treasury for each of the 200,000 Indians which are its wards, is but \$7 per annum, or less than 2 cents a day! He says, emphatically, that the appropriation is too small, and recommends increased pay to police, to additional farmers, and to the officers who compose the courts of Indian offences; also, more liberality in paying Indian agents, and in assisting such Indians as need it and try to help themselves.

Other points touched upon are the importance of making appropriations for the Indian service in time; of stricter laws against sale of fire-arms and liquor to Indians; advantages of the court of Indian offences recently established at some agencies; entries made under the Indian Homestead act of last year; and allotment of lands in severalty to Omaha Indians.

The principal educational advance of the year has been the starting of new training schools at Genoa, Neb., Chilocco, Ind. Terr., and Lawrence, Kansas. The Government allowance of \$175 per pupil is shown to be too small. Private schools receive only \$167 or less; Hampton, \$158.33.

The importance of good boarding and day schools for the reservations is strongly dwelt upon. There has been a gain during the year of 627 boarding pupils in the various schools. The in-

crease in number of day schools is 11. Some progress is being made toward compulsory education.

#### GEORGE BUSHOTTE'S ADDRESS.

(The following is the uncorrected speech of a Sioux Indian—an appeal to Northern friends.)

Dear friends:—I am standing before you all as representative of a poor and needy race, and expressing my experience; but, my friends, before I go any further, I must state one thought. Some of the people of civilization have no faith in those Indians who are about to tell of the improvements which are made by the Indian race.

In the year 1878, in Dakota, nearly all wear blankets, and they used to live together in the woods, but now they live out of the woods on the prairies, and nearly all have log houses and a garden beside it, and raise corn and vegetables for the use of their own families during the summer. They wear citizens' clothes, but they don't cut their hairs, for they think that would interfere with what they are trying to do.

That time, in 1878, I was still in the darkness; sinful, miserable, and shameful life; yet I have no idea I am laying my footsteps towards the eternal destruction; but now I know a part of the eternal life and happiness, and trying to learn all I can in order to use in right way as possible, and not to make myself useless, after I get the education. I will say a few words about the place where I came from. The name of that place is Lower Brule Agency, situated near the town of Chamberlain, five miles west. There the people scatter around into five camps; near half of them are willing minds to do what the Government want them to do, but it is too hard for them to get along without help. They have some help among themselves, but they are very poor, so now I know something about their feeling in this new life, and how much they need.

I have found that they are willing to divide up their lands for some good reasons. One reason is that if they were far apart from each other they will control themselves in the right way and work steadily day by day on their own land. By that way they will make a far advance to what has been done many years past. They used to live together and to have all sorts of games, that makes pull them back.

One time some of the chiefs were gathered together and asked me to come in. They asked me to write what they said in English and send it to the Government of the United States, for they need so many things. One thing that they want the Great Father to do is, they want him to stop sending whisky out there, and also ask him for a school house near that Agency. After I spend three years in Hampton, I returned to my home, to my own people, and I was with them about a year, and found out all these different feelings among the chiefs or any other Indians towards the right way, and they wished that all these boys who are trying to get education, to hurry up and get all they can in order to help their people.

One day, before I came the second time to Hampton, one of the old chiefs talking to me and said that they want me to stay with them all the time, for it seems as if I were their wings. "We want to have some wings so we can go right to the place where we are trying to go, and you are the ones going to be our wings." The Indian boys stay at Hampton three years and then go back. It is short time to get our education, so when they return to their homes they are not very strong, but some of them are trying very hard to use all they can to help others. I think it is good for the people who are helping these Indian boys to have them stay a little longer.

Now let me tell you about the boys at Hampton, Va. I have been with them and taken notice of the feeling of the boys, and they are really want to learn, and look at their poor race and

wished many times about the knowledge.

Now I will tell you another thought. Those people who opposed Indians want to make everything heavy on the minds of the Indians' friends so as to keep them off from the privileges which they enjoy, and some who are thought-every in that which is least and painful ever in that which is least and painful about the life, which is very strange to us, and which is higher position, so that the Indian can not take it in place of their own life at once, but we will have to come up step by step, until we become something like your life.

Some of the people are out of patience. My dear friends, the things done by halves are always weak, not strong enough for storms. The impatience will lead towards the crookedness and misery, and the patience will lead towards the right, straight and happiness.

When you plant some flowers you notice how they grow, and the result is that you find some beautiful flowers on each stem. Now, you are the roots, and you are the ones that are going to stand and support us in order to raise some blossoms.

Be patient with us so as to let everything come up right and firm in the sight of God and men. You have the key of knowledge so you can let your children get in and make themselves useful in the world; but the Indians have no key, neither can he make the key of knowledge. But I am glad now that you are sorry for us, and lend away your key in order that we can get inside and learn how to use our hearts and heads, and hands, and fit ourselves for the world to come.

Some people still say that the Indian cannot be civilized. That I cannot say anything about, for it seems as if they were the people who want to make others feel that it is worthless to help the Indian. It is better to divide up the lands for the Indians and let them work on it, for I cannot depend on somebody else like a little child and not to be respected as a man, neither driven along; I rather drive myself than somebody else drive me ahead as a flock of sheep.

My friends, let what is passed be passed, and recall it no more. And now as for ourselves we will try to make the present sweet and bright in order to make the future intelligent, and we shall stand shoulder to shoulder like one family under the care of our king, and we shall take our place with Christ Himself into the world which is prepared for us from the foundation of the earth.

#### Indian Police.

The agency police system should be strengthened. The bold experiment of investigating the preservation of order on the reservations to the Indians themselves has produced surprising results. It had been said that they could never understand civil law, and that if clothed with authority they would abuse it to gratify personal vengeance. It had been feared also that in controversies between red men and white they would always go with their race. But Mr. Price tells us that what actually occurs is this:

"The impartiality with which the police have performed the duties devolving upon them is amazing and creditable in the highest degree. It matters not who the offender is, whether chief of the tribe or a young warrior, Indian or white man, friend or foe, when ordered to make an arrest there is no flinching from duty; and it is truly marvellous that so little friction has occurred in the performance of their duties."

These Indian police decrease the need of troops at the reservations, and they accustom the tribes to self-government, under the process of law; yet they are paid so little that 128 members of the force have resigned during the past year. The courts for the trial of Indian offences are also very shabbily treated by the Government. The Judges receive a mere pittance for compensation, although it is admitted that their services are of much value. Nothing is more important in Indian civilization than the cultivation of respect for the administration of justice.—N. Y. Sun.

# Indians of New Mexico & Arizona. Their Past and Present

GATHERED FROM INDIAN BUREAU REPORTS.

Fifteen years after the publication of Major Emory's Report, the various tribes of which he speaks had come under the care of the Indian Department of the United States Government, and appear in the Report of that Department for the year 1872, as follows:

**Pimas and Maricopas**, numbering 4,312, occupy a reservation of 64,000 acres set apart for them under act of Feb. 20th, 1859, located in the central part of Arizona on the Gila river. They are and always have been peaceful and loyal to the Government, are considerably advanced, industrious and nearly self-sustaining. The relation of these bands with the neighboring whites is unfortunate. The difficulty arises from the improvident use by the whites above them of the water of the Gila river, by which they are deprived of all means of irrigating their lands. The result is that many of them have left and gone to Salt River valley, but are there also getting into trouble with the settlers. They are much interested in the education of their children. Two schools are in operation with 105 scholars. \* \* \* These tribes have no treaty with the United States, and receive but little assistance.

**Papagos**, numbering about 5,000, like the Puelchos of New Mexico, live in villages, cultivate the soil and raise stock for a support. They have no reservation, no treaties, and receive no assistance. Many of them have embraced Christianity, and are well-behaved, quiet and peaceable. \* \* \* There is no reason to doubt that if established on a reservation, with implements and stock, they would become prosperous. It is hoped that a reservation may be set apart for them at St. Xavier, to include the venerable church built there by their ancestors.

**Mohaves**, numbering 4,000, with a reservation on the Colorado of 75,000 acres. Only 828 are established on the reservation, the remainder roam or are on other reservations. They make but little progress, object to the education of their children, have no schools, and no treaty, but are partly subsisted and largely assisted in their farming operations by the United States.

**Pimas**, numbering 2,000, live near the mouth of the Colorado, as they will not remove to the Mohave reservation where they belong. They are inveterate gamblers, and gain a scanty subsistence by working for the whites. They have no treaty and receive little assistance.

**Hualapais**, numbering about 1,500, inhabit the country near the Colorado, north of the Mohaves, and are more or less hostile. Those who are peaceable are being fed by the Government.

**Yarapais and Apaches**, 8,000 to 12,000. They range through the central, northern, and eastern parts of Arizona and have long been hostile. All attempts to settle them on reservations have failed, as they will come in in large numbers and then have difficulty when so disposed, renewing their depredations before their rations are exhausted. The bands of this tribe present a great diversity of type, but are all seemingly incorrigible, and all those not on reservations have been turned over to be dealt with by the military.

## NEW MEXICO.

**Navajoes**, numbering 9,114, with a reservation of 3,328,000 acres, in the northwest part of New Mexico and northeast of Arizona, set apart by treaty of 1868. Prior to 1864, no less than seven treaties had been made with these tribes, all of which they broke. They were then made captives by the military and held as prisoners of war till in 1868 they were removed to their present location, where they have since remained, peaceably, many of them being engaged in agriculture, and in raising sheep and goats. They are industrious and attend faithfully to their

crops. They have for some years been partially subsisted on account of the failure of their crops, and receive, under the treaty, in clothing or material, \$40,000; and in other beneficial objects, \$14,000. Provision is made for two teachers at a cost of \$2,000 per annum.

**Mescalero Apaches**, numbering 830, have no definite reservation, being unable to live in peace with the Navajoes, and, until recently, having been more or less hostile to the whites. They have no schools, care nothing for the education of their children, are not engaged in farming or any industrial pursuit, have no treaties and receive no annuities. They are, however, subsisted in part, and receive clothing when necessary.

**Gila Apaches**.—This tribe is composed of two bands, and number about 1,200. They are warlike, and no success has attended the attempt to settle them on a reservation. They have no treaties and no annuities.

**Hearlin Apaches**, numbering 850, have for several years been located at the Cimmaron Agency with the Navajoes. They have no treaty relations with the Government, and no reservation, and have heretofore supported themselves by hunting, with some assistance from the Indian Department. Four hundred of this tribe are reported to be at the Tierra Amarilla Agency.

**Muache, Weeminuche, and Capote Utes**.—The Muache band of about 650, at the Cimmaron Agency, and the other two bands (870) at the Abiquiu Agency, are parties to the Ute treaty of 1868. None of them are disposed to work, preferring to live by hunting, or on the Government, and they do not desire to have their children taught.

**Pueblitos**, numbering 7,683, have no treaty with the United States, and receive but little aid from Government, but hold 439,664 acres of land under an old Spanish grant confirmed to them by Congress in 1858. It is desired to establish schools in all their villages, and few are now in operation. (Here follows a brief notice of their condition under Spanish rule—their revolt, and their gradual decadence—from the time the Spanish power was withdrawn until the United States came into possession of their territory.) There are now 19 villages of these people in New Mexico, each having a distinct and organized government, with officers who are all elected annually by the people, except the *cacique*, a sort of high priest, who holds his office during life. While calling themselves Catholics, it is thought that they still believe, as did their ancestors, in the days of Montezuma. They are a remarkable people: sober, honest, and docile; simple in their habits and moral in their lives. But for their residence upon reservations and their continued tribal organization, they could hardly be considered Indians. It is to be hoped that it will soon be decided whether they are citizens of the United States, or Indians, to whom the law of 1834 respecting trade and intercourse with Indian tribes, is applicable. It was decided in 1867 by Chief Justice S. G. Smith, that their status was that of citizens.

In this year, Gen. O. O. Howard was sent out as a special commissioner to examine and report upon the Indians of New Mexico and Arizona, who were becoming actively troublesome. General Crook was at that time commanding the Department, and General Schofield the Military Division of the Pacific, and General Grant's official letter to the latter, dated from the Executive Mansion, is not without interest:

MARCH 6th, 1872.

GENERAL:—The anxiety felt by the public generally, and by myself in particular, that Indian hostilities should be avoided in the future, and a policy to civilize and elevate the Indian people, has induced the sending out of a commission to study the present condition of Indian affairs in Arizona, and if possible, to suggest a means for accomplishing the end aimed at. General Howard has been selected as the commissioner to visit that country. It is not proposed to interfere with any military move-

ments ordered by proper authority. On the contrary, it is hoped that sympathy of views may be entertained between the commissioner and the officers under your command. Indians who will not put themselves under the restraints required, will have to be forced, even to the extent of making war upon them, to submit to measures that will insure security to the white settlers of the territories.

It is not proposed that all the protection shall be to the Indians, but that, if they will submit to rules and limitations laid down for them, protection by military force shall be mutual.

Very truly your oht. servant,

U. S. GRANT.

General Howard's very full report is accompanied by numerous papers and concludes with an expression of his "conviction that the Society which nominates the agents for Arizona, should also be allowed to nominate the superintendent. They need a man in full sympathy with themselves—one who believes in the possibility of civilizing the Indian, and a man of decided ability."

From the year of General Howard's visit to the present date, the history of these tribes, so far as it has been in any way connected with, or affected by the United States Government, is, of course, a matter of careful record; and we now propose to give the principal facts of this record from year to year, condensing them as closely as possible, while at the same time endeavoring to make them of some value for purposes of reference.

## NAVAJO INDIAN AGENCY.

1873.—3,328,000 acres.

A very large portion of this reservation is not fit for agricultural purposes. One half is pasture land. A tract on which the Indians have for several years raised corn and wheat, to the south of their reservation, should, in my opinion, be granted to them, as while persons could then locate nearer to this agency than twenty miles, which would be a great assistance in controlling the Indians.

After December 1st, they will have to be fed, on account of failure of crops. It will require \$70,000 to do this.

They have no farmer, and a proper person in that position would save thousands of dollars to the Government.

They own over 10,000 horses and about 175,000 sheep. When they were organized twenty years ago, they had over one million sheep and goats.

They have no schools, and I do not believe there is an Indian on the reservation who can read or speak a dozen words of English.

There are 2902 children, none of whom know so much as the alphabet. In my opinion, the mistake has been in not establishing boarding and industrial schools. Day schools are of no account.

They suffer much from diseases produced by immorality.

One year ago, as directed by General Howard, a police force was established of 100 Navajoes, which has been most successful, and I regret that my instructions require me to disband them.

It appears to be the desire of the Government that moral and religious persons should be employed here, and I submit herewith suggestions for changes, so that I may be able to have the co-operation of the employees in the work of civilizing and Christianizing these interesting people.

W. F. M. ARMY.

1874.

Past year has been more quiet and satisfactory, though I cannot report as much progress as I had hoped. The number of sheep has decreased on account of heavy snows. Horses remain the same as last year.

A farmer has been appointed, and if he is supplied in time with seed, cows, and sheep, I am confident that in two years the tribe will be self-supporting. A boarding school and home for children has been established, and their success shows that with proper facilities the 2,963 children at this agency can be educated in practical labor and knowledge of English, and that before the expiration of the treaty, the tribe can be civilized and Christianized. Their health in general has improved, for they are coming to believe in "white man's medicine."

It has always been difficult to obtain good employees on account of the small salaries, and the recent legislation of Congress still further reducing these salaries, will still further increase the difficulty.

The Navajoes are manufacturers as well as an agricultural and pastoral people, mak-

ing blankets, wool, and silk work, baskets, etc. I encourage and assist them to make these for sale.

I feel, on the whole, that their progress is encouraging, and I firmly believe in the ultimate success of the peace policy.

W. F. M. ARMY.

1875.

In September, I, with my family and several white employees, were driven from the agency, the Navajo laborers were forbidden to work, and in some cases, tied up and whipped, the school teachers were obliged to leave, and all efforts to train the Indians in industry, etc., were brought to naught.

This state of affairs is the result of the action of the "saw men" and the whiskey sellers, and the failure of the military to protect us. The demoralization of Indians by soldiers, whiskey sellers, and white men living with Navajo squaws, goes on so rapidly that the agent has little chance to civilize or teach. At my agency, the labor of several years has been retarded, if not destroyed, by the machinations of bad white men, and the inefficiency of the military. Either the Indians must be declared citizens and made amenable to the courts, or they must be placed under full control of the agent and military be compelled to aid him. I am of the opinion that the Navajoes are in general good Indians and can be civilized.

W. F. M. ARMY.

1876.

When I took charge of this agency in December last, I found everything in confusion. The last agent having been driven away. I must say, however, that the Navajoes seem quiet and orderly, and that the progress during the last year seems all that could be expected. No missionary work has been done among them, and the Mormons will soon occupy the field.

The Indians ask for a school, but want their children to live at home. The hand looms have not been a success, the Navajoes preferring their own method of weaving. There is great need of a saw mill. They desire an extension of their reservation, but one-half of the area asked for is covered by the grant made to the Atlantic and Pacific Railway.

We hear that the Utes are endeavoring to get the Navajoes to join them in a war against the United States, and are advising them to purchase nothing, but gun-powder and lead. The act of Congress regulating the sale of those should be made more stringent.

ALEX. G. IRVINE.

1877.

These people are pastoral, depending upon their sheep and goats for subsistence. Owing to the scarcity of water and grass they are obliged to move from place to place and have no permanent houses. The sheep industry should be encouraged. They sold 200,000 pounds of wool this year.

The farm looks well, but corn will not ripen on account of the shortness of the season. Educational matters show no prospect of improvement, unless an entire change can be made.

School houses should be built at various points, and school teachers with their families take up their permanent residence with the Indians. As the agency has now a steam saw mill, the expense of building would not be great.

If the agency could be removed to some point on the San Juan river, all the corn, wheat, and vegetables necessary for the tribe could be raised. Here the buildings are old and the water supply very poor.

I have had some trouble during the year in the issue of supplies and in taking the census, but it comes from the chiefs alone.

ALEX. G. IRVINE.

1878.

Having been at this agency only three months, I am unable to do more than make a few general remarks. Little progress has been made in inducing these Indians to adopt the white man's method of cultivating the soil. The best land is lying idle on account of its proximity to the predatory Utes. The failure of the department to carry out the provisions of the treaty, has had much to do with the failure of teachers and agents in the matter of education. These failures are profoundly to be regretted.

Why the agency should have been allowed to remain in its present location through all these years, it is difficult to conceive, as it is in every respect most unfortunate, not more than half the tribe being permanently on the reservation, and I believe that the natural resources of the reservation are entirely inadequate to the support of the tribe. But I suppose it would be worse than folly to ask for territory for any tribe, however deserving, from a government that does not

secure to the Indian the peaceable possession of lands already guaranteed to them by solemn treaty stipulation. A few hundreds spent in supplying water would be a good investment. The time has come, I think, when the issue of daily rations to the Navajos, except to the aged and infirm, should be discontinued as demoralizing. Give them seeds, and do more for their education, and they will take care of themselves, for they are a nation of workers.

There is nothing to fear from the Navajos, they have too much at stake. But their peaceful disposition, their industry and willingness to support themselves are only added reasons why the obligations of the government should be fulfilled to the letter.

JOHN C. PYLE.

1879.

The census for this year gives a population of nearly 15,000. Flocks and herds are in a flourishing condition. I estimate 700,000 head of sheep, 1,600 head of cattle, 22,500 horses, 500 mules. The drought is unusually severe, and crops will give one-fourth the usual yield, so that there will be a large amount of supplies required. At their last "big talk" there was a unanimous appeal for more land in order to get a "winter range" for their stock. These Indians are peaceable, industrious, and deserving; are semi-civilized in appearance, and quite civilized in their taste for whisky and tobacco. There is but one day school, with an average attendance of eleven. If I could have boarding schools for each sex, I could fill them, and I believe make as good progress as has been made with any other tribe of Indians in this country.

No missionary effort has been made among them, but I hear that a missionary is to be sent out by the Presbyterian Board. The employees are moral men, but I strongly advise sending only married men with families, as the example of Christian households is the best possible education for these Indians.

My statistics show that the Navajos furnish 85 per cent. of their subsistence from their stock and farming; 9 per cent. from hunting, and receive 6 per cent. from the United States.

GALEN EASTMAN.

1880.

During the past year many of these Indians have been in a starving condition, the result of a two years' drought, and the failure of the contractor to furnish supplies, made the situation at the Agency anything but enviable.

We have now commenced irrigation by means of mud engines, \$3,500 having been granted by the Secretary of the Interior for this purpose. The saw mill does excellent work. The building for the boarding school to accommodate 200 pupils is getting on well. The Navajos are intelligent above the average Indian, and the school will probably be largely attended.

There has been little missionary work done here, as the missionary appointed died shortly after his arrival. The greatest evil here is whisky. The more sensible among the chiefs deprecate the traffic and ask, "Why does not the Great Father at Washington, who can do anything he pleases, keep white men from bringing whisky to us?"

I have endeavored to organize a police force but have not yet succeeded. Many of the young men are restless and require to be decisively dealt with.

F. T. BENNETT,  
Captain 9th Cavalry.

1881.

I have been absent from my Agency for nearly a year, a military officer having been put in my place, on the ground that my Indians were dissatisfied and hostile. My accounts have now been satisfactorily settled, the charges against me refuted, my salary paid, and my Indians (who have, as a matter of fact, been peaceable all the time) express themselves satisfied with me. I trust as civilization advances into these wild regions these intrigues may cease. I estimate the Navajos at present at 16,000.

Farming this year has been disastrous, owing to drought, followed by floods of rain.

The peach crop is said to be larger than usual. The trees are said to have been planted by a superior race, or by ancient explorers, possibly by the cliff-dwellers, whose remnants of swallow-like dwellings line the walls of this romantic canon; but the memory of these Indians does not reach back to that period. They value highly their peach orchards, which belong to families, and are re-planted when necessary, by the aged ones when they are about to depart, the younger people believing that such acts forbode death.

Their flocks have not increased, but they still sell large numbers of blankets. The building of the Atlantic and Pacific Railroad is affecting these people considerably.

They continue to entreat that the "Great Father" will stop the whisky selling among them.

They need agricultural implements sadly, but the very small appropriation granted by the last Congress is an effectual barrier to further progress at present.

The Homestead rights under acts of 1875 and 1880, will enable these Navajos to continue in the occupancy of their homes, and they are happy in this new prospect. The school has been put back by the difficulties to which I have alluded, but the two missionaries sent by the Home Missionary Society have done all they could, and are ready to organize a permanent boarding school, so soon as the building can be occupied.

I must repeat my strong conviction that only married men with families should be sent out, and that salaries should be made adequate to this end. The native women are cruelly wronged, and the care of all illegitimate children is thrown on the tribe, as they have none of the rights of citizens, and cannot testify.

Arms are being sold to the Indians against the law. For every reason it is to be hoped that the "severalty bill" to come before the next Congress, will also accord to the Indian the right at least to testify in the courts, and thus to afford him relief and protection. Nearly all these Indians cultivate land, and they regard each other's rights jealously; less than 5 per cent. of their subsistence is obtained by hunting; and less than that amount this year from Government.

GALEN EASTMAN.

1882.

The season has been exceptionally favorable, otherwise the merely nominal appropriation of \$5,000 would have been entirely insufficient, and there would have been great suffering. This appropriation gives about 25 cents per capita to purchase all necessary improvements, etc., and to teach them "white man's ways."

The injustice of this is so evident, especially when it is considered that the 4,570 restless Apaches have secured an appropriation of \$275,000, that it is wonderful that these Indians still listen when I tell them that they must now behave better than before, for the neighboring whites and Mexicans are only watching for an excuse to oust them from their 6,000,000 acres of reserved land. I am left with almost no means of control, and it is not significant that for the first time the military are proferring me their services.

The school building is about completed, and the attendance has averaged 54, but the employees of the mission board have not fulfilled their contract, and I am now out of them from their 6,000,000 acres of reserved land. I trust I have succeeded, at some risk to my employees, in establishing friendly relations with them, and that murders may be less frequent.

GALEN EASTMAN.

1883.

Premising that I did not take charge until the 1st of January last, that I have been without adequate assistance to perform the work of the agency, that I was much of the time without funds, that the labor demanded of an agent here under present conditions is such as to prevent his performing any of his duties in a satisfactory manner, I will say that this report must needs be incomplete. It would require the descriptive powers of a Scott or a Dickens to portray the wretched condition of affairs at this agency in language such as to present a faithful picture of it to the mind of one who never saw it.

This reservation is situated on the elevated table land known as the Colorado plateau, and lies partly in New Mexico and partly in Arizona. It is about 105 miles square, and embraces something over 10,000 square miles of the most worthless land that ever laid out doors. It is wholly a sandstone mesa country, with occasional patches of valley land susceptible of cultivation by the rude Indian method. It is almost waterless, in fact, a barren rocky desert. What does exist is alkaline, and nearly all of it is such that any well-regulated animal east of the Rockies would refuse to drink it, it is the only kind available for these

people and the white workers amongst them. Many a civilized stomach "goes back" on its owner on its first introduction to the "sheep water" of the Navajo country. The face of the country is almost entirely rocky, except where the sand, which is such, the soft sand and debris accumulated in the lower spots by ages of erosion and the action of water since the "early days" when the world was new. An Illinois or Iowa or Kansas farmer would laugh to scorn the sandy beds which form the planting grounds of this people.

Seventeen thousand Indians manage to extract their living (in addition to the mutton which forms the staple article of food) from these spots, and that, too, without any Government aid. If they were not the best Indians on the Continent they would not do it. The United States has never fulfilled its promises made to them by treaty. It is safe to assume that it never will. As I have resigned and am about to leave here, and will not be relieved before this report is read, I may be pardoned for resuming my rights and privileges as a citizen and speaking plainly of the gross wrongs perpetrated by the Government on the Navajos and on the Navajo Agency. Whether that treatment is due to ignorance, malice, or neglect, it is time that something was done to remedy existing evils, and I should feel lacking in the performance of a plain duty if I failed to point out a few of them.

The character of the country, as already briefly described, makes it incumbent on the Indians to look for almost entirely on their flocks for a livelihood. They are purely a pastoral people, and necessarily so. Their sheep and goats furnish their staple food, and from the sale of wool, sugar, and coffee, the other necessities of life, and coffee. These comprise almost the entire range of food supplies.

Heretofore, little in the way of aid has been furnished by the Government for the sick, indigent, and helpless Indians, the agent being compelled to see them suffer under his eyes and to close his ears to their requests, or else supply the most needed articles at his own expense. Coming as it did, fresh from business life, and knowing the failure of the Government to fulfill its obligations to them, I for a time, did my best to supply their needs myself. I spent some \$800 in the way. I thought I could do for the United States what I could do for any honest business man, firm, or corporation in the country—that is, make up for its neglects and that upon proper representations, the money would be repaid. I found, however, that the United States does not pay anything it can avoid. I was compelled to stop that, of course, in self-preservation. How any man could turn a deaf ear to the sufferings I witnessed here last winter—to the cries of hungry women and children whose only support had perished, owing to the severity of the winter, and who were thus deprived of all means of livelihood—puzzles me. But that impersonal myth, the Government, neither sees nor hears these things; and if any of its officers has humanity enough to heed them, he pays the expenses. I do not state this for my own benefit. I shall not be here when any action is had on these matters, if it ever is. What is done is done. The money it costs me is dead loss. An institution which could not fulfill its written obligations cannot be expected to sustain its officers in an action dictated by any such weak sentiment as humanity. But, for the sake of the unfortunate individual who has to wrestle with this work hereafter, I desire to call your attention to the need of strengthening his hands, and of sustaining him in doing right.

When I came here there was not an ounce of hay or grain at this agency; there was not an ounce of provisions of any kind for issue; the thermometer ranged as low as 20° below zero (and we are over 7,000 feet above the sea); there was not a horse that could walk two miles without falling down from sheer fatigue, caused by hunger and age, and I was compelled to buy food for them at my own expense, rather than see them die of starvation. This at an agency for 17,000 people. There was not a house that would keep snow or rain. The roofs leaked, the water ran in on the floors, (the floors are below the level of the ground). In a word, the agent and employees who were to lift these people to a higher plane, to carry out the civilizing policy of the Government, were expected to live in a lot of abandoned adobe huts, condemned by special, regular and annual reports as unfit to live in fifteen years ago, condemned by every one who has ever seen them since, and repeatedly damned by all who have been compelled to occupy them. They are fit of vermin and utterly unfit for human habitation.

I was told repeatedly by influential and well-meaning friends, verbally and by letter, "hold on, as you can't do it, we can't do it all in a month," "just wait till Congress meets," etc. You have heard it all re-

peatedly. The meeting of Congress would have been very consoling, no doubt, had I buried one of my loved ones as the result of this experiment. My family is not enduring this now, but God knows, but that it is not bettered a bit (only that the weather is warmer), and the family of the agency physician is putting up with it in the hope that something will be done to prevent this, and won't stand it all next winter. Wait till Congress meets? Wait until an indifferent Congress gets good and ready, and if this one doesn't wait for the next. But don't forget to wait. The same old song for the Indian, too.

Last winter I promised the Indians I would go amongst them and visit the portions of their country which I had not seen. I have always felt that it was my duty to make myself personally familiar with the entire country covered by his Indians; to know their wants, their habits, their resources, the climatic conditions, the amount and kind of stock owned by them, the number of families, the number of children of school age; in short, an agent ought to know his Indians. These Indians range over not only the country embraced within the limits of the reservation as defined on the maps, but far into the adjoining lands. They are found to the south of Zuni, as far east as the Rio Grande, on the north in Colorado and Utah, and to the west as far as the Little Colorado, as well as on the banks of the main Colorado. Many disputes have arisen between them and the surrounding whites. Many are ranking to leave. The Navajos cover more than 4,500 square miles of territory.

When I announced my intention of visiting the country they inquired, and of examining into all the matters of interest to them, it was joyfully received by the Indians as well as by the whites, who had been impatiently waiting for some authoritative determination of the questions so long unsettled. Fifteen thousand square miles of mountain country is a good deal of ground for any one man to explore, in a few breathing spells, one gets while doing the clerical work for 17,000 nomadic Indians, in quadruplicate. I managed to make fourteen trips amongst the tribe during the six months from January to June, in spite of the onerous conditions placed upon me by Congress; but in denying an agent for these Indians any clerical assistance, that body prevents his performing any of the higher duties of his office almost as effectually as if he forbade his doing so.

I have had no police. Navajos cannot be right to fix the pay of the police should be vested in the Secretary of the Interior, and not be arbitrarily named by men who have no conception of the duties required. I have had to go after some horse thieves and white to remove unlawful traders from the reserve; to recover stolen stock; to chase criminals; and to do it all myself—be agent, clerk, chief of police and entire force, postmaster, courier, everything, to be able to cope with the single-handed, and to wisely treat all the questions arising between 17,000 Indians and their white neighbors; and to personally watch over and guard every item of Government property at the agency while doing this, in a word, to be (were it possible) a hundred miles from here settling a dispute, and to be quick in making my papers and guarding the dial clock and the cups at the same moment.

The reservation lines have never been surveyed. Oh! how often have I written those words. And how much they mean to the man in charge here. Now in the world am I to be always right on questions of jurisdiction, guarding this immense tract with its restless occupants? Must an agent continue to assume (as I have had to) that the reservation is right where he happens to be? There isn't a mark on the ground.

This work is a bricks-without-straw task all the way through. If a man has the mental and physical qualities demanded, the patience to endure, he can take those to a much better market—and he need not travel far. Any man who fills the bill here, is worth \$3,000 a year and found. He is entitled to a good, comfortable house to live in, furnished—at least, as good as an ordinary mechanic occupies in the States. He does not desire the Government will get the right man for less. It could not keep me for a quarter of a cent less. But I consider myself "discharged, cured." I plead for the future of this field.

The Government ought to do something for the development of water on this reservation. There are places where the supply of water is barely sufficient for the needs of the people, and where I think a small sum properly expended would develop sufficient water to irrigate considerable land. In other places water has cut a channel through the loose sandy soil, into the firm sand, and is 30 and 40 feet below their former levels. These places are abandoned. Suitable dams would cause them to become productive by

### DENTISTRY.

Hampton, Va., Oct. 1883.

Dr. T. H. Parramore begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton. Office on King St., opposite Barnes' Hotel.

### A Happy New Year!

In addition to our regular stock of  
**BOOKS, PERIODICALS,  
STATIONERY,  
CONFECTIONERY,  
FRUITS,**

Tobacco & Cigars.

We have added a large assortment of

**TOYS, GAMES**  
Fireworks, etc.

Which we are confident cannot be surpassed by anything ever seen in this town, and which we are selling at

Surprisingly Low Prices.

We keep a supply of SCHOOL TEXT BOOKS, and will furnish

ANY BOOKS TO ORDER

desired. Don't forget the place,

**Hampton News Co.,**

King St., near Barnes' Hotel.  
Booker Bros., old stand.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$100,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, malarial fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 44° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

For further information address by mail or telegraph.

H. PHOEBUS, Prop'r.

### A TRIAL OF THE BALTIMORE JOBBER

Will Clearly Substantiate Six Especial Points of Excellence.

1st—It is the easiest running press made. 2nd—It is as strong as any press made. 3rd—It is the most durable press made. 4th—It will do as good work as any press made. 5th—It will take less to keep it in repair than any press made. 6th—(Last but not least) It costs less than any first-class press made.

ALL SIZE PRESSES, TYPE AND PRINTERS' SUPPLY.

### National School Supply Bureau

Baltimore, Wis., July 31, 1883.

National School Supply Bureau:  
Last April, being in charge of a large public school, but desiring a position in some good academy or college, I placed my name with your Bureau. During the first part of the present month I received notice from you of a vacancy in such a place as I desired. Putting myself in communication with the party concerned, I received the appointment. I am well satisfied with the management of the Bureau, and feel sure that it fills a useful and necessary place in our school economy. You are at liberty to use my name if you wish.

Respectfully,

EDWARD O. FISKE.  
Headmaster Markham Acad., Milwaukee, Wis.

For application-form and circular, address:

Nat'l School Supply Bureau, Chicago, Ill.

N. B. We want all kinds of

Tesohers for Schools and

Families. Good pay to

Agents and Private Correspondents.

# Southern Workman.

VOL. XIV.

HAMPTON, VA., FEBRUARY, 1885.

No. 2.

Humor and pathos are blended in Miss Bacon's page of Silhouettes.

OUR INDIAN DEPARTMENT has attracted favorable comment. We are promised new contributors, whose names are therein given.

THE New Orleans Exposition comes slowly to perfection. Hampton Institute is represented there, in connection with the schools of the American Missionary Association, by photographs, reports, specimens of school exercises and industrial work.

THE "HAMPTON CLUB" of Springfield Mass. and its Hampton Fair, are in their way unique affairs and we are glad to give our readers the bright description of them by a former Hampton worker and another friend, which will be found on our twenty second page.

Many questions are asked at Hampton, in the course of a year, by visitors or correspondents, not all of which admit of a conclusive answer, but many of which are so suggestive and full of general interest that we have concluded to set apart a column or two of the WORKMAN to their consideration from month to month. The questions this month, whose discussion will be found on the next page, are from our valued friend, Rev. John Harding, of the Springfield Republican. The column is now open to "inquiring friends," to whose questions we shall be glad to give due consideration, if we cannot always give adequate replies.

JUDGE TOURGEE, in a recent *Congressionalist*, in his dramatic way formulates the problem of the Negro's destiny as it exists in the mind of the Southern white, the Northern white, and the Negro himself. As he says, the last of these views is seldom considered, undervalued and hard to get at. Its distinguishing features, he thinks are: 1st, a total absence of any doubt of his equal capability of development with the white man, given the same antecedent opportunities; 2nd, a belief that white superiority is owing above all to education; 3rd, a consequent intense desire for education, "believing more devoutly than any people on earth ever believed before, that 'knowledge is power,' the power that distinguishes the free man from the slave, in every age and clime;" 4th, distrust of the whole white race and of any protestations on their part of an interest independent of policy; 5th, an indestructible trust in God, and belief in "the good time coming," though he cannot see how.

The suggestion of Judge Tourgee that "the so called leader frequently represents the ideas he thinks his followers ought to have rather than those they actually hold," may possibly be thought true to some extent of himself. As he says, "the lower levels of humanity feel but rarely formulate." The white race has now at any rate, an excellent chance to so vindicate its good faith as to cultivate feelings of confidence in the new generation, to whom slavery is but matter of history. Certain it is, that the education which is spreading and will spread over the Southern land will give the Negro some of the power he expects, not only to formulate but to act upon the feelings which may be cultivated in him.

## The Freedman's Case.

MR. GEO. W. CABLE's article in the January Century on the "Freedman's Case in 'Equity'" is of great interest, especially as coming from a Mississippian and ex-Confederate soldier. No Northern waving of the bloody shirt could be so effective as his frank and plain avowals of the numberless oppressions of caste distinction and the worse abuses of the penitentiary and convict lease system, upon a people who have "proved that be their relative standing among the races of men what it may, they are worthy to be free," and have a right to "that simple protection without patronage which any one American citizen, however exalted, owes to any other, however humble." The Atlanta Constitution (Dem.) indignantly denies that Mr. Cable represents Southern sentiment in any degree. It is likely that not many Southerners and by no means all Northerners would follow him to the furthest extent, as for instance in his plea for mixed schools.

He is regarding the question on the plane of absolute equity and economic common sense rather than of present expediency. But we believe with him that there are thousands of Southern born men and women, and these of the best intelligence and position, who desire fairness and right above all things, and who "see that the whole community is sinned against in every act or attitude of oppression however gross or however refined." The principle of right once started will work out its own development and no other. This being so, neither they nor we need be agitated over the question whether or no their little great grand children will go to school with little colored boys and girls, as—according to our Southern contributor, Mrs. Langhorne's sketch on another page,—their little great grand parents did without consternation or disaster, in the good old "ante bellum days."

The great need of the hour is education—enlightenment of the masses of both races. We rejoice that, as Mr. Cable says, "all have agreed not to handicap this with the race question," that "there is in the South an honest effort to keep the public school interests in the hands of the states' most highly trained intelligence," and that Southern public sentiment is growing so evidently in the favor of education for all. We rejoice too in the new impetus that is apparent in the general public interest in the question. Nothing is so dangerous as to shut the eyes to danger. No one has put this more forcibly than Mr. Cable when he says: "This is what the impatient proposal to make it a dead and buried issue really means. It means to recommit it to the silence and concealment of the covered furrow. Beyond that incubative retirement, no suppressed moral question can be pushed; but all such questions ignored in the domain of private morals spring up and expand once more into questions of public equity; they blossom into questions of national interest; and despised in that guise, presently yield the red fruits of revolution. This question must never again bear that fruit. There must arise, nay, there has arisen in the South itself, a desire to see established the equities of the issue; to make it no longer a question of endurance between one group of states and another, but between the moral debris of an exploded evil and the duty and necessity of planting society firmly upon universal justice and equity."

## Indian Rights.

The need of an "Indian Rights Association" was never more manifest than in the case of the starving Piegan Indians, of Montana.

At the September meetings in 1884, of the representatives of that and of the leading religious societies, at Lake Mohonk, N. Y., as the guests of Mr. C. R. Smiley, it was decided to send Professor Painter, the Washington agent of the Association, to ascertain in person the facts of the case.

Returning from Montana, he made to the House Committee on Appropriations, a strong statement of what he had observed, asking for immediate relief, which was promised as soon as possible. Following up the matter with persistent effort, he met an unexpected rebuff, and at once addressed an open public letter in the New York Tribune to Mr. E. J. Ellis, Chairman of the Committee, stating the facts of the case. Prompt action was taken and fifty thousand dollars were at once voted to save the Piegan from starvation. These people had practically been forced to sell their wives and daughters to soldiers and citizens about them, for money with which to buy food; the details are too shocking to repeat.

We take this occasion to impress on all friends of the Indians, the necessity of work at Washington, where, more than anywhere else, is the root of the red man's troubles; not that Congressmen are averse to doing their duty, but because the demands of constituents and endless details, push the interests of the Indian into the background.

The Indian Rights Association can, with six thousand dollars a year, for their Washington work, in circulating documents, holding meetings, etc., do more for the red race than all the ten millions a year used by the War Department in the West, and the forty million pounds of beef issued annually (not without justice) to the tribes who never will work till they are compelled to.

Those who wish to know fully of the work of this Association can get information by addressing Mr. Herbert Welsh, Secretary, 1316 Filbert Street, Philadelphia, Pa. Until this and the Woman's National Indian Association, Mrs. A. S. Quinton, of Philadelphia, Secretary, were formed, the sympathy of the people had no organization, no concentration, no effect. Now, public sentiment is telling; the Indian is every year more recognized, and hope for his future is more and more felt. The beginning of it all was Captain Pratt's quiet work in Fort Marion, Florida.

Dr. Mayo thus sums up the educational progress of the South. "It will pay this year more than fifteen million dollars for education. In the last three years, the Southern people have themselves paid as much money for education as the Nation and the North have given them for that purpose since 1860. The free school for both races has been established by law in every Southern State. The collegiate, academic, and professional schools upset by the war, have been restored. Two State universities admit girls, and the education of women is largely on the increase. A great revival of popular interest in education pervades the South.

The short sessions of the country schools, from two to five months, need lengthening. The larger cities have from six to nine, and an extensive sys-

tem of Normal schools is needed." A people so bravely struggling to educate all its citizens should have both national and private aid to lift the great weight of illiteracy which threatens not one section or class only, but the National life.

THE ALUMNI JOURNAL, of Hampton Institute, owned and edited by resident graduates, is a little sheet which deserves our frequent notice, and the liberal patronage of Hampton graduates. It is well and independently edited. The January number is now before us. Its editorial on the situation is rather corroborative of Judge Tourgee's estimate of the colored point of view. As to the proposed "Colored World's Fair," the editor thinks the colored people need many other things more, and advises them to devote their energies rather to petitioning Congress to pass the Education Bill. We must agree with him also, in his criticism of a letter to the WORKMAN, that "fostering" is not the most appropriate word to apply to the influence which slavery had in developing some of the "admirable traits" of the African. He probably would not deny the fact of such development, and that is all, we think, that our liberal minded Southern correspondent intended to express.

There could be no stronger argument for the progress of the Negro race or the hopefulness of its future, than the possibility of such a collection of thoughtful, calm, and well-put sentiments, as the A. M. M. Church Review of Philadelphia presents in a symposium of leading colored men upon the relation to their race of the present political aspect, extracts of which may be found in another column. Not the least eloquent of the writers is the one woman among them, Mrs. Frances E. W. Harper, of Philadelphia, and not the least forcible herance that "If for the next twenty years the colored people take no feverish interest in the success or failure of either party, but will do all they can to build up an intelligent and virtuous manhood, and a tender, strong and true womanhood, we can afford to wait for political strength, while developing moral and spiritual power."

Alarming rumors of illness at Hampton Institute make it proper for us to state the facts of the case from the report of the resident physician, for the relief of those interested in the school.

There has been more than usual sickness this winter, attributable chiefly to atmospheric conditions which we share with the surrounding country, but nothing of the nature reported; not one case of "diphtheria," "scarlet fever," or any malignant disease. In a community of six hundred students such as ours, with the attendant force of instructors and employes, any epidemic makes a great show, and we have had three: "German measles," brought from the West by an Indian child; measles proper, brought from Hampton by day scholars, and quinsy sore throat. With care and isolation, the first and most severe of the three was soon stamped out. The second, with its sources so near us, was of wider extent, spreading to the teachers and families, on the school grounds, but generally of

a mild form. Tonsillitis, or quinsy, which is commonly regarded of malarial origin, has been prevalent about the town of Hampton, as in other parts of the country. At the school, there have been about a hundred cases, scattered through all the buildings on the place, which points to general, rather than to local causes. The long drought of the summer and fall may have had something to do with causing this and other sickness. Of continued malarial fever, there have been but two cases among the students, with two among the teachers. As it is unusually prevalent this season in the country about us, our proportion of the disease is small, and contrasted with the nine or ten cases a year the students of last year, up to this date, and more the year before, shows actual improvement in the sanitary condition of the place, owing to the measures which have been taken to this end each year. There has been an unusual number of ordinary cases of chills and fever occurring early in the year, chiefly among new students, coming from various sections. Outside of the epidemics, the usual number of incidental cases of various kinds, has helped to swell the aggregate of illness, and the arduous work of the physician and nurses, but has no special significance as to local causes of disease.

The one death from malarial fever in our corps of teachers—the first ever to occur at the school, made naturally, a profound impression, and was, perhaps, the chief origin of the excited feeling. Though an enfeebled condition of health before starting for Hampton this fall made her, no doubt, peculiarly susceptible to disease, if not already in its power, every means was promptly taken to investigate and remove any possible local causes of malarial. Mr. Chas. F. Wingate, of New York City, well known as a sanitary engineer, and a member of the Commission appointed by the city to take measures against the approach of cholera, was sent for, and made, as he had, a thorough inspection of all the school grounds and buildings. We quote the first paragraph of his report:

"At the result of my examination, made December 28th and 29th, I am glad to find that so many of my recommendations made two years ago, have been complied with, and that the improvements effected have been so satisfactory in their results. The present suggestions, will, I trust, be as readily carried out and with as beneficial results."

We may say that the improvements made in the last two years, at the advice of Mr. Wingate and the present physician, including a building for laundry, bath-room, etc., with the bulk-head now in construction, to keep the tide from rising and falling on the flats, have cost thousands of dollars. The minor and inexpensive ones now suggested, will be promptly carried out. It would be folly to ignore the warnings of nature and the teachings of experience, but that folly will not be committed. There is no reason for panic, but, with all the work and anxiety inevitable in the care of such numbers, there is much reason for thankfulness and courage.

THE CONDENSED REPORTS of Indian Agents, of which we print in this number a third installment, furnish testimony in regard to the manner in which the U. S. Government has conducted its work for Indians, which is far more forcible than could be obtained from any private source or sources, and has presumably the great advantage of being unaffected by prejudice in favor of this theory or that.

It is interesting to conjecture what would be the verdict of a totally disinterested person, to whom should be submitted this testimony, as to the wisdom and justice of the means adopted by a Government whose attempts at civilizing a handful of half savage tribes has borne such fruit. If all philanthropic

sentiment should be laid aside, and the matter regarded solely from an economic standpoint, what would be the opinion of an average business man in regard, for example, to such a story as that of the Navajo Agency, published in our last number? This story is sufficiently startling when hampered by the unimportant details inseparable from official reports, but when these are cleared away, the points present themselves with a distinctness which leaves nothing to be desired.

At this Agency, then, there have been in ten years seven different agents. Every one of these agents has represented to the Government the necessity for supplying the Indians with the means of rendering themselves self-supporting, and has borne witness to the willingness of the Indians to work, as soon as work is made possible for them. Not a year passed without a strong statement of the need of schools and the desire of the Indians for education; and the request that mission work in some shape should be begun among them, has been almost as constant.

Again and again is the fact repeated that the reservation lines have not been surveyed, and that unending and needless trouble and expense are the result. That there are no Agency buildings which are in any sense fit for their purpose, that the sale of whiskey is practically unrestricted, that the Indians suffer cruelly at times from the failure of Government supplies, (the result usually of the insufficient appropriation) is reiterated from year to year with more or less force and bitterness. That the salaries are so small as to make it impossible to obtain employees who are in any sense fit for the work, and that the appropriation for this work, (which, be it remembered, the Government nominally undertakes to accomplish,) is simply an absurdity, so out of proportion is it to the necessary expenses, comes to be taken as a matter of course by these men who have most of them learned by experience, the value of remonstrance. And what is the outcome of it all? What has the Government to show for its ten years of work, for this decade during which it has been responsible for the bodies and souls of these people?

The report of its agent for 1883 takes up every one of these counts as given above and asserts with proof that on every one of them the Government stands guilty; guilty of indifference, of fraud, of a most shameless inhumanity.

In that year matters at this Agency stood as follows: The reservation lines had not been surveyed; there was no police force because there was no money to pay them; nothing had been done to procure a proper water supply; very little or no aid was furnished for sick or helpless Indians; there were no suitable Agency buildings; the school buildings had not been surveyed; the school consequently a failure; nothing had been done towards furthering the plans for industrial education; the Indians had not been assisted in their efforts to take up land or protected against swindlers; in short, in no way or shape had the United States fulfilled the promises made to them by treaty.

The history of this agency is the history of a large majority of the agencies for which the United States Government is responsible, and while the impersonality of "the Government," protects it from the results which would inevitably fall upon any individual who had made similar mistakes, is it therefore true that there is no hope of reform? The Indians can speak for themselves only through the fraud and the scalping knife, but their friends can speak for them, and certainly, as we have shown above, they have not far to look for a text.

CHILDREN'S CLASSICS published by Given, Heath & Co. New York, are an excellent addition to the supplementary reading which now happily relieve the routine of "readers."

## QUESTIONS AND SUGGESTIONS.

### As to the Lion and the Lamb.

Editors Southern Workman:

I observe two outlooks for the Negro problem, each of which has its plausibilities. As the Southern Negro grows more intelligent and acquires property, he will be recognized as an important factor in society, be respected accordingly and given due place in the body politic, as a producer, office holder, etc. letting social relations take care of themselves. In this view the two races will recognize their mutual need of each other, and continue to live together, with a growing identification of mutual and common interests.

The cleavage of the color line is so deep and will be so intensified by the preference of the colored people for separate churches as well as the jealousy and old time prejudices of the whites, that there will be a gradual and voluntary separation, resulting in black communities, perhaps a bolt of black states. Both races will in due time prefer to live apart, in regions where the colored people will have an indisputable majority, and will assert their competency to buy the land and take care of themselves, both industrially and politically.

Towards which of these outcomes do the present tendencies of each race seem to be leading?

Do the Southern white people who are intelligent and influential favor Negro education? Would they, as a class, welcome National aid?

The above questions interest me and probably many others.

Longmeadow, Mass.

J. W. H.

In brief, will the Negro, through intelligence and prosperity, become more and more allied and identified with the white race, or will he by prejudice and opposing sympathies become more alienated and separated? Still more briefly—Is the lamb to lie down inside or outside of the lion?

In our opinion, the more educated, industrious and energetic of the freedmen will have the position they want as contented citizens. Many, even without education, have the native force of character to rise. Witness the improvement of the race in landholding. In Georgia their landed property was \$7,000,000, five years ago. It is \$25,000,000 in Louisiana including that of the creoles. Wherever there is commercial prosperity in the South, business activity, railroad building, the Negro gets his share, and while many are improvident, many buy land and build homes. The saying fact about the race as a whole, is their desire for land and education. This fits their indirect, as their training as laborers is their direct gain from the years of slavery to the white; race which left them also the darker inheritance of providence and moral weakness. There is no doubt that one third of our 6,000,000 blacks are making decided improvement. Perhaps one third, especially those in the Gulf and South Atlantic States, are deteriorating. The rest are about holding their own, and if afforded a fair chance will rise. On this portion the educational movement of the South is telling, and there is hope for it, but the work for them needs to be vastly increased.

The *Workman* believes in the general forward movement of the Negro race, and in the tendency of its better portion to adjust themselves to the white race, to demand office in only a reasonable way, and to be satisfied with a fair chance as citizens and as a laboring class. The South in the next four years has a grand chance to confirm this tendency and make the Negroes a satisfactory and highly productive and prosperous industrious class. The great source of slavery is the demagogues who can command by tens of thousands, Negroes who cannot read or write and who will willingly trade their

vote for the merest trifle. Only as the black voting population shall be able as a whole to read and write and form their opinions for themselves, will their votes cease to be a danger to the prosperity of the South and the country. As things stand, the combined aid of Southern support and Northern charity cannot do the work, and the Government will not.

The record of the Southern whites in taxing themselves for the education of both races as heavily as most Northern states do for their own people, shows that they are in earnest about educating both race and giving the Negro a fair chance. (See Cable's article in the *January Century*.) Acknowledging to the utmost the fact and the ruinous folly of unrighteous oppression, and putting the Freed man's case in a *Epitaph* with an impartial blindness that would expose a Northern writer to the charge of incendiarism, he writes:

"A far pleasanter aspect of our subject shows itself when we turn from courts and prisons to the school house. \* \* \* As of the South, as elsewhere, there is a fairly honest effort to keep the public school interests in the hands of the State's most highly trained intelligence. \* \* \* Practically, through the great majority of our higher educational offices, we are fairly converted to the imperative necessity of elevating the colored man intellectually, and are beginning to see very plainly that the whole community is sinned against in every act or attitude of oppression, however gross or however refined."

It is generally felt in the South that it is the Nation's duty to aid in fitting the Negro for the citizenship which it conferred upon him. The only opposing sentiment is the traditional fear of centralization, and this being strongest in politicians and political leaders is likely to prevent or delay such national aid.

This answers the first and third points of our correspondent's inquiries to the best of our ability. As to the depth of the line of cleavage between the two races, it is, while socially very deep, in some other respects less perceptible in the South than in the North. There is a great deal of mutual sympathy and liking between them in the relation of employer and employee, and a mutual adaptation and interdependence which is the result of living together for six generations. Good nature and good feeling, in every thing but politics, and increasingly in that, is the rule. The suppression of the Negro vote is, we suppose, confined to some three or four of the Southern States. We believe it to be free and fairly counted in the rest. This we think shows precisely the relation of the Lamb and the Lion. One of the worst features in the South is the petty oppression of traders, a mean and unscrupulous class, many of them Jews, who grind the faces of the poor, both black and white, especially in the more remote and sparsely populated regions, in the strict ratio of their ignorance, and make a state of things that words can hardly describe, selling for exorbitant prices, receiving pledges of crops, etc., at the end of each year, the freedman is poorer than at the beginning. The remedy for all these evils—slow but sure, and the only one,—is general education that shall throw light upon and into the dark places. More light is the need of the hour.

### Civilization vs. Nature

Is the effect of civilization and education to destroy or impair distinguishing race characteristics and powers in either race?

Vinton.

This is an interesting and suggestive question, and we will give it what consideration we may from the results of our own experience, in our next number.

## SOUTHERN WORKMAN.

**TWELVE PAGE MONTHLY.**  
(Reduced to eight pages from July to October)  
Printed on the Normal School Steam Press  
by Negro and Indian students trained  
in the office.

S. C. ARMSTRONG, Editor.  
H. W. LUDLOW,  
M. F. ARMSTRONG.

REV. H. B. FRISSELL, Chaplain,  
MR. W. N. ARMSTRONG,  
MRS. ORRA LANGHORN,  
MISS ALICE N. BACON,  
F. N. GILMAN, Business Manager.

Terms: ONE DOLLAR a year IN  
ADVANCE.

Entered at the Post Office at Hampton, Va., as second  
class matter.

## The Southern Press. Both Sides.

The year '88 opens for the white people of the South, with a promise of good things, of which the mere antislavery is having its effect, for though in reality the conditions have not essentially changed, the point of view has been so much affected by the late election, that the general tone is more cheerful than it has been for many years.

The following statement shows how substantial the foundation for this cheerfulness is:

"The Baltimore Manufacturers' Record during the past year has been engaged in the laudable work of attracting attention to the growth, enterprise and development of the Southern industries. The facts which it has concisely presented from time to time have had much to do in securing the investing of Northern capital in the borders of the South. In its issue of Thursday it sums up and presents in a graphic manner the results of a year's work in building up the manufacturing and mining interests of the South, presenting a carefully compiled list of all industrial enterprises organized during the past year. From the showing of the Manufacturers' Record the progress made is indeed wonderful, and would be so considering even had the past year been one of general activity in business, but when the great depression in trade and manufactures is taken into account, the advance made by the South in 1884 is well calculated to excite profound astonishment and to impress upon the business world the great importance of the new era upon which the South has entered."

During 1884, according to the showing of the Record, there were 1,865 new manufacturing and mining enterprises—including some that were rebuilt after being destroyed by fire—organized in the fourteen Southern States, the aggregate capital (including capital stock) reaching the enormous sum of \$105,269,500. The Record says, one of the most noticeable features of the industrial progress of the South is the immense amount of Northern and Western capital seeking investment there. The Southern people themselves are also displaying remarkable energy in establishing new enterprises and in building up their own country. In what States has this increase taken place, and in what branches of manufacturing is most progress being made, are two questions of particular interest, the answer to which will show that the entire South is sharing in this improvement, and that almost every industry is represented. Summing up the number of new enterprises and the amount of capital by States is as follows:

States.	Rate prices.	Capital.
Alabama.....	187	\$16,925,000
Arkansas.....	95	9,000,000
Florida.....	95	9,933,000

The Record says that in Kentucky, Alabama and Virginia extensive mining and iron companies, with heavy capital, made the total of the investments so heavy, though they also added many of the smaller industries to their list of manufactures. Despite the depression in the cotton goods trade, cotton mill companies were organized very freely during the early part of the year, and of blast furnaces the same may be said. Of woolen mills there are quite a number, while ice factories are counted by the dozen, and machine shops and foundries, some of great size, even in large number, while of the various kinds of mills that make wood-work their business, such as planing, saw mills, building material factories, furniture factories, carriage and wagon factories, handle factories, etc., it may be said that they are going up by the

hundreds in the South. Many flour mills were built, and still more tobacco factories. Of cotton seed oil mills there were very many, and of mining enterprises of all kinds, gold, silver, mica, ore, coal, the number is so large as to give some hint of the South's future greatness in this direction.—*Norfolk Virginian*.

Mr. Cable's article "The Freedman's Case in Equity" has elicited much criticism, and probably nothing except such an article from the pen of a Southern man could have produced such expressions of feeling. The *New Orleans Picayune* in a lengthy critique, says: "Leaving out of consideration, for the present, the question of the immediate practicality of Mr. Cable's theory of social ethics in so far as he has explicitly stated it, we may properly inquire, in the first place, how much farther his argument would legitimately lead us. If differences of race are to be disregarded in public places, why should they not be disregarded in private places? If the Negro family is to be admitted to seats by the side of the white family in church and concert hall, why should it not share the hospitality of the white family's home? If, as Mr. Cable contends, the black man is degraded by exclusion from the one why is he not degraded by exclusion from the other?"

We insist that we are not pushing the argument beyond Mr. Cable's lead. We know it might be replied that the law can never touch the right of a man to select his own personal friends and associates, but that reply would be an evasion of the doctrine which Mr. Cable has advanced. He argues that the aversion of white people to social intercourse with the blacks is the result of prejudice, and that it is therefore unreasonable and unjust. From his point of view it is morally wrong to draw the color line anywhere. Hence his doctrine carries him over the threshold of private life, leads logically up to the exchange of all social courtesies, and even to intermarriage between the races. Mr. Cable does not only announce this conclusion, but it is an unavoidable inference from his statement of the "Freedman's Case in Equity." If we accept his premises we must go with him to the conclusion, and as that is monstrous and revolting we can but wonder that he did not see that he was refuting his own conclusion by a *reductio ad absurdum*.

Mr. Cable's position is more eccentric than original. Its novelty consists in the fact that it is assumed at this late day by a Southern man from whom one would have expected a better appreciation of those inextinguishable affirmations and denials of nature which he proposes to ignore. He ought to understand, though apparently he does not, that the persistent and ineradicable distinctions of race lie deeper than any consideration of etiquette, convenience, or mere sentiment. The fact of immovable and impassable difference may be hard, but it is a fact. As there are superior and inferior individuals in the same race, so there are superior and inferior races in the world. It is the order of nature and we cannot question it.

We are free to admit that the position of the colored man is in some respects uncomfortable in this country.

Mr. Cable belongs to an old school, not a new one. He merely repeats the shallow sentimentalism of those doctrinaire philanthropists who overlooked the fact that the rights to political freedom and social equality are inseparable from the capacity for proper exercise and due enjoyment. Forgetting that races as well as individuals must be subjected to the slow processes of culture before they can reap the ripe fruit of the highest civilization, they held that the crude cannibal should be permitted to enter at once upon the heritage of Anglo-Saxon liberty expressed in the institutions of that last result of political evolution, a democratic Republic. But their view is now, if not obsolete, at least, obsolescent. The logic of events has demonstrated that no arbitrary and hasty measure can immediately remove the consequences of many centuries of moral debasement and intellectual sloth. In agitating the question just at this juncture, Mr. Cable is doing neither the Negro nor the white man a service. He has undertaken a work of supererogation. If race feeling is nothing but a prejudice it will pass away in time, but a result which must rest at last upon the voluntary allowance of individual men and women cannot be forced by legislation or precipitated by rhetorical pleas against the deepest feelings in human nature.

In so far as the black man is the victim of any form of oppression: he deserves the sympathy of all men. Wherever he is refused educational facilities and religious advantages, wherever he is accommodated unnecessarily as a traveler in public conveyances, there is urgent demand for reform in his interest. We can go that far with Mr.

Cable; but we cannot advocate the degradation of the white race for the questionable elevation of the black."

From other quarters however, Mr. Cable meets with grateful appreciation, and the *New York Freeman* gives, on the whole, a fair summing up of the effects of the shell which he has exploded in his own camp:

"The Freedman's Case has been limboed for so many years by Southern writers, preachers, and statesmen, that well-informed people had about concluded that Southern men did not consider that the Freedmen had any claim in equity. The bugaboo of social equality, admixture of the races, and kindred questions, have so warped the common sense of Southern writers, that it is a novelty to find one who considers that the Freedman has any case in equity, and who has the courage and boldness to say so."

For this reason mainly, the article in the January number of that excellent monthly, the *Century*, entitled "The Freedman's Case in Equity," by Mr. George W. Cable, of Louisiana, has excited a degree of notice which in many particulars is striking and painful. Mr. Cable is by birth and education a Southern man. His knowledge of colored people, therefore, must be admitted by all candid men; the same is true of his intimate acquaintance with the condition of the colored people, and he has graphically and candidly discussed it in the article under discussion.

The measure of adverse criticism which the article has elicited from Southern editors is simply marvellous; while the degree of narrowness and sophistry employed makes one marvel at the sort of education these men have enjoyed. Only a few weeks ago the same editors were painfully vociferous in professions that the colored man should have accorded to him all his rights under a Democratic President. Now, they one and all declare that the cessation of those rights, as early and justly defined by Mr. Cable, is altogether out of the question. Either these editors have a very warped and distorted idea of what constitutes a colored man's rights, or they are unconscious liars. The former supposition is more likely true.

Such papers as the *New Orleans Picayune*, the *Charleston News and Courier*, and the *Atlanta Constitution*, repudiate as heretically absurd and Utopian Mr. Cable's interpretation of "The Freedman's Case in Equity." The conclusion of the *News and Courier* is that Mr. Cable is all wrong, and that "blood is thicker than water" is ridiculous to the last degree.

The only points of difference between a white man and a black one are color, mental training, and material condition. All these differences are artificial, and are even now becoming less marked than in past years. Time will totally annihilate them, the impassioned protests of Southern editors to the contrary notwithstanding.

A colored man, as a good, all things being equal, as a white man. The one has no more natural and conferred rights than the other. Just as the white man now enjoys all his rights, so ultimately will the black. It is even so now to a very large extent in the North, East, and West, it will be so in the South. It is bound to come. Character is the only true standard of worth. The differences between a colored gentleman and a white one are so infinitesimal that it requires the distorted perception of an American to discover them. He is more sensitive on this point than an English Lord or a German Grand Duke.

The *Picayune's* *reductio ad absurdum* of Mr. Cable's article is very logical. Its fears are justly grounded. The outcome of the matter will be just what it pictures and becomes. There is no escaping it if the two peoples continue to inhabit our Southern land. The free commingling of the races in school and church, in theatre and circus, in Senate and Assembly, in steamboat and steam car. And if this equality of right be obtained, as obtained it will be, social and business relations will follow as a matter of fact. There is but one of two ways to avoid it—expatriate, root and branch, the colored population, or expatriate root and branch, the white population. Expatriation can only be forcible or voluntary; and as the first will appear impossible, so will the latter appear equally so. The black man will have his just rights—they are the same as the rights of the white man—and the ravings of prejudiced editors will avail nothing to stay the inevitable.

Mr. Cable has done the race a great service. He has given the people of the country a truthful portrait of "The Freedman's Case in Equity," he has "painted the Negro as he is," and thereby protected against a discussion which has been fruitful in showing how warped and narrow Southern civilization remains twenty years after the "The Freedman's Case in Equity" was

filed in the Constitution of the Nation proper and the States in severity, and in the common law. The Freedmen must have full scope for mental and moral growth, and he can only have this by being regarded in law and equity, and in all avenues of life precisely as other men are regarded."

The *Augusta Constitutionalist* brackets Judge Tourgee and the *New York Tribune* together as enemies of peace in the South:

"Judge Tourgee thinks, if his recent lecture is correctly reported, that unless the Negroes are enlightened they will soon rise in rebellion against the whites of the South. The *New York Tribune*, on the other hand, believes that when they are enlightened as to their 'rights,' they will be more swift to resent 'Southern outrages.'"

According to these eminent authorities the Negro problem is apt to resolve itself into violence, leaving its solution only between the alternatives of colonization or extermination. Happily, for this broad land of ours, there are wiser men than Albion W. Tourgee, whose only claim to notoriety, is a political novel, in which all the facts were fiction, disguised under a feint of fairness. Since the production of a "Fool's Errand," his philanthropy has degenerated into partisanship; his fiction into absolute falsehood. His "Appeal to Caesar" is an attempted review and prophecy of the race question—a miserable contortion—a wretched plagiarism.

There is no danger of a Negro insurrection in the South, and Judge Tourgee knows it. Enlightened or not enlightened, the colored race has adjusted its relations as well as could be expected. They will live more tranquilly and prosper better under Democratic government than under Republican misrule. They have stood the test of scalawag instigators, and are not likely to write under barren idealists like Tourgee.

The *New York Tribune* has better given the South for voting for Cleveland. It never will. It has omitted no occasion to speak of disfranchisement and terrorism in this section. It begrudges the electoral representation which a Republican administration placed in the hands of the South, and it has bullied and badgered this people since the decisive victory of the Democracy. Tables are turned, and now the *Tribune* is published to show that the Republican majorities in the South have been reversed by fraud and intimidation.

We have no doubt that if the *New York Tribune* could disfranchise the colored vote in the South, it would do so. It would annihilate this political power by exterminating the colored element, and the best way to effect this result, the *Tribune* believes, is to incite an insurrection. The South is amply able to care for herself; her labor problem and her political differences will be settled in time, and the educational question is working itself out wisely and well. Her domestic peace will not be disturbed so long as no more serious destroying agencies than Judge Tourgee and the *New York Tribune* are present.

The *Peoples Advocate* describes a state of things among the colored people which is not likely to be changed for the worse under the incoming administration, while it is possible that the new forces which the next four years are to see at work, may gradually create juster conditions.

"The colored people of Washington; with its 60,000 population, must rely mainly on themselves, in the work of breaking down the obstacles to their progress."

Though under the shadow of the National Capitol, in a community very largely controlled by the thoughts and feelings of an office holding class, mostly republicans, they are the victims of the caste of race or color, as unmistakably as were the residents of Georgia or Texas. They are denied accommodations in the restaurants and dining saloons, and they are excluded from many of the ice cream saloons.

They are without representation in the large mercantile establishments, although their patronage must aggregate over a million of dollars every year to these same establishments. There is no paper, except the two edited by colored men, that dares to raise its voice unmistakably in denunciation of wrongs from the Negro sufferer, and in favor of that equal chance in the race of life, which the white American so eloquently contends should be the heritage of every oppressed people without our borders."

Dr. Daniel T. Nelson, Chicago, says: "I find it a pleasant and valuable remedy in indigestion, particularly in overworked men."

## SOUTHERN SKETCHES.

## Dick Parsons, The Black Slaveholder.

BY MRS. ORRA LANGHORNE.

Ever since I have lived in Lynchburg, I have been hearing accounts of a Negro man of the name of Dick Parsons, who was a famous character in ante-bellum days, and occupied a very different position in society here from that usually assigned to the Southern Negro. Dick, as I gathered from various sources, was free born, a magnificent looking specimen of humanity, "black but comely," a man of brains as well as muscle, who made quite a little fortune by boating on the river, invested his gains after the fashion of the average Virginian of his day, in land and slaves—was a man of excellent business standing, flourished for awhile, and when the evil hour came, went down in the revolution like others of the class with which he had allied himself, and when the rest of his race were rejoicing in freedom, he, like the "white folks" around him, was brought to ruin and his grey hairs went down in sorrow to the grave.

I had long been desirous to collect materials for a sketch of Dick Parsons from every available source, and had vainly tried to see some members of his family who were still living, but efforts have, until lately, been unsuccessful. Yesterday, as I was sitting alone in the counting-room at our little store, where I was installed by my husband, while he, and our small colored assistant, "Captain Swan," took a trip into town, a tall, sensible looking, elderly black man entered the room, and with an air of hesitation, asked for Mrs. Langhorne. When he learned that I was that personage, he learned that his name was Isaac Parsons, and that he was desired by a white gentleman in the country to come and see me. I was much pleased at meeting somebody at last who could satisfy my curiosity about the Negro slaveholder, and finding he was a nephew of the famous Dick Parsons, invited him to be seated, and asked him many questions about his uncle.

If I could tell the story in the words of my informant, I have no doubt it would be more interesting than in the form in which I am compelled to give it; but, as like most uneducated people, my visitor, being given to circumlocution and required much questioning to get at what he knew, I shall be obliged to condense the narrative somewhat, and give it in quite different shape, from that in which I received it.

## "OLD SETTLERS"

Isaac Parsons said his family, as far back as he knew them, had been free on the father's side. He did not know whether they had always been free, as has occasionally happened to Africans in America, but thought they had been set free some generations before him. He remembered that a long time ago it was a very common thing for "old settlers" to set their slaves free by will. This expression "old settlers" I find in frequent use here with the Negroes, and among other race or sex, just as the term "settled" refers to middle-aged men or women. "Unsettled," or "unsettling" might apply to young people, but I have not heard it used. Isaac Parsons' earliest memories took him back to a little log cabin in the Blue Ridge mountains, where the James is called North river, and breaks its way among mountains and valleys, affording exquisite views to the modern traveller who sees them from the trains on the Richmond and Allegheny railroad. My visitor had probably never thought of the beautiful scenery among the hills when he first saw the light, nearly sixty years ago. He remembered it as bleak and dreary. The land on which the cabin stood had belonged to his grandfather, and his earliest recollections were connected with the river and the boatmen taking their bateaux to the tide-water towns. Isaac's father had married a girl in the lowland country and taken her to the log hut in the mountains to keep house for him and his brothers. Isaac was the youngest of several boys, who all took to the river as naturally as water-fowl. In one of the trips, when he was but a few months old, his father was drowned, but this event made little change in the life of the family. His uncles and brothers kept on boating and his mother tended to the cows, pigs, and poultry, and cooking and washing for the boatmen when they were at home. There were distilleries all around them in his childhood when the boatmen would all come home, after a successful voyage, and have a grand carouse. They would give the children whisky, and if they objected to drinking it, in their rough mirth, would force them to

swallow a dram, thus early giving them habits which have done much harm in later life. Isaac had pleasant memories of a very different kind in seeing his brothers, when at home in the winter, attending school with the white children from among the hills and dales around them. Rockbridge County was then, as now, a centre of culture in Virginia. The famous blind preacher, Dr. Waddell, and Mr. Lyle, the ancestor of Dr. Ruffner, were then teaching in the "log colleges," which formed the nursery of learning in the wilderness, and were the foundation of "Washington and Lee University," especially cared for and encouraged by George Washington. In those early times, there were few slaves in Western Virginia, and the slave power which attained such evil eminence and met with such a fearful downfall had not made itself felt among the peaceful homesteads in the Blue Mountains.

The race prejudices it exists now, had not then possessed our people, and it was provided by law and generally thought proper that the children of free colored citizens should attend the nearest school with the other children of the district. These schools were usually taught by white teachers, but one in Rockbridge County was taught by a worthy colored man, and children of both races were instructed by him.

Isaac Parsons said his father and uncles had received some education, and his brothers had attended the neighborhood school as they grew older. His mother had begun to talk of sending him to school, when an untoward event produced a great commotion throughout the State. This was the war of "Nat Turner's War," which resulted in much hardship for the Negroes generally. Among other changes made in the laws at that time, was one forbidding colored children to be sent to the schools. Isaac had been born just in time to come under the ill effects of this change, so that he never went to school at all. He rejoices that his children have fallen under the times, and are learning in the public schools of the State.

## THE NEGRO BATEAUMAN.

Isaac said his Uncle Dick early began to show capacity for business, and though not the eldest son, was soon the leader among the family of boatmen. He became a very skillful trader, carrying wood, grain, and all sorts of country produce from the settlements among the mountains to the lowland towns, buying in return groceries and manufactured goods for the country folks. In the course of time he came to own several bateaux and gained the confidence of the farmers and merchants for whom he acted as agent, large and valuable cargoes being constantly entrusted to the brawny boatman, who fearlessly encountered the rapids of the swift and narrow river, on its course to the sea, and could not be outdone in shrewdness when brain instead of brawn was needed in the business.

The boatmen led a merry, roystering life. Their living cost little or nothing, as they found friends all along their route who were ready to furnish abundant good things in exchange for little favors done by the boat hands.

They were not over scrupulous in their ways, and when going into camp at night on some lonely spot, did not hesitate to knock a stray cat or pig in the head or rob an adjacent hen roost to help out their supper, feeling sure that the bateau would carry them far down the river before the farmer would discover his loss. Of course they were particular not to stop just at that point on their way up stream.

After awhile the bateaux were given up and the lumbering canal boat, with its team of plodding mules, took up their trade, the canal being completed about 1840. Dick Parsons was ready for the change, and taking for his partner, a white man named Swinney, who owned several slaves, he extended his business by degrees, purchasing several fine boats and being an important man on the canal.

## THE NEGRO PLANTER.

After a time he invested some of his earnings in a little farm near Lynchburg, and hired hands to work it, finding it convenient to have his home a more central point than the mountain hut on North river.

In those early days there was a steady emigration from Virginia to the "Western Reserve" of Ohio. There was always more or less agitation of the slavery question, and Lynchburg having been founded by Quakers who would not own slaves, the peaceful slaveholding neighbors, and preferred seeking "fresh fields and pastures new," to living in strife. The West was fast growing in wealth and importance, and glowing accounts came back to Virginia of the new commonwealth on the Ohio. Among those who decided to seek their fortunes in the Western Reserve was Swinney, the white partner of the Negro boatman.

## BUYING SLAVES.

In settling up the business, Swinney desired Dick Parsons to buy him a slave, Allick, who had long worked with the firm on the canal, and Allick and Dick knowing and liking each other well, the sale was made to the satisfaction of all parties. Isaac Parsons seemed to feel somewhat sensitive on the subject of his uncle's having been a slaveholder, and insisted that Dick would never have been a "Negro-trader," the character indispensable in every slaveholding community, but heartily despised by all classes. He declared that his uncle would never have bought slaves merely as an investment for money, but human chattels being as much merchandise in those times as any other articles of barter and sale, it was difficult to transact business without buying Negroes, and "Uncle Dick" purchased the man Allick just as he did his partner's share in the boats, with the other "good will and fixtures" of the trade.

Parsons had a great regard for Allick, and as his new investment was growing old and needed good care, the Negro master soon decided to leave him ashore, and put him on his farm where Allick was made manager. From time to time other slaves were bought, of course, merely in the way of business, and put under Allick's charge on the farm, where he had full authority in Dick's absence, and managed his affairs very faithfully and well, his master often promising to set him free when he died and assuring him that he should never want for comforts.

## BUYING A WIFE.

Among Dick's friends was a worthy old free colored man in Lynchburg named Cato. This man had married the slave woman of a white family in the town, who had a little girl, the child of a freed man, who had labored long and faithfully to earn money to buy his wife, which he at last succeeded in accomplishing. The child, however, remained a slave in her master's house, and good old Cato and his wife worked hard for the money for the purchase of the girl. Years went by, Cato and his wife were growing old, and found it difficult to support themselves and lay by money enough to pay for the child who was fast growing into womanhood, and her value constantly increasing to her master. The heart of the mother grew heavy as she realized that her child was a slave, and she thought of the many chances that might separate them forever, before she could earn money enough to secure her treasure which had value in eyes that did not look so tenderly on the girl as she did.

In their anxiety on the subject, old Cato and his wife at length determined to ask for aid from Dick Parsons, the Negro boatman, farmer, and slaveholder, who maintained popularity and business standing in the white community, and was the pride and envy of the black people, bond and free.

Dick sympathized with his friends in their desire to gain possession of the young girl, and readily consented to advance money necessary for her purchase, taking a mortgage upon the damsel herself until the funds were returned. The girl was now the property of her step-father, subject to the lien held by Dick Parsons. She was brisk and active, decidedly what was termed by the dealers "a good girl," and ere long found favor in the eyes of the money-lender, who proposed to take her for his wife, and though much older than the mortgaged chattel, he was greatly beloved by the whole family, and no opposition was made to his wishes. Old Cato dryly remarked, when his step-daughter left his house for that of her husband, that he "reckoned that money was paid now, and he need not trouble himself any more about it." The young girl, who had already had three masters, was now the slave of her husband, and her story sounds more like an Oriental tale than a sober business transaction in our land of modern improvements and enlightened ideas.

## LOSS OF SLAVES AND SIGHT.

A few years before the war began, some trouble with his eyes, which involved much suffering and useless expense, resulting at length in total blindness, made it necessary for Dick to leave the river and stay at home on his farm. He tried for a good while to keep up his business, but was so disabled by his malady that nothing prospered with him, and his affairs fell into confusion. The beginning of the war disturbed all interests of every kind, and changed all values in the South. Dick had gone in debt for his last boat, and as things grew worse with him he was compelled to give a mortgage on his farm. When the war closed and his slaves were free, almost blind and crippled by mismanagement, he was unable to attempt to run his business on the Canal. A disastrous flood, which almost destroyed the "big ditch," upset his last effort, and the death of his only son completed a sore list of disasters. The old man did not long survive the wreck of his fortune.

He was tenderly cared for in his declining years by his wife and one daughter, who survived him. It must have added to his grief, to realize as he could not help doing, that his family would be left in poverty. Since his death his affairs have been settled up and a small part of Dick's plantation set apart as the dower of his wife, who, though a slave and not legally married comes under the benefit of the United States law, provided to cover such cases.

Very many people along James river have vivid and kindly memories of Dick Parsons, the famous boatman, who so overcame adverse circumstances as to rise to the rank of a leader in his times, but unhappily failed to read the signs aright, and like other slaveholders, met the ruin which inevitably awaited those who persisted in sustaining a system wholly incompatible with modern civilization.

## ORIENTAL DISCIPLINE.

Many amusing stories are told to illustrate Dick Parsons' indomitable will, and the resolution with which he carried out his plans. Among them is an incident we culled from the gossips, that at one time finding his young wife somewhat rebellious, he sold her to a neighboring white planter, and sent her to her new master, without hesitation. In the course of a few weeks, his wife returned repentant and submissive, entreating her aristocratic lord to buy her back, declaring herself wretched and unused to her new life. Dick at once relented, received his spouse with much kindness, and promptly applied to his neighbor to let him re-purchase his wife, a request which was obligingly complied with. It somehow transpired afterward that the whole thing was a sham gotten up by the astute Dick to enforce obedience to his orders.

Possibly other husbands of the district may sometimes have wished for Dick Parsons' power in his household.

## A Christmas Tree in a Colored School.

To Hampton and Mr. Giles Cook's fine school, we owe the well educated faces of the colored public school in Harrisonburg. These excellent young women began their work in a missionary spirit, eager to benefit their race, and their kind and unselfish kindness shown by their teachers, grew fond of school and anxious to learn, first for their teacher's sake, then for the sake of knowledge, and the result was unexpected success.

Two years ago, they were given a handsome schoolhouse, by the town, and the pupils now number nearly two hundred. This year the teachers rewarded their praiseworthy behavior by a pretty Christmas tree, at the colored Methodist church, Dec. 25, 8 P. M.

A good many white people were present, and the room was crowded.

The entertainment opened by the scholars singing the 23rd Psalm in chorus. The Lord's prayer was then offered.

After a pretty card had been well sung, a pleasant looking boy made an opening address. This was followed by several poems relating to Christmas. The grateful scholars had taken of their small means and with the help of parents and friends, all contributed to getting a pretty and useful gift for their teachers to show their gratitude to the faithful friends who were doing such a noble work among them, making school and learning seem attractive and doing all in their power to fit them to become useful, God-fearing men and women. These gifts were presented during the evening and the teachers were much gratified. After these were given and received with suitable remarks there was more music, and nine little girls appropriately dressed and bearing banners with their names painted on them, presented the "fruits of the spirit," Love, Joy, etc.

Each said a poem relating to them and it was very pretty indeed. Quite a number of pieces, interspersed with lovely or tender Christmas carols, followed.

A little time was left for speeches and two good addresses were made.

While the carol that followed was sung, the candles of the tree were lighted.

Each parent sent some little gift and the gifts and a table below was loaded.

Most of the children had never seen a Christmas tree and none such a one as this. The carol ended, the gifts were distributed. Each child had something beside a bag of candy and all were more than satisfied. The evening closed with another song and the happy scholars flocked out into the night richer than when they entered, for their teachers and better than the songs they had sung "of Jesus and his love," for there is no surer way to reach a child's heart than by happy music. H. D.

---

BY A. E. K.

In the winter of '82, there came to us a boy from Zululand. His own story was, that he had come to England in the same steamer as the mother of the Prince of Imperialism on her return from the visit to the plice of her son's death. He had come first to London to teach the Zulu language to the sons of a gentleman, who did business in the Cape Town. From there he had come to America, and, joined one of its great shows, as he said, and went with horse and show different to Zulu dance." He had grown weary of this life. "It was hard work to travel with show," he said. "Going change all about, I was sick running with horse. I did

## Letters From Hampton Graduates.

POLITICAL EXCITEMENT. BRIBERY AND INCENDIARISM. THE EBENEZER EDUCATIONAL SOCIETY'S SCHOOL. A SCHOOL TEACHER, NOT A SCHOOL KEEPER. TEACHER AND PASTOR. IN WANT OF A COMMENTARY. HOW THEY KEPT CHRISTMAS. "GOD BLESS DEM! DEY HAIN'T FORGOT US." FROM A POSTMASTER.

## POLITICAL EXCITEMENT.

Some of the inevitable attendants of an exciting political campaign in an ignorant community are thus impartially described by one of our most intelligent and experienced workers, who sees that the greatest danger before his people is not bulldozing, but bribery and evildoing leading them to excesses, the only safe-guard against which, to them and to the country, being their education. Our correspondent writes:

"Politics has caused great consternation among property owners. Within two weeks after the election, many thousands of dollars worth was buried in this section. At last our turn came! a block, burned. So it has happened! all along this line. There was a \$300,000 fire at ——— the week before. All is attributed to politics.

I am a little afraid my people won't work well under Mr. Cleveland. They don't like the idea of a Democratic President. The white people do not give expression to their thoughts as to these fires, but from what I can learn, they think that incendiaries are going from place to place. In my opinion, they are right among them, in the shape of some of our colored brethren. I have charity for my people, yet I know them so well, I am among them every day. I do not suppose any one will know just who the incendiaries are. We have had a police force of fifty during these exciting times. For myself and friends, I have no anxiety. No one wants to burn colored people out. I could not vote in this election, (not being a resident long) but I did what I could that advantage should not be taken of the ignorance of my people whose gratitude is the only pay I want. After repeated attempts to silence me, one colored man came to me with two hundred dollars of Democratic money, and offered it to me if I would have nothing more to say. Of course I refused it, and was the cause of the same man's defeat by another colored man, for the office of ———. The man who was defeated is a member of my school board. If I regarded the source of my income, I should not have done it, but money is nothing when it comes to right. Well, the board as a whole thinks no worse of me, and I am not mistaken, the people think better. My school opened with a full attendance which grows larger every day. That is the only sign of its worth that I desire from the people. It is a wonder that we start out so well, considering the warfare I have gone through. My wife is well, and my home is pleasant. I do not get home till late every day, but then it is quiet when there.

## THE EBENEZER EDUCATIONAL SOCIETY'S SCHOOL.

A very praiseworthy and successful effort of one colored community to solve their educational problem, showing their appreciation of the situation, and what can be done by those who do appreciate it, is described by one of our faithful graduate teachers.

—S. C. Dec. 19th, 1884.

Dear Miss C. — As it is probable that you have never heard from this long neglected part of the country, I expect I shall be somewhat lengthy in my description.

I have taught here ever since '79 and all of my terms last eight months; of course the county does not allow that much free school as it is commonly called, but when the county school is over, we have what is called "The Society's School," for there is a Society called the Ebenezer Educational Society, and when it runs the school it is the same as free.

The male members pay 20 cents per month and the females 10 cents all the year, and there are so many members that we are enabled to run the school three or four months per year. I have been President for two years.

We have a County Teachers' Association which convenes twice per year and I have been President of that for two years.

I have five pupils teaching, two with third grade and three with second; they have never been anywhere except to "the old fied school."

My patrons declare that when I am tired of teaching I must secure them a teacher from Hampton in my stead.

I have the largest school in the county. My averages are from 75 to 100. I generally have an assistant.

My commissioner and trustees seem very well pleased with my system of teaching and I teach as near like I was taught as possible.

At first my "object teaching" met with a great deal of remonstrance, but I persevered, and now nearly all of the teachers pursue the same course.

The morality of my people can not easily be excelled, nearly all of whom are religious or of a strictly moral class.

Financially they are just about the average, though there are some who own their own land and stock; they are prospering, but the larger part can scarcely hold their own.

Politically there is somewhat of a division owing to the hard times they have endured at the hands of the K. K. K's and "Red Shirts."

Domestically they are a little above the average.

The cry of "Cotton is King" has thrown them back somewhat, but after all we are progressing.

Would like to hear from you again. All is more prompt about replying.

Yours truly, J.

## A SCHOOL TEACHER, NOT A SCHOOL KEEPER.

A faithful young woman, who has the right idea of teaching and is carrying it out, writes of her work as follows:

—Va. Oct. 20th, 1884.

Dear Miss C. — On the 4th inst. while on my way to take the train for ——— where I am now teaching, I received your kind letter. I was glad to hear from you, and ready to grieve with you when you mentioned the death of Miss Longstreth and the resignation of Gen. Marshall.

My delay in writing to you before now has been because I did not know until yesterday where I should board.

My examination was rigid, though oral, even to arithmetic, but I got a first grade certificate; my average was eighty on the scale of one hundred.

I opened my school on the 13th with eight scholars, and have had a daily increase of three ever since. My school-room is a very nice one and is large enough to seat forty pupils. I have a large black-board, a nice stove, every seat has a desk, and the school-room is comfortable and have a great many necessities that I have not time to mention. Teaching school is more than a notion; and I want to teach school and not just keep one. My children are fond of reading, therefore I am trying to have a reading-room in my school. I have just written to Miss T. to help me out in furnishing my children with reading matter.

I am working for the Master and the uplifting of my race, therefore I ask your prayers for my success.

I am truly yours, F. B.

## TEACHER AND PASTOR. IN WANT OF A COMMENTARY.

One of Hampton's earliest graduates who has well illustrated its training of head, hand and heart, by very successful, excellent work as a teacher, a carpenter, and now as a pastor, writes thus of his present work and needs:

—Miss A. C. — N. Y. Oct. 6th, 1884.

Miss A. C., dear friend! — It seems strange to me that I am now up here in New York and not teaching. I came here with my family on the 25th of April, to take charge of the A. M. E. Church, in this place, and therefore I am not teaching "young ideas to shoot," but old ones to come up to the mark of the higher calling, which is in Christ Jesus. My success in this last calling is for me only to see in part. The temporal part of my work has been as successful as I could wish. I don't think I have any reason to be discouraged about the spiritual success.

The seeds have been sown and I trust some have fallen on good ground, and will bring forth fruit to the honor and to the glory of God.

I find that the demand for sufficient workers in this field is as great as it is in the other (teaching), but the pay is not so great, financially speaking. I suppose you would be glad to know the rest of my observation in relation to the colored people in the Middle States, so far as I have been. I have not enjoyed the change of location as much as I expected, being disappointed in not finding the colored people in better circumstances here than those I left in Virginia and North Carolina.

Progress among them has been very slow and the prospects for the future are not very encouraging. My advice to the colored people is, "Go South!"

As a new beginner in the ministerial field I find the need of books a great disadvantage. Commentaries on the different books of the Bible is my greatest need just now in the book line.

If the friends of Hampton who have ministerial books which they could dispose of, would send such to some one then to be sent to young ministers, they would supply a great need both to minister and people. The people are in want of light on the Scriptures, so they may see it bearing upon them every day.

Such they must receive from the ministry as a general thing. In the country places and small towns such light is most needed. Those ministers who are sent to such places do not receive salaries sufficient to give them a decent living, and of course they are unable to purchase such books as they really need and ought to have.

Sincerely yours, L. B. L.

## HOW THEY KEPT CHRISTMAS.

Things move rather slowly down South, and letters of acknowledgement of the Christmas boxes, sent by Northern friends to some of our graduates' little schools, will doubtless be coming in for some weeks yet. The following are two that have been recently received.

—Va. Dec. 30th, 1884.

Dear Miss C. — Your cards and the package came in due time. Please accept my sincere thanks for the nice little things you sent my children. They were delighted with everything. The tree was very pretty, and the children had a real good time. We tried to make them understand the meaning of the happy time. We had a few appropriate pieces spoken by the children also singing. I must say the children have had a real happy time here this Christmas. The different Sunday schools gave trees to their children. They were very happy, and had a good time looking at the children enjoying themselves. It was given at the Second Baptist Church. The children received very nice presents. The Misses I took an active part in it. I am quite sure we have all had a nice time, and will enter our different school rooms to-morrow, feeling much encouraged and more determined in our future work. I will write you during the term concerning my work. The Misses I, Mr. Y., and myself all teach together. Three other teachers in the building — Miss C. Mr. G., and my brother Lorenzo, are teaching together. (All Hampton graduates.) We all met together every Friday night, and have a little school. We have taken up a regular course of study. All seem to enjoy it. We feel that it will help us in the future. I hope you may excuse my poor note. I will try to do better in the future.

With my sincere wishes that you may have a happy new year, I am respectfully Yours, J. L. D.

## "GOD BLESS DEM! DEY HAIN'T FORGOT US."

Dear Friend: — Your letter and package were received, also the books sent by Mr. B. of Brooklyn, N. Y. We had our tree in the Church, and a large crowd assembled to see the tree, and our exercises. Many of them had never seen a Christmas tree. I gave them a talk from the 2d Chapter of Luke, and explained how the holidays should be observed. All listened with great attention. The presents were then distributed to the children. All were made to feel happy. I told them that the presents were sent by Northern ladies and gentlemen. I could hear the old people saying: "God bless dem! dey hain't forgot us." De Lord put it in dar hearts to help our children.

Our tree was quite a success, and we are very thankful to you and Mr. B. for your generosity. I close with kindest regard and best wishes for the new year.

Yours truly, F. L. H.

P. S. — I have written to Mr. B.

## FROM A POSTMASTER.

It would perhaps surprise some of our Northern readers to know how seldom we receive any complaint in regard to the treatment of our teachers by their white neighbors. On the contrary, we are glad to say, such testimony as is contained in our "postmaster's" letter, is frequent.

—Oct. 17th, 1884.

Miss C. — My very kind friend: This morning's mail brought me, I think, the second or third communication from you, and while it is true that I have not responded to either of them, it is certainly not true that I am in the least indifferent in regard to the interest that you have so manifestly exhibited toward me as a graduate of the Hampton Normal and Agricultural Institute, and while I am tudy in expressing to you my gratitude for the interest thus manifested, I sincerely hope you will pardon me for my just conduct and expect more of me in the future. I am not teaching now, and have not taught since 1881, in which year, on the 14th of the present month, I was commissioned and took charge of the Post-office at this place, which I have held ever since. I have the credit of having conducted the best office that the people of E. have had in twenty-five years, and this in face of the fact that all my predecessors were men of education, experience, and good business men of the white race. I am the first and only colored man who has held the position of P. M. in this, the oldest and most aristocratic town in North Carolina. I don't like the work quite as well as I do teaching; yet, I continue it because it is more profitable than teaching, therefore it is that I am not engaged in the work for which I was prepared while at Hampton. I get on with the white people here splendidly; in fact, they are among my best friends, and have done more to encourage me than my colored friends have done. I used to take an active part in Sunday Schools, temperance talks, lectures, etc., but don't spend much time toward them since I left off teaching; this is not from choice or inclination, but I may almost truthfully say, compulsion, or necessity. This fact I regret exceedingly much, but is the result of circumstances which I am unable to influence or avert. Our people, I am sorry to say, in my community, do not encourage education, nor educated people, and as illiteracy is predominant, the few people who are prepared to instruct and give information, are compelled to take the back seats and be governed and controlled by a class of worthless people who, unfortunately, are in the majority. I can no better convey the true idea of the situation than by the use of an old but true saying, viz: "Where ignorance is bliss 'tis folly to be wise." I am glad however, to be able to say that this situation is not general in North Carolina, but is only confined to certain localities. The better elements in our community are a clever, sober and industrious people. The great need is a better system of education than what we have, which only furnishes from one to five months schooling in the year, in each county, with such instructors as are available, many of whom are utterly incompetent as teachers, and would best fill the place of pupils.

Well, Miss C. — I have said a very small part of what I would like to, but my time for writing is greatly limited. I have to write a few words or sentences and then wait on some one calling for mail.

Please believe me to be your true friend and servant,

G. W. L.

## Horsford's Acid Phosphate.

## UNANIMOUS APPROVAL OF MEDICAL STAFF.

Dr. T. G. Comstock, Physician at Good Samaritan Hospital, St. Louis, Mo., says: "For years we have used it in this hospital, in dyspepsia and nervous disease, and as a drink during the decline and in the convalescence of lingering fevers." It has the unanimous approval of our medical staff.

## DENTISTRY.

Hampton, Va., Oct. 1884.

Dr. T. H. Farramore begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton, Office on King St., opposite Barnes Hotel.

## Southern Workman.

### Indian Department.

WM. C. GASMANN.

The Senate Committee on Indian Affairs has begun an investigation of leases of Indian lands by cattle companies. Large tracts in Indian Territory and on the Crow reservation in Montana have been illegally leased, for merely nominal compensation. Another chapter in the history of injustice done the Indian!

A citizen of the Indian Territory wants the lands divided pro rata, and government of the new State provided for by taxation:

"Make the title," he says, "to each individual in fee simple, with permission to dispose of all over 160 acres, if he sees fit; 160 acres to be inalienable for twenty or twenty-five years. The older Indians will then be, in most instances, passed away, and the growing generation will come into their property, and will be unable to compete with their white neighbors. \* \* \* We have no protection against intruders, \* \* \* give us the title to our lands, and then we have the right to eject these tramps and squatters by law."

I never saw age retire more gracefully than the other day, when one of the Kiowa chiefs, who had come to Washington to redress his people's wrongs, was confronted here by some "advanced" doctrines of Indian civilization:

"I am an old man," he said, "and I haven't much learning. I am not standing where I can speak about these things. Let my children go among the white men and learn to speak English, and look at the white men's ways, and then let them decide."

He, at first, opposed the holding of land in severalty, but after listening to the stock arguments, solemnly shook his impressive old head with its barbaric silver ornaments, and said only, "Let my children decide."

Equally touching, is a letter written by four of the middle-aged men at Lower Brule Agency, D. T., to one of our students here:

MY FRIEND:—To-day we are going to write you this letter. Four of us suggest some subjects, and ask you to help us about it. My friend, will you please tell me of the things you have learned; and I think by your doing that way I might learn something. I have been in the darkness during these years past. My friend, I often thought about this; what shall I do in order to gain the light? Therefore, this is the reason I am asking you some questions in much earnestness. Because we have heard that you are counted with the thinking men. Now my friend, I urge you to learn more and know something of this world. I am now anxious to have you give me something out of your own thought. Perhaps I cannot stand all of it, but I want you to know now that I am thinking of these things.

A resume of Superintendent Harworth's Report on Indian Schools is crowded out.

There was a fire last month at the Forest Grove (Oregon) school, and the Girls' Building was burned to the ground. Much property was saved by the exertions of the Indian girls and boys, who are commended for their "pluck" and coolness throughout the affair. Rain was falling at the time, which helped largely toward saving the other buildings.

### THE NEED OF PUBLIC SENTIMENT.

By a curious wording in the last annual Appropriation Bill, Indians sent to the government schools at Carlisle, Pa., Lawrence, Kansas, and Genoa, Nebraska, are designated as *scholars*, but those sent to Hampton, Va., Lincoln, Pa., Philadelphia, and other private schools, are called *children*. The Treasury officers have decided that "children" mean those under twenty-one years of age, while "scholars" may mean those of any age; hence, all Indians of age at Lincoln, Hampton, and other private institutions, after November 1st, 1884, receive no Government aid whatever; those at the other schools are all right. We do not know the state of things at the Lincoln, but twenty-four of the best and most hopeful Hampton Indians are thrown upon the charity of the country or must be sent home unless provision shall be made for them. Among them are five out of seven married couples, who are a special feature of this school. Husbands and wives are taught to live in little houses just as they should at home. The married Indian girl has ten times the chance of the one who returns single. Our course being five or six years, half of those we graduate become of age before leaving.

There is, however, reason to believe that the next Appropriation Bill will correct this intentional discrimination and also provide for all those dropped this year.

But the Hampton School loses \$1,040 by an intentional discrimination of the House Committee on Appropriations, which voted for Hampton an allowance for 120 Indian children, at the rate of \$18.33 apiece; while the Lincoln and other private schools receive \$167.00 apiece. They also receive transportation for pupils for the entire year, while Hampton's allowance lasted but six months, making a discrimination against this school of about \$2000.00 which ought to be made good in the next Appropriation Bill. The motive of this action is doubtless the fact that private schools receive charitable aid. That is, the more they do for the Indian cause, the less they get from Government, which thus most unjustly taxes the generosity of the country. This is a shame! Carlisle, Lawrence, Genoa, and other Government schools receive \$175.00 for each Indian pupil, besides transportation, which should be allowed to all that do equally good work. These public schools are all needing and pleading for charity, for they all need it—they do not get enough from the Government. Captain Pratt is begging for \$20,000 for a farm which is indispensable.

Only by public sentiment can these things be righted. Secretary Teller has shown that the Government owes the Indians, for education, about four millions of dollars, a large part yet due them for sales of their lands to the Government, which is selling these very lands at a profit. Congress is not asked to give anything for Indian education, but to pay the nation's honest debts to them. Only as the people call on our Legislature to do their duty will they do it. Hence the importance of the INDIAN RIGHTS ASSOCIATIONS, and the WOMEN'S NATIONAL INDIAN ASSOCIATION.

### NOT ENOUGH OF A SACRIFICE.

In the *American Missionary* for December, we read a woman's enthusiastic story of her six years' work among Indian women and girls at Santee, Nebraska. Her day "begins at half-past five and ends at ten, often later." It is crowded with constant supervision of the girls in their work and play. "The every-day wants and decencies of life call for constant, systematic thought and labor. There are great difficulties to be overcome in the nature of the material itself."

Yet, Miss Webb is really happy in her work as well as in her success. "I often wonder," she says, "if there is something wrong about me or my field that I do not feel it to be more of a sacrifice."

### A GREAT SNOW.

We are having an alarming snow-storm here. It has been snowing almost continuously for a week, and is still pouring down and is about four feet deep. It is about two months earlier than our usual snows. Herds of cattle and horses are mostly out on the ranges, away from habitations, and it is starvation and death to all that cannot be got in where there is forage.—Letter from Agent Milroy, Fort Sincere, Wash. Ter.

### AN INDIAN LOVE STORY.

Helen Jackson's "*Ramona*" is a romance and a tragedy, but it is a tragedy of events rather than of the inward life. The scene is laid in the beautiful valleys and mountains of Southern California. The stage accessories and supernumeraries are all picturesque. The first third of the book is a delightful pastoral, told with great ease and charm; the dramatic character of the old Senora and the lesser one of the jealous maid Margarita, artfully relieving the softness of the chief portraits. We often feel impatience with the generous but weak Felipe, and of the two central figures—the Indian Alessandro, and Ramona, the foster-daughter of the proud Senora, ignorant of her Indian mother—we remember only that they are young and beautiful and in love.

There is much of what painters call "atmosphere" about these early chapters, with the free Arcadian life in an old Mexican-Spanish family, which they give so well; but when Ramona has accepted her lover's poverty and exile, and the life goes on in an Indian village, we feel that the sentiment is a trifle overstrained. Poverty is made almost too ingeniously picturesque in the tiny house of tule reeds, under the great fig tree; in the adobe hut, with fine deer-skin rugs on the earth floor, the cradle woven of fragrant willow twigs in its red manzanita frame; the Madonna on the wall, wreathed with vines, where the young wife "inconspicuously strikes the key notes of pleasure in the primitive harmonies of existence."

These Indians, among whom she lives, are a gentle, loving, pastoral people, good Catholics, and patient tillers of the soil, and they are dragged through a series of persecutions, without the shadow of justice or excuse. Nearly every American who comes in contact with them is brutal, sensual, or mercenary, from the Indian Agent, who complacently laments, in the face of a great wrong, that "I have no real power over my Indians, as I ought to have," to the ruffian who shoots Alessandro down on the mountain.

As a love story, "*Ramona*" is a success, except that it is a little over-weighted with misery. As a presentation of the Indian problem, it is inadequate. Alessandro is a soft, southern, Spanish nature, whose darkest element is a passionate melancholy. His father was a chief, a good and wise and religious man. He is well taught, accomplished, a gentleman. His story is one simply of love and misfortune; he is driven at last to insanity, and dies, leaving the great question exactly where he found it. Ramona, who is just a tender, womanly woman, gradually allows herself to be consoled by Felipe, a little to our disappointment. A bit from the delicious episode of the runaway lovers resting in the canon may serve to illustrate the best charm of the story.

"With the insight of a lover, added to the instinct of the Indian, Alessandro saw how, hour by hour, there grew in Ramona's eyes the wonted look of one at home; how she watched the shadows, and knew what they meant."

"If I lived here, the walls would be sun dials for us, would they not?" she said, in a tone of pleasure. "I see that

your tall yucca has gone in shadow sooner than yesterday."

And, "What millions of things grow here, Alessandro! I did not know there were so many. Have they all names? The nuns taught us some names, but they were hard, and I forgot them. We might name them for ourselves if we lived here. They would be our relations."

And, "For one year, I should lie and look up at the sky, my Alessandro, and do nothing else." It hardly seems as if it would be a sin to do nothing for a year, if one gazed steadily at the sky all the while.

And, "Now I know what it is I have always seen in your face, Alessandro. It is the look from the sky. One must be always serious and not unhappy, but never too glad, I think, when he lives with nothing between him and the sky, and the saints can see him every minute."

And, "I cannot believe that it is but two days I have lived in the air, Alessandro. This seems to me the first home I have ever had. Is it because I am an Indian, Alessandro, that it gives me such joy?"

It was strange how many more words Ramona spoke than Alessandro, yet how full she felt their intercourse to be. His silence was more than silent; it was taciturn. Yet she always felt herself answered. A monosyllable of Alessandro, nay, a look, told what other men took long sentences to say, and said less eloquently. After long thinking over this, she exclaimed, "You speak as the trees speak, and like the rock yonder, and the flowers, without saying anything!"

This delighted Alessandro's very heart. "And you, Majella," he exclaimed, "when you say that, you speak in the language of our people; you are as we are."

ACORN BREAD.—The Indians scattered along the foot-hills of the Sierra are a quiet, inoffensive people. They do not appear to be governed by any tribal laws, yet adhere to many of their old traditions. One or two men of superior ability and industry form a nucleus around which others less ambitious gather. Hence they fence with brush and logs a tract sufficient for their requirements of hay-making, pasturage, etc. Although they often indulge in the food of the civilized nations, the acorn is still a favorite article of diet in every well-regulated wigwam. The process of converting this bitter nut into bread is curious. Under the branches of a grand old pine I found them at work. They had shucked and ground in the usual manner a large mass of acorn meats. A number of circular vats had been hollowed out of the black soil, much in the shape of a punch-bowl. Into these was put the acorn pulp. At hand stood several large clothes-baskets filled with water, and into these they dropped hot stones, thus heating the water to the required temperature. Upon the mass of crushed bitterness they carefully ladled the hot water, making it about the color and consistency of cream. Not a speck appeared to mix. A buxom mahala stood by each vat, and with a small fir bough stirred the mass, skillfully removing any speck that floated upon the surface. The soil gradually absorbed the bitter waters, leaving a firm white substance, of which they made bread. I asked to taste it, at which they said something in their language, and all laughed. I asked a gain, and after more laughter I was banded a small particle on a fig-leaf, and found it sweet and palatable. They began to remove it, and so adroitly was this done that but a small portion adhered to the soil. They spread it upon rocks, and in a short time it was fit for use. This, I am told, they mix with water, pat it into thin cakes, and bake before the fire.—*San Francisco Chronicle*.

### Incidents of Indian Life at Hampton. Look out for stars!

It's a great mistake to be without one of the pretty badges given the English speaking boys and girls.

The Indian teachers met at table one night for a general discussion. "This isn't a tea, exactly," said one, "it's a pi!" Quoth a second, concisely, "Indian meal."

Some of the new bread trays carved by our Indians read thus—"Anpetuyohi aguyapi kin, anpetu kin de unqu miye." The usual petition from the Dakota prayer book.

Two of our Omaha girls are learning the organ under Mr. Hamilton's direction; an accomplishment which will be of great use to them in their mission work at home.

Miss Hemple, on her way to teach Indians in Santa Fe, New Mexico, gave a day to the study of methods and of the raw material at Hampton and was, apparently, favorably impressed by both.

One of the Natural History boys forgot, and asserted that a snake had no back bone. But his next neighbor patted him on the back with the encouraging remark "O, you're not civilized yet."

### THE INDIAN READING ROOM OPENED

When the folding doors were up and the book cases set in order in the little room at the Indian Cottage, we didn't wait to fill our shelves or complete our scheme of decoration, but gave the boys some good advice and welcomed them to their new privileges. Mr. Frissell, Mr. Gravatt and others were present at the "opening," which occurred at the time of the usual evening meeting, and in simple words explained to an attentive and seemingly interested crowd, our hope and purpose in giving them this opportunity. The Reading Room will be open four days in the week, between the hours of four and six o'clock.

### A NEW ORGANIZATION.

A "Town Meeting" has lately been organized among the Indian boys, to discuss matters of local interest and gain knowledge of the theory and practice of self-government. At the first meeting, the general nature and value of primary meetings was discussed, officers elected, and a warrant made out in proper form. The articles range all the way from a practical matter of tables for the Wigwam, to an inquiry by a committee into the recently agitated question of Government aid for Indians over age.

### HOW WE HAD A "GOOD TIME."

*Some of the Boys and Girls give their own accounts of the Christmas Festivities.*

DEAR FRIENDS:—I thought I will tell you what we do just before Christmas. Twelve of us we hang our stockings, and in morning we went in the room where we hang our stockings, but no stockings hang up, but it was in the other room and it was lock! And I think about half past seven, we get our stockings, and full of balls and whistles, and candy and cakes, and knives and paint-boxes, and books and some other things. And one thing more I want to say. Some teachers try to fool us, saying that an old man come down from the chimney, but we don't believe.—*One of the Small Boys.*

I am very glad I am going to say a few words about our first holiday. I took very interest in the procession, and Z— and I went over, and some colored children came over from Hampton and from the Butler School, and they marched round the school and we joined in with them, and all marched together to the Gymnasium, and the band played. We marched round and round, and then we all sang some Christmas

carols; then some colored men spoke, and also Gen. A—, and we had very nice time all day.—*One of the Girls.*

I will try to tell you something about the little Indian girls' Christmas dinner, which they never had by themselves before. This being their first, they were really proud of their Christmas dinner. First thing we did in the morning was to set the table, after having nice time over many pretty presents. Some of the little girls got some evergreens and hung them over the pictures, which made it look it very pretty indeed. The teacher was not very well so I helped her in getting the dinner ready. I suppose you would like to know where they had this dinner; in Winona Lodge, in their own dining room.

Now after we got through setting the table and everything looking very nice, some of the girls went to the Gymnasium to the exercises which were held there. Then they got all ready for dinner, looking very nice indeed. All had their new dresses on. The older girls had their Xmas dinner in Virginia Hall, where the boys got up their clubs and invited the girls. Well, the little girls said they want to see the big girls go to dinner first, and so that was it, and the boys came to go over with the girls. They thought it was lots of fun to see them go, and so it was, I must say. Then I told them to get in line; that I was going to ring the bell. And they all laughed, and said, "Where are the boys?" And so I said, "Never mind about boys." I told them they would look just as nice going with the girls as with the boys, and perhaps better too! So they all laughed and marched down to dinner. The teacher asked who liked turkey, and all said "I!" and they enjoyed their dinner so much. One of the girls passed her plate thrice for turkey. After dinner was over some of the girls stayed and helped put the dining room in order again.—*A Junior Girl.*

DEAR FRIENDS:—I am anxious to tell you something about our Christmas, but it is difficult for me in your language, but I will try to say a few words. We have had a very good time indeed. We were had three clubs in our dining room; we had some turkeys, young pigs, cakes, biscuit, and most everything; and in the evening we had games very nicely. And I hope you had good time also.—*One of the Boys.*

### HOW THE GIRLS HELPED.

One evening during holiday week was pleasantly filled by a students' entertainment class songs, recitations, etc., in which our Indian girls bore their part.

One young Omaha girl read a poem of Christmas in Virginia two centuries ago, with an Indian chief as a Christmas guest. Several of the girls sang a chorale and five of the smallest recited some verses, bearing large banners which formed the word "Peace" in gold letters on a white ground. They spoke quite clearly and without hesitation, and the effect was very pretty.

### A JOURNEY TO THE NORTH.

*An Indian's Impressions of Nature and Civilization.*

About a month ago General Armstrong went North with us to see some of our friends. There were in our party four colored men and two of us Indians.

We went first to New York, then to Brooklyn, where we spoke first, in one of the best churches of that city. The whole church was beautiful, and I thought even when we first started from Hampton that I had never seen such wonderful things before. The people filled almost the whole of the church. I was not nervous when I got up to speak, but I was only afraid that I might forget what I was going to say. First the colored men sang, then one of them spoke. Then it came my turn to speak. I was very glad when I finished speaking.

Afterwards we went to Utica, N. Y. We had a meeting there at 7 30 o'clock,

in the evening. We wanted to go to the Lunatic Asylum, which was about half a mile from the depot; so we went. When we went inside we saw the women first; they were very pitiful; I felt very sorry for them. As we were passing through the different departments we saw an old woman sitting in the corner. She scarcely noticed us, but as we drew near, she said, "Where did those crowd people come from?" It did not hurt our feelings very much, because we knew she did not know any; there were 600 in all, I think.

Then we went to Niagara Falls. When I used to hear about the "Falls" so much, I wanted to see them very much, and I saw them very unexpectedly; it was a very beautiful sight; the water falling over the rocks made it look very much like rain; the fall of the water over the rock was 300 feet. I saw a great many wonderful things, but I liked Niagara Falls the most.

In New York City at the menagerie we saw all the animals. I wondered how they could have captured all those lions and tigers and buffaloes. When I saw the buffaloes it made me feel very glad; it was like home to me to see them as I remembered how we used to eat them.

I saw so many good things—how the white men live, and how they do, that it helped me very much. I thank General Armstrong and his friends very much; for it was through him that I saw everything. We ought to thank both General Armstrong and his friends. He wants the Indians to live in the right way. It is the same as though a man was lost in a forest, and some one who knew the way was calling to him, so he could find his way out. He wants the children to be educated, and he does not want them to lose any time at all.

As soon as we know a little better, he wants us to go home and teach our people what we know, so we can help them, and I think that is a very good way; some of us think of doing that, but we are very slow in learning; the teachers are helping us very much too. This year I am going to try very hard, because it is my last year.

NOAH LA FLESCHÉ, Omaha.

### OUR WORLD.

*Work and Fun in the Geography Class.*

The Races.—They are five races, which are the white and yellow, and black and red and brown. The yellow race likes to eat rat, and the black race likes to eat man, and the white race likes to eat frog, and the red race likes to eat buffalo.

The Caucasian is the strongest in the world. The semi-civilized have their own civilization, but not like the white race.

The savage race kept their own ways, and they have had three occupations; they were hunted, fished and fought to the other people. They beat to o.

The white race have three occupations agriculture, manufacturing and commerce.

The white people they are civilized: they have everything, and go to school, too. They learn how to read and write so they can read newspaper.

The yellow people they half civilized, some of them know to read and write, and some know how to take care of themselves.

The red people they big savages; they don't know anything.

Divisions of Land and Water.—They are going to somewhere, they got two children, and they take long walk, and they are very glad they are going to see so many nice things.

They are going now, and they walking along, and first they see something, and they went up the hill, and they go down again, and those two little children they say, what is that? And they tell them it is called valley; and they see little creek, and this creek is called River; and they are going

again, and they see very nice land and flat, and those two little children, they don't know any nothing, and when they see something, they always ask him, and that man he always tell them, and they asked him what is that? Well, it is called plain; \* \* \* and they went up to the mountain, and they see very large water, and those two children they say, what is that? It's called ocean; and in the middle they see piece of land, and they are called Island.

The following is the uncorrected examination paper of one of the younger girls:

1. What is another word for weather?
1. Climate.
2. Where do we find the coldest climate?
2. In the two Frigid Zones.
3. Where the warmest?
3. In the Torrid Zone.
4. What are the belts of climate called?
4. Zones.
5. How many are there?
5. There are five belts of climate on the earth.
6. What does direction mean?
6. Which way.
7. Give one word meaning how far?
7. Distance.
8. As we go long distances in different directions, what changes do we find?
8. We find different climates and people, and vegetation, and languages, and different animals.
9. To what race do we all belong?
9. The human race.
10. How many classes belong to this race?
10. There are five large classes belonging to the human race.
11. Which are the first?
11. The white people are the strongest.
12. Which are next?
12. The Mongolians or yellows.
13. The next?
13. The Ethiopians or blacks.
14. Next?
14. The Americans or reds.
15. Tell me something of the white people.
15. The Caucasian is away ahead of all the other races—he thought more than any other race, he thought that somebody must made the earth, and if the white people did not find that out, nobody would never know it—it is God who made the world.

Here is what the smallest boy in the class wrote about the discovery of America:

First Columbus thought that the earth was round like a Ball, the people did not believe him, so he took three Ship and sail around the earth; he sail across Atlantic Ocean, and when he found the North America. He thought he found India, so he call them Indians. Columbus had a hard time crossing the Atlantic Ocean; the Indians did not know how to farm, and when the white men came they teach them how to farm; it is very good for the Indian.

Nearly every card in the Second Division was marked "Excellent" in Geography last month.

### Horsford's Acid Phosphate, FOR ALCOHOLISM.

Dr. C. S. Ellis, Wabash, Ind., says: "I prescribed it for a man who had used intoxicants to excess for fifteen years, but during the last two years has entirely abstained. He thinks the Acid Phosphate is of much benefit to him."

# Indians of New Mexico & Arizona Their Past and Present.

## GATHERED FROM INDIAN BUREAU REPORTS.

### MESCALERO APACHE.

1873.

At this date reservation has not been surveyed nor its boundaries indicated; there are no buildings nor accommodations of any kind, the people are savages, seemingly without any desire of civilization. While nominally at peace they are charged with frequent depredations.

S. B. BUSHNALL.

1874.

Reservation still undefined. No schools, no effort to teach the people agriculture, they subsist by hunting and on the Government. They feel that they have no permanent home and make but little progress in civilization.

W. D. CROTHERS.

1875.

Numerous charges made during the past year against these Indians, I believe to be false. As a result of the raids made upon them in retaliation by the settlers, they have suffered greatly. They feel that they have been wronged. Their efforts at farming are creditable, and as a school house has been built, I have some hope of a school.

W. D. CROTHERS.

1876.

The extension of their reservation (in 1875) has been of assistance, as it has given them plenty of hunting ground. Liquor is the chief trouble, next, I find the settlers on the reservation. There are still no buildings and no schools. Although warlike they are willing workers, and I believe have been grossly misrepresented. They are very independent and with proper treatment can be made self-supporting. I find great difficulty in enforcing the laws for their protection.

F. C. GODFREY.

1877.

School was opened on Jan. 1st, and has been very well attended, but will not be a success until we have a proper school building. The settlers on the reservation continue to make trouble, and nothing can be accomplished until either they or the agency be removed. Smallpox has raged and interfered with farm work. Stock raising would suit them better, and a small expenditure would make them self-supporting.

F. C. GODFREY.

1878.

Affairs so disturbed that little progress in any way can be reported. The Indians have been kept in a constant state of alarm by frequent raids, and everything has been broken up. The school exceeded my most sanguine expectation.

F. C. GODFREY.

1879.

I find these Indians lazy and thriftless. They do nothing at farming, for which the reservation is not suited, and at present could not be trusted with stock, as they would eat the cattle in spite of all that could be done.

S. A. RUSSELL.

1880.

On account of difficulties between the Indians and the military, nothing has been done this year. It is claimed that the former broke faith, and they have been treated with severity. It is true that they are troublesome, but there has been gradual improvement. They do not seem to care for school, though some do well, and we have a good school house.

S. A. RUSSELL.

1881.

This reservation includes the "garden spot" of New Mexico, good grass land, excellent water, fine timber, etc. The mountains are said to be rich in gold, silver and copper. But the settlers who own farms within its boundaries are a ceaseless source of trouble. The Indians are poor farmers. School is not a success on account of indifferent teachers, but can be made so. No missionary has ever been here. I have just organized an Indian police. The people seem willing as a rule to work, and should be furnished with employment.

W. N. LLEWELLYN.

1882.

Mescalero and Jicarilla Agencies were last year consolidated, a portion of their lands being conceded to the mining community. Indian police is a success. Sanitary condition of tribe fairly good. Good work has been done on the farm. I am glad to be able to say that the present district commander has given me his cordial co-operation, and I can see that it is all-important for the Indians that the military and the agent should be in accord. While this tribe has committed depredations, there is another side to the story; and till public sentiment shall range itself on the side of law and order, the Indians will have just ground, I fear, for their attempts at retaliation.

W. H. LLEWELLYN.

MESCALERO AND JICARILLA APACHES.

1883.

In accordance with the Executive order of 1882, the survey of the exterior lines of this reservation has been completed. I have had trouble in preventing the Indians from ejecting settlers from their lands, and hope this matter may be attended to.

They have made rapid progress in agriculture, but lack teams, etc. A Roman Catholic priest has visited the agency this year, being the only missionary who has ever been on the reservation. The day school has done creditable work, and the boarding school will soon be ready to accommodate 30 pupils. Supplies have been good but entirely insufficient. These Mescaleros are restless and turbulent, but the Indian police preserves good order among them.

W. H. H. LLEWELLYN.

JICARILLA SUB-AGENCY.

1883.

The last census shows 747 of this tribe. We trust that their removal (as above reported) will meet with success. As to agriculture, mission work, education, etc., there is simply nothing to be said, as there is no such work going on. Supplies are good but insufficient, and Indians have suffered much. For instance, no tenting has been supplied, and they have been obliged, with the thermometer at 35 degrees below zero, to live under piles of brush.

It is certainly wrong for a Government to pretend it is caring for a tribe of Indians under such conditions and then give strict instructions that they must stay in their reservation, because all their wants are there supplied by the Government.

FRANK W. REED.

MESCALERO AND JICARILLA AGENCY.

1884.

This being my fourth annual report, I can speak with exactness of the condition of these Indians. The Jicarilla Apaches who were removed here last year, are a restless, shiftless lot of people as a rule, confirmed drunkards, and I expect much trouble in bringing them to order, though I hope much from the example of the Mescaleros, who are a temperance people. The majority of the Jicarillas are, I believe, satisfied with the change, but say it is of no use for them to make permanent improvements, so long as their lands are not guaranteed them, and they can be removed at any time. The fact that this last removal is the fifth within fifteen years, naturally discourages them.

In agriculture they have been fairly successful, the Mescaleros cultivating 460 acres, and the Jicarillas 130 acres. The Indian police does effective and satisfactory work; indeed, little could be done without them; but their pay is too small. I am under obligations to the Indian Office and the Department for courteous treatment and prompt aid whenever it could be given. The supplies not being contracted for until late in July, owing to the failure of Congress to make appropriations, has made it very disagreeable to myself, the employees and the Indians. The latter were loud in their complaints.

W. H. H. LLEWELLYN.

ABIQUIU AGENCY.

1874.

A delegation of these Indians visited Washington last fall and were promised that they should be removed to their reservation in the spring; that they should have teachers, etc., and they are much dissatisfied that this has not been done. I respectfully urge that it be done in accordance with the treaty.

S. A. RUSSELL.

1875.

The Indians on this reservation, both Utes and Apaches, are still asking for the fulfillment of the promises made them in

Washington. The Utes have a country of their own; they are peaceable, quiet, not disposed to work, and not willing to have their children educated, but desiring fair treatment from the Government. The Jicarilla Apaches have no home, are restless, and less provident than the Utes, but no incentive to improvement has ever been placed before them. I hope that before another year has passed the Government will show its intention of dealing honestly with them.

S. A. RUSSELL.

1876.

There has been little change in the condition of these Indians. There has never been any effort made by Government to educate, Christianize or civilize them. They have not been treated fairly, and their moral condition is worse than it was a year ago.

S. A. RUSSELL.

1877.

There is little of interest to report. I can simply repeat statements made in former years.

S. A. RUSSELL.

1878.

Small pox has prevailed and the Indians have suffered for food and clothing. My hearty sympathy is with them. It is not their fault that they are not self-supporting. They have, through me, for almost four years been *living for a time*, and it has been *denied* them. Having sent in my resignation, I am free to say that while making no pretense of philanthropy, I had believed that I could do these Indians good. I had supposed that all reasonable efforts would be made to educate and Christianize them. It is needless to say that the conditions are such that I have been disappointed in my expectations.

S. A. RUSSELL.

1879.

The past year has been marked by no change. The wants of these Indians may be enumerated as follows:

1. They do not want to go to any distance from where they were born and their dead are buried.
2. They want farming land of their own.
3. They want schools for their children.

JAS. H. ROBERTS.

1880.

These Indians are very anxious for a reservation where they can make homes for themselves, and express a desire for schools also. Having no home, no work, no schools, no moral or religious training, it is remarkable that they desire to enter upon a different life. I trust that before another year they may be emancipated from these most unfortunate conditions.

JOSEPH B. HOLT.

1881.

This agency (the Abiquiu) has been changed to the Jicarilla Apache and the Indians have been promised a new reservation, to which I am told they will shortly be removed. If this had been done years ago they would probably now be self-supporting.

B. M. THOMAS.

1882.

As this is the first annual report made since these Indians were located on a reservation there is of course not much to be said. They have had no opportunity for education but desire it. They have had not the faintest chance for instruction in industry, but have been under the influence of the worst class of men. Still they are anxious to go to work, are not bad or dangerous, and with anything like proper encouragement would do well. A larger appropriation however is essential to this.

F. W. REED.

PUEBLO INDIAN AGENCY.

SANTA FE—1873.

When I assumed charge on July 1st, I called a meeting at Santa Fe of the governors of all the pueblos in order to learn from the Indians themselves their condition and wants. I have also visited 13 out of the 19 pueblos (villages), and believe that my statistics are approximately correct. By far the larger part of the land of this reservation is unproductive being either rocky or destitute of water. All the pueblos on the Rio Grande are independent and are but slightly affected by lack of rain. Those away from the river are very poor, and their condition is made worse by church taxation, and the oppressions of their Mexican neighbors. This latter is their greatest cause of complaint, for no justice can be had in the Mexican courts, and there will be no improvement until Congress interferes.

They are sober and industrious, but while nominally Roman Catholic, I believe that their ancient customs and superstitions have full sway. The Roman Catholic priests, however, have some influence, and use it constantly against the United States Government and its agents, keeping the people in ignorance and opposing efforts for their education. The remedy for this I believe to be the establishment of an industrial boarding school. (I give the plan in detail). This is entirely practicable, and would prove, I am sure, to be the most economical way to civilize and Christianize these people. Simple, industrious, and peaceable, they have made little trouble for the Government, and reserve, I think, special consideration. I would advise therefore, a special appropriation and submit a statement:

Surveying of lands	\$10,000
Civilization of Indians	25,000
Agricultural implements and cases of extreme need	10,000
	\$45,000

EDWIN C. LEWIS.

1874.

After carefully studying the history of these people and their present condition, I am convinced that they are but little advanced beyond the state in which they were found by their Spanish conquerors. Little attempt has been made by those who had the power to improve their condition, but I have no doubt as to the possibility of completely civilizing them. Their superiority, I believe, is due more to their pastoral life than to any difference of race.

Although there has been, during this year, much want, I have had few applications for help. I have united all the pueblos except Zuni, (which is too far away), and I would respectfully press upon the Government the necessity for protecting these people against the Mexicans. In the schools favorable advance has been made, but I am convinced that no permanent good will be done until a central training school is established. If the appropriation asked for in my last report is too large, I would suggest an annual expenditure of \$5,000 for this purpose. It is essential that the children should be kept constantly under the influence of the teachers and away from their own people. In closing, I would say that I believe the passage of an act of Congress, declaring these Indians to be citizens, would be most unfortunate, for if the protection of the Government be withdrawn they will be left at the mercy of Mexicans and others, and will soon be reduced to pauperism.

Having sent in my resignation, I trust it will be seen that these suggestions are disinterested.

EDWIN C. LEWIS.

1875.

These people are quite unable to protect themselves against designing men and deserve protection from the Government. It would be good policy to spend \$10,000 in agricultural implements, fruit trees, etc., for they are an agricultural people, and could be helped to complete independence. The schools are doing fairly well; the Girls Industrial school is a decided success; the obstacles are the small salaries paid, the opposition of the Roman Catholics, and the home influences on the children. I am convinced of the success of the peace policy. A good, honest business man, backed up by the Department, is as sure to succeed in the management of an agency, as he is to wish for such an increase of salary as will enable him to retire from his work, no worse off than when he accepted it.

B. M. THOMAS.

1876.

Each of the nineteen Pueblos has a grant of about four square leagues in extent, and most of it is as desirable as any in the Territory. But for the continual interposition of the agent, Mexican and American settlers would soon possess themselves of the whole of it. These Indians raise enough grain and vegetables for their own use, and often have a surplus.

The schools are not satisfactory for several reasons, the chief being the uncertainty of their being continued for more than a few months at a time, and the smallness of the salaries paid. A central training school is much to be desired. The Presbyterian Church has established a mission at the pueblo of Laguna, and the Indians are delighted. These Pueblo Indians are worthy of every effort that can be bestowed upon them.

B. M. THOMAS.

1877.

There are about 8,400 of the Pueblos in New Mexico, and 1,600 of the Moqui Pueblos in Arizona. They sustain themselves with but little aid from the Government, and

your cities whom you must shield by Christian sympathy and help, and gird for a purer and nobler life.

We remember that new paths of promise and power are opening before you, and voices you dare not disown call you to enter them. We know that in social life a kingdom waits for you, and it is not through indolence or selfishness or pleasure seeking you will win and wield the beautiful sceptre of American womanhood.

But far away from these things, near nobody's home, there are places in our land full of men and women growing hopeless, beaten back, in the bitter struggle against ignorance and poverty and sin.

The service is blessed to those who go to help them. Perhaps it will prove more blessed still to those who serve them, so far away they can receive no earthly reward, never see their faces as they kindly with grateful love, never watch their lives or hear their voices as they tell the sweet story of powers developed, characters strengthened, and souls saved.

#### A FAIR FOR HAMPTON.

The Hampton Club fair was held in an unoccupied store on Main St., the use of which was kindly given. It was prettily decorated, with the assistance of an artist, with red and white bunting, plants and flags. The front of the store was used as a salesroom, the rear as restaurant. In the latter, coffee, chocolate, rolls, ice-cream and cake were served on small tables. The work of the Hampton Club ladies was attractively displayed, and included the usual variety of articles. In these days of really arduous fancy work, one has reason on such an occasion to rejoice that the task which formerly filled the counters of fairs has been superseded by things better worth making and buying.

One counter was devoted to choice table linen and towels, which had been procured from New York, and were sold on commission. Small tables were used for the flowers, candy and toys. The unique feature of the fair was the display of articles, from Hampton, which excited much interest. They were arranged by themselves, on one of the long counters. The carving of book-racks and easels was beautifully done, and the perfection of this and all the Indian work illustrated the fact, told us by Gen. Armstrong, of the peculiar manual skill of the races.

The Indian paintings, done in most primitive fashion and with bold indifference to perspective and the coloring of nature, showed great force and spirit. Few lay horses possess such life as the blue ones of these pictures! The droll colored and Indian dolls, children and animals, were especially interesting. The pottery too, came in for its fair share of admiration, and altogether this table was the one at which customers lingered with most interest. Subscriptions to the Hampton paper were taken, and through this and the work of the students it was hoped to form an interest in the school, as well as to raise money. C. M.

#### Views of Leading Colored Men, on the Results of the Election.

FROM A SYMPOSIUM IN THE AFRICAN METHODIST-EPISCOPAL CHURCH REVIEW.

The panic of the ignorant masses of the colored people in prospect of a Democratic President, is by no means shared by the leading men. "The A. M. E. Church Review of Philadelphia, has done a good thing in massing the expressions of their sentiments as to the election. With varying views of the disastrous nature of the event, there are almost none who fail to see its possible advantages to their race. From the many papers, all interesting, some striking and eloquent, we extract a few representative passages.

#### VIEWS OF FREDERICK DOUGLASS.

"There is little to be said of the agency of the solid South in bringing about this result. It is made solid not by discussion and deliberate choice but by bullet and bludgeon, by midnight assault and assassination. There has been no election there since the inauguration of President Hayes. Here one hundred and fifty-three electoral votes were ready to be counted for Cleveland at any time after the day he was nominated."

The old war horse, as Douglass said of himself once at Hampton Institute, knows better the trumpet call to battle than the songs of peace. Yet he says:

"But I am not without hope even of the Democratic Party. Though it is by history and antecedents bitterly opposed to every measure of justice and equality urged in our favor, it is still composed of men—men with heads and hearts like other men. The world moves and the Democratic Party moves

with it. The Democratic Party may not be a good party, but it may be a wise party, and wisdom in statesmanship is sometimes safer than simple goodness."

PROF. W. S. SCARBOROUGH,  
of Wilberforce University.

"As for my part, the only ray of light I can discern lies in the supposed conservatism and independence of Governor Cleveland. If he will not permit himself to be swayed up by the party he represents, the Bourbon element is given to understand that his advice is not needed, and that he intends to co-operate with all law abiding citizens in seeing to it that no harm befalls any citizen, Negro or Caucasian, and that political rights of all are to be held sacred. I entertain some hope for the future."

HON. P. B. S. PINCHBACK,  
Collector of Customs at New Orleans.

"Aside from the legal aspect of the question, which I consider settled, there are other considerations which will induce the white people of the South to accept the citizenship of their colored brethren. It increases the political power of the South, and the race furnishes an army of laborers, producers and consumers worth hundreds of millions of dollars—constituting an element of wealth and strength too valuable to be ignored by either the local or national Democracy."

T. THOS. FORTUNE,

Editor of the New York Freeman.

"There can be no backward step. We must go forward. It is the decree of the Omnipotent. The Democratic Party of to-day is not what it was twenty-four years ago. The Democratic Party wants votes, wants all it can get. It will appeal to us for votes. It did appeal to us at the last National Convention. We have the ballot. In the last election the entire Presidential question turned upon two thousand votes in the State of New York. We have twenty thousand votes in that State alone. We have enough votes in New York, New Jersey and Connecticut, to decide the election either way. These are the pivotal states. The Democratic Party knows this. We know it. I shall be disappointed if the Democratic Party does not seek to conciliate us. Let us watch 'vents and shape our course in accordance with them."

WM. HANMIDAL THOMAS,  
of South Carolina.

"As President, his duties are constitutionally defined. The gravest injustice and the grossest crimes may be perpetrated upon them with impunity, and as the national Executive he has no power to interfere. Assurances therefore of executive protection for any class are imbecile utterances, and call up a smile of contempt—in this instance the proffer comes with ill grace. The President elect is *paraphrasing criminals*, and the chief beneficiary of the disfranchisement of a large body of his fellow citizens by his own party. These crimes against citizenship are the cause of disquietude on the part of colored men. The freedom do not believe in relegation to slavery possible. Free labor embodies all the practical advantages of slavery and is infinitely cheaper. In his present condition the Negro is the bulwark of misfortune and the foothold of empire. His standing as a political factor depends largely on his attitude as a citizen during the ensuing four years. The danger to be apprehended and guarded against is a hasty severance of his present political relations. Should he vindicate his manhood by sturdy political independence, he will win a substantial victory."

GEORGE T. DOWNING,  
of Newport, R. I.

"I would not be clasped with certain colored gentlemen who since the election have taken pains to publicly affirm their confidence in the President elect, who are now declaring that the South is happy and orderly, that the colored men's rights are there respected; still, in response to your query, I affirm the conviction that we will not regret the election of Cleveland."

Hate of the colored man had no deeper fixed place in the breast of Democrat, North or South, than in the breast of the Republican. As a rule, all manifestations, both favorable and unfavorable were prompted by policy. The old South is giving way to the new South that is opening its eyes to results of more liberal policies. The election of Cleveland will give strength to the new South."

REV. C. S. SMITH,

Secretary S. S. Union of A. M. E. Church.

"The Democratic Party may well be trusted; I may not trust it but I am willing to try it. I regard its coming into power with some degree of satisfaction. First, because I am anxious that the colored people

of the country shall speedily understand the true basis of their citizenship; and second that I may know if it is truly the purpose or disposition of any party in this country to stop me of my rights. Countless numbers have been instructed to believe that the continuance of their citizenship depended on the continuance of the Republican Party in power. Every colored man in this country who is a citizen is so for the very same reason that every white man is—because the constitution makes him so. To thoroughly understand this is necessary to our stability."

HON. PETER H. CLARK,  
of Cincinnati Ohio.

"For years we have been taught to believe that a majority of the white people of this country not only desire to deprive us of our political rights, but even to reduce us to slavery; that a minority, reinforced and kept in power by our votes, was the only bulwark between us and the deprivation of all rights. Mr. Frederick Douglass admirably summed it up in his famous sentence: 'The Republican Party is the sole plank to which we cling; all else is the wild and wasteful ocean.' This teaching chimes with the chief defect in the character of the colored American, which is an entire lack of faith in his fellow men, white or black. This paralyzes every effort public or private. Societies, churches, schools, all fall to pieces because the principle of coherence, mutual trust, is wanting. We shall learn that all the friends of the colored man are not in the Republican Party, nor all his enemies in the Democratic Party. . . . There is a baser and more ignorant class [of whites] the members of which no doubt, with the alarmed colored people, think that nothing but the retention of power by the Republican Party could prevent them from inflicting the outrages which their bitter prejudices suggested. They too will be disappointed."

WILLIAM STILL,

Author of "The Underground Railroad."

"The colored man has learned some wholesome lessons and is profiting thereby. He has at last been using less stock in politics and more in education and land. Upon the whole his prospects were never more favorable. The color line, if not broken entirely, will be very perceptibly diminished in the interest of content. The very gratifying fact is plainly to be seen that two distinct elements have arisen in the Democratic Party—one quite ready for the rights of colored men as far as the law has provided, though the other yet clings to the prejudices of the past."

REV. H. M. TURNER, D. D.,  
Bishop of A. M. E. Church.

"I believe the Negro will receive more personal kindness throughout the South than has been accorded to him since the war. The Southern whites are determined to make him feel that they are better friends than the Northern whites; therefore I look for a general reform in the treatment of the Negro South. I need not repeat my well known convictions as to the future of the race. I think our stay in this country is but temporary. No matter how much we are loved by the Negro but a great Christian nation upon the continent of Africa."

PROF. THOS. H. JACKSON, D. D.,  
of Wilberforce University.

"When it is seen that under a Democratic President, it will be, at least, no worse than under a Republican, and that the rights of citizenship will be at least as secure, all of our fears will be allayed and we shall settle down to do our work—viz., to educate morally and religiously and intellectually, and to get some of this world's goods by industry, thrift and economy. I believe the Democratic Party will seek more than ever to secure the vote of the colored man all over the country. I am not despondent, but hopeful for the future."

MRS. FRANCIS E. W. HARPER,  
of Philadelphia.

To some the aspect may look gloomy, but if we look beyond the present to the future of our race we have no right to despair. Hind slavery been abolished by the nation breaking off its sins by righteousness, and its iniquities by showing mercy to the poor, there would have been a moral adaptation in the country to the new conditions of freedom, but when it went down by a sudden wrench, it found master and slave facing a problem unparalleled in history. I know of no other country in which enslaved and freed were so physically different that the complexion of the one was a symbol of power and superiority, and that of the other an emblem of poverty, ignorance and social abasement. Man created free by politics alone—let the colored man abate some of his political zeal and do all he can to shame the nation into a

higher regard for human rights and human life. Let him expose to the gaze of Christendom the condition of Southern prisons and the treatment colored men receive in them. Let no Hamburg or Danville massacre pass without earnest indignation meetings and appeals to all that is highest and best in American civilization and Christianity. If for the next twenty years, the colored people take no feverish interest in the success or failure of either party, but will do all they can to build up an intelligent and virtuous manhood and a tender, strong and true womanhood, we can afford to wait for political strength while developing moral and spiritual power. We can better, if need be, postpone taking part in the next election than we can neglect attending to the best interests of the next generation. Power will gravitate into the strongest hands, be they white or black; and to strengthen our hands and base our race life on those divine certainties which are the only safe foundation for either individuals or nations, is of more vital importance to us than being the appendages of any political party."

Jessie P. Morgan.

Died, at Hampton Institute, December 11, 1884. For five years a faithful worker at the School as bookkeeper and cashier.

The first death in our corps of workers to occur at the School in the sixteen years of its progress, has taken from us one of the most faithful, most useful and most beloved of the number. We are glad to print the following tribute to her memory from our honored ex-Treasurer and constant friend, Gen. Marshall, whose words express what we all feel:

KENDAL GREEN, Weston, Mass.,  
January 22, 1885.

DEAR EDITORS:—I wish I were equal to the task of writing a fitting notice of our dear Jessie, that should be just without seeming to outsiders extravagant.

Jessie's rare loveliness of person attracted at once all who saw her. Her equally rare loveliness of character was known only to her intimate friends. Her utter unconsciousness of either was an added charm. Her retiring disposition and very humble estimate of herself prevented her being known and appreciated as she deserved. Conscientious, religious and affectionate in her nature, her prominent trait was an entire faithfulness and devotion to duty. Engaged in her work, she was unwilling to take the needed recreation urged upon her lest she should be neglecting some duty, and by self-indulgence setting a bad example to others, who were stronger. I have often begged her in vain to join in some excursion or to take the rest which her wearied and frail body required. Only an absolute command was effectual to keep her from her work at times when she was absolutely unfit for it; and she even then most reluctantly obeyed. She was not only always ready to perform promptly and accurately the duties of her position, but also to relieve me as far as possible of the pressure of my own; and my work during the last year at Hampton was materially lightened by her quiet but effectual help. By these qualities, and by her affectionate disposition as a member of our family, she greatly endeared herself to us both, and we mourn her loss as that of a loving and loved daughter. For three years she has been one to us, and we shall sadly miss her affectionate greeting when we visit Hampton. But she is at rest from her labors, and for her sake we must rejoice.

Yours faithfully,

J. F. B. MARSHALL.

#### Correspondence.

29 CHAMBERS ST., NEW YORK.  
January 22, 1885.

Editors Southern Workman:

I know your readers will be interested to learn that the presence of General Armstrong and his words in New York City is attracting more attention than perhaps ever before. Of the success of the meetings you will know later.

Yesterday I took the students, and White Ghost, into an engine house opposite my office, here, where they witnessed the rapid methods by which both men and horses respond to the sound of an alarm bell which indicates a fire.

We also went across the Brooklyn bridge, and examined the machinery which keeps the long cables between New York and Fulton in motion.

Afterward crossed the ferry, inspected Fulton market, and then visited the Stock Exchange and the Produce Exchange.

Items concerning the latter I enclose you, I enjoy the *Workman* in its new form very much. Yours truly,

CHAS. L. MEAD,  
(OVER.)

# Southern Workman.

VOL. XIV.

HAMPTON, VA., MARCH, 1885.

No. 3.

MRS ORRA LANGHORNE gives us an intelligent Southern woman's view of Mr. Cable's judgment of the Freedman's Case in Equity.

IN HIS SPEECH for the New South, Dr. Curry made hearty acknowledgment of the work and influence of Northern benevolence and missionary enterprise. Of Hampton Institute he said, among other pleasant things, "If I were in a Baptist, and not in a Congregational meeting, I should think it to be strictly in order and the highest consideration of duty, to raise twenty, or forty thousand dollars here to night for the endowment of Hampton." And of the *Southern Workman*, before quoting from one of its editorials: "I have a copy of the *Southern Workman*. I hope all take it, and do more than I do—pay for it: it is sent to me gratuitously." As might possibly be expected, the *Southern Workman* modestly approves these sentiments of the Doctor's and wishes his hopes might be realized.

A SOUTHERN CORRESPONDENT of the *Augusta Chronicle*, describing a visit to Atlanta University, to which the State of Georgia appropriates \$8,000 annually, says: "The capacity of the race for intellectual culture is here irresistibly demonstrated. Large classes in the elementary branches, Latin, Greek, geometry, algebra, physics, botany, science of government, history and Lieber's Civil Liberty, stood close and hard examination. The committee were urged to put questions without limit and often did so, with the unvarying result of correct answers. It was marvellous to see the difference in the grades of color, the lightest not surpassing the purest blooded blacks in any element of intelligent and correct scholarship. Not only were the oral examinations good, but the written examinations were admirable, well spelled and well expressed. The truth is that this university is a conclusive proof of the capacity of the colored people for advanced intellectual development."

DR. WILLIAM HAYES WARD, the accomplished oriental scholar and editor of the *New York Independent*, writes to that paper from Turkey: "It was a great pleasure to find everywhere I went the graduates of our American Robert College at Constantinople, all imbued with American ideas and masters of the English language. Those grand institutions, Robert College, Aintab College and Harput College, are the type of the position which American Protestantism is taking in that land. The time cannot be far off when the Turks will begin to accept Christianity, and when that time arrives I believe they will come in such great numbers as almost to overwhelm the churches. After all, the great strength of Protestantism in Turkey may come from the Turks. These views are in direct line with our own convictions and experience, that the best way to elevate a race is through trained preachers of its own blood. The graduates of Hampton and its kindred institutions are those who will carry the light of civilization and Christianity to their people, and the best help the white race can give is in training such teachers."

## The New South

Not the least of the evidences that there is a new South is the new spirit of hopefulness that prevails, the disposition to no longer regard the war as a date of death but of birth, a starting point toward better things. Not ten years ago, the caricature was hardly overdrawn that described a Southerner as saying of the full moon which a Northern visitor was admiring: "Oh, but you should have seen it before the war." Now, such men as Dr. Curry, agent of the Peabody fund, President Haygood, Mayor Carpenter of Charleston, George W. Cable, and other leaders of Southern thought and intelligence, not only accept the situation in advance of the masses in some of their positions, the logic of events is irresistible, and the wonderful growth of business and wealth in the South under the new regime of free labor, is making a new South in public sentiment as well as in material prosperity. The progressive North recognizes and rejoices in it; partisan prejudice and old-foggyism on both sides will be left behind together in the new era. Both facts are evidenced in the eloquent address of Dr. Curry, recently delivered by invitation before the New York Congregational Club and the hearty applause it called forth. A Southerner of the Southers in family, education and experience; officer in the Confederate army and member of the Confederate Congress; who better than he should know what the old South was, and whether it still lives? He says that "At Appomattox the old South perished," and that now in spirit as well as in fact "slavery, secession, exclusive State citizenship, primary allegiance to a State, are all gone." "The present feeling is one of cheer and hope, of absolute loyalty and friendship and good feeling." "I measure my worst liberally. The Negroes will now see that not simply the Republican party but both parties and all sections are their friends, pledged to their protection and freedom." "The South rejoices in the opportunity presented to her to show her love of country, her acceptance of all the legitimate results of the war, her assumption of all the obligations and responsibilities imposed by her relations of confidence and good will." "This is not all the extravagance of oratory or the voice of a single optimist. Dr. Curry looks squarely at the tremendous problem which is before the South, and the whole country, 'the most gigantic which civilization ever encountered: the imperilment of free republican institutions by the degradation of the franchise, demagoguery and corruption;' and 'the dense mass of Southern illiteracy—fifty-five per cent. of the colored population, and nearly fifty of the white.'" The new South rejoices in the removal of the "incubus of slavery." How will the new South rejoice, and the whole country with her, in the removal of this incubus of ignorance! But he calls attention also to the fact that since the war, in spite of having touched bottom to begin with, in poverty and bankruptcy, every Southern State has adopted a school system; that last year over sixteen million dollars were given by the Southern States to public education and distributed proportionately to the blacks as to the whites, though the whites pay eight-tenths of the school tax; that Charleston is to-day paying a larger per cent. of her property for public schools for

all classes than Boston is. The Senate of Alabama passed the other day a resolution that "the sense of this Senate, as reflecting the sentiments of the white people of Alabama, is most heartily in favor of the largest appropriations by the State compatible with existing financial conditions, for the support of our public schools; and especially and solemnly do we express the obligation and fixed purpose of the white people of Alabama to aid in the education of the colored children in our midst." In the growth of such popular sentiment as this in the South, and the response it shall meet in the North and at Washington, in private and public aid demanded by a general sense of the exigencies of national life, is the hope of the South, and of the whole country, which shares the common danger.

Dr. Curry is as thoroughly identified with the new South as he ever was with the old; "a minister also of the new dispensation," who has done as much as any one man to bring it about, and has the right to be its voice. Such voices from the New South are heard more and more over the din of party strife. All vital growth—from the growth of a flower to the growth of a child's mind, or the growth of a people in civilization—seems to advance by leaps; not that the growth itself has not been infinitesimally gradual, but that we are only impressed by it at intervals. While we have been lamenting over the winter, the snows have been melting, the buds have been growing, and lo! "the time of the singing of birds is come."

A MINISTER of the "old South" writes to the *Independent* deploring the ignorance prevailing outside the Southern States "in relation to the moral and religious culture of the Negroes during the period of their slavery." "It seems that almost impossible," he says, "for those who lived in the non-slaveholding States to believe it possible that slave-owners, who held Negroes as chattels, could feel any more concern about their religious condition than they did for their horses or other dumb driven cattle." This is itself, of course, a sweeping and exaggerated assertion, but the incredulity charged was at least natural as far as it existed. Outsiders are always the best judges of the logic of a situation, but the poorest of its practical complications. They cannot allow for the great unknown quantity of human inconsistency, which is often the saving factor in human nature. Men better than their creed are fortunately to be found everywhere. Where's the logic for the flowers on the cactus? But there they are without logic. And so, on the thorny, monstrous growth of slavery appeared many a blossom of human kindness and good intent, nourished by hidden juices from that most miraculous of laboratories, the human heart. Interesting statistics of the Southern missionary work among the slaves from 1810 to 1860, in which hundreds of thousands of dollars were expended, are given by the writer, who quotes Bishop McTear as stating that "The Northern membership of all the missionary societies and stations in all parts of the world did not equal the colored membership of Methodism in the Southern States at the beginning of the war." Doctor Edwards believes that "Multiplied thousands upon thousands of the sons of Ham will rise up in judg-

ment to bless the faithful men of the South for their long-continued labors in teaching the benighted Negroes the way of life." It is pleasant indeed to think that the thrilling refrain of the slave's song, "Ise gwine to tell God how you sarve me," will have some sound of blessing as well as of a curse in that day.

The series of articles by Professor Salisbury of the A. M. A. on the schools and methods of training now in operation in the South, are especially interesting on account of the suggestions made in regard to the teaching of industries. Authorities everywhere are coming to be of one mind in regard to the value of manual labor in schools; that is, it is almost universally acknowledged that some form of industrial training, some system by which the pupil may become grounded in one or another art or handicraft, is essential to a true education. And yet this argument leaves still a wide opportunity for difference of opinion as to the application of the principle, and these differences go deeper than the surface. Professor Salisbury has shown himself an able and careful observer, and the ground which he has covered includes most of the industrial systems now on trial in this country. His criticisms, therefore, deserve careful attention and a wide hearing, for their value is not confined to the South, although they are made specially with a view to the conditions there existing.

He has very little faith in the possibility of making manual labor classes do profitable work, and indeed considers it a mistake to make this an object. He believes that it should always be borne in mind that the work is first of all and above all educational; and that while it should of course be done always as economically as possible, its cost should be considered an entirely legitimate expense. For example, in speaking of school farms he says: "Student labor is too costly, simply as service. It must be thoroughly educational in order to be justified."

Schools which are, to any extent, dependent upon charity, must of necessity, be limited in their experimental work, and Professor Salisbury recognizes this fully in his suggestions, as his observations were made primarily with a view to the special conditions affecting the schools of the A. M. A. For such schools those industries which can be made, in some degree self-supporting, must, perforce, take precedence, and, especially in the case of the girls' industries, this makes it difficult to get the best results. Still, Professor Salisbury points with pardonable pride to the fact that in several of the A. M. A. schools, girls are being taught not only cooking, but housekeeping in its general details; that is, they are not merely doing the work of the institution, which, as a matter of fact, is rarely an educational process, but are being properly trained, on the cottage system, in what will most probably be their life work.

The suggestions which Professor Salisbury makes as to trades, etc., which may at present be taught in schools, are all thoroughly practical and helpful, and if his articles could be collected, and with some enlargement, published in pamphlet form, they would be welcomed with a larger appreciation than they have yet received.

### Conference of School Superintendents.

THE STATE CONFERENCE of County School Superintendents of Virginia was held in the Capitol at Richmond, from the tenth to the fourteenth of February. In the hall of the House of Delegates, where the ordinance of secession was passed, were gathered nearly one hundred southern men, representing Virginia's public free school system. The feature of the occasion was the marked earnestness of all to get information and to make every possible improvement.

State Superintendent R. R. Farr presided; he has shown great energy in the management of educational matters; to him is due the credit of these annual gatherings, which stimulate and improve all who attend.

A feature was an exhibition in the Senate Chamber of written papers of various kinds and of drawings, chiefly of maps, by children of both races, from nearly every county of the State, in which the colored children from Norfolk County did as well as any.

While the work was comparatively simple and crude, there were many signs of a spirit of enterprise; much may be hoped for from the common schools of Virginia under their earnest but ill paid superintendents, whose small salaries from \$300 to \$400, prevent the constant devotion to school work which is needed. For want of funds, the work of education in all the South is retarded at every point. Many speakers referred to the Blair bill in Congress as their great hope.

More profitable than anything else perhaps was the personal intercourse of educational workers from different parts of the State. A superintendent told us that in his county, while the colored population had a majority of three hundred, the whites had thirty-four schools, and the Negroes but nineteen; he was trying to amend matters but found great difficulty, chiefly from want of colored teachers; that the blacks preferred teachers of their own color who were good, but unless they were competent, they wished whites to teach them. He said that Negro teachers of the right kind would devote themselves to the homes of the people, teach in their Sunday schools, and exert an influence outside of their school houses, while whites, as a rule, taught only to make a living.

For the past ten years, the want in the South has been not so much school houses and salaries, such as they are, but men and women qualified to teach. Over fifty Hampton graduates were spoken for, for the next year; salaries from \$25 to \$50 per month. The supply will fall short of the demand.

Teachers are wanted who will not whine because the school house needs repairing, but who will put in window-glass themselves, make rough benches, patch up the house, and stir the people to help and do their share; not only men but women teachers have taken tools into their own hands to put some "ramshackle" old building in order, and their example as well as work has given them success and influence. Many kind words were spoken of those from Hampton.

The idea of the Union Government in conferring the ballot upon the ignorant millions of just emancipated Negroes, was, of course, as a military necessity, to clinch the decisions of the war by giving the freedman the only protection for his freedom, and by reconstructing Southern party majorities. The miseries and confusions which have inevitably, for both races, accompanied the execution of this heroic measure, have shaken the faith of some of its advocates. But the deeper purpose of that "divinity which shapes our ends, rough hew them as we may," is becoming, and we believe will become, more and more apparent to all; a purpose of good to both races in combining all classes in one, as no other motive could have combined them, to demand and labor for the education and eleva-

tion of the other, as the only protection against, not only ignorant black votes, but white demoralization of the ballot, which is as certain death to republican institutions.

Rev. G. D. Pike, D.D.

The death of Dr. Pike has called from his arduous earthly labors one of the most earnest and untiring friends of the colored race. His enthusiastic work with the Jubilee Singers of Fiske, whom he directed in their European tour, is well known on both sides of the Atlantic. In his eighteen years' service as Agent of the American Missionary Association he spent the strength of his days for the advancement of humanity and the spread of Christ's kingdom, in labors which may well "suit the full grown energies of heaven."

A touching incident of the recent Northern trip of the Hampton party of singers and speakers was their providential presence in Hartford at the time of Dr. Pike's funeral, and their participation in the services; the quartette singing, "Swing Low Sweet Chariot," and one of their number, as one of the pall bearers, assisting in the last offices of respect to him who had identified himself with the cause of their people.

Caroline Alfred.

News comes to us of the death on February 9th, at Birmingham, Ct., of Miss Caroline Alfred, who for the two years previous to this, was one of the Hampton teachers, sharing with all her earnest nature in our work, and filling a large place in the esteem and love of those with whom and for whom she labored. For her own sake, we can but rejoice with our sister in her release, long waited for, from surely fatal and agonizing disease. It is a comfort to know that the dark way was smoothed, as far as possible, by the ministries of love and skill; a greater still to think of her in the rest and joy that remaineth.

Here was one of the strong and gentle natures that quietly make themselves felt. With a cultivated mind, an enthusiasm for nature, an artistic skill to copy the glowing beauty of the flowers whose ways she knew and loved so well, she gave the best of her life to arduous work for the lowly. She was one of the pioneer teachers of the freedmen who went South even before the close of the war; sharing with other delicate and "honorable women not a few," the hardships, toil, contumely, and even personal dangers, of that Christlike mission; sharing also the cream of its rewards, which was theirs in rich experience, fresh enthusiasm, and the uplift of heroic devotion. For ten years she taught in Columbus, Ga., under the New England Freedmen's Aid Society. Strength failing at last, she went West to recruit, and had been living for some years in California, before she came to us. Her two years at Hampton were the last two of her life work. The shadow of fatal disease was gathering about her, the conditions of the work had changed; she missed the old incitements and the strength which had responded to them. But with no less heroism she labored on, faithful to every duty, ready with a helpful smile or word or act of kindness for every one; bravely cheerful till the day when she slipped away from us, shrinking from the good byes which she knew must be final until she,

"in some brighter clime,  
Bids us good morning."

Our abstracts of Indian bureau reports this month—in rather different shape from former numbers but quite as interesting—are by Miss Alice C. Fletcher, whose great work for the Omahas has been crowned with success in securing for them lands in severalty. Our other new contributor, Mrs. A. S. Quinton, gives the history of the Women's National Indian Association, of which she is Secretary.

### QUESTIONS AND SUGGESTIONS

#### Civilization vs. Nature.

"Is the effect of civilization and education to destroy native race powers and instincts?"—*Visitor.*

We take it that the question is not of general principles, which may be regarded as having been already settled by longer and broader observation than any one field affords; but simply as to the degree and direction of change, if any, which may be seen taking place under our eyes at Hampton.

Is the Ethiopian not only changing his intellectual skin and the savage the leopard spots of the wilderness, but are they losing some strength as well as gaining some?

On general principles again, an affirmative answer might be anticipated. And even in the three or four years course of the individual pupil, and still more in the six or sixteen years of our observing the races under training, some such indications are not wanting. In the case of the Indian, the caution and reticence, for instance, so general and marked in the new comers, and conceded characteristics of their race, diminish in three years very noticeably. Not simply with acquaintances, but with strangers, they grow much more spontaneous and demonstrative, in face and voice as well as in manner. A loss, thus far, indeed, to only a very desirable extent, of some of that power of self-containment which is perhaps the strongest point in Indian character. It is remarked that there are no such good Indian painters on pottery of late—taking the same tribes and ages—where there were among the first comers. How far this implies actual loss of artistic talent, and further lack of keenness of observation and perceptive powers, is not certain. An artist who came from Boston to Hampton to study the subject, giving her services as their drawing teacher last summer, was greatly impressed with their capacity for training. But in their native work they seem to have fallen off both in skill and originality.

The educated colored man undoubtedly loses a measure of that buoyant cheerfulness which so long kept his burdened race from sinking down. Some of his hopefulness, some of his faith go with it. The new demand upon his reasoning faculties and independent action diverts his vital force from the old channels for the present.

Stir comes with manhood, and waking with day. And whether or no the Indian artist's hand is losing its cunning, the Negro's useful tongue seems disposed to cleave to the roof of his mouth, the more it is trained to English as spoken by his brothers in white. Partly from the sobering of his mind, partly from shame of the musical old dialect, he does not sing spontaneously on the school grounds as much as he used to when fresher from the cotton fields and camp meetings. The vocal powers may be as good as ever, but the effects of disuse are well known, and the white songs preferred, have not the ring of the old "spirituals" which, as far as possible, it is our aim at Hampton to keep up.

But these are trifling, or, we believe, transient losses. Nothing of the old for which the new has need will be permanently lost; nothing "whose strength gives promise of good fruit at last."

Many more advantageous changes wrought by education, might be enumerated, but there is not space here, and we do not understand that they are within the scope of the question.

As to the Blair Bill,

New York February 9th, 1885

Southern Workman:—

I should like to know what you think, will be the effect of the bill giving national aid to Southern education, upon the people of the South, white and colored. Will it quicken and stimulate their educational interest, or will it serve to make them

apathetic and indifferent, on the assumption that the nation is going to provide their education for them?

Yours sincerely,

LYMAN ABBOTT.

Dr. Abbott asks the most important question that can be put as to the "Blair" educational bill, which appropriates the sum of seventy-seven millions of dollars to be divided among the States in the proportion of their illiteracy during the next eight years.

The Hon. John C. Winthrop has well said that slavery was but half abolished and emancipation half accomplished if the Negroes were left without education and without virtue. There is no language too strong in which to state the duty of the country to its ignorant "Sovereigns" of both races in the South. The war settled its right to take all measures necessary to national life; hence we are a nation.

In a few decades there will be a Negro majority in every southern State, and in their present condition Negro rule is ruin. They must be improved or the right of suffrage will be practically annulled, as it is in three States where they now have a majority. Only by national aid for their education can this be adequately done. The United States Senate last winter, after three weeks' debate, took this ground, and by a two-thirds majority, passed the Blair bill, which is now before the House of Representatives; fifty-five of the seventy-seven millions appropriated going to the Southern States.

Would this help stimulate and quicken the educational interest of the South? The Blair bill provides that no greater part of the money appropriated shall be paid out to any State or Territory in any one year than the sum expended out of its own revenue for the maintenance of common schools, not including sums expended in the erection of school buildings.

Dr. Curry, agent of the Peabody Fund, states that last year, the Southern States raised by taxation, sixteen millions of dollars for common schools.

The proposed Government aid for education for eight years would give an average of nine and a half millions yearly, though the Blair bill makes the maximum grant the first year and the minimum the last; this we believe to be of doubtful wisdom. It would seem to be easy for the Southern States to comply with the conditions and secure the national grant, which for them would amount to about seven millions a year; or less than half of what they now raise annually.

We believe that there would be some temptation to relax effort beyond enough to secure Government aid, but that a counter-spirit of earnestness to make the most of it would appear.

All would depend on public sentiment, and that is stronger in the South for common schools than the people of the North suppose.

"It is only for a few years; we are on trial to see how it will work. Good use of national funds may secure it for the future by commending it to the people who will continue it if they see that it is a good thing," would be, we believe an argument of many.

Thinking men would know that but little could be done in eight years, and that every reason should be given for continuing the help. National aid is an experiment, a stimulant. The Blair bill and the many like bills prepared, are an admission of a great duty, that, if binding now was equally binding twenty years ago. Ground has been lost, and the country is threatened by the delay. Better late than never.

We believe that, on the whole, national aid as proposed, would stimulate and quicken the educational interest of the South, whose many earnest school men would realize their position and act accordingly.

"Is Hampton Institute a Government school?"

While receiving public aid for Indians it is not a Government school, but is directly dependent upon the people for the greater part of its yearly expenses and for all building and outfit.

## The Southern Press, Both Sides.

The discussion excited by Mr. Cable's article still goes on, while many among the colored people are waiting in really pitiable anxiety for the change which they believe will follow close upon Cleveland's inauguration. Between the criticisms and denunciations of Mr. Cable in the white journals, and the expressions of fear and distrust in the colored, there is a connection which gives food for thought, and we propose in the following selections to set the one over against the other, leaving our readers to draw their own conclusions. The *Freeman* and *People's Advocate* may be taken as representative colored papers, and the feeling to which they give expression shows itself, with more or less distinctness, in the utterances of all the colored editors in the South.

"A great display has of late been made in Northern newspapers over the 'new South,' its 'marvellous rejuvenation,' its 'tremendous progress,' and other such 'nonsense.' True, the South is growing much in the development of its vast natural resources; it could not help doing so when we take into consideration its wonderful resources and the great labor force it is able to draw upon at wages which would starve a Northern laborer. But the South has grown but little in the knowledge of human rights. The poor whites and the blacks of the South are still regarded as 'mudsills' and 'hewers of wood and drawers of water.' Equality before the law and at the ballot-box is still denied, taxation without representation is still practical; common schools are still regarded as luxuries which the white and black mudsills have no right to enjoy, since the doctrine is deeply rooted that 'education spoils a good field hand,' and the *opportunity* should 'not be taxed to educate the children of the poor'—who are yet the producers and consumers, without whose sturdy arms and capacious stomachs the South would soon, aye, very soon, relapse into a howling wilderness.

The party of their infancy turned the colored people adrift in 1876, and had colored men possessed the right to vote, the wrongs they would have denounced the party then. But they held their mouths and their offices. They now speak up with surprising boldness and unanimity. Let them speak. It will do them good.

We remain where we have been for the past four years—we have no confidence in either party. When it comes to the scratch we are forced to take sides with the better of the two evils. We did this in the last election. When Blaine was defeated we immediately resumed our attitude of independent criticism. Had Blaine been elected we should have pursued a like course.

We are pleased to see colored men take a bolder, more outspoken attitude. We hope the disposition to do so will increase. When we are struck we should yell and strike back. It does not matter who strikes us—let us strike back. In this way we show that we have feelings and can resent injustice."—*Freeman*.

"While it is well for us to speculate on the probable friendship of the leaders of the democratic party and to prepare for a 'new era,' yet it may not be well for us to cry out too vociferously for democracy, lest, when they reach us, we may find ourselves woefully 'left' for our pains and ignored by our friends as the price of our infidelity and lack of judgment.

It is therefore advisable to make but little demonstration one way or the other, but to wait with patience the issue and prepare for the worst. This wholesale prattle and voluminous correspondence about what Mr. Cleveland's policy shall be or will be, are altogether too 'previous' and indicate but little sagacity. This untimely ecstasy over a bare possibility, at best, savors more

of characteristic obsequiousness than of real manhood. We can well afford to wait; and should a division of the colored vote be desirable, the democrats will do something substantial and satisfactory to indicate that desire. If the democrats do not desire the colored vote they will make it plain by no doubtful policy, and in such case, the colored voters should not be demoralized by a surrender of their manhood, but will buckle on their armor for a first class rough and tumble fight in 1888."—*Peoples Advocate*.

The bright side of the picture for both races is found in such facts as are here given:

The Chattanooga *Tradesman* says: "The present organization of Southern society makes it necessary that we educate our own mechanics or fall behind in the race of development. Skilled labor seldom migrates. It is conservative, and well paid, and acquires property wherever located, and remains there. It follows that the South must grow and educate a class of this kind or her industries will be of the crudest and most primitive kind."

The London *Times* has been sending a special correspondent through the Southern States to inquire into the actual condition of its material interests, more especially as regards manufactures, agriculture and industry. The result is in the highest degree gratifying. "Everywhere," says the *Times* writer, "the talk is of improvement; and with all their social and political difficulties under which this vast region is laboring, there can be no reasonable doubt that the improvement which is now being talked of will become more and more actual." If the South has no longer the monopoly of the world's cotton, it still has seventeen millions of acres under the crop, and it has natural advantages against which other countries will always find it difficult to contend. The very fact that industry is taking so many new directions is a proof that the social state of the country is rapidly improving."

"The message of Governor Jarvis of North Carolina, which was sent in yesterday, contained an interesting reference to a colored industrial association which has done much for the betterment of the race in that State, and which proposes to extend its influences for their improvement in other States. In 1879 the colored people of North Carolina organized a State industrial association for the encouragement of thrift and industry among the colored people, especially in agricultural and mechanical pursuits. Each year since its organization the association has held a State Fair, which, in the opinion of Governor Jarvis, has been 'very creditable to the association, a means of improvement among the colored people and beneficial to the State.' The association, proposing to hold an exhibition which shall be open to the colored people of all the States, had asked the Governor to recommend an appropriation of \$1,000 to aid them. Governor Jarvis recommends that twice that sum be appropriated for the purpose, and says: 'I cheerfully bear testimony to the fact that the colored people of this State, with rare exceptions, have been orderly, law-abiding citizens during my term of office.'"

"I can see marked improvement among them in many ways, which is commendable to the State and to the Nation. The relations existing between them and the white people are so kind and harmonious that we hardly realize that one-third of our population is of one race and two-thirds of another distinct race, and that a quarter of a century has not yet passed since the one-third was held in slavery by the other two-thirds. Governor Jarvis does not fail, it may be noted, to avail himself of an opportunity here presented to declare his belief that 'the race problem can best be solved by those who have to meet, day after day, its different phases, and any interference by Congress or by those who are not affected by it is unwise and pernicious.'"  
—*Baltimore American*.

The New Orleans exposition is likely to be productive of good in more ways than one, and the opportunity which it affords to colored people ought to act as a wholesome stimulus.

"Hon. B. K. Bruce, who is Chief Commissioner of the colored people's exhibit, recently said in Washington City that: 'The Exposition is a splendid example of the industrial and aesthetic progress made by the negro race in this country since the war.'"

Many eminent writers in different reviews have contended that the negro race has been at a standstill since the war, industrially and aesthetically. The most practical refutation of this statement is contained in the colored exhibit at New Orleans.

"It comprises every branch of commerce, industry and art. The colored people of Mississippi, Louisiana, North Carolina, Kentucky, Tennessee, Ohio, Virginia, New York and New Jersey have excelled themselves in their exhibits. Owing to the great

difficulty in obtaining display cases, great numbers of these exhibits are not yet unpacked from the boxes.

We have some 4000 feet reserved for our display and propose adding an art gallery for works of art by colored artists. A colored artist by the name of O'Tanner, of Philadelphia, has sent a large painting, which is valued at \$500, and which has been pronounced a genuine work of art by artist examiners.

"There is no color line, and that is a great feature of the Exposition. The colored people are treated like the whites, and there certainly can be no complaint that discrimination is shown."

The occasional bitterness of feeling among Southern whites, as shown with sufficient plainness by their reception of Mr. Cable's 'views,' is constantly and hopefully modified or counteracted by expressions of kindness, and better still by practical evidence of their desire and intention to deal fairly with the colored race.

The Morris Street School for colored children in Charleston, S. C., is the largest in the State, containing more than 1,400 pupils. It has a principal, vice-principal and twenty-four assistants, the latter being ladies, artists and natives of Charleston. Altogether the school will compare favorably in progress and scholarship with any similar school of white children. Some excellent specimens of the pupils' proficiency in drawing and painting will be exhibited at the New Orleans Exposition."

"There doubtless are points where the South has failed in her duty to the negro, but no other people on earth, placed in our position, would have done better than we have done; and we have addressed ourselves to the solution of the problem more cordially and more earnestly.

We recognize fully that it is the great problem of the day. We realize that a mistake made now may prove irreparable and bring about fatal results. No graver mistake could be made than to set the public mind toward mixed assemblies in schools or railroads, or to inspire the deepest suspicion in the thought that he should demand respect. The people of no section can have such vital interest in the just, equitable and harmonious adjustment of this race question as the people of the South. It means everything to them—every-day life, prosperity, peace, growth, and progress. They are meeting the issue without passion or prejudice, and with a full understanding of its tremendous import, and of the deep and unspeakable equities it holds. They realize fully that the most serious dangers that beset its solution come from fanatics on the one hand and from demagogues on the other. They believe further, that the great body of the American people—the fair, frank and level-headed folks of this republic—will decline to be misled by the one or misused by the other, but will leave the final settlement of the matter with the people upon whom this problem presses most closely, and whose industrial and social existence depend upon its settlement in the largest sense of justice and common sense. There it can be left, the Constitution puts its word and its pledge on this assertion, with the fullest confidence that the honor of the republic will be maintained, and the problem worked out in such exact justice as the human mind can measure or human agencies administer."—*Atlanta Constitution*.

"The good order throughout the South on the day of election was phenomenal. The white people (Democrats we mean) were ready for any emergency; but they respect the laws, and have a feeling of genuine kindness towards the Negroes.

But to the credit of the white Democrats, and the black Republicans, the facts stand forth before the public that the election passed off in quiet and in good order. Nor was this rule broken by the exultant Democracy when assured of victory. Our people assembled in masses, burnt powder in salutes, cheered themselves hoarse, talked eagerly of the exciting details and threatened no violence. This is the record made by the South and it cannot be disputed. We have no disposition to make invidious comparisons; but our brethren to the North of us indicate in some amiable suggestions, as to pulling down houses and hanging a few obnoxious people. They did not do so; but we have no doubt the spirit manifested had a very good effect on the thieves who were organizing to steal the Presidency."—*Norfolk Landmark*.

"In the same issue of the *Standard* is an article of something over a column in response to our late editorial on the work of the Home Mission Society in the South. The writer warmly approves the *Herald's* view of the matter. With an extract from our editorial he begins: 'This extract, from an editorial

in the *Religious Herald* of Jan. 15th, ought to be the key-note of a great movement on the part of Southern Baptists to solve the negro problem and put the colored race where it ought to be in the march of civilization. The negro is just what the South has made him."

The spirit and bearing of the Chicago article can better be seen from the following paragraphs:

"No man who has given attention to the subject can fail to see that the negro question, politically and religiously, must be settled at the South and by the Southern people. There are a hundred things involved in the issue that cannot be reached from Boston or New York, and while the North has done well in spending large sums of money to benefit the colored people of the Southern States, the time has come when the South should take the matter into its own hands and deal with it as only the South can. If the blacks are to have a free ballot, the South must give it. If the negro is to be lifted to equality with the white race, the South must lift him. If the colored population of the States south of the Potomac are to have an educated ministry, the South must educate. The freedmen are at the South. They are employed by Southern men. They are surrounded by Southern politicians. It is drop-in-the-bucket work to reach them from the North. Efforts to give the negro education or the ballot from the North must inevitably meet with more or less jealousy and suspicion. We are not far enough from the 'bloody chasm' to expect it to be otherwise, and efforts made will, simply because they do not commend themselves to the judgment of those who hold power in the South. Southern politicians, irrespective of party, must give the negro the ballot; Southern Christians, irrespective of sect, must give him education and Christian nurture.

Suppose Societies should be formed in New Orleans and Mobile to evangelize New York and Chicago, great festering sores of moral corruption, we can see how tedious and slow would be the work, and how inexperienced and unnatural the movements of those societies would be. That Chicago and New York need to be evangelized we all know. But the people in Southern States cannot do it—cannot feed our poor, educate our children, shut up our grogshops, make clean our morals. No, we must do that ourselves. The cases may not be exactly parallel, but one may serve as an illustration of the other."

The condition of affairs in the South is peculiarly favorable for such a new departure as that now proposed. There has not been for twenty years a better feeling between the two races than exists at this present moment, and Southern whites never realized more than now that duty and self-interest alike demand that they attempt to do far more in this direction than they have heretofore undertaken. Returning prosperity will soon enable us, we hope, to do for our colored brethren all that it may be in our hearts to do. There are some of us in this latitude, however, who propose to do more than we have ever done in helping our Northern brethren bear their burden; or rather of sharing more equally with them this God-given privilege even at the risk of a 'misunderstanding of motives and acts.'—*Religious Herald, Richmond*.

The Southern Churchman reprints from the *Spirit of Missions* a statistical account of the work done for the colored people of Virginia by the Episcopal Church, from which we take some interesting figures.

*Population, White and Colored, of the State and Counties where Colored work is being carried on by our Church.*  
State of Virginia—White, 880,000; Colored, 631,616; Chinese, 6; Indians, 85. Total, 1,511,707.

	White.	Colored.
Petersburg City	9,959	11,701
Dinwiddie Co.	14,438	18,428
Richmond City	35,765	27,832

Other interesting facts about the colored people in the State of Virginia:

Insane, White, 1,719; Colored, 692.  
Paupers—In Alms House, White, 1,090; Colored, 1,000.  
Idiotic, White, 1,839; Colored, 955.  
Prisoners, White, 360; Colored, 1,204.

## SOUTHERN SKETCHES.

BY MRS. ORRA LANGHORNE.

## A Life for a Life.

It is now nearly two years since a sensible looking young German, who had recently landed in a northern port, came to my husband to rent some land for a market garden. A contract was soon made and the "Dutchman," as he is called in the neighborhood, was, in a few days, in possession of about an acre and a half of land, part of which lies low and has one or two little springs upon it. The land had been at one time well set in grass, but the wild onion, which is a terrible pest to farmers in this district, was making inroads upon the meadow, which had been a pleasure to look at, and we were glad to have the sod broken, and the land put in cultivation.

Our "Dutchman" has proved very steady and industrious, and has made a very good reputation in the community. His vegetables are as good or better than any brought to the city market, and his beautiful celery, fine cabbage, crisp lettuce, and excellent tomatoes, are in great demand. He has used fertilizers to a degree never heard of before in this region, and in utter contempt of the shallow plowing common among farmers here, spades his whole garden, thoroughly pulverizing the soil. Only in the busiest seasons does he hire any additional labor, except the colored woman who sells his wares. When he has, with her aid, prepared the vegetables for the market, she puts a basket containing a mule's load on her head, and taking another in her hand, composedly walks off in search of customers.

It has sometimes amused us very much to see a row of Virginians, black and white, leaning on the fence, watching the "Dutchman" with astonishment, as he scatters fertilizers a foot deep on the surface of his land, and then works it in as far as he can push his spade. Had he adopted their methods he would have "sprinkled" manure on the ground and scratched it in with a little plow. They are often very liberal in their advice and suggestions to him, to which he pays very little attention.

Like most new-comers, he has made some mistakes, and had some difficulties to contend with, from not being acquainted with the climate, the customs of the country, etc. One of his most serious troubles the first year, came from a crop of bolls, at one time the most flourishing crop he had, which caused him great suffering and much loss of time.

Although we sympathized greatly with him, it was sometimes difficult to repress a smile, when the "Dutchman" would come to us, with a most woe-begone expression on his intelligent face, exclaiming, "another boll! it comes! it comes! My garden, whole the garden, will be ruined. Again I cannot work!"

Everybody had some remedy to suggest, and the unfeeling "Dutchman" tried poisons and potions in great variety, with very little effect, until at length, in much scorn of American medical science, he wrote to his father in Germany, describing his affliction, and asking him to procure for the "old doctor" some powders to cure it. The powders were duly sent and immediately produced wonderful results upon the patient. His health and spirits rapidly improved, and when asked about the progress of the last boll he had reported as on the way, he replied joyfully, "Oh, it comes not at all; the old doctor has cured it!"

While moping about unable to work, our gardener tenant told us many interesting things about his native land, and the manners of his people. In one of his talks he gave us an account of the "old doctor" whose medicines had such effect on him, and of whom he always speaks with the utmost reverence. This old physician, who lives in the German city from which our gardener came, was in his youth a prosperous farmer of the district. He had naturally a very quick temper, which he made little effort to control. His little farm, which was well cultivated and very productive, was worked chiefly by the peasant women of the neighborhood, under the vigilant eye of the master. One memorable day a young girl, among these workers, went so slowly about her tasks, that her employer spoke roughly to her, bidding her make more speed, and using very rough language in regard to her tardy movements. The girl answered in pert defiance, which so enraged the farmer, a large and powerful man, that he seized some implement close at hand, and dealt the hapless maiden a savage blow, which laid her dead at his feet.

The young man was overcome with horror and remorse at the fearful result of his passion, and at once gave himself up to the authorities. At the time he would make no effort in defence, and was promptly sentenced to ten years imprisonment.

In the long, weary years that followed, the

unhappy man, who had brought such terrible grief upon himself and others by rash act, occupied himself diligently in studying medical books, and, when his term of imprisonment ended, sought employment in the city hospital. He soon distinguished himself in his profession, and gradually extended his practice in his native town. He devoted himself as much as possible to the treatment of women, and sought in every way in his power, to alleviate the sufferings and trials of the class, upon one individual of which his fierce anger had brought destruction.

In a few years his reputation had become so great that he received two flattering offers to remove to larger cities. The physician has, however steadily and firmly resisted every inducement to leave his birthplace, considering himself bound by his self-imposed penance to perform his life work on the spot where his crime was committed. As time went on, his practice became immense, and patients have come to him from far and wide. He opened drug stores in order to have his prescriptions compounded under his own eye, and established infirmaries for the reception of his patients. In all possible cases he employs women to do his work. He is now very old, very rich and very famous, but always very gentle, even humble, in his manner. Ever bearing the burden of his crime—ever haunted by the shadow of the young creature whose life he took upon his hand, surrounded by young women who live bountifully under his watchful care, ministering always to suffering and sorrowful women, he lives his life of expiation, and is beloved and revered among the people who once regarded and shrank from him as a malefactor—a murderer.

I am very sorry to say that in referring to the dreadful deed, which had cast such gloom over the physician's life, our "Dutchman" seemed to think it a matter of very small importance, a mere flaw in the crystal, and evidently believes that such a man as this adorable "old doctor" should be allowed to knock a peasant girl on the head whenever he chooses.

## "The Freedman's Case in Equity."

Mr. Cahle's article in the January *Century* expresses, I believe, in most respects, the opinion of many of the best people of the South, editors of Southern papers to the contrary notwithstanding. In one particular it is a surprise to me, as it alludes to the exclusion of colored people from railway cars and jury boxes.

I can not speak for the whole State, but in this district and the Valley there has been no difficulty on those points for several years.

The indictment of the State Judges in the United States Court, during Judge Rivers's term, and the decided stand taken by that faithful friend of the black man settled the jury question fully. In every term of the courts of the city of Lynchburg and county of Campbell, colored as well as white jurors are summoned, and no opposition is now made to the practice.

For a much longer time, colored people have ridden in first class cars on the B. & O. road, and I have often noticed them on the trains of the Virginia Midland Road. Virginia is nearer to the great centres than her sister states of the South, and the constant intercourse between her people and citizens of the North and West have doubtless placed her ahead of other southern communities in this as in many other respects.

In the Lynchburg Post Office there are a number of colored clerks and mail carriers, who are generally satisfactory to the people now, though there was at first much opposition to their appointment.

Soon after Cleveland's election was decided, I heard a particularly bitter Democrat remark that he should like to see every man appointed under Mahone's administration, of state patronage, promptly turned out of office, with one exception, and that was the colored mail carrier on the same street in which he lived. The gentleman added, with much feeling, that he had known the carrier from childhood, he had always been a steady and well behaved person, and since his appointment in the postal service had been so obliging so polite and agreeable every day, that if there were other changes made in the Post Office, the people on that route would petition for the retention of their carrier.

On this question of race privileges, the Southern people are nothing if not inconsistent. In regard to every step in progress made by the black man from slavery to citizenship, the white people invariably decide every way in which they can make it as difficult as possible, and they will "never, never, never submit to them." The step is taken, however, the white opponents soon become accustomed to the change and wonder that it was ever otherwise in a little while they forget their opposition and prefer them as they

are. While much still remains to be done to give the colored people the full advantages enjoyed by their white compatriots, so much has already been done and is now doing, that the friends of the black man have every reason to look with hope to the future.

To realize what he has done for himself and what has been done for him, it is necessary to go back twenty years, and look at the freed slave as he crossed the threshold of his new life, "without a local habitation and a name." This matter of the name was no inconsiderable point in the case. There had been no legal marriage possible for the slave, and he had no right to marry but his Christian or "given" name. It remained for them to choose a name, and in most cases they naturally took that of the master. Now this question is all settled, and the Negro child is known by the name of his parents as universally as the white children by theirs. Surely he "who setteth the solitary in families" has helped the African in America, who now owns thousands of comfortable homes; as he did the chosen people of old, when they went forth "with their kneading trays bound up in their clothes upon their shoulders."

All things considered, the colored people have done wonders in the acquisition of property, and there seems reason to believe that they will in time be, to a very great extent, holders of real estate, that kind of property being suited to and sought by them.

They are fast gaining a strong position in the trades and can afford to keep up their habit of underbidding the white contractor, as long as the custom of simple living, learned in slavery, enables them to support their families and save money, where he would starve.

A poor widow lady near me wished, some months ago, to build a little cottage as a home for her children, with the small remains of what had once been an ample fortune. The contract was submitted to both white and colored builders, and was finally given to a white man, known to be a first-class workman, who agreed to do the job at the bid made by a Negro carpenter fast becoming one of the leading contractors of the city. "I had to take the job at a nigger's bid," said the white man, indignantly; but the work was well done and the widow got the benefit of the competition, which, on the whole, is for the good of the community.

The history of the African in our land, both in bondage and in the struggle for civil rights, presents a constant analogy to that of the Hebrew race. It is within the memory of people now living that the first effort was made in the British Parliament to enable a Hebrew to hold office in the land where his race had dwelt for centuries. The opponents of the Jews said wrathfully, "Why, if this infamous bill should pass, the time might come when a Jew would hang a Christian!" "A strange sort of Christian he would be," retorted the Jewish advocate, "to deserve hanging!"

In our day, the Israelites suffer no disabilities under English rule, and the Premier of Great Britain a few years since was the accomplished scholar and statesman, Benjamin Disraeli. Colored men have already filled high offices with honor in our country, and with better opportunities which come to them year by year, there is everything to encourage the race in our land.

The world goes on faster in this telegraphic age than it did in the days of slow travel, and there is little reason to doubt that the child of the slave will enjoy the full privilege of citizenship in the Republic. It is matter for rejoicing that this strong and able statement of the "Freedman's Case in Equity" comes from one of the old slaveholding class. It has far more influence coming from that source than if it had come from one of the old abolitionists.

In reading it, I am reminded of one of Charles Dickens's fine utterances: "To be able to say what others only think, is what makes men poets and philosophers; to DARE say what others only think, is what makes men heroes and martyrs."

I do not know how it is to be accomplished, but it seems to me that there ought to be some way discovered or made, by which the Negro should enjoy the same privileges in every part of our country which he enjoys in some parts thereof. Perhaps this can only be done by the gradual changes of public sentiment in the various states, but it is clear that the sooner it is done the better for all parties. "Unsettled questions have no pity for the repose of nations."

## An Indian Camp in Virginia.

There are a great many old people in Virginia who can remember a time when there were many Indians in this and adjoining states, and many stories are still told at the fireside, of those days.

When I first came to Lynchburg, good old Doctor Owen, then a very old man, was living, and I have heard him tell a great deal about the Indians he had seen in his youth. He pointed out to me the place on the river bank, now the site of a large flour mill, where the Indians used to camp when on their annual visit to the Great Father at Washington. These visits gave the householders of the town, then only a struggling village, no little concern, for it was impossible to keep the boys of the town from going to the Indian camp. Once there were some sick people among the Indians; the white boys visited the camp secretly, and in a few days their secret was betrayed by two or three of the party being taken ill with a disease which proved to be small-pox. It was the first time the dread disease had appeared in the community, and great was the consternation in town and country. After this, more stringent orders were given the boys, and they were more closely watched; but the Indian camp had irresistible attractions for the urchins of the village, who longed to share the wild life of the wanderers. This desire was so strong in the breast of one youngster that he managed to elude the watchful eyes of his parents, and when the Indians departed the white boy also disappeared. This family were in much distress, and a party from the town followed the Indians and made every effort to find him without avail. "The Indians vowed they knew nothing of the child, but it was believed that their party had divided after leaving Lynchburg, and those in charge of the hunt either grew discouraged or gone towards the West. Every possible effort was made by the unhappy parents to recover their lost child, but utterly without result.

Ten or twelve years afterwards, when all hope of seeing their child again had been abandoned by the bereaved parents, they were startled by hearing a report that some Indians were at the old camp grounds, bargaining with them a young white man, who said he had left this country when a child. The father was still living and hastened to the camp to see if it were possible that his son could be thus restored to him. It proved to be the wanderer returned; but he was forever lost to his home and friends, and civilized life. The young man told a strange story of sorrowful wanderings. He had become fascinated with the Indian life while visiting the camp, and entreated the red men to let him join their tribe. A chief had taken a great fancy to the boy, and in opposition to the advice of all the other members of the party, who knew the trouble likely to result from carrying away a white child, he agreed to adopt the boy as his own. He hastily prepared for a lonely journey into the wilderness, and taking the boy with him, left the camp and travelled day and night, until he felt safe from pursuit. After the rest of the tribe had returned from the visit to the Great Father, the chief and his adopted son joined them at an appointed rendezvous. The boy had adopted the Indian dress and language, and been trained to be a most expert hunter by his adopted father, who had always shown devoted affection for him.

The old chief made no effort to influence the young man, when his real father implored him to leave his wild life and return to his home and friends. The youth, however, was immovable in his determination. His father offered every inducement in his power to recover his lost child, and showed him a valuable farm belonging to him, which he promised to give him at once, if he would leave the Indians, and return to civilized life.

The young man listened with scorn to the proposal, and replied, "You offer me a field or two in which I should be cramped and miserable," then turning to the old chief, who calmly waited his decision, he exclaimed, extending his right arm proudly, "This is my father, and see what he'll give me—the whole country is his to fish and hunt over; and he will give me a boundless dominion! My heart is with him, and the tribe which has adopted me, and I will live and die with them! I should perish in your narrow bounds, and crave nothing that you can give me. When the Indians sent me on their way, the sorrowful family were forced to bid adieu to their boy, and they saw him no more, as the tribe was soon after removed to one of the reservations in the West."

## SILHOUETTES.

BY ALICE M. BACON.

## Some of our Neighbors.

Life on the Hampton school grounds has its own charm and its own picturesqueness, but we must not forget that the colored people as we see them are not the school as we see them. Outside of the school are the cabins of many of those whose lives have a long stretch backward through the troubled past, who are looking, not forward to the future but back at the many and great events which have swept over this fair country during the last half century. We, on the school ground, with our lives and thoughts absorbed in the work that the school is trying to do, do not really know what "contrasting" pictures may be obtained in a walk of a few steps from our own gates. Our neighbors along the shores and in the lanes, living in their little tumble down huts, and earning, by hard labor with hands grown withered and shapless from many years of toil, the barest pittance that will support life, may excite our interest if we go out for a little while to visit them and see what manner of life theirs is and has been.

From my window as I write, I look out on a cluster of cabins, some whitewashed, others unpainted, some with wooden boards and patches of tin and shingles, all occupied by at least one family. They are not conspicuous objects in the landscape, if my attention had not been called to them, I do not know that I should have noticed them at all, they hide so meekly under the trees and behind the more pretentious houses that border the road, but there they are, and once noticed and visited, they cannot be forgotten. Let us go down from our lofty eminence in the third story of this great brick building and look a little more closely at the lives that lie hidden among that little cluster of huts. As we come nearer to the place, we can see more plainly the smallness and meanness of the buildings; the prevailing style of architecture is like that employed by some shiftless farmers in New England in the building of hen coops. Let us stop at this one and see if any human being really lives here. In the little yard, fenced about by a picket fence, in which the pickets seem to be made of drift wood picked up along the shore, so various are the things in size and shape, and so unbecomingly weather-beaten, stand a structure of worm-eaten boards. The cabin is longer and lower than most that we have passed, the roof is pitched with pieces of tarred paper in one place, some of the boards have rotted away and the tarred paper sinks in, forming a crater or cup into which the rain may conveniently drain and stand. Two geese penned up in the yard and a large bound chicken, which give warning of our approach. With some fear lest the house may fall on our heads, we enter the gate, march boldly up to the door and knock. An aged Negress, her snow white hair just showing under the edge of her black turban and relieving the otherwise perfect sombreness of her face and attire, opens the creaking door and invites us to enter. "Good morning, Aunt Urania, how's your husband?" "Oh he's gone, Miss" is the answer, in a quiet, cheerful, matter of fact tone which would lead the uninitiated to believe that he had stepped over to Hampton on an errand, but which is intended to reveal the fact that Uncle Saul has departed this life. Within the cabin is more of comfort than the outside would lead one to expect. A tolerably good sized room is revealed, containing a table, a number of chairs, and a safe or cupboard for provisions. A ladder at one end of the room leads to the loft which is occupied, as we afterwards learn, by another family. At the other end is a great open fire place, and on the hearth is cheerily blazing a wood fire, with a kettle standing on the back log. By the fire sits an old colored woman, working at some coarse sewing, and a small, aged, elderly child sits meditatively on a little wooden box beside her. Not once during all our call does the child move from his seat. He only looks at us with his big solemn eyes, and doubtless thinks his own thoughts about the strange ladies, who ask so many foolish questions.

"Aunt Urania, do you remember about when the honey-dew fell?" "Yes, Miss, I remember it some, but she'll tell you all about it," pointing to the old woman by the fire. "She," thus appealed to, looks up from her work and takes upon herself the duty of entertaining the visitors. Aunt Urania standing and looking on with evident delight.

"Yes, Miss, I remember all 'bout de honey-dew. It was all ober de grass and trees. I put my han' down on de grass, so, and lick it and it tase' 's like honey."

"Did it look like honey, auntie? we ask,

curious as to what manner of phenomenon this was.

"Well, you know Miss, how de honey look when it jes come ou'n de comb, kind o' white and cloudy like? It look like dat and it tase' sweet, jes like honey. People make a great 'miration about it and dey all say dat somp'n gwine happen. De sun was all blue too, and you put you han out and it all blue and de grass and de trees and all was all blue."

"Well did anything happen, Auntie?" "Nothin happen Miss, cep what happen to us all. De war come and we all free and de-colored people tink somp'n done happen den."

"Do you remember the war auntie? Were you a grown woman then?"

"Law, yes, honey, I was grown up and had children way back in de ole British war."

"Why auntie, are you so old as that? Are you sure you remember the war of 1812?"

"Yes Miss, my young Miss, she say dat if I live till February I'll be a hundred years old. She say I hear my age wonderful well, but I'll be all of a hundred years ole if I live to February." This with an air of triumph and of resolute intention to live until February. She did not know that it was February, nor did we enlighten her for fear lest having attained that end she might see no reason for continuing to live.

"Were you in Hampton when the war was here?" we ask, hoping to get some historic reminiscences.

"No Miss, I was up in York County. I was workin' for Dr. Powell. He lih in York County. You see it was dis-away. My Mas' he was ole dis Dr. Powell, but he ask me, he say 'Narcissa, you go up to York County and work for Dr. Powell and den when 'e debt all worked out I gib you 'or time for de rest of yo' life.' I went and I worked out de debt and den de ole mas' gib me my time and I free, and den de war come and we all 'kep gittin' free and free. I was up den in York County and den de war come and de Union soldiers dey come dar 'time; dey was all in de field and dey was thick en dat!" and she held both long black hands with the fingers close together to show us how the Union soldiers swarmed over the face of the country.

"Dey was rebel soldiers dar too, and dey had a fight in de woods and, bless yo' soul honey, ef dey didn't bring out o' de woods fight was over. Dey brang men out pile up on de wagons and de blood was drippin' down like water from de wagon. I see 'em when dey come out and it give me de most monstrous headache. I went home and my head ached all day terrible, it did so."

"What became of Dr. Powell when the Union soldiers came?" Did he run away?"

"Oh, no Miss, he stay right dar."

"Was he a Union man?"

"No, honey, he wa'n't a Union man at de fus' but de soldiers make him one. Dey took him out his hut but dey jes took and lock him up in de own house and he jes hatten stay dar. He took on a good deal; he say it pear mighty hard dat he locked up in de own house and he asked us were we sorry for him. We say we sorry for you mas', but we can't do nuffin 'bout it." And there was a triumphant ring in the old cracked voice as if Dr. Powell's imprisonment had struck them all as a species of poetic justice.

"Didn't you go away when Dr. Powell was shut up?" "No, Miss, we didn't none on us go away, we jes stayed dar to see what gwine ter happen, and we stay dar till de war was over. Jes after Richmond was taken my ole man, he die, and den I come down yer."

"And how do you manage to get along now?"

"Oh we has pretty poor pickin sometimes, but we tries to do what work we kin. Sometimes when I feels right smart, I goes over to de Missionary and picks up papers and den things ar dey for to sell for to get us a penny to buy sum'n p'n to eat. 'N den I works for de neighbors in de lane and we does a little here and a little dar and we manages to keep out o' de po' house."

But if we spend so much time with these old ladies we shall not be able to visit any of the rest of our neighbors to-day, so with a "good morning," we depart, leaving the solitary child and the old woman still sitting by the fire, and escorted as far as the gate by aunt Urania, who complains as we depart that she has a "tremblin rheumatiz" in her leg and "some kind o' sinners under her knee."

On we walk down the lane in the warm February sunshine, the children swarm about the cabin doors and smack at us as we pass. The turbulent old women bob their heads, and the yelling, snapping curs give an uproarious greeting to our aristocratic Bruce, every drop of whose blood can trace the blood of the generations of Scotch collier ancestors. Bruce dances ahead, his sleek black coat shining, his feathery tail waving, calmly indifferent to the impudent little beasts that fly out at him, or turns some-

times his loving brown eyes toward his mistress, with a look that says more plainly than words could what a deep and wholesome affection he cherishes toward that fortunate woman. Now we have reached the end of the lane and find ourselves once more on the shores of Hampton Creek. We are through with the Negro cabins, and along the shore stand the cottages of white people, unpretentious enough, it is true, but still, easily distinguished from the hovels that we have just been passing. An oyster house here and there standing on the shore and at high tide in the water, shows the principal industry of those who live on the shore. Oyster buying, auctioning, shucking and gathering, is the business of the dwellers on Hampton Creek.

We stop at a little house with a neat picket fence running across the yard toward the water. Two puppies come running down to meet Bruce, who smiles benevolently upon them. A man in a half military costume, with a halting gait that suggests a disabled soldier, comes down the walk and asks us to come in. We have not time to stop now, but pause to speak a few moments and to inquire after Mrs. C, who has been suffering from one of those severe colds which are epidemic at this season. She is better, able to sit up, would be glad to see us, her husband says, but to-day we cannot wait. We have only time to notice the dirty running fruit trees with which the little door yard is planted, the evidences of care in the rose bushes and flower beds and to pass on to the next house, where a handsome "black-eyed" girl, a young woman, with her hair married daughter. That they are poor and proud, one glance around the room shows.

Proud and independent but willing to do whatever they may honestly wish to earn. Upon inquiry in regard to whether she will take a little sewing to do for one of the ladies Mrs. C. professes herself able to make anything, "from a sail to a satin dress." We stop and talk a little while, for Mrs. C. has a clear bright eyes and handsome aquiline nose, her erect carriage and queenly demeanor, have a charm that it is hard to resist. Her clothing may be poor, but her house is as new as a new pin, and her daughter's little boy and the baby in the cradle are pictures of rosy, sturdy childlike. Unless our instincts are altogether untrueworthy that she has somewhere in her veins the blood of some of the F. F. V's. We do not in the present state of our acquaintance feel justified in making many inquiries of her, so we go away after a pleasant call in no way wayward her ancestry than we were when we went in.

We make one more stop before we go to the school, at a large two-story wooden house, where live Uncle Tom and his wife, who is known to all the world of Hampton as Sister Lou.

Uncle Tom is a small, round, white haired, shrewd looking man with an air either of preternatural wisdom or simplicity, it is hard to determine which. He is a character and he knows it, and he rather expects other people to know it. We are ushered into the house, through a dining room neat as wax, into a parlor where everything looks as if it had just this moment been polished off with a duster, so spotless and shining are carpet, furniture and walls. Uncle Tom, arrayed in the cleanest of blue checked shirts, and Sister Lou, looking as if she had just stepped out of a band-box, come in to entertain us. Uncle Tom suspects that we have come to pump him, and he is not inclined to commit himself upon any matter of importance. Inquiry into the history of his life carries us no farther back than to the war time. The explanation of this fact, given in Uncle Tom's own words, is rather a novel one.

"Yo see Miss, endurin er de war, I had so much to do and I was havin' so much excitement dat kin'er didn't pay no tention to my membrances. De time jes kin'er got away wid me."

"Uncle Tom, how did you come to leave the school? You used to cook there when I was there long ago?"

"Well Miss, 'twas dis away. I had jes been tryin for nigh about fifteen years to see how much one man could stan'. I had been cookin at de Fort and at Newport News for de soldiers all through de war and den I went into de school and I cook dar a long time and I says to myself all de time, 'I'm jes tryin' to see what one man kin stan'. An' den I bebbe sleep a wink day nor night all de years, an at las I begun lert to get kin of po'ly and I had some business I wanted to tend to befor I was ready to leave so I thought I'd go away from de school and stay here a while till I was ready to leave."

At this juncture a giggle from Sister Lou's corner, somewhat takes away from the feeling of awe with which I am listening to Uncle Tom, and I turn to the counterpane of the old man never relaxes a muscle, Sister Lou's frivolity is nothing to him.

"Uncle Tom, what do you think about the election?"

"I tink it's gwine to be all right."

"Do you think the colored people about

here feel satisfied? They say that farther South they were a good deal frightened at the idea of the Democrats coming into power again."

Uncle Tom assumes a look of importance, as if he were about to disclose a great mystery.

"My idea about de matter is dis. De colored people is so hussy scratchin' roun after some bread and some meat dat dey don't neber hab no time for to tink 'bout nuffin else and so when dey does look up and tink bout sum'n else dey gets scared mighty easy. De colored people was scared 'cause dey know dat dey haint got but one side to hol on to."

"What side is that, Uncle Tom?" for the oracle has stopped and is waiting to see the effect of his words.

"Dat's de Norf. De colored people oughter know dat dey frien's is at de Norf."

"But don't you think that the Southern white people are friends of the colored people too?"

"Well Miss, dis is a way. Colored man go into store, white man say to him, 'Here, uncle, here's sum'n p'n for you and den colored man ready to go to de en er de row wid dat man and de colored man don't know dat his frien's is at de Norf. Yo' can't draw line right fur de people here. De colored people an' de white people dey gotter come up together. Now 'bout dat school, I didn't do dat work at de school jes for money. I did it some for de experience, an' I see dat de colored people need help an' so I thought, I'd been cookin' for white folks all de time, I'd cook ter de colored people now. An' dey's a comin up now an' de white folks comin axid den and dey's gotter be lifted up together."

With which oracular utterance we must depart, for the great school bell is ringing for dinner and our explorations have made us hungry. Only a few of our neighbors have we had time to visit to-day, but though we have been all the time under the shadow of de school buildings we have seen some sights and heard some things which could only be seen and heard off from that enchanted ground where Northern wealth, charity, and energy have raised an institution, in the South but not of it and destined to play an important part in the elevating and improvement of one of those two races whose destinies are so closely and individually blended that shrewd old Uncle Tom sees that if they rise they must rise together.

## A Curiosity in Literature.

The following letter and bill need but a word of explanation. They do not show the work that the Hampton School is doing, but show one of the jobs that have to be done, sometimes given up and left undone. The letter comes from a former student who was dropped from the school as hopeless in scholarship, but who has gone into politics and if his own efforts will carry him there, will soon reach the presidency:

JAN. 14 the—1885.  
2 Streets, No 14, N.H.

My Dear Gen A.—I will drop you a few lines. I never intend to stop until I reach the hyis peak of seizerzern and still go on to learn my Books. Pees and good will to each and evende. I will call by in a few monts. I will send you some off my bills. I compose and write myself, and all ready speeblum, good by.

MOSES N. STARR.

The bill mentioned is the following appeal to all good citizens. The play upon words following his name, seems to me rather the strong point of the bill:

AMELIA CO.—1885.

A man without an object in this Country is like a ship without a sail. I have an object and will make all the people leap for joy.

AMELIA CO., AND NOTTOWAY CO., VA.

FRIENDS AND FELLOW CITIZENS:

I now will offer this bill with candor. I hope every man will go to work to carry the governor and men vote the Republican ticket with a scratch. I have asked God for this time, fifteen years ago, and I believe God called me to do this work for the people. I am the man of the people and will feel the people's interests.

MOSES N. STARR.

[AROUND MY NAME THE PEOPLE SHALL HAVE LIGHT.]

Horsford's Acid Phosphate.

FOR WAKEFULNESS.

DR. WM. F. CLOTHIER, Buffalo, N. Y., says: "I prescribe it for a Catholic priest, who was a hard student, for wakefulness, extreme nervousness, etc. He reports, great benefit."

### Letters From Hampton Graduates.

SECOND BEARING FROM CHRISTMAS TREES. FROM A SCHOOL TO A SCHOOL. SHARING THE GIFTS WITH THE POORER. "HOW I CONDUCTED THE EXERCISES." LETTERS FROM THE LITTLE ONES. "PLEASE SEND US A CHRISTMAS LETTER." A TRYING CASE.

#### SECOND BEARING FROM CHRISTMAS TREES.

Christmas trees bear two crops of fruit; one for the receivers and one for the givers. Here are samples of the second bearing, still coming in, from the trees planted at Christmas time in some of the little country school houses of the South by kind friends who, whether big or little, we venture to say, find their share of the fruit of their doings sweet to the taste.

— Va. Jan. 10th, 1885.

DEAR MISS — When I opened school in Oct., I wrote you a short letter, but could say very little about my work so early in the term.

My number has been gradually increasing till now. 'I begin the New Year with an enrollment of 51.' This term I have more boys than girls; never before has this been the case, but the girls are older and more advanced.

Before closing for holidays I had a Christmas Tree for my pupils. They furnished candies and confections; the presents, which consisted of pretty, gayly dressed dolls for little girls, cambric work-bags each containing a thimble, spool of cotton and needle case and needles, for large girls, with books, dresses, shoes, hats, jackets and many other useful articles of dress, were made and sent by some kind ladies in Saugateck Conn., through Miss Mary Atkinson, a former teacher of mine at Hampton. They can not realize how much they added to the comfort as well as happiness of these little children. I left them rejoicing over their presents, and found them still talking of them.

A few of the children had suitable recitations for the Christmas Tree. It was the first they had ever seen, and their eyes did not tire of the beautiful sights.

I shall start a sewing class in my school soon. The bags will be used then. The girls are anxious to start about the sewing.

I spent a few days at Hampton during the holidays, and found some scripture texts Mrs. Dixon left for me. I have tacked them up, and they improve the room very much.

My school term will be extended, but I don't know yet how many months. I haven't begun my Sabbath School yet, but now I have some books sent me in our Christmas barrel, I shall begin as soon as I can.

We still have our Teacher's Association which meets monthly. Mr. B. is the only Hampton graduate, beside myself, in the county. These monthly meetings are pleasant as well as beneficial. We invite the parents that they may see what we are trying to do for their children. The Supr. is invited but doesn't attend.

Wishing you a "Happy New Year,"  
Your friend,  
D.

#### FROM A SCHOOL TO A SCHOOL.

A Northern school which sent a Merry Christmas to a needy one in the South, heard thus from it.

— Station, Va., Jan. 3rd, '85.

DEAR FRIENDS: For the kindly feeling which prompted you to send my pupils a Christmas box when you had so much to think of, I thank you exceedingly. The barrels and boxes were duly received.

As there were two other teachers near me who were going to have their Christmas trees the same day as my own, we concluded to have them together. The trees were beautifully arranged in a large church near the altar. The older boys and girls willingly helped dress the tree and by the time we had finished, the house was crowded with people. The exercises began about five o'clock P. M. The programme consisted principally of speaking and singing. After this a few words were spoken by some of the teachers. Then came the presentation of the presents. It would be impossible for me to tell you how great was the joy of each girl as she received her neatly dressed doll, the lovely work bag, dress, apron, or collar, and of every boy on the reception of his knife, crayon, ball, or game, and candy.

### SHARING THEIR GIFTS WITH THE POORER.

But this school wanted a share in the second bearing of Christmas tree fruit too, and received it doubtless, for "He said—It is more blessed to give than to receive."

The things left after giving each child a present, were distributed among the very poor people whose actions proved that they were equally proud as my little ones.

I have been working hard to furnish my school with slates and the regular text books. You can imagine my joy when I received the slates from your school. For the writing materials, pincushions and various other gifts, given me by you and your friends, I have thanked you in my heart times without number. The maps especially do I feel grateful for. I had neither maps nor charts of any kind in my school-room.

I am gratefully yours,  
M.

#### HOW I CONDUCTED THE EXERCISES.

To another generous school and its teacher, a grateful teacher writes.

South—Va., Jan. 10th, 1885.

DEAR FRIENDS: The whole of my school and the parents of my children send their hearty thanks to you all. I also thank you all very much for your very great kindness and hope that the blessings of God may be with you.

That being the first Christmas tree I ever had charge of, I did just as you wrote me, and was very successful indeed. I conducted the exercises almost as I do the Sunday School. Commenced by reading the Ten Commandments together, then singing and prayer, afterwards a short address by myself. "Why we should keep Christmas and what it really means." The children had very nice pieces on Christmas, etc., which were very nicely delivered.

Some of my children in a very short way have written some account of their Christmas tree. These scholars have had a very poor chance to improve themselves. My work keeps me very busy all the time. I have 88 scholars and they are crowded in a very small room; quite a large number for one person to teach.

Yours very truly,  
B.

#### LETTERS FROM THE LITTLE ONES.

A few of these little "short letters," or short extracts from them, are as follows:

South—Va., Jan. 10th, 1885.

My Dear Friends—Our Christmas tree was very beautiful indeed and I write to tell you about what a splendid time we had. I received a beautiful picture book and a great deal of things, and my little book had in it some very pretty pictures and reading also. I hope you enjoyed yourself Christmas as well as I did at the Christmas Tree. I can not keep from thinking of you when I read my little book; when I received my book I was as happy as a boy when he knows his lesson. I thank you very much for sending us such nice presents. This is all I have to say. From your friend,  
LAURA DILLARD.

My Dear Friends: It is with no small degree of pleasure, that I write you, thanking you for the kindness which you have shown by sending us such nice presents. Oh! I wish you could have heard our speaking and singing, and enjoying our Christmas tree. I received for my present a cup and a saucer, on it a good girl, and I must say that it was the grandest time I have ever experienced at a Christmas tree. The Christmas Tree was a green holly, and on it were red berries which made it look just grand. Now I wish you a happy New Year.

Yours truly,  
LUCY C. BOONE.

My Dear Friends: The Christmas tree was so beautiful you could not help looking at it. Oh! I had such a pleasant time. I wish you had been with us. I got two very nice presents, a little story book and a mug. I thank you very much for sending us such nice presents. I hope that there will be a time when I shall have the pleasure of doing such a kindness for you. Now I hope you a happy new year.  
From yours truly,  
SUSANNA LAWRENCE.

### My Dear Friends:

Oh! we did have such a lovely time, it has been better enjoyed than it can be expressed, for all of our schoolmates were there and parents, and many of our friends, and then a beautiful Christmas tree in the midst of the congregation, loaded with beautiful presents, and our teacher under the tree, so happy and so kind to us.

Dear friends, I am very thankful to you for your kindness to us; we may never have the pleasure of doing anything for you, but will ever be grateful to you for your kindness to us.

I remain yours truly,  
MARTHA L. MELTON.

#### A TRYING CASE.

We do not often use this page for direct appeals, and the following one was made to a friend and not to the public. We present it however, knowing the writer as one of our good and faithful workers, and thinking that some of Hampton's friends may rejoice to help in what is to him a peculiarly trying emergency. We shall be glad to send his address to such, or to forward to him their cup of "cold water."

— Jan. 3rd, 1885.

MISS C.

DEAR FRIEND: Months have elapsed since I have written to you. I have had nothing new to write. My condition is the same, the burdens of life are just as heavy, and such things I know do not particularly interest my friends. The last time I wrote to you, my story was a sad one; my health broken down, unable to work and dependent upon others, almost entirely for support. To-day finds me in the same, if not a worse condition. I feel that I am a great burden to my cousin, who has done much for me and is still willing to do more, but even willing hands can get tired.

Sometimes I feel that all my hopes and aims in life are crushed and life itself a burden, but when I stop to consider whose I am and whom I ought to serve I am constrained to say, "My Lord, thy will be done." The Lord worketh for the good of his people and He often carries them through a most rigid discipline to make them what they should be. So in my case I must have needed the discipline or He would have never given it to me.

I am sorry that I am not able to write you glowing accounts of diffusing knowledge, spreading the cause of temperance, organizing Sunday schools among my people, as many of the other Hampton graduates are doing. Though hindered, I am just as anxious and willing as those at work.

I don't wish to burden you with my troubles of life, but as I am writing to you I can't do otherwise than to state my condition as it is.

Another phase of my trouble is the precarious condition of the little home I attempted to procure for my aged mother and afflicted sister. I have on fifty or sixty dollars and if I could clear that up I would feel relieved from one of life's burdens. As a last resort I must beg my friends to help me in this matter. I beg you to do what you can for me that I may save my little home. I leave the matter with you, trusting the consequence to Him who cares for the poorest of His poor.

I am yours truly,  
B.

#### "PLEASE SEND US A CHRISTMAS LETTER."

One of our faithful workers, who is teaching with her husband in Virginia, writes as follows of their successes and efforts, and needs. Her modest request was more than fulfilled, and her school made glad not only by a Christmas letter but by other remembrances.

— Va., Dec. 1st, 1884.

DEAR FRIEND: My husband has purchased a very valuable place here. We moved here last June and we have been making improvements ever since we moved. We planted a very nice orchard last month, and set out 225 strawberry plants. My husband and I are now teaching in a very fine school of 68 pupils. This is the first school the people have ever had here and they are very proud of the school. My Trustees are very much pleased with my school, and way of teaching. I am now preparing my children for a Christmas entertainment. I want to give them a Christmas tree if I can get any help. The people are very anxious for one as they have never seen one. Please do all you can for me and if you can not do anything like, gifts for the little ones, please let us have a Christmas letter, and then I will

feel more encouraged in my work, for I feel very much discouraged sometimes, and feel like my work is in vain, and then my soul is revived with the Spirit to go on with my work, for I expect to be rewarded hereafter. I am a graduate of '74. I have been teaching ever since 1874. I have been married six years. My husband is a teacher in the same district. I am teaching in. I will write you a more full account of my school when I write again. I received a package of reading matter from Miss T. last week. Please let me have an answer from this.

Respectfully yours,  
M.

#### Contributed.

The following pleasant communication is from a valued friend who, on a recent visit to Hampton, made selection of a room in the new Girls' Cottage to be furnished by the donations of the ladies whose hearts as well as voices are lifted up in the mountain missionary meeting she so graphically describes.

#### A MEMORY AND AN OUTLOOK.

The memory is of a pleasant, summer parlor, with a welcome blaze in the chimney corner; from the windows it were apparently an easy thing to touch the mighty mountain walls encircling the tiny valley.

Here, every Sunday morning, during the short "season," there came up a score of neighboring cottages and hosts of ladies (to be absolutely exact, twenty-three) dwellers in divers cities and holders of diverse opinions, yet gathering almost instinctively to one accord in one place, and that place a missionary meeting.

Society, both human and molecular, has its own laws of crystallization.

These ladies, whose homes are at the centres of thought and philanthropy, have very naturally sought this summer rest equally "near to nature's heart," and the strains of their morning hymn.

"We are watching, we are waiting,  
For the bright, prophetic day."

are caught up to mingle with the refrain of the poetic, yet overworked river which has its springs in the northern hills.

That they may sing with clearer faith,  
"Lo, He comes! See the King draw near!"  
they propose the social contribution basket.

The outlook is from the new Dormitory at Hampton, six months later: four ladies from that far away missionary meeting have picked their way up two flights of stairs to the Waterline Room. As yet it contains nothing but rough plaster and lumbered floors, except some excellent possibilities.

Its occupants will be two colored girls, night students, who work all day with their hands, for the privilege of two hours instruction in the evening and the anticipation of earning an entrance to the regular classes.

The room is not large, but it is ample; here will stand the bureau; there, the wardrobe; behind the door, the wash-stand; in those corners, the narrow iron bedssteads, and under the gaslight a table by which the room-mates will study out the promises of God's Word, or write letters that will give an impulse to lonely homes. Over the mantel-shelf is to hang a view of the Happy Valley, and the simple conveniences on the bureau and table are sure to be pretty as well as useful.

The completeness and the freshness and the sense of possession will make this upper room an earthly paradise to these girls.

A new existence is open before them. What shall be its limit? From that unanswered question, it were better to turn to the window whose view decided the choice of rooms by this self-appointed committee. Just below they see sparkling in the bright February morning, the tidal creek, as it goes tripping on towards the river. They look beyond out to Hampton Roads, whose peaceful waters are made forever historic by the tremendous conflicts and conquests, and they know, rather than see, that in the dim distance lies the illimitable ocean.

M. B. B.

**Horsford's Acid Phosphate.**  
EXCELLENT RESULTS.  
Dr. J. L. Willitt, Elio, Me., says: "Horsford's Acid Phosphate gives most excellent results."

## Southern Workman.

### Indian Department.

ELAINE GOODALE, In Charge.

Regular Contributors:

HERBERT WELSH, *Gen'l Sec'y Indian Rights Association.*

ALICE C. FLETCHER,

REV. JOHN J. GRAVATT,

REV. SHELDON JACKSON, D. D.

JOHN T. MCGOUGHIN,

WM. C. GASMANN.

Bishop Whipple's letter, urging the importance of great care in the appointment of an Indian Commissioner, is touching in its simplicity. "I have given the Indians all I had," he says, "my time, my means, my heart."

The Onondagas in N. Y. State have given up their tribal form of government, and adopted, of their own accord, a republican constitution. Have not these Indians taken a long step toward American citizenship?

The *Indian Journal* declares that Colonel Boudinot's chances are good for the Commissioner. They have a precedent in appointing a Parker of an Indian blood, as Commissioner of the Cattaraugus tribe and a nephew of Red Jacket.

A bill has passed the House providing for the punishment of all Indians committing a crime against the person or property of another Indian, according to the laws of the Territory in which such crime is committed. This is an advance over the old custom of the "avenger of blood." Why should there be law and justice everywhere except on an Indian reservation? What right have we to protect the white man against the Indian, and refuse to protect the Indian in his turn?

Mr. W. H. McKinney, the young Choctaw Indian who is studying theology at Yale college, repeats the cry for fair dealing and right dealing toward a misjudged people. "There was a time when the people of the United States thought that North American Indians were incapable of civilization. But those times are past, and now here we are trying to learn the ways of the civilized people. We want men and women to work for us and help us. We need a holy religion; a nobler motive of Christian union. We have had men whose aims were to cheat us; we have had speculating men, and we do not want them any more. We want those whose labors must be for all the tribes of the earth; who recognize no distinction of race; for the time is coming when no race shall differ from another."

#### LONG ISLAND INDIAN PREACHERS.

Dr. S. Irenæus Prime, in the new *Brooklyn Magazine*, gives an interesting account of three native Indian preachers of remarkable power. One of these, Samson Occum, was the first Indian to make a public appearance as a preacher in Great Britain, where the multitude flocked to see him. On his return he labored with great success among his people on this island, and he also preached in Boston and New York, and many other places, with acceptance and effect. Some of his hymns are preserved in church collections, and are sung without a thought of their origin. A sermon of his, preached to a man on the eve of execution, is also preserved, and he who can read it without tears must be made of sterner stuff than ordinary mortals. That these Indians have had eloquent preachers among them is the proof that they might have been a moral power in the land had they cultivated the arts of civilized life, in the midst of which they have perished.

#### AN INDIAN SCHOOL IN VIRGINIA.

Perhaps few people know that Virginia boasts the remnant of a tribe of native Indians, for whom a separate school must be provided. Miserably poor, and degraded almost beyond belief, with both white and Negro blood in their veins, they will not attend colored schools, while the white schools refuse to admit them.

Although the state of the parents, in spite of their curious pride, is thus lamentably low, the little children (like all children) are interesting and lovable. A few of them are remarkably bright; and one little girl, whose father cannot be induced, and possibly is not able to pay for her school books, resolutely announces her intention of "going to college!" The teacher, a white young lady, writes:

BOWER'S HILL,

Norfolk Co., Va., Jan. 25, 1885.

"The school has gone very well this week. The last two days, that were so cold, I had twenty-two and twenty-three pupils; the last is more than I have had any day since. It was so cold that it was impossible to get any work out of them. I kept the stove hot all day long and made a square of the benches all around it; packed the children in as best I could, putting all those of one class near together; then walked around the outside with my cloak and mittens on, hearing the recitations and trying to keep them from crowding one another, which was the hardest task of the two, although both were hard enough.

My fingers were so stiff and cold that I could not write on the blackboard; but just think how much better off I was than the children! There was one little girl who is about eight years old, who had a five-cent calico dress on, and this thin stuff was all that she had over her arms; but these cold days she has had an old cotton coat of her father's to wear to and from school. Even then she is almost frozen when she gets here; and a little brother, who is four years old, come, and I can always tell when they are coming when quite a long way off, for they are always crying this cold weather.

There are several others nearly as badly off, but still they come to school. I asked some of them why it was that so many came on these cold days. "O, Miss Lila," said they, "it's warmer here than it is at home."

LILA COCK.

#### THE SNAKE DANCE OF THE MOQUIS.

Capt. Bourke, in prefacing his vivid account of some of the curious customs and religious rites of the Moqui Indians, emphatically pronounces them to be "one of the most interesting peoples in the world." He and his party of three were the first white men to witness the ceremonies which he so closely describes, and the artist has made careful studies in color of the costumes and paraphernalia of the dance, which add greatly to the realism of the book.

The Moquis inhabit seven pueblos or villages, Arizona, a few leagues apart; the houses, ranged in rows, or in terraces one above the other, are of rubble sandstone, laid in mud and plastered with the same on the inside. The scene of the great festival painted is as follows:

"Six or seven hundred feet below us, at the foot of the mesa, stretched a broad plain, bounded on the distant horizon of the southeast and east by a long, low, broken line of bluish buttes, in all the fantastic forms of towers, buttresses and pinnacles which nature loves to carve out of the hills of this strange country. This plain, which to the eye is apparently a broad expanse of barren sand and rock, is in dozens of sheltered nooks dotted with the tiny fields of the Moquis, vividly green with ripening corn and wheat, or decked in darker hues with the foliage of peach orchards.

"From half a dozen ravines, springs discharge petty streams of water; wherever it is possible to build a dam of stone or clay there is a reservoir, and close to it a corral for sheep and goats; on the flat rocks, closer to the foot of the mesa, are often spread traps for luring and killing doves, or small cleared

spaces upon which bushels of luscious peaches are drying in the sun. Not a sign of animation mars the placidity of the scene, since yonder sedate donkey, trudging solemnly down to the springs for a drink; that great herd of goats and sheep browsing in the middle distance, or this half-dozen old women toiling so slowly up the almost vertical face of the precipice with five-gallon ollas of water wrapped in their old and faded blue blankets, can scarcely be called animate.

"Then you have the projecting beams of the ladder leading down into one of the *Estufas*; close to this the sacred rock, with its niche containing the sandstone torso idol and the largest of petrified wood, eagle-down and corn-shucks. On this side of the sacred rock the cottonwood lodge and the sacred tree; and right back of these you can place a medieval jumble of masonry, for all the world like the half-ruined castle of a Rhine robber-baron of six centuries ago.

"Fill every nook and crevice of this mass of buildings with a congregation of Moqui women, maids and matrons, dressed in their graceful garb of dark blue cloth with lemon stitching; tie up the young girls' hair in big Chinese puffs at the sides; throw in a liberal allowance of children, naked and half-naked; give color and tone by using blankets of scarlet and blue and black, girdles of silver and coral, abalones and *chuchichuit* (turquoise). \* \* \* with a hazy atmosphere and a partially clouded sky as accessories, you have a faithful picture of the square in the pueblo of Hualpí, Arizona, as it appeared on this eventful twelfth day of August, 1881."

The dancers now appear, a strange procession of old men, little children, young men and girls, elaborately tricked out in barbarous finery, curiously painted, and wearing rattles of tortoise shell and sheep or goat toes. One set presently vanish; and reappear bearing live serpents in their hands and between their teeth. During the varied ceremonies these poisonous creatures are handled over and over again with apparent freedom, but with wonderful skill and caution as well. It is said that the dancers are never bitten.

"My own suspicion," says Captain Bourke, "is that one of the minor objects of the snake-dance has been the perpetuation in dramatic form of the legend of the origin and growth of the Moqui family." This view he proceeds to support with some ingenious conjectures. "Religion is at all times conservative; it is never more so than among the savage races, when the functions of the hierophant have not been differentiated from those of the doctor, the sorcerer, the dramatist and the historian; and, therefore, in the religious dances of such peoples as the Zunis and Moquis, suggestions of their history and previous environment will crop out in features which, from any other point of view, would be without import."

A good deal of interesting information follows as to the dress, customs, worship, arts and industries of this hard-working, superstitious, devout and unwarlike people. The adventures of the party are likewise told with some humor; and we have upon the whole a curious and readable, if not valuable addition to the scanty literature of American ethnology.

#### White Ghost, as seen in a parlor in Boston.

By his hostess.

I feared Chief White Ghost might suffer from his unaccustomed experiences. But I am sure his presence has quickened an interest in his case (unknown before) in many hearts. None could resist his eloquent words nor the courteous gentlemanliness of his whole bearing. And when he came down dressed in the costume of his race, and stood motionless before us, with crossed arms and a sad earnestness in his downcast face, he seemed the embodiment of his people, pleading for the justice and mercy so long denied. There were not many dry eyes in the three rooms.

#### "Bad Medicine."

A recent imitator of Columbus found himself less successful than the great man in carrying out a practical joke.

"A Clerk in the Agency store, Fort Reno, Indian Territory, a short time before the last eclipse of the sun, informed the Indians that on a certain day (naming that on which the eclipse took place) he would put out the sun, and if they would assemble at that time they could see the performance.

The Indians professed not to believe what he said, but he assured them he would do all he promised, and when the day arrived it brought a large number of the red men to witness the sun's extinction.

A few minutes before the time fixed by the astronomers for the observation to begin, the wag mounted himself on an empty sugar hogshead and began his incantation.

Presently the sun began to disappear, and the "sons of the forest" evinced unmistakable signs of uneasiness, which increased as the performance proceeded, until, a short time before the sun disappeared entirely, they rushed upon the speaker, exclaiming, "Bad medicine man; put out sun" and would have dispatched him in short order had they not been restrained by the soldiers, who had gathered to see the fun."

#### What the Schools are Doing.

Mr. Haworth, Superintendent of Indian Schools, reports that the average attendance of the Government Boarding schools last year was 3,404 pupils; of the day schools 1,737, the total enrolment of both being 9,965, not including Missionary schools; the average is the true basis. Increase in average attendance since last year of 925; add to this 301 for the new schools at Geneva and Chilocco. At the latter named there is a difficulty common to schools so near the reservations, of runaway pupils who, when aggravated, make nothing of starting out on the coldest day for a two hundred-mile walk to their homes on the "bee line," which the Indians so easily take; and on the other hand, parents and friends "sit" upon these schools with impunity. They readily ride from two to five hundred miles to see a sick child, and stay as long as they please. Under good management these difficulties can be, in part at least, overcome; but they are serious. Fifteen hundred miles is not too far away for the absolute break from the tribal life, which the Indian needs. Mr. Haworth reports that in the past year 505 children have been placed in industrial schools in ten different States at a cost to the Government of \$165 per annum, besides transportation; but this is complained of as not being enough. He says: "The provision for placing children in private families has not met with as good success as in the other case, though it has been done in some instances, and especially from Carlisle and Hampton with good results. The people of the West are rather reluctant to take Indian children into their families."

He refers to a strong opposition in some tribes to sending children to school, especially girls. "She has a marketable value and can be sold to a trader for ponies, and her innocent ignorance tells her it is all right. Not so, when education and civilization opens her eyes to see aright." Mr. H. says that an educated girl makes more inroad upon savage life than an educated boy. The training of married couples at the Hampton school is cordially commended. The Osage Indians lead in compulsory education; hence, Agency schools are full. Mixed bloods seem to be pushing ahead in educational interest, and are likely to control. "The great changes," Mr. Haworth says, "wrought in the last few years, have also made changes in the Indian mind. Most of them realize it and are anxious for a better way. Care should be taken that we do not educate them out of their red Indian ways into ones making them helpless and proud."

He calls attention to the helpless condition of the Indians, who, after an education away from their home, return to blanket and camp life, with nothing to do, however willing, and calls for some Government provision to meet by way of help to those living upon farms and in homes of their own; the money to come from what Government owes the Indians. A very good suggestion.

Over one-fifth of our Indian population are tax-payers. In 1870 there were 25,731 Indians tax-payers; and in 1880 there were 66,407, says Mr. Haworth—"abundant proof of their ability to take care of themselves."

"The Snake Dance of the Moquis of Arizona," by John G. Bourke. Charles Scribner's Sons: New York.

# INCIDENTS OF INDIAN LIFE AT HAMPTON.

20 boys and 11 girls who have spoken English for four weeks are wearing "Eagles."

The Sioux boys have formed a baseball club and play with enthusiasm. There will probably be a rival "nine" at the Agency mill, and some great match games before long.

The English teacher with a room full of visitors must have been a trifle embarrassed, when, on asking for a definition of the word "smart," the twenty replied with one voice—"you!"

MARRIED.—At Yankton Agency, D. T., Jan. 27th, 1885, by Rev. J. P. Williamson, Mr. Stephen Vassar (Shinyapi) and Miss Lizzie Keeler, both of Yankton Agency. Stephen Vassar is apprentice at the Agency mill, and Lizzie Keeler is one of the returned pupils from Hampton.

Rev. Franklin Elliot of Shawneetown, I. T. writes:—

"So far as I have observed, Hampton students maintain their civilization with more stability after returning to their people than those trained in any of the other schools. It seems that association with the colored there is a very great advantage to the Indian."

T. W. Alford, who has lately accepted a position in the school at Chillicothe, I. T. writes:—

"I am going to establish a reading-room for my large boys, a room in which they would be glad to spend their leisure time. And shall be very much pleased to receive papers and old magazines from any friends who would be so kind as to send us a lot voluntarily."

## AN ADDITION TO THE "MENAGERIE."

A young Chinaman now recites in our Indian classes, and with his straight black hair and olive complexion, there is little to distinguish him from the other boys, unless a stray peculiarity of accent should betray him. He has been in this country for several years, and comes here from a school in Buffalo N. Y. where he has friends. One of them writes: "Lee Wun is intelligent and learns easily. I know you all will be interested in him." Since his arrival, there has been a great demand for "books about China" in the Indian Reading Room.

## HER IDEA OF HEAVEN.

Some of the little Indian girls were eagerly propounding questions to a teacher about death and Heaven. Very sweet and serious they were about it, and their questions were not always easy to answer. They were told of the fair City described in Revelations, of the golden streets, the harps and music. Suddenly an impetuous little Winnebago, recalling festive evenings at Winona, asked, "March with boys?"

## GOOD BYE!

Among the first party of Sioux Indians brought to Hampton by Gen. Armstrong in November, '78, was a son of Chief White Horse, Harry Brown, a boy of fourteen. He was a bright scholar, a fine young fellow and made a good record during his three years at school. He did well also after his return to the West, and we were glad to welcome him back in the Fall of '83 for a further course of instruction. This year he was admitted to the Junior Class of the Normal School, but later, at his own request, became a work student. As such he toiled patiently in the Printing Office until suddenly his health gave way, and he was obliged to return home. It was with sorrowful hearts that we saw him start off, without escort, on the long journey to Cheyenne River, Dakota, but since then we have been gladdened by the news of his safe arrival and the welcome from old friends. It is hoped that his native air will bring him health and strength once more.

J. E. R.

## WHITE GHOST AT HAMPTON.

The chief and his interpreter, under the escort of Major Gasmann, came to Hampton with the school party Feb. 3rd, and passed two days among us. He was impressed by the good work done at the school, and signified his approval of our care for his children.

In his own person he is strongly impressive. The wiry, bent figure, clad in citizen's dress, (which did seem a trifle incongruous), the shrewd, candid countenance, the engaging smile and graceful manner, interested and won us all. He visited rooms, classes, workshops, and gave them appreciative study. He met all the teachers, and got to some extent an "inside view" of the workings of the school. But White Ghost himself, the gentle savage, the religious heathen, is a rare type of nature's gentleman, and there is much of interest in

## THE STORY OF HIS LIFE.

He is head chief of the Lower Yanktonais band of Sioux, numbering about 1045 souls, and occupying a reservation on the east bank of the Missouri river. His father, Bone Necklace, governed a much greater and fairer domain, a true Indian paradise in the central part of Dakota, and he could count more than twice as many warriors. Bone Necklace was famous as a great peace chief. (He is little known in history, the reason is not far to seek; he did us good and not harm.)

He made peace many times between hostile tribes of Indians and between Indians and white men, to whom he was always a consistent friend. More than once he nearly impoverished himself to ransom, with presents of blankets and ponies, white women who had been taken captive by other bands of savages, and restored them immediately to their friends. It is said that he never received any reward for this act of generosity.

White Ghost is now 56 years old and has been chief 16 years. He tells us that when his father died, he called him to his bedside, and enjoined upon him to follow his example. This the present chief has done. We read in his face a gentle and generous nature, which has always prompted him to good deeds toward those whom he calls his friends.

He has an excellent mind, and his oratory is the true Indian eloquence—sound logic, imaginative language and graceful and finished gestures. He appreciates truth and humor. He takes kindly to the idea of civilization, and from his visit to the East has evidently carried away a strong sense of its practical value. On the audiences of our great cities he has made his own impression.

White Ghost's story ought to teach us a wholesome lesson. Here is an Indian who has never shed white man's blood. His band has never, within the memory of men, been at war with the whites. And how have we returned the friendship of this royal family? By cheating them with promises and taking from them their beautiful country, of which the old chief declares that he has never signed away an acre. They are crowded into a corner of their once noble reservation. The chief brought with him a petition signed by all the head men of the tribe, setting forth this injustice in unmistakable terms.

White Ghost is not a Christian, but he believes that all men are brothers, and the children of one Father. This is the principle that has governed his life. Does it govern our course toward the Indian?

## SCHOLARSHIP LETTERS.

Each of our students writes an annual letter to the friend who provides for his schooling. A very small girl in the lowest division dictated hers as follows:

My dear friend—I write you to-day. I like school. Sunday I go to church, nice singing. Big house, Winona; some little girls in iron and sew and dinner. Your friend,

LAURA FACE.

## A boy in the 4th Division writes:

I come from Cheyenne River Agency, Dakota. I go to school in the morning and I work in the afternoon, farm. Yesterday I saw a cow. I am going to Hampton this afternoon. Thank you for helping me. CEDAR BOY.

The 3rd Division can go but little further.

I come from Standing Rock Agency. This Hampton School very good. Now I here because I come from too far, every morning I go to school and afternoon I work harness shop. I like to school here and work too. Today I am very glad to school here. Now I like the corn bread. I come here to learn English. I shall try every day from your friend, BENEDICT CHILHA.

One of the bright little girls in the 2nd Division says:

I am going to tell you about my people. \* \* \* they send their children to school so they can teach the others, and some new girls and boys come about three weeks ago and one of them was very little girl, and she sick, and she died day before yesterday and they bury her, and we have some pretty white flowers in hand and she like to live in Winona because I like the home, we all like to play with a dolls. I try to tell you all about the school but I cannot write very well, my friends so you all must excuse this time.

MAGGIE LARRABEE.

There are so many good letters in the 1st Division that it is hard to choose between them. A Pima boy from Arizona writes:

I am going to write you a letter and try to tell you what I am doing at Hampton. I been at Hampton three years and ten months. And I am studying geography and long division and reading and history. I don't know much but I will try to tell you all I can. \* \* \* I am working in the blacksmith shop and like it very well. \* \* \* And every Sunday we fall in and all of us go in one line and the officer inspect our shoes and him out. When I was at home my father tell me that school is a good thing.

So I thought I would come, and try to learn the white man's way. I like to go to school at home. I want to school little while but I cannot learn so fast as here because so many little Indian boys there we talk our language all time and don't try to talk English long. Last year I did not write so much as this, so you can see how fast we are learning at the Hampton Normal School! KISTOE.

## AN Omaha house-keeper writes:

I work in afternoon and go to school in the morning. I keep house myself and cook, wash, iron, sew and scrub. I have sewing machine. All Indian boys and girls doing very well at Hampton. My little boy he learn talk English, he don't know how to talk Indian. He is three years and a half. I try hard all I can this year. I came from Nebraska. I am Omaha. I am very glad I came to Hampton to learn. All my teachers very kind to me and I love them so much. When I go back I would miss them so much and my little house too.

All Indian girls learn how to keep their rooms clean and keep their own clothes clean. All Indian boys learn very well. Some of them learn how to work carpenter and shoemaker, blacksmith and harness-maker. My tribe of Indians they try to have farm and they work very well, raised wheat, corn, potatoes and vegetables. They have wagons, plows and horses, cows, pigs. They stop hunting and work very hard. Some of them live in a houses and few live in a tent. They have two school houses, mission school and government school. \* \* \*

We have every Sunday night prayer-meeting in my little house. I like it so much.

MINNIE STABLER.

Here is a part of the experience of an earnest young man in the Advanced Class:

Last summer I went home and then saw my own people. But now there are some Indians they wear white men's clothes.

Some Indian boys, I am going to plant \* \* \* Now Dear friend I want to tell you something about my trade, carpenter shop. In my home I worked there two months and a half but it is good for me. I like very much. I made some window-frames and door-frames and sawing, these I made myself, nobody can help me, and then

after I work there I going to teach school. I have 60 students that beginning 15th of Sept. I try very hard to teach school.

I think about my own people but I have not much learn yet, because I try to help my people I want to learn something that is what I think about and I came back again. Mr. G.—he went Lower Brule Agency and he told me and say "I want somebody to go to school. Please tell me who want to go to school." The Indian chiefs met together and some Indians say nobody can go to school and you must stay here. \* \* \* But I think to him what I know better and after that he let children go to school. Because I know very well it is good for my people when we get good education.

## SAMUEL MEDICINE BULL.

## A Junior boy says:

With pleasure I shall write you a history of my life as far as I can remember. I was born in the State of Kansas, near Topeka, Kansas; and when I was about five years old my father died; but some days before he died I remember very well he was talking about going on a train and expected to take me with him. However my mother thought it would be best for me to go to a Government School that was four miles distant, because she thought I was too young and small to go out on a train. I thought my mother cared not for me in leaving me among strangers, but since I came East I have learned different.

Anyhow I kept on going to school. At times I found it very hard thing to learn to speak English, which is sometimes hard for me to speak at the present time. And when I was about nine years old my mother died, then I was left without home, as my grandmother was too old to care for me.

The manager of the school found me a place with a white man; this man promised to send me to school every winter providing I stayed with him until I was twenty years old. Somehow I managed to stay with him four years, and received five months schooling during those four years. And the first of the fifth year an Indian Agent came to see me, asked if I would like to go where my tribe of Indians were, which I did in a few days afterward.

I went to School at the Mission School nearly one year after going to Indian Territory, then for some time I went from camp to camp just where might happen to reach me, and after following such life some time, I made up my mind I must go to work, which I did until I came here to school.

The main thing that I followed was Cowboy's life.

I have been here two years last Oct. \* \* \* I thank you for helping me to get my education.

## C. W. BATTICE.

Here is a part of the thoughtful letter of a young man in the Senior Class.

Helping my people, is a very easy thing to say, but not so easy to do, as they are so much opposed to the ways and customs of the white people, and were much opposed to my coming to school; saying if I did educate myself, I would be of no help to them, but be more able to defraud them, and consequently they would not have anything to do with me when I returned. These reasons are just brought about, by lying so often cheated and defrauded by educated bad men, whom they have trusted. I hope in time this may all pass away, and that the young Indian students may when they return to their homes, be able to wield a greater influence over their people than they do now or ever have heretofore.

I agree with a very good friend of the Indians who said "that the Indians must become civilized, they must learn how to use these great rail roads, these telegraph wires, to manage steam ships, and to use all the inventions of an intelligent nation. They are as much for them as they are for the American people." I think the sooner they learn how to use all these things, just that much sooner the United States will be cleared of a dark spot, which has for many years been troubling the minds of a great many people. They should not only learn to be good mechanics, but should strive to reach higher positions, such as doctors, lawyers, statesmen and congressmen, and a great many such offices as are held by educated men.

After finishing my course here I hope and expect to attend a medical college, where I shall put in a few years in preparing myself as a physician. Good doctors are needed very much among the Indians, in helping to put down the influence of the old medicine men, who resort to all manner of superstitious means in trying to heal the sick.

THOMAS MILES.

## Horsford's Acid Phosphate.

## Land, Law, Education—The Three Things Needed by the Indian.

BY ALICE C. FLETCHER.

A glance at the map of the United States suggests that the primitive political question of the white men and the Indian was one of the most vexing and the most difficult patches of red upon the maps of today, show that the question is not yet disposed of.

Until recently, public thought had hardly been stirred to consider the Indian's claim to a share in the benefits to be derived from independent ownership of land, and the intelligent labor which makes land valuable. Until these claims receive their proper attention, it is clearly impossible that the "make shifts" of Reservations will disappear from our maps. In times past, the general feeling has been that the red man, out of sight and safely corralled, so that he could not trouble his white neighbors. This was done by pushing the Indian further and further off, clipping his lands, refusing him any legal recognition, and regarding him as one whom only warlike weapons could hold in check. For a century past those who have had the best interests of the Indian at heart, have wanted to lose sight of the Indian in the American citizen, to recognize him as a responsible individual, who, by education and the free-masonry of labor, will become not only a safe neighbor, but a contributor to the prosperity of the country.

Reports to the Government addressed to those in authority, have stated that the means needed to ensure this desired end, individual ownership of the land, the protection of the law, and Education. Our plea of to-day is therefore nothing new or strange. The isolation of the Indians upon reservations where the land is so small and the people so helpless and to keep them in ignorance and poverty. It is largely because of this isolation that they have had to be fed and clothed and well-nigh reduced to beggary and all its attendant evils. Studying the Reservation system brings with it a conviction of the make-shift character of the system, and of its injurious influence upon the people most nearly concerned. By means of the Reservations, the ancient social organization of the Indian tribes is kept alive, bereft of all its former beneficent power, its force being mainly felt in its restriction upon individual independence, upon the accumulation of wealth, and the establishment of the family, with its legal rights over property. Under the control of the influence of the chiefs and the agency system, the Indians are kept in the irresponsibility of perpetual childhood. The only door of release opens through the breaking-up of the Reservation, and giving individual ownership to tracts of land greater or less in extent, according to the nature of the soil, thereby extinguishing tribal ownership, and in a great measure, tribal authority. By a division of the land, the individual would be set free and become the inheritor of his own labor, and the important point in social advance would be gained by having the legal family established. This relation is impossible under tribal rule; and without individual property, family rights have no anchor to hold them secure in the midst of conflicting passions. Many difficulties, hedge about any general legislation which, by a single act, aims to settle permanently groups of people scattered over a wide area embracing different soils and products, and requiring varied forms and methods of industry to secure a livelihood. A quarter section upon a rich prairie is wealth to any industrious family; but a quarter section, or even a section, in the arid region of Arizona, or Montana, would yield little to sustain life by agriculture. In many locations where the Indians are now living, irrigation is needed, and land without secure water privilege is of little use. Some Reservations are fitted solely for grazing, and others possess so little tillable land that it seems hopeless to expect a people permanently located thereon to ever become self-supporting.

To cover therefore so many points and to meet to the full all the needful adjustments, in one bill, is a most onerous task, and almost impossible of complete success. Amid the great pressure of business before each Congress, special legislation for each tribe of Indians is not to be hoped for; and the question is therefore, how can the most salient points of the difficulty be met? It seems clear that in any legislation upon land for the Indians, the allotment of the land in severalty should be made the rule, and the matter not left so permanently optional with the Indians. This course, while seeming to be arbitrary, is not so in reality. We have inherited the guardianship of the Indians and we must therefore act for the benefit of our wards in a way that shall fit them to enter upon their majority, which cannot

be far distant. We must use our wider experience to supplement the lack of knowledge on the part of the Indian, which prevents his discerning the necessities and conditions of his future, and his ability to be rational and dependent upon a two-thirds vote of any tribe, is to rivet the chains which bind the Indian to a hopeless position. In every white community, the progressive men, the minority, and the friends of public welfare, particularly those which involve radical changes or abstract advantages, were left to a two-thirds vote of the whole community, few if any of such acts of public welfare would be made effective. The Indian tribe is no exception to this rule of human nature which governs the white man's town or county. Born and reared in the midst of a social system which holds the individual in the grip of his "gens," and prevents the accumulation of property and the establishment of the family upon a firm legal basis, unacquainted with any other social organization, and disposed to keep aloof from strangers, it is surely imposing too grave a task upon the Indian to bid him decide his own future condition; particularly as he is now standing facing the forward rush of civilization with its difficult ideas, laws and customs, already closing him in, with irresistible force. He has no power to choose the safe course for his future, because he has had no experience of the conditions that are coming upon him; neither he nor any one can turn aside, and leave the Indians untouched, unmodified. Because of this lack of vision on the part of so large a portion of the Indians, we owe it to our own honor, to the future welfare of the people, to act as faithful guardians, since we must, that the Indians' path shall be made plain, and freed from the obstacle of his present social condition. Tribal control, therefore, which ignores the individual and the family, (as established in civilized society) must be overthrown, and this can only be effected upon the giving individual ownership of the land, and thus setting up the legal homestead. Until these changes are made, all labor in behalf of the elevation, education and the civilization of the Indian will be but partially effective. To make land in severalty the rule and not make its execution dependent on an Indian two-thirds vote; which is so large as to be almost impossible to secure, is our plain duty and a kindly act, since history and experience have taught us that the sanity of the family, the establishing of the homestead, giving to each individual freedom and opportunity to bring all the faculties into play so that he may win success or by failure learn how in future to avoid disaster, are the only conditions favorable to growth in manly independence and social security.

Another reason for speedy allotment is that the encroachment of settlers is continually causing loss to the Indians of their best lands, and lessening the chances of securing to the people suitable farms, or herding grounds. There is no time to lose in this regard. If we wait until all the Indians are ready, there will be little left worth allotting to them. Still another reason is to be found in the fact that under the present procrastination, the Indians who desire to advance are held back by the lazy and shiftless ones. They live off of the others; tribal customs, duties and conditions permit it, and indeed foster it. There are those among the Indians—and what race is exempt—who will always shirk work and responsibilities. An intelligent Tuscarora Indian said: "It is not just to us who live on tribal land to give land in severalty to Indians or to Indian tribes here and there. All the beggars come back on us. Makes us poor. If you are going to give land in severalty to any Indians, then all the Indian Reservations should be broken up at once so that there should be no place to which these lazy ones could flee."

The history of past Indian allotments testifies to the truth of this remark, and the inertia common to humanity adds its weight of evidence. As rapidly therefore as possible, the Indians should have their lands in individuality; and the residue of the land be thrown open to white settlement. The end of the Indian is at hand and his fate is to become an American citizen. Nothing can stay the tide of events which is sweeping him into our very midst, where alone lies his chance for safety and advance. The present lack of legal protection is a source of much wrong and trouble. There is no appeal possible for an Indian to make, to seek redress for any grievance committed by another Indian. Nor can he enter into any business or contract with anyone, neither sue or be sued. Were not his neighbors, of whatever color, far better than their legal restraints, neither life nor property could be safe for a day. This improper state of affairs has been shown by the wrongs urged by Secretaries upon Congress, and recognized by individual Congressmen, but to no avail. Even should a bill pass which would give the law over the Indians, there would

still remain a practical difficulty in the way of its execution, and that is, that the Indians like a foreign body in the midst of the state, as they are all non-taxpayers, they contribute nothing to the support of the machinery of the law, or of education, or of internal improvements. They are burdens, since their lands are excluded from yielding any benefit to the community. To take on the legal care of several thousand persons who could in no way make compensation for the labor bestowed upon them, or the benefits received, is a task that struggling pioneer counties could not carry. Were the Indian a taxpayer, it is a question whether the courts could refuse jurisdiction over him. Why should not the Government, during the period of the tract patents, pay the taxes upon the allotted lands, from the funds derived from the sale to white settlers of the unallotted portion of each Reservation? This is exactly what any business-like government would do for its ward. It is certainly proper that the property of the Indian should be used in such manner as to protect his property and to bring the greatest benefit to the Indian himself, and there can be no greater benefit than the protection of the law to hedge about individual enterprise, and give to the Indian his full share in the enjoyments of "Life, liberty, and the pursuit of happiness."

The education of the Indian already engages a share of public attention and interest. The Government has already over two hundred schools for the Indian, and as rapidly as the opportunities will permit, more schools are being started and existing ones augmented. The good work done by the pioneer industrial schools of Hampton, Carlisle, and Forest Grove are being extended, and Geneva, Haskell, Chilocco, and others, have been added to the number, beside the introduction of an Indian Department in several established schools, in which children, which the Indian scholars are supported by the Government. Every year witnesses a deepening interest in Indian education, not only in our own midst, but among the Indians themselves.

The necessity of industrial schools scattered over the country for white children is being recognized, while their benefit to the Indians has been proved beyond cavil. The efficiency of an industrial school is apt to be in proportion to the means at its command to secure first-class teachers; and these effective schools are among the most expensive to build, appoint, and maintain.

In the prairie region, from the sale of unallotted land to the white farmers, or to cattle-raisers, in the grazing country, from mines, and from the wealth of timber now going to waste upon Reserves in the Northern states, sufficient money could be realized to establish and endow many industrial schools, and a considerable sum would remain to be divided pro rata and start the people in their homesteads. For example, it has been estimated that upon the Menomonee Reservation there is standing timber which would bring \$1,500,000, and the land still remain untouched, and available for purchase and settlement in the course of time. There are many Reservations with equal and greater untapped riches which could be made to endure good. However, these vast sums were realized, invested and the interest paid in annuities, the people would be debased and pauperized, as all stimulus to labor would be removed. But if a portion of this capital were employed to establish and endow first-class industrial schools, generation after generation would be benefited and the entire community elevated by the presence and stimulus of such institutions. The Indians are not poor, they have still considerable riches, but their riches are of no avail and are sure to work mischief until they are transmuted into a form which shall give to the Indian his own homestead, the right to his own labor, protection for his life and property, and the knowledge how to use his head and hands. It is right, too, on the broad scale of justice, that since the Indian has the means to procure these benefits for himself, he should do it and not be under obligations to any outsider. We owe a debt to the Indians for past and present wrongs, but that debt cannot be paid by us in money or regrets, but it must be paid in the dear coin of thought and unselfish, timely action, with full acceptance of the responsibility of our guardianship.

Let some should think these proposals herein set forth, too hasty for the Indian, it may be well to state that were the legislation needed to the initiation of the work by which these changes could be brought about secured during the present session of Congress, a decade of years would elapse before the day of final adjustment could be reached, so extensive is the field to be covered, and so difficult and arduous the task to be performed. This important act only adds another argument to the need of speedy legislative action, and removes the objection in the minds of some persons that Indians now far behind, would have no

time for any preparation to meet the new order of living. There is ample time for them to prepare, and the fixity of the future status would make more definite and effective the labor on the part of the Indians, the agents, the teachers and the missionaries.

## Indians Now Ready For Lands In Severalty.

IN NEBRASKA.

The Indian population in this State is not far from 3,400 and the lands occupied by the tribes lie close to the eastern border.

**The Poncas.**—That portion of the tribes who made their way back from the Indian Territory in 1878, under Chief Standing Bear, the story of whose sufferings is so widely known, are now prospering upon their old land north of the Nebraska, and a few miles from where it empties into the Missouri. They number about 170. During the past year, by the aid of an especial appropriation, twenty new houses have been erected in addition to the log cabins built soon after their return from Indian Territory. Horses, cattle, and farming implements have been issued, and the people are reported as making an honest living and supporting themselves. A warehouse, blacksmith shop, two agency buildings, and a school house have been recently built, and a day school started. These teachers are strongly attached to the present homes, where their ancestry have lived for over two hundred years. The Poncas have always been friendly to their white neighbors, and are now desirous of becoming versed in the white man's ways. By a bill now pending in Congress for the partition of the Great Sioux Reservation, the Poncas are to be given their present lands in severalty, and their wishes are being accomplished there will be an additional incentive to progress among the people.

**The Santees.**—Fifteen miles south, on the banks of the Missouri, lies the Executive Order Reservation, of the Santees. This tribe belongs to the Sioux group, and have passed through grave experiences and sufferings, having been involved in the consequences of the acts of members of their family of tribes, wherein innocent and guilty have alike been punished.

The Upper Mississippi was formerly controlled by the Sioux tribes. They are placed in that locality on the map of M. d. 1860, and John Carver visited them in the same region in 1767. During 1805 and 1806 Maj. Z. M. Pike found the Sioux at the same point on the Mississippi river, and established friendly relations between them and the United States Government. Early in the century, the pressure of white immigration upon the easterly Indian tribes felt by the tribes living near the Mississippi. Treaties for the purchase of lands and removal of Indians began to be made with the Western tribes. Even before this period, the earlier movements of the Eastern Indians had forced the Sioux tribe westward and brought on conflicts between these warlike Indians and the peaceable village Indians of the Missouri river. Of these conflicts between Indian tribes, the Santees were the least involved, but these conflicts reacted upon the white population and increased the difficulties between the two races. The Sioux were troublesome neighbors, but to the whites they were amenable to just and kind treatment. Of this, however, they received but small share, compared to the more liberal donation of hatred; pushed upon all sides, deceived, and driven from their homes, it is rather a matter of surprise that so little vengeance was taken by them upon the isolated white aggressors. The native Minnesota outbreak in 1862-3 was in reality but one of the intrigues practiced during the civil war in a rear attack. The number of white lives lost, however, was small comparatively, but the fact that friend and foe alike fell victims, intensified the public indignation, and resulted in the act of Congress which banished all Indians from the State of Minnesota. During the outbreak, the Christian Indians did not give work in the face of public sentiment of their own kindred, and saved many lives of the white people at the risk of their own. The blow of imprisonment and abrogation of treaties fell on all alike, little or no discrimination was shown. The result, however, was, on the whole, not disastrous to the welfare of the Santee tribe, for during their prison life the Christian Indians became teachers and ministers to those who were in bonds with them. A religious revival, a great desire to learn to read, and obtain a knowledge of things essential to civilized living took possession of the prisoners. Their old missionaries were appealed to, and their faithful friends, Drs. Riggs and Williamson, came to them, and guided the stricken, humbled band to better modes of thought and life. To-day the fruit of that period of trial is to be seen on the Santee Reservation. This land was set apart by Executive order, in 1866. The people number about 800, and live in the same houses, some of which are graced with

many comforts of civilized living. Agent Leighton reports 9,357 acres under cultivation, and the following crops: Barley, 200 bushels; flax, 340 bushels; wheat, 12,500 bushels; corn, 17,500 bushels; oats, 19,550 bushels; potatoes, 10,500 bushels; and hay cut, 2,700 tons.

Their Agent says: "They have come from a life of dependency to one of independence, acquiring habits of industry instead of idleness, with a disposition to try to make their own living and not depend upon the Government. They are very regular in attending church on Sunday, generally live in peace with their neighbors and comply with their word."

An article of the Sioux treaty of 1868, gives to an individual Indian who has resided 3 years on a piece of land and made improvements to the value of \$200, a patent for the quarter section (160 acres). One hundred and twenty-seven of the Indians complied with the requirements, and have filed their application papers under this title. As yet, however, no patents have been received. The "hope deferred" has a depressing influence and hindered the general progress of the people.

The American Missionary Association has a large Mission School, with a Normal Department under the charge of the Rev. Alfred L. Riggs, son of the pioneer Missionary, Dr. Stephen Riggs. Thirteen buildings are connected with the school, including carpenters', blacksmiths', and shoe-makers' shops, farm buildings and brick-yard. The 124 scholars are instructed in trades and in English studies, and the "foundations are being laid here for a lasting benefit to the Sioux nation in Christianity, education, and industrial training."

Rev. Mr. Riggs writes in his report: "The help that we have in our work from native assistants is worth noticing. Three men and one young woman have served as teachers in the school room, and two other young women have served in the Industrial Training Department, all with very valuable results."

This Normal School sustains such a relation to the whole Dakota nation, that it is a sort of an educational barometer, and we find an increasing number throughout the Indian country who are intent on gaining an education, not only for their own advancement in knowledge, but that they may become the instructors of their people. This is a most hopeful sign. For even though very many more of the white teachers ought to be employed in the education of the Indians, yet before the work can be successful as a whole, we must raise up a strong corps of teachers from among the Indians themselves, who, though they may have less scholarly equipment, have the greater advantage of sympathy. From the condition of the educational and religious work among this people, as well as from their progress in civil institutions and their building of civilized homes, there is ground for great encouragement."

A large church under the charge of a native pastor, and other smaller stations under the same kind of guidance, are connected with this mission. The Protestant Episcopal Church has successful sehops and churches among this tribe. Unfortunately during the past year, the principal church and St. Mary's school adjoining, were destroyed by fire, but these are being rebuilt, and their usefulness will again be felt among the people.

Opposite the Reservation, on the east bank of the Missouri, is the thriving town of Springfield, and there, under the same mission, is the Hope school, under charge of Mrs. E. E. Knapp, and with about 24 boys and girls. Their proficiency in English and various studies, is noteworthy as well as the admirable discipline and bearing of the scholars. The interest and sympathy of this border town is won by these pupils, not only for their far-away Indian relations, but for their far-away student relations. Double work is thus done at Hope school by educating the white people to fairer judgment of the Indian and by preparing the Indians to meet and fraternize with their white neighbors.

At the Agency is a thrifty Government Industrial school with 55 boys and 29 girls. "All the children, except some who came this year, talk English in all their conversation in school and out." The educational facilities of the Santee tribe of Sioux Indians may be said to be exceptionally good, and the large number of children in attendance at school, their willingness to speak English and acquire habits of industry and civilized living, are among encouraging signs of the times. About 10 years ago, under the encouragement of the noble Missionaries at work for these people, a considerable number of the Santees were induced to homestead at Flandreau, Moody County, Dakota. They now number about 250 persons.

"They are recognized citizens and live in peace with their white neighbors." During their residence in this place, not one of the Indians has been accused of or arrested for stealing. They are honest and make good citizens, but do not display the energy gen-

erally seen among the white people; although this, we believe, has been very much overcome within the last few years. They have two churches conducted by native ministers, and the Indians are very regular in attending services. They have a school house in which day school is taught by a man employed by the Government, making a free school for them. The Government has built 20 houses for the tribe during the year.

The country around Flandreau is well settled; a railroad runs through the country, and their lands are valuable. These Indians deserve credit, should be encouraged, but not assisted too much."

The Poncas, Santees, and Flandreau settlements are all under this Agency, which for eight years has been under the charge of Isaiah Lightner.

**Winnebagoes.**—South, following the Missouri river, the Winnebago Reservation is located, lying about 90 or 100 miles north of Omaha city. The portion of the tribe living on this reservation numbers 1205. The Winnebagoes were formerly inhabitants of the eastern part of Wisconsin, near Green Bay and the lake which still bears their name. Their history has been one of great vicissitudes. They have been pushed hither and thither, and not always treated with the respect for their former nomadic Christian civilization. It was among these that the Jesuits established their outpost missions in the 17th century. In 1769, Carver found the Winnebagoes living on an island near the eastern end of Winnebago Lake. He says: "Their town contains about fifty houses, which are strongly built with pallisades, and the land on which is situated is a nearly fifty acres in area. The land adjacent to the lake is very fertile, abounding in grapes, plums, and other fruits which grow spontaneously. The Winnebagoes raise corn, beans, pumpkins, squashes and water-melons, with some tobacco. The lake itself abounds with fish, and in the fall of the year, with geese, ducks, and geese. The Queen, who presided over this tribe instead of a Sachem, received me in a very distinguished manner, during the four days I continued with her."

The Queen, who presided over this tribe instead of a Sachem, received me in a very distinguished manner, during the four days I continued with her. The Queen, who presided over this tribe instead of a Sachem, received me in a very distinguished manner, during the four days I continued with her. The Queen, who presided over this tribe instead of a Sachem, received me in a very distinguished manner, during the four days I continued with her.

She was a very ancient woman; small in stature, and not much distinguished by her dress from several young women that attended her. These attendants seemed greatly pleased whenever I showed any token of respect to their Queen, particularly when I saluted her, which I frequently did, to acquire her favor. On these occasions, the good old lady endeavored to assume a juvenile gaiety, and by her smiles, showed she was equally pleased with the attention I paid her. Although at the present day a woman no longer holds the place of Sachem, descent goes by the mother, not by the father, the continuous warfare between the Winnebagoes and Chippewas led to much trouble, and the United States sent officers to arrange a peace between these contestants, whose war impeded the lives of the settlers and traders. The emigrants to Wisconsin, Iowa and eastern Minnesota, pushed hard upon the Winnebagoes. Treaty after treaty was made for the sale of more and more land held by them, until at last they ceded to the United States all the lands claimed by them, the former agreeing to purchase lands north of the St. Peters river, for the permanent home of the tribe. Eleven years later, settlers finding their way into that region and desiring to get rid of Indian neighbors, another treaty was made by which their lands and all their improvements were to be sold, and the people removed to a tract 18 miles square on the Blue Earth side in Minnesota, where it was supposed the distance from the white people would be sufficient to insure safety against further removal. All the Winnebagoes were to go to this district. A number had hitherto refused to leave Wisconsin, and some had joined tribes living in Kansas. This very land was to be surveyed and allotted to individuals, and schools to be established and workshops built. Many of the people went to work with a will, and opened up farms and built houses, although the pastured schools were not yet started, nor the allotments made as agreed. After the Sioux outbreak, the Winnebagoes were driven from their homes, and sent over to the Missouri river in Dakota, where they underwent great suffering, and finally fled down the river and sought shelter and protection from the Omahas. In 1866, the Omahas sold a strip off of the northern part of their Reservation, in all about 109,844 acres, which has since been the Winnebago Reservation. Every inducement was offered the Wisconsin branch to join their tribe and settle on their lands and begin life again. Houses were built and farms opened for them, and the people brought over and placed thereon, but group after group made their way back to the old haunts in Wisconsin, until all were

now there that were once carried away to Nebraska. Some of these Wisconsin Winnebagoes have taken up homesteads and settled down to work; others are still picking and securing living, helped on by their yearly cash annuity of about 20 dollars per capita.

In 1871 part of the mixed blood relations of the Winnebagoes applied for a separation from the tribe, requesting to be made citizens and to receive a final settlement of their share of the tribal money. This was granted to them, and they returned to Minnesota and took up homesteads on their old Reservation at Blue Earth river.

The Winnebagoes that are gathered on the Reservation in Nebraska are doing well, considering their unfortunate history. They have been the victims in many ways of the misdeeds of other tribes, and owing to their quiet attachment to their old home in Wisconsin, have found it difficult to take to new habits in any other locality. Then, too, they have been virtually without any persistent, energetic missionary labor for many years. The old-time mission left little impress upon the people, and the efforts have been spasmodic rather than permanent. The people, however, are industrious and valuable as farm hands, laborers on the railroad, and wood-cutters. Winnebago camps are scattered for miles around the Reservation, and these Indians find ready employment and good wages. The Agent reports: "They are always active, energetic and industrious; quick witted, full of expedients in case of emergency or accident, and sharp at a bargain. Many of them are good farmers and occupy their farms at all seasons. As a tribe, they prefer to be laborers rather than farmers. Seed time and harvest are too far apart for them, and they prefer the quicker returns of the laborer, even at the expense of greater profit. Most of the men are now wearing citizen's clothes, and when on the Reservation, live in houses, and send their children to school." A few years ago there were two or three day schools scattered over the Reservation, but after many changes, the large and prosperous industrial boarding school is the only one at present in operation, with nearly 100 pupils. The children are advancing rapidly, not only in their studies, but in a knowledge of civilized modes of life.

These Winnebagoes are very desirous to receive their land in severalty, with trust patents, and a bill to that effect is already before Congress. If this bill should become a law, a great impulse will be given these people, and the home feeling which has been so often outraged will be satisfied, and they will again yield its blessings to the tribe.

**The Omahas.**—South of the Winnebagoes, and divided from them only by an imaginary line, live the Omaha tribe of Indians. These and the Winnebagoes are under the charge of the same Agent, Mr. W. Wilkins, and the two of administering the affairs of two such diverse peoples, is by no means a light one. The Omahas belong to the same linguistic group as the Winnebagoes, but are of a remote and less civilized lineage. The Omahas lived in villages surrounded by patches, where their corn, beans and melons yielded a comfortable subsistence. They were hunters as well, going out under regulations upon their annual summer hunt, and thus receiving food and clothing and material for their tents. Their villages were composed in the main of large circular dwellings made of closely set posts, interwoven with willows and tightly covered over with sod. These formed durable structures, warm in winter and cool in summer. They have lived for two centuries or more, on or near their present Reservation, being occasionally driven away by inroads from warlike neighbors. They are deeply attached to their land. Until 1855, they had received but little help or benefit from the Government, being grouped with a number of small tribes, under a general Agency at Council Bluffs. After the transfer of the Indians in 1868 from the War Department to the Interior Department, their first treaty as a separate tribe was made in 1855-6, at which time they ceded the great tract of land which made up the reservation between the Nebraska on the north, and the Platte river on the south, the Missouri on the east, and the barren sand hills some 50 miles inland. They were promised that we desire to become rich and great, but we are here alone on the prairie without any one to help us." Mr. D. D. Mitchell, Superintendent of the Central Superintendency, which included this and kindred

tribes, writes to the Interior Department under date of October 7, 1852: "The Indian tribes are well aware of the fact that there is no resting place for them under the existing order of things, and this knowledge has had a most unhappy effect upon them. When urged to turn their attention to agriculture or mechanical pursuits, they invariably reply: 'What's the use of it? In a few more years we shall be driven into the plains or the Rocky mountains, and what will our knowledge of agriculture or the mechanical arts avail us on the prairie or in the Rocky mountains?' If the Government determines to persevere in its laudable efforts to improve their unhappy condition, the plan that I have heretofore recommended must be adopted, viz: To make citizens of all who are willing to become such, and they comprise a large majority of the families in question. The Government has only to choose between two ways: either to make citizens of all who are willing to become such, or to make citizens from time to time of the Indian tribes, or drive them back into the prairies and abandon them to their fate. A great and humane nation (as we profess to be) cannot hesitate which course to adopt. There is nothing novel in the policy I have recommended. We paid \$2,000,000 for New Mexico and took the whole of the native population as citizens of the United States. Two or three millions will purchase Nebraska, and give us a territory on our border of equal value to New Mexico, and a native population far more enlightened and patriotic. I speak thus positively on the subject as I am acquainted with the country and inhabitants of both Territories."

By the policy which has been pursued, the Government has already paid out in cash between four and five millions dollars, exclusive of the cost of maintaining officers, and all the Indians that were inhabitants of the territory at the time Superintendent Mitchell made his suggestions, except the Omaha tribe, have been removed from their old homes to the detriments of their energy and progress and faith in the benefits of civilized training. Discouragement has followed the track of their removal, and clouded the hopes of Indians and missionaries, while the pernicious policy of herding the Indians in an Indian territory is becoming daily more apparent to all persons.

The Omahas were fortunate in having some strong men as leaders, and soon after the tribe took up its residence upon their present reservation, many of these people began to go to work in earnest. Commissioner Dole, in his report of 1870 to the Secretary of the Interior, says, concerning the Omahas: "Much of the progress observable in the condition of this tribe is attributable to their intelligent and exemplary chief, La Flesche, and to the excellent school in their midst." This school was under the Presbyterian Board of Foreign Missions and in charge of the Rev. J. R. Burk, a man who has left a profound impress upon the people, which has not been effaced by the lapse of time, since he resigned his charge, after years of faithful labor.

At the opening of the United States flag over the Agency during the first year of the war, La Flesche addressed the assembled tribe, saying: "This flag, I understand, signifies freedom and equal rights. When we were in Washington, we were given a flag like this, and told it was the flag of our country, and it was our flag. Before it was given us, it seems that we were not a people; but since we have received it we have made great progress. It seems as though when we were given the flag strength was given with it. This is a flag of a great country; it is our flag. By it we stand, and when it falls, we fall with it." The Omahas have proved their loyalty by deeds, for one hundred enlisted in the Union Army, and many of them were mission scholars who spoke English.

After much parleying on the part of the tribe, and weary waiting, the Reservation was surveyed in 1868-9, and the more progressive men took up their individual farms, receiving in 1871, certificates of allotment, which they at first fondly supposed to be patents. Believing the removal to the dreaded Indian Territory was now impossible for them, shops were established, and the saw mill was busy making lumber for the houses the Indians were building on their farms.

In 1875 the old village of sod lodges was broken up and all the tribe betook themselves to farms. Government assisted the people, and wagons, harness, and farming implements were issued, purchased with the annuity which was then made to serve exclusively as a civilizing agent. In 1878 the forcible removal of the isolated tribe of Poncas carried a profound feeling of uneasiness among the Indian farmers concerning their tenure of the land and possible removal to Indian Territory. Many were discouraged, but the leaders urged the people to persevere, and fervent prayers were daily made for God to spare to them the land of their fathers.

Reforms have taken place in the tribe. The chiefs are deposited and an elective council substituted. The paid United States Indian police force was selected out of the Indian soldiery. Indian employees found their way into the shops, and in 1879 the Government Boarding and Industrial school was opened. During the same year the Omahas and Winnebagoes were consolidated under one Agent, and an extensive economy began in the administration of affairs.

In 1881 a petition signed by a large number of the farmers of the tribe, was sent to Congress asking for patents to their lands in severalty. On August 7, 1882, a bill was signed by the President granting this request, and in July, 1883, the work was completed, and to-day each family has not only its own homestead of 160 acres, but each child is the owner of 40 acres in its own right. In all, 75,931 acres are allotted in 954 separate allotments to 1,194 persons. The patents, which will be distributed to the people in about two months from now, declare that the United States will hold the patents in trust for the term of twenty-five years from date of the act, at the expiration of that time, the patents to become a fee simple patent; meanwhile the land cannot be sold, or encumbered, or taxed.

The Omaha and Sioux City Railroad now forms the Western boundary of the Reservation, the land west of the railroad having been opened to settlers, who have proved to be of an excellent class. Several of the Indians had taken land west of the road, and their homes and farms now compete with those of their white neighbors.

"All the land lying near the white settlements is allotted, and the Indians, particularly those who are interested in progress, are seeking rather than avoiding association with the white people. This is a good indication. Progress cannot be made in isolation. The increasing crops of the Omahas to be marketed make them an important factor in the prosperity of the growing villages in their vicinity, and the tradesmen of the villages encourage these efforts. The people seem more and more inclined to advance in their farmer's mode of life. The security of their tenure of their land has had an excellent influence. The very thorough manner in which the work of allotting these lands was done, and the practical instruction given them at the same time, has given these people an impetus which will never be lost.

Henceforth the land follows descent according to the laws of the State, and the registry kept by Miss Fletcher will facilitate securing the proper inheritance. This registry, giving as it does, the exact status of the family as it is recognized by the Government in the patents, will also render valuable assistance in maintaining the integrity of the family, a most important matter in the welfare of the people. Another step taken by these people at this time, which indicates a determination to march on to independence, is the closing of their shops as tribal institutions. They have been ready for the discipline of paying for their own work."

"The Omahas are a determined and progressive people, and are in a very hopeful condition. The Agent urges the increasing need of law, as between Indian and Indian, and white men and Indians; and also the justice and necessity of paying a salary to the three judges who constitute the "efficient and effective" Court of Indian offences. The crops of the Omahas are principally corn, wheat, potatoes, and other vegetables, which they raise to the amount of nearly one-third of a million of bushels per year. The Government school is well attended, and also the Mission school, which has done so much toward elevating and educating the tribe. A number of Omaha children are at Hampton Institute, Carlisle, Lincoln, Houghton, Ia., and Genoa, Neb., schools.

To be Continued.

#### A Day with White Ghost in a Boston Snow Storm.

Receiving a printed notice that Gen'l Armstrong, Chief White Ghost, and Major Gasman, Agent of the Crow Creek tribe, with others, would address a meeting of the Massachusetts Indian Association in the Old South Church, Boston, I took the early morning train for the "Hub" on the day appointed, in the face of the fiercest snow storm of the season, to greet my Lite chief and his party and report for duty, if I could be of any service. I found the party at the Parker House, fatigued with their hard winter night's journey in the cars, but those who were strangers in Boston, desirous of seeing its lions, Mr. V. H. Davis, that staunch friend of Hampton and of the Indian, who had the party and the meetings in charge, gladly accepted my offer of service, and placing a "Booby Hut" (the name of the "back on runners") at my disposal, asked me to escort White Ghost, Major Gasman, and

my esteemed friend, Rev. Mr. Gravatt, Rector of St. John's Church at Hampton, to such places of interest as could be seen in the time at our disposal.

#### OLD KING'S CHAPEL.

Stopping for a moment to take a look at "King's Chapel," the beautiful old church of which Rev. H. W. Foote, a fellow trustee of Hampton Institute is pastor, with the well known Lewin Hayden, who was one of Gov. Andrews' trusted agents in the South during the war, and has since been in the office of the Secretary of State, and is a leader of the colored people in Boston.

#### CALLING ON THE GOVERNOR AND SECRETARY.

We first paid our respects to Governor Robinson, who received us graciously, and with whom we had a pleasant conversation. He expressed his interest in the cause of the Indian, and his regret that an important council would prevent him from accepting the committee's invitation to attend the Indian meeting.

Our next call was on the Secretary of State, who showed White Ghost the original Indian treaties with the Massachusetts Bay Colony and presented him with an impression of the State seal, which the old chief was gratified to notice bore the device of an Indian on its coat of arms. The cordial reception and courtesies shown us by all the officials made a great impression upon Major Gasman, who is a Norwegian by birth, and who was struck by the contrast between the bearing and that of European officials, with whom he had come in contact.

#### MEETING A MASSACHUSETTS TRIBE.

We were invited to visit one of the committee rooms, where a delegation of Marshpee Indians, one of the old Massachusetts tribes, were having a hearing. These Indians are civilized and educated, and but for their somewhat swarthy complexions could not be distinguished from the whites. They have all the rights of citizens; one, a portly, comfortable looking gentleman, evidently well to do, was one of the selectmen of his town. Another was a physician in good practice. It was interesting to witness this interview between these educated Indian citizens of old Massachusetts, and the members of the community in which they live, and in possession of all their "Indian Rights," and the untutored Western chief of an oppressed people, they quietly noted each other's characteristics and contrasted their condition. When will our Western tribes be accorded justice and the rights so long denied them? Let us hope that the appeals of the Indian Rights Association, and the fact which is being made known through their agency, may have this result.

#### WAR RELICS AND VETERANS.

Taking a hasty look at the senate chamber, I pointed out the drum and musket which were used at the battle of Lexington. The latter was presented by the late Rev. Theodore Parker, by whose grandfather it was used in the fight.

When Gov. Andrew delivered it into the custody of the President of the senate at the close of a very eloquent speech, he reverently kissed the ancient weapon. Some irrelevant war the next day propounded the following conundrum in one of the Boston papers: "Why is Gov. Andrew like a poor sportsman? Because he *passed* the gun." When Gov. Andrew escorted Gen. Grant around the State House after the close of the war I accompanied him as one of his staff, and heard him tell this joke upon himself to the tactful commander, which he did with great gusto. Here I was greeted by an old acquaintance, Sergeant Plunkett, who lost both arms at the shoulder, while bearing the colors of the 21st Massachusetts regiment in the battle of Fredericksburg. The regiment was under a very heavy fire, the color bearer had been shot down, and eight volunteers in succession, who had seized the flag, met with the same fate. Platen Sergeant Plunkett gallantly rushed forward as the tenth man to save the falling standard. He had no sooner done so, than both arms were taken off by a shell and he fell upon the colors which were saturated with his blood—the blood-stained colors hang in the Rotunda with the other battle flags of the state. When I was Paymaster Gen'l. of the Commonwealth, during the war, Platen Sergeant Plunkett, used to come in with orders from soldiers and their wives bounties. We would put the money into his pocket, and holding the pen before him, he would sign the pay roll. One day he came in and astonished us by taking off his cap

after giving a military salute. He had just been supplied with a false arm, so perfect that he could even pick up a match with his fingers by springs worked by his shoulder joint. He was engaged to be married at the time he was maimed, and he desired to release his lady from her promise. But she refused to abandon him, feeling what on a similar occasion was so well expressed by another noble woman, "that as long as there was enough of his *body* to hold his *soul*, she would not give him up."

#### THE STATE HOUSE AND CHURCHES.

Passing through the Hall of Representatives, where hangs the historic cod-fish emblem of one of Massachusetts' industries, we left the State House and drove to the beautiful Trinity Church, of which the eminent Phillips Brooks is rector. This church is one of the grandest specimens of architecture in this country. All our party, but especially Rev. Mr. Gravatt, whose church in Hampton is the principal one in the country, were profoundly impressed as in the dim religious light that pervaded it, they studied the beautiful windows, the interior decorations, and the massive arches and pillars of the magnificent edifice erected at a cost of nearly a million dollars. In the vestry, an "Emergency Lecture" was being given, which was well attended in spite of the furious storm which was still raging. The course was given for ladies and gentlemen, and the proceeds went to pay the expenses of a free course given evenings to conductors, brakemen, and others whose occupations are likely to bring accidents under their notice, where a knowledge as to what should first be done may be the means of saving lives. This is one of the wise charities of which Dickens says, "I sincerely believe that the public institutions and charities of this Capital of Massachusetts are as nearly perfect as the most considerate wisdom, humanity and benevolence can make them." From the church, we called upon Mr. Brooks, who, after a long wait, did not find him at home; we were repaid by a glance into his charming study, an ideal home for a literary man. Mr. Brooks must have been started at finding by our cards, that a "White Ghost" had visited him in his absence, for whom the snow storm was an appropriate accompaniment. In fact, it made the ghosts of us all—not only the floor and seats of our carriages would be covered with snow before we could get in and close the door, but we were enveloped from head to foot with the fleecy covering.

#### A TALK WITH THE PHONOGRAPH. TOO GHOSTLY FOR A WHITE GHOST.

We next visited the Electric Exhibition, which for some weeks has been one of the greatest attractions of the city, but found it had just closed and were turning away from the door when Mr. Edison's assistant invited us to inspect the wonderful Phonograph which he had not packed up. White Ghost, who had been apparently unmoved at all the numerous and wonderful sights he had seen thus far, was no longer able to conceal his astonishment, when, after making a short speech in his own language into the little hole in the machine, his sentences were recorded at him in clear distinct tones as pure as the air. He had uttered them. He had met with nothing so wonderful in all his experience, and stood aghast at what seemed pure diablerie. We greatly enjoyed his wonder.

#### WHITE GHOST'S OPINION OF THE APOLLO BELVIDERE.

Our last visit was to the Art Museum where Gen. Loring, the Director, was very courteous and attentive, but with the attractions which we have neither time nor space to describe, and all its varied collections, it was difficult for Mr. Edison's assistant to send some specimens of the work of his tribe. Gen. Loring wished to know his opinion of the statue of the Apollo Belvidere which had been spoken of by some writer as the perfect type of a Mohawk Indian. But the old chief gave his decided opinion that it was "all white man, no Indian about it." He thought however that "Cicero" in the same room might pass very well for a Sioux Chief.

#### THE MEETING AT THE OLD SOUTH.

Our interesting tour was now ended for lack, not of further attractions but of time, and giving up a visit to old Faneuil Hall, and other notable places, we returned to the Parker House for lunch, after which the whole party went to the Old South, that ancient and historic building, where Franklin was baptised, where our Revolutionary leaders made their fiery speeches and which is now used for lectures, public meetings and for the exhibition of articles of historic interest, to encourage and keep alive a spirit of patriotism in the younger generation.

Here, notwithstanding the fierce storm, we gathered a large audience of the friends of the Indian and his rights, and addresses

were delivered by Gen'l Armstrong, White Ghost, Major Gasman, Rev. J. B. Wicks and our Hampton student, Bushnet, who acquitted himself very creditably and has much improved since I last heard him at the Hampton Anniversary.

And so ended our interesting day with White Ghost and his friends.

Kendal Green. J. F. B. MARSHALL.

Weston, Massachusetts, Jan. 31, 1885.

#### The Women's National Indian Association.

BY MRS. A. S. QUINTON, SECTY.

When Divine Providence raises up many different classes of workers, and different lines of work, for the deliverance and elevation of a race, the world may be sure that the hour of the redemption of that race draws near. The truth of this proposition has often been proved in history. So manifestly, for our native American Indians is the day of deliverance near. The tide of moral sentiment upon their behalf, already well-nigh irresistible, is hourly rising; and any day we may look for the launch of their new prosperity. For many years the churches worked among these people and with as good success as usually attends a like measure of effort for any untutored race. Then came the thanks to the Friends who first suggested it—Gen. Grant's new Indian policy and the work of the Board of Indian Commissioners. Following soon after was Captain Pratt's new departure—a special work by a specially prepared instrument, introducing to the East in his experiment (first at our noble Hampton, and later on a large scale at Carlisle) Indian capability and thirst for education. The success of this work in this direction. In the West, too, the gross injustice of the eviction of the Poncas, in 1876, had stung into intense activity on the Indians' behalf the strong will, brain and heart of T. H. Tibbles, and the noble group who, in the city of Omaha and elsewhere, worked with him for the restoration of that tribe to home and rights. Like the flame of a prairie fire the indignation kindled by his burning appeals, and the pathetic and fact-fuelled eloquence of Bright Eyes, spread wherever they were heard, East or West, yet there was no union of forces amongst all friends of Indians to move Congress to that new and just legislation for lifting the Indian out of his serfdom and helplessness into manhood and citizenship; to secure the only sure remedy as against his wrongs and his barbarism. A new line of work, a fresh and widely reaching band of workers, composed of best abilities and abundantly equipped, was needed. God's "needs be" were met, and there arose another agency to do yet another special work on Indian behalf. In the Spring of 1879, apart from all preceding agencies and in no way connected with either of these special ones, a Christian woman, reading in the daily papers the announcement of a wholesale wrong to Indians proposed by a member of Congress, and reading about the same time other similar facts, was moved to present these items to friends with the hope of making the facts more widely known. The first effort toward publication of these failed, but the second was successful, and petitions and leaflets began the work of publishing to all denominations of Christians the many and deep wrongs done our Indian tribes, and of calling attention to the fact that the whole church of God in America is responsible for the failure to deliver, elevate and Christianize the Indian race, since Christians can secure the needed light and help, if they will but use the moral power, committed to and organized by them. To this call to the church there was quick response and, after the first popular petition thus seconded, went to Congress, a nucleus of organization was secured, and the first committee, a few months later, doubled—soon became the Association which, under progressive names is now known as "The Women's National Indian Association." A deep conviction of the power of the whole church of God—if all its branches will but move together, of a divine commission to make "crooked things straight," to "destroy iniquity," and to bring in national as well as individual righteousness—is seen in every effort and leaflet of the Association. It has ever asked for faithfulness to compacts with Indians, and where this, if literal would work injustice, that the promises as intended to be understood by Indians may be kept.

The influence of this Association, through its thirty-eight auxiliaries and helpers in twenty-seven States, and its membership of noble women from ten different denominations and the best and most useful walks of life, has been wide and strong. Many hundreds of thousands of leaflets and petitions, giving facts from official sources, on the condition and treatment of the Indians; many hundreds of public meetings in various sections of the country; the weekly appeals of Government in repeated petitions; and to the public constantly through the press and

# Southern Workman.

VOL. XIV.

HAMPTON, VA., APRIL, 1885.

No. 4.

We are enjoying again the presence of our friend and honored ex-Treasurer, Gen. J. F. B. Marshall, and his wife.

REV. DR. AUBREY, a distinguished minister of the Congregational Church in London, has recently visited the school, and delighted all with his most interesting lecture upon "Living English Statesmen."

AN account of a difficult and interesting surgical operation, successfully performed recently by Dr. C. N. Dorsett, of Montgomery, Ala., assisted by two other "well known physicians of the State," was recently given by the *Nashville American* without knowledge that Dr. Dorsett is a colored man, but in another number cheerfully making recognition of the fact. We are glad to record this triumph of a Hampton graduate, with whose manly struggles to secure his profession we have before now acquainted our readers. It is good evidence for the capabilities of his race, and that grit and ability are the keys to success in hands of any color.

THE INDIAN RIGHTS ASSOCIATION, whose vigorous "appeal to Caesar" was of late so successful in rousing the Appropriation Committee of the last Congress to save the Piegans from starvation, has again proved its efficiency by securing the arrest—we trust the pre-emption—of gross injustice to the Indian and one more disgrace to the country. For the particulars and merits of the opening up of the Crow Creek reservation, we refer our readers to Mr. Herbert Welsh's letter in our Indian department. The prompt consent of President Cleveland and Secretary Lamar of the Interior, on the representations of Professor Painter and the recommendation of Commissioner Price, to suspend the action of their predecessors until its justice could be investigated and the Indian have a hearing, promise well for the independence and conscientiousness of the new administration. Mr. Atkins, the new Indian Commissioner, has had much experience in Indian affairs upon the Appropriation Committees of the House. It is to be hoped that the forces of the Department will be united, for the satisfaction of the demand recognized by the President in his inaugural address. "The conscience of the people demands that the Indians within our boundaries shall be fairly and honestly treated."

CHIEF WHITE GHOST's letter, received just in time to print after Mr. Herbert Welsh's statement of his case, well supplements it. Many of our readers will recall the stately old man, with a face like a Roman senator's, who so eloquently spoke for his people at the recent meetings for Hampton in New York and Boston. We submit it to them, whether the spirit of this letter, and the bearing of the old chief and his people in their emergency, contrast unfavorably or favorably with that of their civilized "guardians."

A FRIEND who shows his good will to Hampton and the colored race by contributing one of the \$70 scholarships which pay for a year's schooling, returns the student's customary letter of acknowledgment, with a serious criticism of its various errors, and the supposed remissness of some teacher in allowing it to go out from the school in such a faulty condition. The case has been explained, we trust, to our good

friend's satisfaction. For that of others, it is perhaps well to state here again, as we do from time to time, that these "scholarship letters," as they are called, are required every year from every student; that one is sent to every donor of a scholarship, and that it is a point of honor with us that each shall be sent without correction further than that of cutting down when necessary. The student knows that it will be thus sent; that he is expected to do his best at the time, and that only those who are trying to, have we the right to commend to those who entrust their contributions to the school for the benefit of the race. The scholarship letters are thus, from year to year, a gauge of the students' progress and real condition. Revised, they would lose their chief value and interest. As they are, they have been for years very effective in interesting many in the school, as well as in instructing the students in their relations to it and its supporters. The general nature of the letters may be seen in the two or three samples of those written in the past year, which we print as they were written and sent, on another page.

DR. FELIX ADLER whose great work for the rescue of the poor children of New York by scientific industrial training, is of course well known to our readers, has visited Hampton Institute with great interest in its line of work. He moved its students as no other speaker has, by his earnest words of counsel from the standpoint of one who had himself—as a Jew—known not only the trials but the "moral danger of belonging to a persecuted race." Mr. Adler was accompanied by the distinguished English artist Mr. Moscheles, grandson of the great Mendelssohn, who also very kindly addressed the students, and gave them an illustration of "how an oil painting is begun," by an offhand sketch for which Gen. Marshall obligingly sat.

MR. EDWARD L. MORRIS, of the Society of Friends in Philadelphia, whose excellent work in and for Liberia, founding schools and missions, encouraging trade and commerce, we have heretofore noticed in our columns, has just made a new gift to the women of Liberia and Africa, by perfecting hand machines for spinning, spinning and weaving cotton, to supersede the clumsy apparatus hitherto in use. His new gin and loom, operated by two men, will do as much work in one day as twenty men can in six days by the native process. They will doubtless be as effective to "astonish the natives" as was the first steamboat or telegraph, and are as real and timely a step in civilization, in the opening up of the "Dark Continent."

The hand machines are adapted not only for use in Africa but in this country, making small producers independent of distant manufacturers. To the colored men and women of America as well as of Africa, Mr. Morris makes the offer to accept their raw material in exchange for the machines. The price of the cotton gin in cash is \$750, and of the loom \$25. For 5,000 lbs. of unginned cotton he will send the gin to any address, and for 6,000 lbs. working them, and will pay the freight himself on cotton and machines, from and to any port or railway station within the limits of the United States. His address is Edward S. Morris, No. 4 Merrick Street, Philadelphia, Pa. Mr.

Morris is a well known friend of the colored race, and we take great pleasure in helping to make known to them his latest benevolent work in their interest.

THE words of the President's Inaugural for our Negro citizens and Indian wards were few but strong; for the nation must be promoted with a view to their ultimate citizenship; for the former, that "All discussion as to the fitness for the place accorded to them as American citizens is idle and unprofitable, except as it suggests the necessity for their improvement. The fact that they are citizens entitles them to all the rights due to that relation and charges them with all its duties, obligations and responsibilities."

In an interview with a colored "Independent" recently the President gave further expression of his views in discussing the relations of the Democrats to the Negro. He "hoped that the position of the colored man in the South would be improved under his administration." He "believed that a political division among the colored men in the North would be of advantage to the South, where the vote would not always be the color line." He "thought the time had come when it was possible that all political distinctions between the white and colored man could be abandoned," and he "hoped that his administration would tend to that end."

We heartily concur in this hope. So will, we think, every honest and intelligent citizen, who cannot, however well convinced of the soundness of his own political faith, desire it to prevail by class distinctions and color lines, instead of by intelligent conviction; and who cannot fail to see that division on points not of absolute right and wrong is better, as human nature is constituted, for the purity and life of all parties.

At the Conference of County Superintendents in Richmond noticed in our last number, Col. M. B. Newell, State Supt. of Instruction in Maryland presented some very interesting statements of the interest in education among the white people of this and neighboring States, and the sacrifices by which some of them prove it. While the colored people's longing and struggles for education are naturally oftenest noticed in our columns, none the less interesting to us is the growth of Southern white public sentiment, which indeed is to so great an extent the encouragement and guarantee of theirs. In response to our request, Col. Newell has kindly taken time from his arduous duties in the educational conference at New Orleans, to put upon paper for the *Workman* the interesting statements in his speech. He says:

"The facts referred to in your letter were observed by me in Virginia, North Carolina, South Carolina, and West Virginia, most notably in South Carolina, three years ago. There were over 300 teachers attending the Summer Normal School. I talked to a great many of them, and I hardly found one of the lady teachers who, if she paid for it, took her whole salary to pay her school expenses. One middle-aged lady had had a school that was kept open at public expense but six weeks in a year. It took her whole salary to pay her railroad fare and a month's board at Columbia."

"I have never seen a more genuine and more touching thirst for knowledge than among the South Carolina teachers. The

teachers of North Carolina were not far behind in their devotion but they were not so communicative; an inherited Scottish cantinism made them reticent. I have had girls come to our Normal School at Baltimore for a whole year, traveling 75 miles a day in the steam cars, and four miles in the street cars. At the great Normal School held at the University of Virginia in the summer of 1880, I met with many ladies who spent the entire savings of the year for traveling and boarding expenses, though the latter was very light—not exceeding \$12 a month. At Abingdon, Va., the following year, we had men who walked 20 miles to a day in the steam cars, and four miles in the street cars. Quite a number came and went daily on horseback, because they could not pay for their board in town. The South may be proud of her sons and daughters."

Very truly yours,  
"M. A. NEWELL."

There is no doubt that this educational interest is the common ground on which the double race problem is to be worked out in the South, and the prophesy of our gentle Quaker poet to be fulfilled—

"Ye are rising, both are rising—  
The black and the white together."

## The Let-Alone Treatment.

In the *Christian Advocate*, the organ of the M. E. Church, South, Dr. Haygood earnestly protests against the sentiment entertained by "many excellent people" as well as some less excellent, that "The way to solve the Negro question is to let it alone." As the Doctor truly remarks: "If every white hand in America were withdrawn from all relation to any scheme of solution, the problem remains and it will work on to a solution of some sort." But not to the one we would look for. "No human beings, needing all things—education, training, help, sympathy, religion, were ever yet let alone by those who were able to help them without going straightway to the bad." "And he will not sink into the abyss alone—those nearest go with him." "It often comes to pass that to decline a responsibility is to assume the gravest responsibility."

\* \* \* If we say we believe in Christian education and employ it for the saving of our own children, and let the Negro alone, what will become of us, to say nothing of him?"

Since reading Dr. Haygood's earnest words, we have read with deep interest a volume on the past and present of Hayti, just published, by Sir Spencer St. John, for thirty years British Consul General and Minister-resident in that republic. He gives a most appalling picture of the state of things there; agriculture and all internal business and improvement checked by revolution after revolution; cities burned and not rebuilt, or given up to filth and pestilence, increasing yearly; corruption in every branch of the service; constant strife between the blacks and "colored," exceptional men among both striving against the tide, but immorality everywhere the rule, with caninism in proportion to the lack of any foundation for it. A government and constitution modeled on that of the French republic, but commonly disregarded by every official who swears allegiance to it, from the Presidents down; human life little valued; Voudouism, or pagan conjuring serpent-worship, preached openly or secretly in all ranks of society; cannibalism, even, not infrequent in the more remote districts among its horrid rites. In short, according to Sir Spencer, the whole country is lapsing, and now at a rapid rate, "into what

Napoleon called it, *"l'eyes de barbare."* How far his representations are reliable and just we do not know. We would like to know what other observers—Mr. Langston among them—think of it. The author has a fluent pen, and says—very frankly—that he rewrote it once, his notes appearing too strong to himself on a second reading. They must have been strong indeed. Perhaps a more careful hand would have toned them down still more. On the other hand, his position entitles him to a respectful hearing. He certainly must have had every opportunity of observation, and he seems to have been brought up in the most advanced school of English liberalism; to have gone to Hayti utterly without prejudice as to color, and to have a personal liking for the race. A reader who is acquainted with it in better conditions, finds himself involuntarily acquiescing here and there in special bits of observation and analysis, favorable or otherwise, and this natural strengthening the hold of the book. We can but hope that it is overdrawn at least, though if it is anything but a tissue of fabrications, the case is surely bad enough. He speaks very highly of the influence of the small Protestant mission as far as it reaches. Romanism, which prevails, seems to be generally corrupt, even mingled often with Voudounism, the "slimy serpent god" being sometimes actually kept in a box beneath the altar. One point in the book is of special significance. Contrasting the condition of Hayti and the adjoining republic of San Domingo, on the same island, Sir Spencer attributes the vastly better condition of the latter to the policy of encouraging white settlement, bringing in this capital, competition, and the ideas of civilization, while Hayti has always sought to exclude it and is suffering the consequences. In this case the responsibility of neglect is not upon the whites—unless we go back, as we well may, to the causes of this spirit of seclusion—but it is a powerful illustration of the results of the let-alone policy.

"The chief specialty of our country must be education, if she is to maintain her place among the Powers of the civilized world," is the expression, in a wise and apt article by Prof. G. Stanley Hall, in the *North American Review* for February, which ought to be read by every thoughtful teacher and parent in this country, so full is it of fundamental truths. While there is no lack of words of warning, the general tone is inspiring to a degree which can only be reached by a whole-souled faith in the new order of things, and no one who has anything to do with the training of children can fail to be helped by it.

We should be glad to quote the article entire, but are compelled to content ourselves with a few quotations, which we hope may create in our readers an appetite which will be satisfied only with the whole.

"Although, compared with other lands, we almost never have the best in education, we rarely have the worst."

"Our printed courses of study, often so detailed and exiguous as to destroy all the teacher's freedom and initiative, and our examination papers and exhibitions, which too often more than make up for lack of thoroughness by the number of studies begun, show off the children so well that we forget that many of our school-boys, as has been said, working out here the problem that China has solved so well, viz: how to instruct and not develop."

"Every important advance or reform in the history of education, has been in large measure due to new insights into the nature of childhood."

"Pestalozzi dressed, washed, combed, and slept in the midst of his pauper school-children, shared all their joys and sorrows, and effected his reforms because he had at last come to live in their world, and learned and told something new of childhood. Locke, Froebel, Herbart, Hamilton, Bell, Lancaster, Stowe, Wilderspen, Necker, and most of the teachers whose work and words it is worth our while to ponder in the history of education, studied

children, often in a systematic way, as a naturalist studies the instincts of insects and animals; and their exhortation is to follow, observe, adapt to the needs of childhood. Knowledge of the subject to be taught, though so commonly defective, is only the beginning of the teacher's wisdom, especially in all primary and intermediate education."

"Premature, belated, ill-adapted information, given without determining just how much knowledge can be presupposed as the point of departure, this is the crum that makes bad, collapsible mental tissue, because not thoroughly digested and assimilated, and originates that worst product of artificial methods, a dislike of study and knowledge."

"The new education of to-day looks at quality rather than quantity, and has chiefly in view two things: first, methods that are natural; and secondly, educational values—the highest of all kinds of value in the world."

"It is plain that the wisest of the founders of our political institutions realized far more than the most of us do, that in a country so free and so new, and without authority, precedent, or tradition, only intelligence could control the conditions of human development."

"The lawgivers that will rule our land in the next century should and must study well the problems of education."

"\* \* \* for, imposing as any school system may be, it is good and will endure only as it represents and fits the nature and needs of children. Even in discussing such questions as the form, slant, and height of seat in school; the lighting, heating, ventilation, and size of rooms; the duration and frequency of recesses, the number of studies, the length of lessons, the best part of the day for study, the best form and size of type and script, the best position in writing, the best size of classes, etc.—points that are in debate—it is to the physical nature of childhood that we must ever turn for a solution, to which he alone makes real contribution who brings new facts about juvenile physiology and hygiene."

"As, after all, comparatively little of what is now being done has found its way into print, it may be of interest to say that already, in this country, many teachers are carefully exploring, by many ingenious ways, with due precautions against both harm to the child and error in the results, the minds of individual children of all ages, one from another, carefully noting all important points in the environment, with a view to get at last, when hundreds of records are carefully compared, a better and more objective picture of the inward growth of our faculties, serviceable alike for science and for the practical work of teaching."

"It is acquisition along the lines of least resistance thus ascertained that makes education truly liberal, whether elementary or advanced. It is this that makes our colleges so much more effective under the elective system, which makes its way wherever the increased expenditure for instructors can be met."

"A good method of recommending knowledge to the young, and thus of teaching, is one of the most effective bulwarks against a slow relapse to barbarism, because by it knowledge and all its benign intellectual influences filter more effectively down from the high to the lower intelligences. But all methods, curricula, and programs perish with their representatives, if persisted in from habit or convenience, after the all-controlling needs of childhood have found a better way. Hence, the danger for institutions and men of being left behind, which was never greater in this country than to-day, where progress in these directions is so rapid."

#### The Cannibal Chair.

(See page 47.)

"On the porch of a pleasant missionary home in the Sandwich Islands, shaded by tamarind and bread fruit-trees, and tropical vines, stood a few years ago, an old-fashioned high-backed rocking chair, that looked as if whole mission in life had been to rock generation after generation of New England babies in a New England home, but to which the stranger guest was formally introduced as to 'The Cannibal Chair.' In spite of this formidable introduction, its inviting arms did not prove to be those of a devouring Moloch, but swinging lazily in its comfy cradle, the stranger heard of a Marquisan chief to whose savage honor, missionary mother and child had been perforce entrusted in the father's absence upon a further missionary tour; and how the fierce warrior proved faithful to his trust, gratified with the confidence placed in him,

and the privilege of sitting in the wonderful rocking throne of the white woman, and holding the wonderful white baby; its mother hovering near with her heart in her mouth, gathering courage at last to paint the delighted monarch's portrait, in regalia of feathers, tattoo and war paint. Retired from its tropical missionary life, the Cannibal Chair seems to have found voice—as rocking chairs are apt to in the course of years, though seldom with so much interest and pleasure to their hearers.

We have not found any more thoroughly readable series of biographical sketches than are Mr. Edward T. Mason's *"Personal Traits of British Authors"* in four attractive volumes, just published by the Scribners. The period chosen begins with the revival of English literature of nearly a hundred years ago, "the great awakening to which may be traced everything of real moment which has since distinguished the literature of England." The peculiar feature of the book is that, except for the brief introductory notes before each subject, it consists of selections from the testimony of contemporary writers upon these representative authors of their period; sometimes of one upon another. The selections are drawn from many sources with great research and good taste, some of them gems of literature in themselves. Among the twenty-seven portraits, we find Shelly, Keats, Landor, Lamb, Hazlitt, Scott, Hogge, Wilson, Macaulay, Sidney Smith, Dickens and Thackeray. Though after touch of light and color is thrown upon them till you feel that you have made acquaintance with the men themselves, their appearance, manners, habits, their work and their play, their strength and weakness."

While his introductory notes prove that Mr. Mason could have given us good work in the usual style of continuous biographical narrative and criticism, we approve his judgment and thank him for a delightful book on a fresh and original plan. A good index and list of works quoted and of all other available sources of information, increase the value of the book to the student, and a topical index in the broad margins assists the reader, leaving room for personal annotations in which some like to indulge.

#### QUESTIONS AND SUGGESTIONS.

##### The Average Negro.

*Southern Workman* :-

The article entitled "The Negro Problem," in the *Atlantic Monthly*, November, 1884, by N. S. Shaler, was so comprehensive, and the notes of criticism by other competent writers so satisfactory, that a fuller statement of one or two points is all that can be asked on that important and interesting subject.

Allow me to ask, however,

1. Whether the "average of two or three negroes out of a hundred, who would be able to receive and profit by a college education" (as stated in a note by General Armstrong), is an indication that, while the brightness of the negro equals that of the white, up to a certain stage, there is a lack of proportionate ability of the average negro, when educated in elementary studies, to grasp the higher branches?

2. Considering the "race proclivities" of the negro, will the education, in common school branches and in religious ideas, which can be received in an ordinary course of instruction, hold the average student from reverting to the low level, especially in moral tone, when left to work out his own career, without further supervision?

3. Can the average negro, graduating as a teacher from the Institute, be safely trusted to be an instructor and example to his own race, considering all the circumstances by which he will be surrounded, and his own imperfect development in the higher gradations of mental and moral power?

These questions have a natural sequence, and an answer to one or all of them will be gratefully received.

(REV.) A. S. TWOMBLY.

1. The average Negro of to-day certainly has not the same intellectual horizon as the average white man. But in the case of the white man we know

that this horizon has been created largely, if not wholly, by the conditions of his environment, past and present. Granting this, we see no reason to doubt that similar conditions, in the case of the black man, will produce similar results, but we realize also that the question can be decided only by a series of experimental tests, which must of necessity include successive generations. The most that can be said is that while at present the colored man (taking averages) has not the capacity of the white man for receiving higher education, it is too soon for either philosopher or physiologist to give a verdict upon the possible future development of the African races.

2 and 3. The comprehensive answer to these two questions is this: We do not trust to the individual Negro so much as to the great uplifting wave of progress which, all through the South, is bearing him along with it. The hope for the future lies in his plasticity. He does not put himself in opposition; he permits himself to be moulded by the forces which, from every quarter, are focusing themselves upon him, and which, more and more, are working together for good. The magnificently healthy development of our Southern country is carrying the Negro with it as a sweeping current carries drift-wood, and his docility, his imitiveness, his power of adaptation, all his negative virtues, in short, are in his favor.

While in many of our graduates we have entire confidence as individual men and women, it is the great onward movement, of which they are unconsciously a part, which gives us our assurance of success.

In the *York Herald* of England, we see the name of our friend Mr. Geo. Dixon who recently left Hampton for his English home, recorded among those present at a meeting held for the formation of a new "Liberal Association" in Yorkshire.

#### The Women's National Indian Association.

Communicated by Mrs. A. S. Quinton, Sec'y.

The following Resolutions which this Association is urging upon the Legislatures of the country has just been adopted by the Legislature of Pennsylvania and approved by the Governor.

Resolved, Believing that the education of Indians and their voluntary citizenship in the United States will most justly, quickly, and economically solve the Indian problem, *Therefore* :-

First, That our Senators and Representatives in Congress be and they are hereby requested to aid in the passage of resolutions solemnly pledging the faith of the nation to the Indian Policy embodied in the following principles:

First, That the unpaid sum pledged for educational purposes by the Government as payment for the cession of lands by Indians, be appropriated for the purpose of stock, farming implements, tools, etc., for Indian manual-labor schools.

Second, That so much of the net proceeds of the sale of Indian lands as may be necessary shall be set apart for the purpose of creating a permanent fund for the education of Indians.

Third, That lands in severalty, making their titles inalienable for twenty-five years, and United States citizenship may be granted at once to all Indians who so desire.

Fourth, That the legal personality of all Indians may be granted, and that protection of law may be given them, as it is to all other races within these United States.

Fifth, That the civilization of Indians may be hastened by providing for and rewarding their civilized industries.

Sixth, That the salaries of Indian Agents be increased sufficiently to secure good men of large capacity and business experience, and to retain them in service.

RESOLVED That the Governor be requested to transmit a copy of the foregoing resolutions to each of the Senators and Representatives in Congress from this State.

These resolutions have also been passed by the New York, Maine, Connecticut, and Michigan Legislatures.

## SOUTHERN WORKMAN.

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October.)  
Printed on the Normal School Steam Press  
by Negro and Indian students trained  
in the office.

S. C. ARMSTRONG,  
H. W. LUDLOW,  
M. F. ARMSTRONG,

Editors.

REV. H. B. FRISSELL, *Chaplain*,  
MR. W. N. ARMSTRONG,  
MRS. ORRA LANGHORNE,  
MISS ALICE N. BACON,  
F. N. GILMAN, *Business Manager*.

Regular Contributors.

Terms: ONE DOLLAR a year IN  
ADVANCE.

Entered at the Post Office at Hampton, Va., as second  
class matter.

## The Southern Press. Both Sides.

"The government of the United States is  
now in the hands of the Democrats, and the  
eyes of the world are upon them."—*Memphis Appeal*.

"President Cleveland has but to live up to  
the fair promise of his inaugural in order to  
win a position second only to those great  
fathers of the nation whose guidance he  
proposes for his course. He has not disappointed  
an expectation people at the outset, and we  
have confidence that he will not disappoint  
them in the end."—*N. O. Picayune*.

The colored papers take a no less  
inclusive view of the responsibility and  
opportunity of the Democratic party,  
and, evidently, if vigilant watching on  
all sides can ensure good government,  
we are in a fair way to have it for the  
next four years.

The *People's Advocate* puts in a claim  
which is hardly consistent with the  
principle of reform to which, it is hoped,  
the administration has bound itself.  
To turn white men out of office and put  
in colored men, to keep up a numerical  
proportion between the races, is not  
likely to advance the interests of either  
race.

"The democratic party comes into power  
under very peculiar circumstances—not by  
its own dash and influence merely but by  
the aid of elements which have hitherto affiliated  
with the defeated party. The uncertainty  
of the permanent support of these new, yet  
potent elements, and the stern necessity to  
make further accessions from the republican  
ranks, will operate to institute a cautious  
and reformatory policy which will preserve  
its present strength and give new supporters.  
The inconsistencies of the republican party  
(inconsistencies possibly which could not be  
harmonized at once), will serve as an inducement  
to the democratic party, and it may be set  
at once about removing what it seemed  
was impossible or important to the other  
party. For instance, the claims of colored  
people have not been fully recognized. They  
are not fairly represented in any of the  
branches of government and have not their  
share, by large odds, of legitimate patronage.  
In a word, they have not been treated fairly  
or equitably. A policy set on foot to regulate  
this matter by showing a disposition to  
correct this misfortune would at once set at  
rest the apprehensions which are entertained  
by colored people regarding the friendship  
and disposition of their old enemies. The  
colored people are in a very delicate position,  
and will "bide their time" either to  
march on with the successful party, or to  
await the advancing columns of the defeated  
party, conditioned only upon fair, honest  
and full recognition and the "best proof of  
friendship."

The New York *Freeman* enunciates  
sounder views and recognizes that the  
"general good" includes the "interests  
of the race."

"No class of our citizens than the colored  
people have better cause to know and to  
appreciate the fact that "Mr. Cleveland is a  
new man, with new ideas;" and we are  
much gratified to observe a dawning of the  
fact upon the colored mind that, in many  
respects, the Democratic party is not the  
same it was under Buchanan, the last Democratic  
President before the war. In fact,  
the present is one of surprises to us. The  
surprises start with the patriotic and statesman-  
like reference to us by Mr. Cleveland  
in his inaugural address, and is continued by  
the party organs and leaders in the broadness  
and cordiality of their utterances and  
actions towards us."

We hope that the ensuing four years will  
be fruitful of pleasant surprises. We want  
it incontestably demonstrated that the Constitutional  
rights of the colored citizens are as  
sacred, if not more so, under the Democratic  
rule than they have been the past ten  
years under the Republican; and this we desire  
in the interest of the race and the general  
good, which we have always regarded as  
more sacred than any party. Once the race  
is assured of the inviolability of their Constitutional  
rights they will be in position to  
devote more of attention to their mental  
and material interests and thus make greater  
and more lasting progress. Being thus  
reassured, the solidarity of the colored vote,  
in the same proportion as in the past, would  
be an utter impossibility."

The Richmond *State* comments as  
follows upon the appearance of colored  
troops in the inauguration procession.

"The Republican politicians who tried to  
solidify the colored vote of the South by telling  
the Negroes that they must support the  
Republican ticket if they wished to retain  
their liberty, had an opportunity yesterday  
of seeing how little importance the colored  
people attached to those absurd statements.  
The colored militia formed a conspicuous  
feature in the procession that moved  
through the streets of Washington on the  
occasion of the inauguration of President  
Cleveland. Colored troops from Richmond,  
Charleston and other Southern cities were  
in line, and no class of citizens enjoyed the  
day more fully. Try as they may, Republican  
managers can never more deceive the  
Negroes by their old methods."

The Baltimore *Herald* takes another  
view of it, and is disposed to be very  
critical of President Cleveland, whose  
smallest movement, even to an unwary  
smile or nod, is supposed to be fraught  
with deep meaning. The *Herald* says:

"The colored troops in the inaugural  
procession received more attention from President  
Cleveland than associations like Tammany  
and Irving Hall. Even our own Crescent  
Club was permitted to pass without the  
recognition of a nod. Not so with the colored  
militia. As soon as the right of their line  
appeared a smile on the face of their new  
President broadened to a grin and the nod of recognition  
was so emphatic as to attract general  
attention. As it is his ambition to win  
the confidence and vote of the colored people,  
he appears to be starting right. By re-  
appointing ex-Senator Bruce Register of the  
Treasury he will do much toward completing  
the conquest."

In noticing this the *Freeman* adds:

"President Cleveland is a progressive man.  
He recognized in the participation of colored  
troops in the inauguration ceremonies of the  
first Democratic President since the abolition  
of slavery, an index to the momentous  
changes in the sentiment of the American  
people and the structure of the Federal  
Constitution which have transpired during  
the past quarter of a century."

The presence of colored troops upon so  
radical a change in the personnel and policy  
of the Federal government emphasizes the  
fact shown up by the progress of the past  
year, and that Mr. Cleveland should have been  
moved to give them a 'nod of recognition  
so emphatic as to attract general attention'  
is a happy augury which the editor of the  
*Herald* may not be able to read. "There  
are none so blind as those who will not see."  
The world moves; 1860 and the memories of  
it are becoming traditions."

Expressions of opinion in regard to  
the cabinet appointments are, for the  
moment, taking a large share of the  
editorial space in Southern newspapers,  
and the general satisfaction is marked,  
while criticism is of the mildest.

"The Cabinet is made up of strong men,  
who have been before the country more or  
less in past years, and whose recent  
prominence has made them special objects  
of criticism. The names are well distributed,  
the West being probably the most neglected,  
but the character of the men who have been  
chosen overshadows the sectional question,  
and shows up an impregnable Cabinet to  
the country. The selection of two New  
Yorkers in the Cabinet has been severely  
commented upon in some quarters, but as  
both are men of ability and are embodiments  
of the CLEVELAND idea in politics and in  
government, the council is made more compact  
and characteristic by their presence. It  
puts the President with undoubted responsibility  
and power in command of the Government."  
—*Augusta Constitutionalist*.

"Like many others, we are disappointed  
that the Mother of States and Sateenens  
has no place assigned her in the President's  
political family; but we are all prepared to

give the new Ministry our hearty support  
and best wishes in the laborious task of re-  
form before it."

The Cabinet seems to us to be made of  
excellent material, so contrived as to bring  
energy, intelligence, vigor, experience, and  
honesty into the service of the PEOPLE, and  
we have no doubt its policy will vindicate the  
sagacity of the President."—*Norfolk Land-  
mark*.

The appointment of General A. H. Garland  
as Attorney General is received by the  
colored people with much gratification. To  
the wise and conservative administration of  
this office more than any other, in the Cabinet,  
must the colored people look for an  
amelioration of their condition as citizens,  
virtually debarred of their constitutional  
rights. Hitherto greater attention has been  
paid to the colored people by other members  
of the cabinet than by the Attorney  
General, and the consequence has been that,  
while some colored people have, to some  
extent, enjoyed a few offices, the masses were  
in a sense, without either the benefits of official  
emolument or the protection of the  
courts. This has, we believe, been a great  
mistake on the part of our former administrations.  
The rights of the colored people to full  
justice before the courts should have  
been a paramount object of our statesmen,  
the offices being a matter incident to such  
rights and given upon political or other reasons.  
That the present Attorney General will  
do his best to insure fair trial to the  
colored people by exercising a wise selection  
of the men who are to mete out justice, we  
firmly believe. This we assume and believe  
from the wise policy he pursued while Governor  
of Arkansas and Senator of the United  
States. He has been a pronounced conservative  
in the proper sense. In a recent letter  
to a friend, he frankly says, "while I have  
sacrificed no principle or sound idea of the  
section, I am loathed to be conservative. I  
do it for the best of all, for I earnestly and  
fervently desired to see our country restored  
in fact, once more." A conservatism which  
aims at the best interests of all, is the sort  
of conservatism we most desire to see. We  
believe that the Attorney General will act  
on that principle and in doing so he will  
not fail to see that the judicial barriers which  
stand in the way of the proper development  
of the colored man are speedily and permanently  
removed."—*People's Advocate*.

We quote from the *Memphis Appeal*  
a kindly tribute to the work of the A.  
M. A. in the South.

"THE *Appeal* has followed for years, and  
with increasing interest, the benevolent  
work of the American Missionary Association,  
especially its school work at the South. It  
is therefore with special pleasure that it  
finds from its report up to September, 1884,  
that there has been no loss of zeal, no loss  
of interest in the schools that have been  
established south of the Potomac and have  
been sustained at so much cost of money  
and service for more than twenty years. It  
maintains sixty-five institutions, high, normal  
and common schools, at the South, and  
pays 319 teachers, of both sexes, who have  
9886 students under their guidance and  
control, seventy-three of them theological  
students and fifty-five law students. Besides  
this great, good educational work among  
the colored people, this association maintains  
ninety-five churches at the South, with a  
total of 6420 members and 13,150 Sunday-  
school scholars, employing seventy-six  
pastors, twenty-three of whom are Northern  
men and fifty-three Southern. What a  
record is this of benevolence and Christ-like  
work! how worthy of all honor and praise,  
and how worthy of devout thankfulness!  
Is it not good proof that Christian love has  
not perished from the earth?"—*Memphis Appeal*.

In a statistical account of the condition  
of the people of Washington published  
by the *People's Advocate*, there are some  
interesting facts, from which we select  
the following.

"There are, in the city, 12 colored schools  
with an enrollment of about 9,000 children,  
fifty churches, well supported, 167 Lodges  
and a flourishing militia organization,  
several successful physicians, and seven law-  
yers. The trades are well represented, there  
are two colored newspapers, and a number of  
conspicuous business enterprises."

To recapitulate, the colored people of  
Washington are 60,000 in number, or one-  
third of the entire population. The death  
rate, which ten years ago was often three  
times that of the whites, is gradually decreasing.  
The church membership is one-third  
of the population, and the value of improve-  
ments on church property since the war has  
been more than a billion of dollars.  
It is safe to say that the colored people  
pay taxes on about nine millions of real

estate, and their homes are growing more  
comfortable and tasteful year by year. They  
have a fair number of tradesmen. In the  
medical profession they are making a better  
show than in any other city of the country;  
in the law not doing quite so well. The colored  
people have a superabundance of societies.  
In business pursuits progress has been  
slow, but the outlook not without promise. In  
"playing soldier" the Negro here, according  
to his opportunities, asks no odds. In his  
schools he is doing excellently. In the police  
and criminal courts he is too often found  
but, generally for trivial offenses occasioned  
by the condition of the labor market and the  
proscription of which he is the victim. With  
a school for thorough instruction in the  
trades, the colored people of Washington  
could look most hopefully to the future."

## Niagara Falls.

BY ORRA LANGHORNE.

The advocates of the Niagara Park scheme  
are still working hard to secure in the New  
York legislature, the passage of the bill, by  
which the state of New York will purchase  
the property.

In ante-bellum days, Southern people  
loved to go to Niagara, and every one who  
could do so, young ladies just entering society,  
young men just leaving college, not to  
mention bridal couples, felt it incumbent upon  
them to visit Niagara before settling  
down to the serious business of life.

Times have so changed for the class of  
Southerners who once enjoyed money and  
leisure, and Virginians of all classes are now  
so generally occupied with the difficult problems  
of private affairs that they may be com-  
monly known among them, that of late  
years, busy manufacturers, with all their un-  
lucky accompaniments of "sooty mills, law-  
dry shops and dismal tenement houses, have  
been growing up around the great cataract.  
The sordid spirit of gain is utilizing the abun-  
dant water power to such an extent that  
there is much danger of the approach to na-  
ture's glorious work being spoiled by its sur-  
roundings. Unless prompt steps are taken,  
the traveler from distant lands who comes  
to visit this magnificent spectacle of the Creator's  
power, will turn away, disgusted with  
the polluting touch of man."

The plan proposed is, that the state of  
New York shall purchase the Falls with the  
adjacent property, and convert it into a public  
park, where all the world may unmo-  
lested come to enjoy the wondrous scene. (In  
its present form, the "compromise bill" pro-  
poses to appropriate only \$43,000 the first  
year, and spread the remainder over a period  
of ten years by the issue of bonds instead  
of appropriating \$1,433,000 at once as first  
proposed. By this plan, the appropriation  
will not perceptibly increase the public tax-  
es which was the only argument against the  
purchase. It will be a disgrace to the state  
if the purchase is not made.)

## Self-Help.

A LARGE AND SUCCESSFUL EDUCATIONAL  
MEETING OF THE COLORED CITIZENS  
OF MONTGOMERY, ALA. IN THE  
INTEREST OF THE TUSKEGEE  
NORMAL SCHOOL.

At the suggestion of citizens in Montgom-  
ery, a meeting was held in that city in February  
last, in the interest of education. The  
special object of the meeting was to secure  
aid towards furnishing rooms, in the new  
building, "Alabama Hall," at the Tuskegee  
Normal and Industrial School.

The meeting was very largely attended  
by the best citizens. Addresses were made by  
the State Superintendent of Education, Maj.  
Solomon Palmer, Dr. Hecht, the Jewish  
Rabbi, the leading colored ministers and the  
Principal of the Normal School. The speak-  
ing was interspersed with singing by the  
Tuskegee choir.

The State Superintendent was very enthu-  
siastic in his praise of the work of the Tuske-  
gee Institute and exhorted the colored people  
to aid it by practicing economy and self-denial,  
and he himself set the example by giving  
\$2.50 which he said was one-tenth of what  
he had saved in the last year by ab-  
staining from the use of tobacco.

The meeting was in every respect satisfac-  
tory and \$65 in cash were voluntarily given  
by the audience to aid in furnishing the  
rooms. We think this creditable considering  
that this was the first meeting of the kind  
ever held in the city or probably in the  
State. The poorest seemed anxious to give  
something.

The people showed their interest in the  
cause of education by asking that another  
meeting of the same kind be held in Mont-  
gomery next year, when they promise to do  
more.

The meeting doubtless had its greatest  
value in teaching the people self-help.

B. T. WASHINGTON.

## SOUTHERN SKETCHES.

BY MRS. ORRA LANGHORNE.

## AFTER MANY DAYS.

## The Story of a Slave.

On a sultry afternoon in the summer of 1833, a respectable looking, elderly colored man stepped off one of the trains from the South at the Lynchburg station and gazed about him with an anxious and somewhat bewildered air. Apparently he was disappointed in not recognizing or being recognized by any of the bustling crowd around him. He stood for a few minutes looking with an expression of eagerness and agitation at the porters and hackmen, who, in the confusion of the incoming and outgoing trains, hustled him out of their way without notice. At length the stranger, murmuring to himself, "It is over forty years, it is forty-three years," grasped his satchel tightly in one hand, and carrying a stout cane in the other, turned from the noisy crowd and walked slowly up the street. Entering a small eating house not far from the station, he threw his luggage down upon a bench, and, sitting down by a table, he buried his face in his hands.

A handsome mulatto woman who was presiding at a counter covered with cold meats, pies, fruit and such edibles as the snack-vender deems likely to attract the traveler's appetite, glanced sharply at the new-comer for a moment. Her experienced eye taking in the fact that he was well clad, had luggage, and bore a general air of respectability about him, she approached her visitor, and inquired in a mild, agreeable manner if he desired any refreshment.

Striving to control his agitation, the traveler hastily wiped the traces of tears from his face, and said in a broken voice: "Can you tell me, ma'am, anything about a family named Watson? My name is Morris Watson. I was sold away from this country over forty years ago. I have heard lately that some of my kin-people are still here. Do you know anybody of my name?" "To be sure I do," said the snack-seller, ready sympathy, not unmingled with curiosity in her tones. "Yes, I know 'em 'an' if they is your folks, you b'longs to a mighty nice set of people. 'Rush goes one of them now!" she exclaimed, rushing to the door and hailing a passing omnibus, on the step of which a fine looking young black man was riding. The vehicle halted and the porter, responding to the woman's call, sprang from the step and hastily approached the shop. As the snack-vender again pronounced his name the traveler started from his seat and astonished the young man by throwing himself upon him, weeping convulsively and pressing him to his breast.

By the aid of the shop woman, who had herself been a slave, and showed a kindly interest in the stranger, the porter was informed of the name of the person who was lavishing such unexpected caresses upon him, and, catching instantly at the words, he returned the embrace with much warmth, exclaiming: "Why, Uncle Morris, is this really you? Mother was always saying you would come, and we shall all be delighted to see you."

The omnibus had been returning empty from the station, and the driver had up to this moment remained a quiet and unobtrusive spectator of the little scene at the door of the snack-house, but he now reminded the porter that they should be going back to the hotel; and the young man turned the traveler's satchel, insisted upon his getting into the vehicle, the driver obligingly offering to take them around to his mother's little home. Bidding the snack-seller a grateful adieu, and promising to see her again, the wanderer yielded to the urgency of his nephew and was carried away to be restored once more to the friends of his youth.

## A ROMANTIC HISTORY.

Leaving the joyful meeting to be imagined I will go back some forty years to tell the story of a slave, so full of romance and adventure that it would be hard to believe, if we did not know it to be true.

The incidents of the narrative have been gathered from Morris Watson's relatives and from statements made by members of the white family to which he belonged in childhood, as well as from himself. After Mr. Watson returned to his home in the far South, at my request, he sent a brief account of his life, written at his dictation by a young lady who teaches a school near him, attended by his children.

Some forty years ago there lived in one of the rural districts of Virginia a Presbyterian clergyman named Armistead, who was the father of a large family, and the owner of much land and many slaves. At this time the plantation presented a pleasant picture of comfort and cheerful industry; a large and populous household seeming truly patriarchal in its simple and affectionate relations. Mr. Armistead had several country churches in his pastoral charge at which he

preached alternately, the minister and the congregation often going many miles to the thinly settled district to attend the services. Besides his clerical duties Mr. Armistead had important agricultural interests. In addition to cultivating his own extensive estate, he sometimes, in connection with other planters of the district, bought cotton in the South, which was sold in the port cities. In his frequent absences from home the family and property were left in charge of the head man "Uncle Jack." This Uncle Jack was a famous character in his day; jet black, of handsome and impressive bearing, like his master a minister of the Gospel, intelligent and industrious, much respected in the community and enjoying the full confidence of his owners.

His wife, known throughout the neighborhood as "Aunt Molly," was a large, fine looking black woman, the mother of twenty sons and daughters, a most estimable and useful person, greatly beloved in the family. It was Mr. Armistead's custom to require the presence of all the house servants at family worship morning and night, and when his ministerial or business affairs required his absence from home, as was often the case, Uncle Jack's portly form filled his master's chair. With earnest and impressive manner, the old slave, trusted and trustworthy as Abraham's steward, devoutly read a passage from the scriptures and then solemnly invoked the divine blessing upon all the household, present and absent, young and old, bond and free. Sometimes, in case of his master's having gone, he would read a passage from the scriptures and then solemnly invoked the divine blessing upon all the household, present and absent, young and old, bond and free. Sometimes, in case of his master's having gone, he would read a passage from the scriptures and then solemnly invoked the divine blessing upon all the household, present and absent, young and old, bond and free.

Having committed his beloved master to God's care, the faithful slave would then see that his family and business did not suffer in his absence, and by precept and example would urge every one upon the plantation to do their utmost to promote his interests until he should return.

Uncle Jack was a very thoughtful and observant person, and talked with so much sagacity that it was very common for the lawyers, and other travellers, who often stopped for the night at Mr. Armistead's house, attending the courts, to discuss subjects of current interest with their host's dignified and intelligent head man, and the Hon. Hunter Marshall, then Judge of the District, was frequently heard to say that he had never seen a man of finer natural ability than Uncle Jack.

## SELLING A MISSIONARY.

The Southern Workman some years ago printed a sketch of one of Uncle Jack's sons, who early gave such promise of usefulness, and such evidence of talents, that he was purchased by the white church people of the community. His master valued his vigorous frame as valued in the slave market, in consideration of the fact that he was selling a missionary to other Christians. The youth was educated by the white people and sent to Africa, to carry the Gospel message to the heathen, and died in that tropical land, laboring faithfully in the cause to which he had been devoted.

For many years the calm and pleasant life had been going on upon the Virginia plantation, presenting such a picture of peace and plenty, such an ideal life for master and slave, as seemed to disprove all the assertions of the Abolitionists of the evils of the system. So far as could be seen on the surface, all things seemed to work together in the best possible way for all concerned. But at last a shadow fell upon the fair scene, and the thorns which all along had been hidden under the roses suddenly came into view, and threatened to inflict cruel wounds upon the actors in the simple story.

As Mr. Armistead advanced in years, he devoted himself more closely to affairs immediately around him, committing his business at a distance to the care of his eldest son. The young man, with other planters of the vicinity, embarked largely in cotton speculations, his father always endorsing his obligations.

Some unlooked for changes in trade about 1830 upset all the plans for making a fortune laid by Mr. Armistead and his partners, involving great losses and leaving the planters heavily in debt. Before any arrangement of his tangled affairs could be effected, the Rev. Mr. Armistead died; and quickly upon this event followed the settlement of his debts by the executor.

Under the slave laws, the Negro chattels were counted personal property; it was to them that the creditor looked first, and it was decided by the administrator of the estate that it was necessary to allow the young slaves at once to be sold, in order to satisfy the executions in the Sheriff's hands. Then came a sorrowful day for Uncle Jack and Aunt Molly, who had always considered themselves and their children an indispen-

sable part of the family, and had truly loved and faithfully served their owners.

The old couple, who had rejoiced in being the parents of twenty fine buxom children, were now called upon to assemble their dusky brood, the ones who had been given to the service of the Lord in a foreign land alone being lacking, and see them sold by the auctioneer to pay their master's debts.

The sale was made, and Uncle Jack's children, with other young people belonging to the estate, were scattered far and wide. Morris, the son, with whom my story deals, was bought by a farmer in an adjacent district, and at once carried to the home of his owner.

## IN HIS OWN WORDS.

At this point I will give his own words, taken from the neatly written account of Miss Rabb, the colored teacher.

When about fifteen years old I was sold from P. S. Armistead's estate. I was bought by a farmer who lived a few miles from my first master's place, but he only kept me with him six months, and then sent me to his new master, who lived about seventy-five miles off, and was a Negro trader. This man kept me in his Virginia farm about two years, and twice I was permitted to visit my parents at our old home.

I remember distinctly that in one of these visits I carried my father a pocket knife and my mother a head handkerchief, bought with a few pennies I had been saving a long time for that purpose.

I saw a great deal of cruel treatment practiced during the two years I lived at this place. When I first went there I was badly treated by both the white and colored people. I think this was simply because I had been accustomed to better circumstances, and had different manners from the people there, who were very rough and wild. While I was with my father and mother they always taught me to be polite to everybody, and my mother talked to me a great deal and gave me a great deal of good advice when I was about to be taken from her. This made a lasting impression on me. By following the principles taught me by my parents I have gained many friends, some of whom had at first been my enemies. My new master carried me to Mississippi, and when I left his Virginia farm much sorrow was manifested.

I was brought to Columbus, where a man living near that place bought me. When I set out for my new home I was very sad, and as I thought of my father and mother I could not help shedding tears. A boy named Lee, who was a stranger to me, was bought at the same time and sent to the country with me. He did not seem so cast down as I did; perhaps he had no friends to mourn for.

My new master was a very cruel man; and it was terrible to see how he treated the helpless men and women in his power. I have known him to beat people with brands of fire. Strange as it may seem, even the animals and fowls on the place were afraid of him. Fortunately for his slaves, he died in about a year after I went there, and after that we were tolerably well treated.

On account of the indebtedness of his owners I was sold again, this time to a man who owned a mill on the Tombigbee river. He was kind to me until I wanted to be married. But he refused to let me marry the girl I wanted because she did not belong to him. At last, finding I would not give her up, he sold me to her master, and we were married and stayed with him until the emancipation.

I had many trials and tribulations in slavery, but the Lord has always helped me. After freedom came to us, we went to Columbus to live; but we were not accustomed to city life, and soon wanted to get back to the country. I worked on a contract for a while, and then rented a piece of land. I bought a mule for eighty dollars, and worked along until I owned four mules, three cows and a horse and wagon. I found that renting land did not pay me, and I bought a hundred and ten acres of my own. I improved that, and now have a comfortable home. Lately I have added a hundred and twenty acres to my farm, making two hundred and thirty acres.

I had been in Mississippi more than thirty years, and in all that time had not heard of word from my family or the friends of my youth.

## "BACK TO OLD VIRGINIA'S SHORE."

Morris Watson told his Virginia friends that when first sent to the South his heart yearned continually for them, and though there were many difficulties in the way, he had managed to send a number of letters to

the family, telling them of his fate and anxiously inquiring for their welfare. None of these letters were ever noticed, to his great disappointment and grief, and it was only after he returned to Virginia that he learned that after his first master's death the country post-office near his estate had been removed to a place some miles distant, so that the letters sent by the homesick boy were never received.

Long years passed away, freedom had come to the slaves; the freedmen, forgetting the sorrows of slavery, had entered upon a new life, and the storm-tossed wanderer had found comfort and happiness beneath his "own vine and fig-tree," when a stranger asking for a night's shelter under his own roof brought him tidings of his childhood's home, and revived the long-dormant dream, in his breast of seeing once more some of his own kith and kin.

In May, 1883, the Rev. Mr. Colley, who had been a missionary in Africa, but was forced by failing health to return to America, was employed by the Baptist Church as an agent for circulating books and papers among the colored people of the South. He reached Morris Watson's home in his travels, and stating that he had recently come from Virginia, his host inquired eagerly if he could give him any information which would help him in finding out any of his family, whom he had left in Virginia nearly forty years before. Mr. Colley offered to do all in his power to assist his hospitable entertainer, and gave him the address of the *Christian Commonwealth*, published by a colored man at Portsmouth, Va., which he thought would be of use in the search for his lost relatives.

Mr. Watson at once wrote to the *Commonwealth*, giving an outline of his story, giving the names of his first master's large family, with those of his parents and their twenty sons and daughters, and earnestly requesting any of either family who might chance to read his letter to communicate with him. A prompt answer was returned by the editor of the paper, who proved to be one of old Uncle Jack's grantees, and therefore a nephew of Morris Watson. The editor wrote affectionately to the uncle, of whom he said he had often heard from his mother, who was still living, as were several of her brothers and sisters.

Mr. Watson heard with delight of these members of his family, all of whom supposed that he had long been dead. As soon as he could arrange his business, the ex-slave, who had left the home of his childhood in sorrow, and had passed through much tribulation, but had been mercifully preserved and was now a prosperous citizen, and the public joyfully turned his face towards "Old Virginia's Shore."

Naturally he found great changes in the land of his birth. The dark shadow of slavery had forever passed away, and a brighter and better day was beginning for both races. His good old parents were gone, from earth, but they were held in reverent memory by all who had known them, and had left the inheritance of "a good name" to their children and grandchildren. The wanderer received a warm welcome from his relatives, and many white friends, some of whom he had known when a slave, and he rejoiced to see him again and to hear of his prosperity.

Morris Watson has learned to love his Southern home and would not now wish to leave it, greatly enjoying the visit to his birth-place and the re-union with friends whom he had almost lost all hope of seeing again in life. With a thankful spirit he exchanged greetings with old friends and exclaimed in fulness of heart: "The Lord hath dealt bountifully with me in my old age!"

## HUMORS OF THE CLASS-ROOM.

## Butleriana.

There is a good deal of fun to be got out of teaching, and out of visiting schools if one teaches or visits, keeping the fun well in view. A recent visit to the Butler school is worth recording here. The room which is the most attractive of the Butler is the baby room, where the little scraps of humanity, between the ages of five and eight, take their first steps in the toilsome road to learning. Study the little round baby faces, of all shades, from that fair-haired blue-eyed little chip who smiles angelically from his place as we come in; to yonder shining ebony baby, whose short, kinky hair is braided into all manner of odd little tails on her head. They all look up at us with the same knowing smile as we enter; "the Butler smile." We call it, for lack of any better name. It is a smile that is a curious mixture of simplicity and precocity, but has never a trace of embarrassment in it. As one rides through the country roads one meets it at every turn, and wherever it is met it can be immediately set down as belonging to one of those happy children whose education is carried on at the Butler. It is not a thing peculiar to the Negro, for the two or three white children in the school have acquired it; and our four little Indian boys had only attended the school a couple of weeks when it began to make its appearance upon their impassive little faces. What the philosophy of it is, I cannot tell. Perhaps the children get it from the old building, perhaps from their teachers; but wherever they get it there is no doubt of its existence, and so it greets us as we enter this baby room this morning.

The second class in reading is preparing to recite. From fifteen to twenty children are standing at their places, waiting for the word of command. "One, two, one, two, march," says the teacher, and off they go, describing complicated evolutions around the tables and between chairs and benches until they finally bring up in line, with their backs to the wall and their faces toward the blackboard, by which the teacher stands. A breathless silence follows while the teacher writes in clear letters on the blackboard: "I saw a bluebird on a tree." "Now who can tell me what I have written on the board?" Instantly all the small hands are waving in the air. "Charlie, can you tell me?" The smallest boy in the class answers proudly and clearly: "I saw a bluebird on a tree," showing that he can read, even if he has not yet learned to talk. The next sentence put on the board is as follows: "I have a pretty cat." After a sufficient delay, to show that the children know not only the sentence but the words in it, the teacher adds, "Her name is Kitty," and later still comes the information, "She has four legs." At last she calls up one of the little mites to read everything on the board. Here, Franky, Franky begins, looking triumphantly at the visitors, and in his excitement forgetting altogether to look at the blackboard, "I have a little cat, she name is Kitty. She has four feet and a long, bushy tail." Here the solemnity of the visitors breaks down, the class laugh, though they cannot all see the joke; and, last of all, Franky joyfully delighted at having amused everybody, though he doesn't understand just how he did it. However, if there is a laugh anywhere, the children do not mean to be left out of it. So children, teacher and visitors laugh together over the marked success of the "sentence method" of teaching children to read.

## Impressions.

As the Spring draws near, and the season of the Hygeia Hotel comes on, the dwellers at the Hampton School begin to see something of the gay world from an outside point of view. At about A. M. the carriages begin to come, and under the guidance of some graduate, student or officer of the school the different parties are sent off to see the manifold sights which the place affords. Let us be visitors for once, and see what will befall us as we go about the grounds. We drive in our hired hack past the barn, by one of those large brick buildings to the office, which stands rather by itself, facing the creek, just where the road turns to go up to Virginia Hall. Here the driver stops and suggests to us the propriety of procuring a guide so we alight and go up the steps and into a room at the left of the entry, where various men, both white and black, are absorbed in writing in ponderous books or turning over two large paper registers, we write our names in the visitors' register, and then, as there is no one at liberty just at the moment to show us about, we are escorted up stairs to the library and reading room by a small boy, whose soft, lustrous,

black eyes with long, heavy lashes, might be the envy of many a ball room belle. Having wandered for a few moments about the pretty room, turned over the periodicals and looked our heads into the alcoves, only to withdraw them in unseemly haste when we find that we are interrupting the work of a young lady who, in that secluded corner is wrestling with a book that, from its size and weight, looks as if it came from the office below; we try to amuse ourselves by dropping a penny into the contribution box that looks so appealingly in the face, but immediately wish we had tried a five dollar bill instead, as the appalling rattle of our contribution smites our ears, and we feel that we have done "a small deed with a mighty noise." But our embarrassment is relieved by the appearance of a guide, who takes us in tow and marches us along the walk toward Academic, where the classes are in session. "Please show us some of the Indian classes," we say, and so we are shown into a room where from five to fifteen Indians of both sexes are having a reading lesson. The Indians vary in size from the small girl of eight or thereabout to the amiable looking giant who, when called up to recite, unfolds himself from somewhere under the desk to the height of six feet or more, and then from the primer in his hand reads painfully and solemnly, in a small voice: "I have a doll. She is a nice doll," etc.

"Is that a real, live Indian; did he ever scalp anyone?" we are about to ask of the teacher, but our guide beckons, the door opens, and before we have time to collect our wits we are in another recitation room, listening to a class of colored students who are glibly explaining complicated arithmetical problems. Now we dive into another room, and so in and out we go with time to gain any very definite impressions of anything; but we have only an hour in which to do the whole institution, so we must hurry. Then our guide whisks us away to the saw mill; and in the industrial room, where we purchase a small black doll and a painting, wherein blue hunters, mounted on spirited green and yellow horses, are chasing red buffalo up a haystack, ornamentally decorated with broomsticks. Thence we depart to the printing office, where we have hardly time to do more than look in at the door, for there is a harness shop, carpenter's shop, tin shop, shoe shop, and a blacksmith shop yet to be seen; and we must get to Virginia Hall in time to see the students march into dinner. Panting and breathless, we follow our guide; and after a long and desperate struggle we reach Virginia Hall just in time to see the battalion march in, and then we follow on, like Gideon, "faint yet pursuing," and hear them as at the sound of the bell grace is sung by the whole school, standing behind their chairs with bowed heads. Then another bell is struck, chairs are drawn out, and the students are seated; and streams of white-aproned waiters, bearing aloft steaming dishes, hurry through the room. We have found out three things about this school: the students work, they study, they eat, and we knew all that before; but perhaps by our hurried visit we have obtained an interest in the school that will lead us to come again. At any rate, as we drive out of the grounds in our carriage we have a feeling that, though our impressions may be confused, they will be enduring, and that we shall always have a feeling of acquaintance with the school when we see its name anywhere, hereafter. A. M. B.

## AN OUTLINE IN BLACK.

BY MRS. M. F. ARMSTRONG.

## Merrimack and Monitor.

In reading the story of the great fight, as told by the men who fought it, in the pages of *The Century*, we, in whose mouths it is familiar as household words, have been tempted to ask if there was no place left in the record for Uncle Peter's story, Uncle Peter, whose interest in the issue was far greater than that of either of the combatants, for to him and his people it seemed little less than a finality.

Probably no sharper terror is known to humanity than that which drove thousands of black refugees down to the bowed shores of Hampton Roads on the morning when the Monitor met the Merrimack, and even yet the shadow of it has not passed away. Uncle Peter has known fifty years of slavery and twenty-five of freedom, but the flash came back to his eye, and the bowed shoulders straightened till the grey head came close to the low, smoke-blackened masts, as he told of the days when Union and rebel armies swept back and forth over the barren fields and tangled swamps of the "Peninsula." He is a venerable "old time" darkey, and though he holds his freedom as a most precious

gift it is pleasant to her the warmth with which he declares: "No sah! I hain't never had no more to do with de war, I never seed no place outside' Ole Virginny, but I knows it's de best place on de airth; I knows it is."

Does he remember the Merrimack? Laws, chile, I members ev'ry hour o' dat day. 'Tuz wuz on a Sat' day, en de wuz wuz lots o' us culled folks roun' Hampton; pears like mus' a been free or four thousand, en dey wuz all a watchin' 'en a waiten, us de rebels dey done told 'us dey gwine to git a great wict'ry, en sen' us all back inter slav'ry egin. So, 'right soon in de mornin', out come dis yer Merrimack, down out'n de Elizabeth ribber, straight down to Newport's News' Point, whar de Union's vessels wuz a keepin' de blockade not to let no trade go up de Jeames' ribber. De Cumberland wuz layin' just round de Pint, whar dey couldn't see her from Ol' Pint, en de Merrimack she don broke fro' de blockade and pitch squar inter her, en 'twan't no time fo' she war a sinkin, en den de rebs dey called out to de Cap'n: "Ei we don't s'tender we gwine sink you." En de Cap'n he says, so dey tells me, "Sink if ye likes; I ain't gwine s'tender." So, sho's you born, down she went, en 'twan't twel' de las' gun fired dat de men dey giv up en jumped inter de water. Dem dat wuz n't drown'd dey swum ash' right dar, en den dey walked all de way long down yo'uns sho' and dey swum de crick whar yo'uns dun got w'her; en de wuz right on down to Ol' Pint. En den de Rebs dey sarved de Congress de same way, on'y she run jam up on de sho' en tuk fire; dat was a sight to see!

"Ez I tells you, us culled folks wuz scar'd to deat, but de Merrimack she seem'd kind o' satisfied like, en de rebs 'en went back up to Norfolk to recruit I reckon. Anyways, we didn't hear no mo' bout her twel' de de mornin', dat's de Sabath, ye knows; en we allers had service over in Wood's Mill, whar de 'Missionary' is now; right dar whar Gin'l Armstrong libes; en we wuz in thar waitin', but somehow or nuther none on us didn't feel like worship dat mornin', en pretty soon I says, I wuz de leader, ye knows: 'I kin't wait hyar, I must' go see what gwine on outside.' En sho' 'nuff de de Rebs dey at Ol' Merrimack a steamin' agin, en I tells you I wuz skeert, coz ye see no body didn't know nuffin' bout dis yer Monerker, 'cept it wuz de Gin'rl down to Ol' Pint, en she come in de night Sat'day night, wuz nobody seed her, en went right long up fro' de Roads, en sneaked in under de bows o' de Minnesota, des like a little yawl boat, en lay dar, whar nobody couldn't see her. De Rebs ye knows dey called her de Yankee cheese box, but afterwards we sed she wuz de angel wat come in de night and saved us."

"Well, down com de Merrimack, des ez pears; en de Minnesota she gun to fire, en I gibs yo' my word 't was des like hail, de balls dey went a flyin' dis a-way en dat-away, des like nuffin' but hail in a hail storm. En fo' long dis yer little Monerker she peeped up; she bin a layin' still, ye knows, en she says, kinder quiet like, 'p' chunge, des one shot; en den pretty soon 'chunge agin, 'en a bit like de Minnesota, en den de Merrimack she come a sailin' up close to de Monerker, des like she sayin', 'What kin' er thing is you?' but de Monerker she dessaid 'p'chunge,' en she kep' a sayin', of it, en de Minnesota kep' on in thar twel' somehow a nuther de Merrimack kin' er keeled over, en den she fought she got 'nuff en she backed out en went off lop sided, des-like dis, back to Norfolk. En de Monerker she des let her go, coz dey do say dey wuz only two mo' shots on board, en de Cap'n didn't want to let 'em know; coz dey mout a tuk him, stid o' him, takin' them. En den we wuz glad, I kin tell yer, coz de rebels dey said de Merrimack wuz a gwine t' open de gates en dey wuz a comin' right fro' to Ol' Pint; en dey wuz a waitin', lots on 'em, up dere at Newport's News, spectin' to finish up us culled folks. But somehow or nuther dat a little Monerker she hilt 'em. I d'now wat we'd a dun 'thout her; en de gates wan't open dat ar time, en dat war de c'en; arter dat de Union went right along, dey did, en got a wict'ry every time."

"Yis, seh, de Rebels dey called her de Yankee cheese box, but 'tuz de dearest piece ob cheese ober dey swallowed; dey didn't need no mo', I tells you."

And then Uncle Peter shook himself with a great sigh, and the vivid gestures, which had put a strange life into his words, gave place to folded arms and bowed head, as he said:

"Pears like to me t'aint all ober yit; dere's trouble ahead for some on us, I b'lieve; en I d'now whar de een' gwine to be."

## Horsford's Acid Phosphate.

IN SEASICKNESS.

Prof. Adolph Ott, New York, says: "I used it for seasickness, during an ocean passage. In most of the cases, the violent symptoms which characterize that disease yielded, and gave way to healthful action of the functions impaired."

## "Publicans and Sinners."

I received the other day, upon my porch a visit from a handsome, grey-headed, old-time colored man, whose manners might have been the envy of many of his white brethren, and whose request for a little pecuniary assistance was prefaced with the following conversation:

"Mighty hard times for us culled folks dis year; craps done fuled us right out en out; pears like we ain't got nuffin to look to no ways."

"Yes, it has been hard times, I know; but you musn't get discouraged; after the bad years come the good ones, you know."

"Not dis time, Missus; not dis time; looks powful dark to me, somehow."

"But why should matters be worse now than they have often been before?"

"Why, dis yer 'Nawigation,' don't you b'lieve its gwine ter make things mighty bad for us?"

I made no effort to repress my smile, but there was no reflection of it on the old man's face, as he asked with really pitiful anxiety:

"Is you a 'Publican'?"

As, evidently in the mind of my interlocutor, the two political parties were classified as "Publicans and Sinners," I was glad to be able to assure him, that my record was, from his point of view, stainless; and from that vantage ground we discussed the situation, I doing my best to calm the very genuine fears which, when once assured of my sympathy, he had no hesitation in expressing.

The conclusion of the whole matter was to me very amusing.

"Well, now, I nebber fought on it dat way; specs you's right; mebbe 'is de Lord's doings; mebbe He hez knowed wat He wuz 'bout all de time."

With which admission and the few coins, for which he had walked almost as many miles, my friend left me, bearing with him the novel suggestion that even politicians were probably within the sweep of the Lord's omniscience. M. F. A.

## A Card.

We wish to thank, through these columns, all friends who have contributed to the support of Daniel Johnson during his education in the trade of broom-making. He is doing well at his trade, as we are told by those in authority at the Asylum, and is happy himself, as a letter written for him by an amanuensis informs us. That his church is fulfilling its promise toward his wife and children, we know by personal visitation. Thanks to the many friends who have contributed, we now have the whole sum of \$150.00 made up, and we hope in June to see him restored to his family and ready to set up for himself in the broom business.

## Correspondence.

Editor Southern Workman:—

I know that you will be glad to know what a practical friend Dr. C. N. Dorsett, of Montgomery, is to the Tuskegee Normal School. Last Christmas he surprised the students with a large quantity of oysters for their Christmas dinner, and last week came another surprise from him in the shape of a large school bell, a long needed article. Dr. Dorsett deserves the wonderful success that he is having in Montgomery.

B. T. WASHINGTON

Tuskegee Alabama, February 10th, '85.

Dr. Dorsett is a graduate of Hampton, who, having with great energy secured his medical education, is practising with success, deserved, as Mr. Washington says, not only by his medical skill but by the generosity which belongs to the profession.

## Horsford's Acid Phosphate.

FOR OVERWORKED PROFESSIONAL MEN.

Dr. Chas. T. Mitchell, Canandaigua, N. Y., says: "I think it a grand restorer of brain force and nervous energy."

## Letters From Hampton Graduates.

REMEMBERING OLD FRIENDS. FROM A BUSY GIRL. MEMORIES OF MISS LONGSTRETH. PREPARING SCHOLARS FOR HAMPTON.

## REMEMBERING OLD FRIENDS.

A graduate of the first class from Hampton, who has been teaching ever since, and of late with the added burden of ill health, writes of his work and his memories.

—Va., Nov. 10th, 1884.

My Dear Friend:

I received your kind letter sometime ago. I am glad to find that you have such a warm interest in the Hampton graduates. I feel it my duty as a representative of the class of '72 to give you an account of what I am doing. Since my graduation I have had very poor health. I have suffered greatly with rheumatism, for many years, and cannot obtain any remedy to get much relief. After so much suffering with the rheumatism, I caught a fresh cold, which brought on a bad cough, accompanied with the bronchitis. The cough is very troublesome in the day, but worse at night. It causes me to be restless, and prevents me from a good night's sleep. Dear friend, though I am trusting in God, and believe he will make everything right in his good time. I commenced my school Oct. 6th with an enrolment of twenty pupils. Since that time, to the present, it has increased to sixty-nine. I am gratified to say that I am getting along pretty well with my school. Some of the children are making rapid progress in their studies. Our people are getting along and building houses when they have an opportunity. Our crops are very inferior this year. We have the railroad now running through our country. I have been teaching every year since my graduation. I first taught school in Bedford Co. Va. where I met with good success. I taught there four terms, and liked the place people, but my health was so poor, I thought I had better come home from among the mountains. In 1875, I came home and took a school with a large enrolment. My success was so good that the Superintendent gave me the town school. At this school I met the approval of all, but the house was poor. After some new school houses were built, I took another school, where I can be home every night.

I hope to have some more pupils to send to Hampton next term. I am doing all I can for the elevation of my race. I am sorry that I was unable to meet you at the Alumni gathering. We mourn the loss of our dear friend Miss Longstreth and hope our loss is her gain. I am really sorry that Gen. Marshall has left Hampton. I know that every student that was acquainted with him will miss him. I could always feel satisfied when I visited Hampton, and met with Gen. Marshall. He certainly was a dear friend to me. His instructions were good in the school room, and at our entertainments his presence was greeted with the warmest welcome. He would always have something new, to make us lively. Mrs. Marshall was just as dear to me as sure that we will not forget those two faces. I hope God may bless and protect them.

I would be glad to visit Hampton and see the many changes that have taken place since I was there.

I would be pleased to have a Christmas-tree for my scholars. I desire to have everything that is nice and grand.

Very truly yours, J.

## FROM A BUSY GIRL.

The gentle words and tones and looks of our dear friend Miss Longstreth, well remembered by so many of Hampton's graduates, cheer and strengthen many busy workers among them, one of whom thus writes.

—N. C. 12-15th, 1884.

Dear Miss C—

It has been some time since your letter came to me and I have been intending to answer but I am usually so busy that I find but little time for writing.

I came here in November to teach in the public school.

B— is a sea port town with two thousand, one hundred inhabitants. It is nearly an island. The only means of getting across from M— City is by way of tall boats. The night I came it was cold and so it was somewhat unpleasant crossing.

There are three teachers employed in the school. I teach in Sunday School and am organist of the Episcopal church. Our church is rather small but we hope to see it increase soon.

The colored people seem to be thriving here. This is quite an old town and there seem to be few improvements.

I spent last summer teaching in Chatham County of this state. I was truly sorry to hear of the death of Miss Longstreth, but I knew our loss is her gain. I remember her with her pleasant smile, and sigh to think that we shall see her no more.

I have not your letter with me so I cannot answer it as fully as I wish.

Many people here say that Hampton has the best school in the South. I lent your letter to one who wished to attend there and that is why I have it not with me.

Mr. Walter M— a former student of Hampton, is now at St. Augustine studying for the ministry; he also teaches writing in the school.

Faithfully yours, S.

## PREPARING SCHOLARS FOR HAMPTON

More and more students are sent us every year from our graduates' schools, many of whom are well fitted for the classes they enter; chiefly the Junior class. This is a good showing for our graduates' work, which is often carried on under great difficulties, with the fewest possible facilities.

—Va., Dec. 12th, 1884.

My Dear Miss—

I am again teaching and enjoying perfect health. I took my examination in September and am now holding a first grade certificate. I opened my school Oct. 6th with thirty-seven pupils and have now enrolled thirty-nine last year, but I have to work harder than I did last year. The greatest number of my children are very much advanced. My first class in history are taking the Revolutionary War and they seem so very interested that I am sure you would be surprised to hear them reciting, and making practical questions they ask too. When I took United States History, it seemed so dark to me that I felt perfectly sure that I could never make a recitation in it but since I left school I have read history and feel intensely interested in it. I have two classes in arithmetic that have completed the first two numbers of Venable's Series and are now taking compound numbers in practical arithmetic, one in fractions, they are very much interested in it. I have one pair of hands can do, especially when I have only one blackboard about four feet long. A great many times the sun has gone down and still I am in my school house trying to explain some little point that has not been quite understood.

Hoping to hear from you soon, I close with much love.

Yours sincerely, M.

## Some Scholarship Letters.

We shorten our columns of Graduates letter this month, to make room for a few extracts from some of the "Scholarship letters" written as they are every year, by the students at Hampton in acknowledgement of the "scholarships," of \$70 paid by Northern friends for the year's schooling of each boy or girl. The letters are in all cases sent without any correction of spelling or construction, being thus faithful and often interesting evidences of the students' condition and progress, and they are thus given here.

## FROM A GIRL IN THE MIDDLE CLASS.

Hampton Va., Jan. 1st, 1885.

Dear Friend—

Perhaps you will hardly believe me when I say it is a very pleasant duty to write to you whom I have never seen, or known; but then when I give you a glimpse into my life, and contrast my past with what I hope to make my future through the generosity of an unknown friend, I have no longer doubt or wonder that I am not only pleased, but grateful for the opportunity of writing you on such an occasion.

I was born in Greenville, South Carolina, in 1864, but lived there only a short while after the emancipation. My mother with two small children then moved to Newbury, South Carolina, where we have lived ever since. I had no father, my father having died when I was an infant, and my mother found it very hard to support herself and children in those hard days directly after the slaves were freed, when mothers with their children were dragging up and down the public roads with no where to shelter themselves nor a mouthful of food. My mother very fortunately, was a nice seamstress, and after

a great many discouragements, found a home where she sewed, cooked, washed and ironed, and in fact did every thing for the small sum of five dollars a month. And out of this she had to clothe and feed my brother and me. She thus toiled for several years under these circumstances. She then married a man who has in a great measure been a father to me. But of course they had nothing in the world to begin with, and my mother remained hired. My step-father made a bed, table and some small benches that served for chairs, and thought the room quite neatly furnished. I will just stop here and tell you something of their life as slaves.

My mother was owned by a very hard, but wealthy people. She was the house-girl and seamstress; therefore she was greatly troubled by their mean little whims as well as real cruelty. Her owners thought a very effective way of punishing their slaves was to compel them to go without food for two or three days at a time, working in the mean time as hard as though they were well fed. On one such occasion the cook ventured to give my mother a bowl of milk, for which disobedience to her owner's command she was forced by the cruel treatment to run away, and staid in the woods until the emancipation, which was three long years. This is one of the many, many hard hearted occurrences of which I have heard my mother speak.

My step-father's life was exactly opposite. His master was a very humane man, and was much beloved by his slaves. My step-father is a shoemaker, and he was allowed to hire his time, and worked in a large shop where he made enough to pay his owner and have a plenty for his own use. He says he had nothing to complain of.

After the marriage of my mother a man who had a good trade as well as herself, I am sure they could have made a good living for the little wages they received. However, they were forced to work for their owner, my mother concluded she could earn more by taking in work than by giving all her time to a family for so little pay. By very many sacrifices and great perseverance, she soon had saved money enough to buy a small piece of land and build a house of two rooms. Step by step they moved on up the hill of prosperity until at last I can say we are blessed with a comfortable little home, with such necessities as to go to make a happy home. My mother often says she paid for our home with her eye-sight.

Step by step they moved on up the hill of prosperity until at last I can say we are blessed with a comfortable little home, with such necessities as to go to make a happy home. My mother often says she paid for our home with her eye-sight.

I was very anxious to go somewhere to school but not being able to go to any of the schools that surrounded me, I had a friend who had been to Hampton, and he urged me to come here, as this, he thought was the place for poor students. I gladly began to prepare to come to Hampton. I had not attended school more than three years in all, for the schools lasted only three or four months at a time and I was compelled to stay home and help my mother sew, so I could not go even the whole term although it was so short. I have not been to school since I was thirteen years of age, for I am sorry to say my step-father thought there was no use in going to school any longer than it took you to learn to read and write. I came here last year and entered the Junior class, and at the close of school was promoted to the Middle class. I remained here all summer, it being too expensive for me to go home, sewing in the Industrial Room. I earned fourteen dollars a month, and after paying my board and other expenses, I had twenty dollars to begin school with this term.

I am in the Middle Class, and the first section, and am studying arithmetic, rhetoric, geography, English and United States History. After Christmas we shall take up physical geography and physiology. I like grammar and history better than any of my studies, and I can learn it easier, but arithmetic seems so hard to me that I do not like it at all.

I have for my work, a teacher's room and a work-day in sewing then on Mondays, which is our holiday. I sew, after I get through cleaning my teacher's and my own room. By doing this I make my expenses much lighter for my mother.

I feel as though I have not spent my time uselessly since I have been here, for I can see myself how much I have learned. I hope to be able to go home and teach after going through my Middle year. I want to do something for my race and in the meantime prove to mother and you who have believed in me that some of your kindnesses and sacrifices were not in vain. I am sure I can never tell you how much I thank you for this great kindness without which I could not be here. I hope to be able to do some of my chances that you nor any other friend who has helped me would feel that your money was thrown away.

Yours respectfully, A. S.

## FROM A NATIVE AFRICAN.

## Third Year at Hampton.

An African boy who came to Hampton with almost no knowledge of English, entered an Indian class, and is now in the Middle Class of the Normal school gives some reminiscences of his heathen home.

I was born in the West Coast of Africa a place called "Fantee" but English called it "Gold Coast" and if you would look in map of Africa, you will find it on the coast of Upper Guinea.

The natives of this place are entirely savages in every respect some marry five or six wives and the man would not be able to take of them the reason, because he lazy, always depend on his wives for something to eat; sometimes you will see a woman runs in forest with her baby on her back to get some wood to cook for her husband sake.

They build their houses out of mud and covered with thatch and about 12 feet long, 6 feet width, and 8 feet high, the window is about 2 x 4 or 12 inches wide and 24 inches long. They lay no board floor, paint no houses only they have to do, to put plenty of dirt on floor after built the house and then bit, bit, bit, till the dirt get hard like cement before they enter into the house. And when the night comes, each person lays a mat on floor and sleep; no pillow can be seen on the mat. When ever you see anyone's head on pillow, please close and sleep and you will be astonished to see human head on such hard piece wooden block. They have no cooking stove, whenever they want cook something they put three bricks together and make a fire.

We have two ways of worship, 1st, public worship, and 2nd, private worship. The public worship is the worship every person would worship and worship at eight months, see men killing cows, sheep, chickens, even human sacrifices would sacrifice for the idol. Oh! what a fine time we have in that idol. See men, women, children, dancing and bow down to the idols with great joy. They have chosen a particular person that speaks to the idols when they worship. And the private idols is the idols which every person have in he or her own house and beside all these, they have some different kinds of idols which they carry with them when some was come to travel.

Now they have a great many schools along the coast, which some of these schools taught by the native Africans. I had been to some of these schools, but I didn't stay there more than three years on account of the schoolmaster, he teacher they whip the scholars too much. One day I was late for the first time coming, certainly true that the time I reached in there they caught me by both hands and feet and laid me on the table, and he whipped me two dozen and half better.

So the teacher gave me to an American gentleman who he knew him for several years as a sea captain, to carry me over to this country, and this gentleman did not refuse to take me with him to Boston. After I landed at Boston about three weeks, he told me I was going to send me to some fine school where I could learn any kind trade I want, and the next day I came down in a steamer line to Norfolk.

When I came to this school, I don't know nothing. I don't know enough to make the Junior class and I have not being accustom with this English language. And the last year I made Junior Class and I had good teachers which could understand them well. I am in Middle Class this year and one thing I am very anxious to learn that is the English language and Christianity which I have put myself to God for help so that I may be able to hold the Cross of Jesus.

I hope to return home as soon as I finished my course and to teach my people in Christian life to throw all of the foolish idols away and follow Jesus.

I thank you for paying my scholarship. I remain,

yours truly, B.

## Horsford's Acid Phosphate.

## IN SEASICKNESS.

Prof. ADOLPH OTT, New York, says: "I used it for seasickness, being an ocean passenger. In most of the cases, the violent symptoms which characterize that disease yielded, and gave way to a healthful action of the functions impaired."

## FOR SALE

## A Valuable Farm of 125 acres,

Situated on the Potomac river, York Co. Va., at the head of deep water navigation. But one mile and a quarter from the most beautiful landing for communication by steamer three times weekly from Norfolk and Cape Charles City, Virginia to the Potomac river. Has a fine water shore. Fish and oysters plentiful. 100 acres in woodland, and 200 in open fields. Good location for a store. This is a rare opportunity. Terms liberal. For more details and further information call on or address, JOHN T. WILKINSON, Hampton, Va.

WM. C. GASMANN.

President Cleveland has suspended the order pending the Crow Creek Reservation to white settlement.

Great credit is due to the prompt and efficient action of Prof. Painter, Mr. Herbert Welsh and the Indian Rights Association, in securing the ear of the President and Secretary of the Interior, and in calling public attention to the affair.

It is interesting to note that, at the time when the late Executive Order was issued, a bill was awaiting action in the House, unanimously passed by the Senate and approved by all concerned, which proposed to attain the same end in such a way as would have been just to the Indians and honorable to the Government. This bill provided for the cession by the Indians of some twelve millions of acres in Dakota, for a fair compensation and under proper safe-guards.

A point is made by the supporters of Secretary Teller's action, of the fact that the order excepts "all allotted lands, and all lands upon which Indians have made improvements." Agent Gasmann, in his last report, says: "Constant applications are made to me for allotments of land by Indians who desire to settle upon claims of their own, make improvements, and become property owners in severalty. Owing to the fact that I have no surveyor to do the work, I am compelled to put off the applicants indefinitely, to their great discouragement and injury."

"IT MUST BE UNDONE."

A letter from Maj. Gasmann to Gen. Armstrong, tells its own story.

"It is reported here that Mr. Teller, in the last days of his administration, had an Executive order signed by the President opening to settlers about half of this reserve. This report has caused a great rush of people on to the Indian lands, and I am now informed that they are aiming to protect themselves from the Indians. I presume by this time there must be at least 500, some say 1000, people on the Reserve. Many of them are drunken and violent and there is great danger of trouble. So far I have kept the Indians quiet, but how long I can do so, under the great pressure now on them, I cannot say. It is enough to cause an outbreak and bloodshed among these poor people. I am told that this order was kept secret, in order to favor certain parties from Washington, who are now at Chamberlain prepared to enter these lands. \* \* \* I cannot believe the President would sign an order of this kind during the last moments of his administration. If it is done, it must be undone. \* \* \* JNO. G. GASMANN.

#### A TALK WITH THE BOYS.

Indian letters have been received by the students from their friends at Crow Creek and Lower Brule, the letters of a people kept purposely in ignorance of which little more can be made out than that "the lands are being taken away by the white people," and "so now everything seems very dark here."

There is an under current of strong excitement among the boys, and we think it may be well to let our little of the old Indian in them and let in the light of our boasted civilization.

"What right have the Indians to the Crow Creek lands?" we inquire, approaching a representative group in miniature council. "They live there a

long time"—"that is their own home"—"It belongs to them"—"they don't like to leave their home and go to live in some other place"—comes from all sides in varying tones of indignation and remonstrance against this highly unnecessary question!

"But is that all the right they have?" we persist, hoping that somebody will condescend to recognize the rights conferred by treaty. "They have a right to all this country; they lived here first!" "Ought the Indians then to have all the land they want?" "I can't have any land unless I buy it!" (A brief silence concedes the force of this suggestion, and we hasten to make our point.) "A treaty was made in 1868 between Government and the Indians, by which we gave the Sioux so much land in Dakota, and called it a Reservation." At this unfortunate way of stating things, one of the more impulsive of our youth can "hold in" no longer, and so far forgets his usually unexceptionable manners as *aloud* to shake his fist in our face! "Don't say give! The white people can't give land to the Indians! We never gave it to the Indians!" Considering that we have no proof whatever, according to experts, that the original title to the Crow Creek land has ever been extinguished, while Chief White Ghost declares that neither he nor his father ever signed away an acre of it, we haven't much to say on this head.

"Now you have heard that the white men are coming in upon your reservation. What can the Indians do?" Answer, given with somewhat startling animation—"Fight!" "But what has always happened when the Indians and white men fought?" Two or three are speaking together now, and words and phrases such as "Gen. Custer"—"young boy about 16 or 18 years old"—"fight behind trees, no drill like white men"—"detach themselves from the general uproar. Meanwhile a knife and tomahawk pantomime is enacted just before us which would be funny if it were not so earnest and quite blood-curdling if it were not, under the circumstances, so absurd.

The same might be said of the bit of modern slang at the end of one young man's speech. "The Indians had only bows and arrows once—they have guns, and don't you forget it!" Suddenly a quiet listener on the outskirts of the crowd speaks out in distinct tones. "You're all talking nonsense. A pause of intense surprise, and everybody looks at the interloper. He flushes a little but stands firmer like a man. "Fight with mind!"

This is a thought worth keeping, and after a little more natural effervescence it is accepted by the common sense and Christianity of the boys. "What shall you write to your friends in Dakota?" we ask. "Remember you have a great responsibility." "Tell them to wait a while," is the satisfactory reply. "How many things they have a better weapon than the white man's gun in the white man's thought?" Nearly all the hands go up, and "the council" is over.

#### An Important Mistake.

When the recent Indian Appropriation Bill lay before the House, and the immediate future of the Indian, with all its needs and possibilities, was at stake, Mr. Ryan, the general tenor of whose speech was progressive and humane, delivered himself as follows on Indian Education.

"The difficulty has been \* \* \* that when we educate children at Carlisle, at Hampton, and the other industrial schools in the several States, when we have taught them there for three or four years, have fitted them for the duties of civilization to a very large extent, prepared them so that they could go out into civilized life and obtain a livelihood, we are constrained to turn them loose and turn them back into the influences of that barbarism from which we took them when we put them in the schools. It is not long before they succumb to those influences, and become exactly what their surroundings are and *take back into that barbarism from which they were taken.*"

A supposed expert on the Indian question, a man who is influencing the destinies of thousands of his fellow-creatures, ought to know better than this. Opposite the unqualified and unproved assertion of one of our law-makers, let us set the statement of a single Indian Agent, in regard to the returned students at a single Agency.

Maj. McLaughlin of Standing Rock, D. T. writes:

"The Hampton pupils at the Agency are all doing well, with the single exception of F—, whose conduct is not satisfactory. John P— is still stableman at the Agency and John T— is assistant carpenter and doing well. Rosa B—, and Frances W—, are at school preparing themselves as teachers and I intend to place them both in one school as teachers on May 1st. The school will be a day school located in Sitting Bull's camp, the main south of the Agency, where either myself or wife can visit them daily, and I am confident of their ability to conduct it successfully. Jennie N— was married to an excellent young man, Louis P— by name, on the 11th inst. He is a mixed-blood of the tribe and is employed as clerk and interpreter in the Trader's store at the Agency."

In conversation, Maj. McLaughlin further states that Battice G—is herdsman at \$60 a month, and doing extremely well; little Josie M—is living with her sister, (married to a white man), in a comfortable house, where she makes herself very useful; and bright little Joe A—is soon to be placed as apprentice in a physician's family.

Nine boys and girls have gone back to the "influences of that barbarism from which they were taken," and only one weak girl out of them all has found those influences too strong for her!

A touching letter, received by one of her friends here, proves that even she has not forgotten "the good way." She can never again be the same girl that she was before she came to school. You may cut off the favorable sunshine that brought the oak-tree out of an acorn, but you cannot make it small enough to fit the acorn-cup again.

Mr. Ryan's mistake is an important one. *The Indians do not relapse—they cannot!* It is all to be found in the child-like words of one of these very Standing Rock boys, "I am going to tell you something about Indians, and I am Indian too, but I am different now, and so that reason I say Indians." Become what their surroundings are! Their surroundings must become what they are! "Now a great many of the Indians have log houses, and only few others have a tipi, but may be they go to have a log house by and by." Meantime it is worth remembering that "I am Indian too, but I am different now."

#### A Digger Band.

At a recent meeting in Washington, Miss Fletcher placed in the magic lantern, several pictures illustrative of Indian progress. Many of these were what might be expected—from Hampton, but one group was so new and strange as to call out a murmur of surprise from the audience. It was a Band of Digger Indians.

True, the Indian Commissioner knows no tribe of "Diggers," and the Ethnological Bureau rejects the name from scientific classification, yet all travellers on the Pacific slope, and all readers of their travels, are familiar with the scattered mud villages, swarming with a hideous, hopeless race of beings, without ambitions, without industries, with few conscious wants for this world or for another. What connection with them has this group of good-looking men in citizen's dress, equipped with the musical instruments common to a well-organized band?

That appeared to some who looked at it, an illustration—nay, an illumination—of Christian philosophy in its application to social science.

Not very many years ago, the proprietor of a "Ranch" found in his new possessions, a "Ranchera," neither better nor worse than a hundred similar Indian settlements. Instead of driving away his undesirable tenants,

he has made them desirable. He has had them instructed in the use of tools and even of machinery, so that to-day they are among the diligent and satisfactory laborers on that vast estate, (few larger,) with its varied industries, and they receive good wages for good work. He has replaced the half subterranean huts by comfortable houses; has built a chapel; he has provided needful education. His wife has instructed the women and children, devoting to them the mornings of eight or ten years, and has found not only docile spirits but bright and receptive minds. The Sunday-school work has been equally satisfactory in its results. These people had no idols to discard, but now, instead of endeavoring to propitiate a Great Spirit, they believe in a Heavenly Father, and the grace of God has wrought in them, many Christian graces. They have great confidence in their white friends, as is shown by a request made to their Lady Bountiful, a year or two ago. Wouldn't she start a Band? It wouldn't cost her very much; eight or ten pieces at \$20 a piece would be enough. "This petition was promptly denied. 'If you are sick, I see that you have food and medicine, and when you are too old to work, I take care of you; but music is a luxury, and if you want that, you must provide it yourselves.' They are passionately fond of music, and they did provide it and placed themselves under excellent instruction at a further expense of \$12 a week. They now read music readily, and perform difficult selections from the best composers. This photograph is one that they ordered for themselves. Last spring, they were advertised as the musical attraction at a German Sunday picnic, where indeed they would have been an attraction had they not come to have for themselves, what their friends had for them, conscientious scruples against Sunday labor.

They declined the offer, and in its place were encouraged to give a concert of their own to a delighted audience of six hundred. They were aided by some young ladies and by their teacher, Austin, a blind Digger Indian, gave a remarkable solo, "America"; their Sunday-school sang several songs, "What a friend we have in Jesus," "We shall meet," "Behold the Bridegroom cometh," "Rally round the flag," "Pull for the shore; the Tribe, led by two old men who clapped their hands, rendered several native songs in rich, deep voices, and the selections by the Band were most creditable and delightful. Everything was orderly and attractive. A local paper, which reported the entertainment, truly says, "Without doubt, such another concert was never given in this country." M. B. B.

#### The new Indian Commissioner.

It does not yet appear whether ex-Congressman Atkins has the special knowledge of Indian affairs that is so requisite in an Indian commissioner, but in other respects he is a desirable man. He served four terms as representative, and has been known as one of the ablest southern men in Washington, his last term ending with the 46 Congress. He was chairman of the appropriations committee under Speaker Randall. In character he is industrious, direct, honest, beyond question, impatient with wrong and of rather irascible temperament. His sense of justice is large—and that is a prime necessity of the situation. Mr. Atkins can probably be relied upon to become a student of the Indian problem, be his special knowledge of it at present small or great.—*Springfield Republican.*

#### Horsford's Acid Phosphate.

##### EXCELLENT RESULTS.

Dr. J. L. WILLIS, Eliot, Me., says: "Horsford's Acid Phosphate gives most excellent results."

## Incidents of Indian Life at Hampton.

*Little Girl Visitor.* (to Small Indian.) "Are you wild?" *Small Indian, meditatively.* "No, are you?"

Ground has been broken for two new cottages, in the neighborhood of the first two, to be occupied by Sioux families.

Maj. McLaughlin made us a flying visit the other day. He gave an excellent account of the returned Hampton students at Standing Rock.

Mr. and Mrs. Geo. Smiley have again spent a few days at Hampton. Mr. Smiley is known as the prime mover of the Lake Mohunk Indian Conference.

Miss Richards visited Lincoln Institute, the school for Indian girls in Philadelphia, last month, and was much pleased with its orderly and careful arrangement.

A letter from one of the pupils, who was formerly at Hampton, may be found in another column.

*A School Exercise.* "Tell me something large." "My foot," replies an Indian boy. "Something small." There were visitors in the room, and the young lady on the platform was not prepared to see him point silently but unmistakably at her own!

A unique object lesson on the Indian was that afforded by the "Indian Day" of a school in Providence, R. I. There was a large collection of Indian curiosities shown, including the skeleton of a Narragansett Indian, but "perhaps the most interesting of the exhibits," we are told, "was not the relics of the past, but specimens of the work done by Indians in the Hampton School."

## MORE GLAD THAN SORRY.

"O, how we shall miss them!" was what everybody was saying, from the oldest teacher to the newest and rawest young Omaha, on the day that Philip Stabler, with his wife and child, left the Hampton cottage for their Nebraska home. The faithful and hard-working husband, the neat and smiling house-keeper, the "Eddy" who loved everybody and whom everybody loved—had become so much a part of the life here, their little home such a pleasant centre, that we hardly know how to do without their support and influence. We shall miss them in a very real sense. But how safe we feel about them! With what anxious hearts we have seen some go out—sick or inefficient ones, young girls and boys with unformed minds and half-disciplined natures to meet such a terribly uncertain future! Here is a little unbroken family, a nucleus of civilization! Philip Stabler goes to plant his own fields, to build his own house; and Minnie, and her boy we know, can make that house a home.

## THE "LEND A HAND" CLUB.

*By its Indian Secretary.*

A meeting of the Indian girls was held in Winona Lodge Jan. 31st, to consider forming a club similar to the Harry Wadsworth clubs which have sprung from the story "10 times 10." *Lend a Hand Club* was the name chosen.

A second meeting was held Feb. 21st, when a letter was read from Miss E., suggesting ways in which a helping hand could be lent to others. Twenty girls became members of the club and adopted its mottoes by signing their names in the secretary's book. I will write here our motto.

We, the undersigned, wishing "to live as to help others, do form ourselves into a club, to be called the "Lend a Hand Club," and take for our motto the following:—

"Look up and not down,  
Look out and not in,  
Look forward and not back,  
And lend a hand."

Another meeting was held in Winona Lodge, Feb. 28th, when the Indian Cottage branch and the Winona Lodge

branch met together for the first time. This being our first meeting it wasn't a very long one, still it was very good for the first one. A letter was read from one of our old schoolmates, who is now in Lincoln Institute, which we enjoyed ever so much. Some of the little girls recited pieces, and some of the boys made speeches also.

Ten of our little girls are paying for colored girl at Butler School. Each one gives one cent and that makes ten cents—they have to pay ten cents every week, and so these ten little girls picked her out. They sew for her too. And quite a number of the older girls go to teach in Sunday School and read the Bible to the poor every Sunday. I think after awhile we will have some more to do.

A. L.

## A LETTER FROM LINCOLN.

Miss R—  
*Lincoln Institute, Phila., Pa.*  
My dear friend: You asked me to write and tell you of our school, and what we do here. The girls do all the house-work. We work one month in the laundry. The girls can make their own dresses and mend their own clothes. The girls can make their own stockings and some crochet themselves hoods. About twenty-five girls take music lessons, which we enjoy very much. Out in the country we have a chapel, and some girls are picked out to lead, and we are called "choir-girls." We expect to go out in the country again this summer.

We have eight dormitories, and from 10 to 15 girls in each; and a girl over them is called a captain. They take care of them and see that they behave, and each one is to find what the captain says. If she does not the captain reports to the house-mother. There is a house-mother, a matron, music teacher, two teachers, two sewing teachers and two laundresses. The girls go to school in the morning work in the afternoon, while the working girls are at school. We all love our teachers and appreciate what they do for us. I would love to come and see you all, for I remember Hampton.

LAZZIE SPIDER.

## A LETTER FROM DAKOTA.

*Pine Ridge Agency.*  
My dear Miss R—, Many times have I thought of you and wanted to write, but the time would pass by. But to-night I am thinking of Hampton, and I thought I would write you a few lines.

You will see by my letter I am not at Yankton Agency; I suppose you have heard I am married, my husband is teaching school. This is called the Orphan's Camp. There are as many Indians in this one camp as there are at Yankton Agency. They are not so far advanced as those at Yankton. I wish some of them could go to Hampton.

This is a day school; the school and dwelling house are all in one in the shape of the letter T. We have about forty pupils; they do not look as nice as those at Hampton; some of them look very pitiful; some of them wore blankets at first, but Mr. Keith told them they must not wear blankets when they come to school.

We have service on Sunday; we have singing and prayers in Dakota, and teach them the Catechism also. I want to tell you something that happened last Sunday.

We have not been in the habit of taking up collection, for we thought the poor Indians had no money. But last Sunday, little Joseph Big-tooth, about ten years old, a very bright little fellow, gave Mr. Keith a piece of money. Mr. Keith supposed he had found it and wanted him to return it to the owner, but on making inquiry, he found he wanted to give it to the church for collection.

Give my love to the teachers, and all the girls, and tell them I wish them all a Happy New Year. I heard Mr. and Mrs. Gravatt and Miss Folsom were at Crow Creek; I would like to have seen them.

Your affectionate friend,

MAGGIE (Goulet) KEITH.

## THE ROUND OF THE SHOPS.

*Scene.* Academic Hall at 11.30 A. M. Party of enthusiastic strangers just issuing from an Indian recitation-room.

*Gushing Young Lady.* "Well, it's perfectly wonderful! I'd no idea that Indians could talk so much and get so excited over anything. I supposed they were regular stoics, and things you know!"

*Experienced Guide.* "And now that we have visited the class-rooms, would you like to see something of the shops?"

*Enquiring Elderly Gentleman.* "O! the shops?"

*Experienced Guide.* "Where the Indians learn their trades. We have finer facilities for industrial training at Hampton than any other school in the country."

*Gushing Y. L.* "You don't mean to say they have to work? I should think it would kill them!"

*Ex. G.* (repressing a smile.) "Certainly; we have Indian blacksmiths, wheelwrights, carpenters, shoe-makers, tin-smiths—our system gives them half a day at work and half in school. A practical demonstration of our theory, that the Indian's trade is half his education." (During this conversation the party have been walking leisurely along and have just reached the square formed by the high turreted barn and long line of shops, standing at right angles to each other.)

*Enquiring E. G.* "Do you find the time sufficient?"

*Ex. G.* (with his hand on the sliding doors of the carpenter shop.) "Mr. McD. will tell you that a three-years' course on half time is a short term of apprenticeship. But several of our boys have been sufficiently in earnest to become of their own accord work students, and devote a year or two to the mastery of their trade. Who is your best tin-smith, Mr. McD.?"

*Mr. M. D.* "P— is the best workman I have. He was not doing particularly well in school, so decided to give all his time to the shop and learn it thoroughly. He was our first Indian work-student. Since then, a number have followed his example."

*Enquiring E. G.* "Is he capable of teaching his trade?"

*Mr. M. D.* "He could teach the essentials."

*Intelligent Critic.* (who has not yet spoken.) "Do you find that the boys who are dull in school do best at the trades, and vice versa?"

*Mr. M. D.* "Now that's a hard question to answer. There is a boy (pointing to a workman at the far end of the room), who the teachers tell me is slow at his books. He's a natural mechanic. So on the other hand, who only came last Spring is doing splendidly at both. He has some force of character, and means to learn whatever he undertakes. As a general thing, however, when the Indians get to a certain point they're apt to make up their minds about what they want to do. If they are determined to fit themselves as teachers or something that way, they naturally rather lose interest in their trades."

*Ex. Guide.* "We have an increasing number who return after a three years' course and a year or so at home, to study with a view to their future work in life. We give them special opportunities in the direction they have chosen. How are your new boys doing, Mr. McD.?"

*Mr. M. D.* "Better than any previous lot."

*Enquiring E. G.* "I should like to know whether they work at their trades after returning home."

*Ex. G.* "We sent two boys from this very shop last Fall who are doing well as carpenters at their agencies, earning \$20 a month, beside a house and rations. One of them has helped to build a school-house near his agency. One of our graduates from Indian Territory was a shining light in the Printing Office, and printed the *Pawnee New Era* for some time after his return."

The party pass through the harness and tin-shops, look at the excellent samples of finished work, and gaze curiously at the black-heads and blue aprons along their rows of wooden benches. Turning the corner they meet a young workman, running lightly toward the shops who remains in sight long enough to take off his hat and display a fine, intelligent face. One or two more are at work on the founda-

tions of the new Indian cottage, whose purpose is explained by the guide.

*Gushing Y. L.* (with a burst of long pent rapture.) "A real 'little home O, isn't it all too sweet for anything!'"

## FISH, FLESH AND FOWL.

*Notes from the Natural History Class.*

One day the teacher was trying to explain the difference between wild and domestic animals. The result—"O yes, I see—savage and civilized!"

*The Cat.* The cat sleeps in the day-time and goes out in the night and finds its food, they eat flesh and drink milk, they like to stay in house to keep themselves warm and like them very much. They like to go out to find mice and like to eat mice very much. Some people like to have them for pets and some do not. They are very afraid of dogs and do not like them.

*The Lion.* The most fierce and savage animal in the world, stronger than any others. I supposed if I see one, how I will be a scare, but I will try to make a friendly. These are flesh-eaters, because they going out in the night, chance to hunted for other animals are sleep, kill them very easily to have for food. Their claws are very sharp, when they are anxious to kill something.

*The Cow.* The cow is very good for useful everything. They butters and cheese and can raising more calf every summer, and sometimes good for food and skin good for leather and horn and hoof, comb and spoon. Cow relation oxen. Oxen useful work.

*The Eagle.* The eagle belongs to the Falcon family, these birds are strong and have bills, and when the eagle is flying in the air and looks down all the way down where other kinds birds he sees catch fish he comes down and those birds catch fish they are so afraid of that eagle and dropped that fish and eagle takes that fish and eats all of it. The eagle has very large nests on the top of the mountains, this nest made with big bush and some things softly too. And the eagle has a sharp curved bill and has very sharp claws and has two wings which it fly with.

*The Rattlesnake.* The rattlesnake is bad, no legs, and bite very poison kill you, bright eyes, and make noise with his tail when he afraid or mad too. When he kill creature swallow right off whole. And covered with scales. He live on land. When winter come go in the hole stay there long time and come out again when summer time.

*The Rattlesnake.* are very curious and fierce animals. They have very bad poison. The ends of their tails have a rattle. They are always wanted to bite something very much. Their poison is kept by the teeth. As soon as they bite you you may have very dangerous things, perhaps you shall die off, that is all.

The following is an uncorrected examination paper.

1. What is a vertebrate?
2. What is an invertebrate?
3. How many kinds of vertebrates are there?
4. There are five kinds of them.
5. What are they?
6. Mammals, reptiles, frogs, fishes, birds.
7. What are flesh-eaters?
8. Those animals who killed other animals and eat them.
9. Name some of the principal families of flesh-eaters.
10. The cat family, dog family, bear family.
11. Describe the lion.
12. The lion is the strongest animal and it's fierce and sometimes it's called the "king of the Beasts."
13. What are four-handed animals?
14. Monkeys are four-handed animals.
15. Name some hoofed animals?
16. Horse, cow, camel, oxen, goats, sheep, deer.
17. Which is the most useful mammal?
18. The horse is the useful animal.
19. Describe the buffalo?
20. The buffalo is large and sometimes very fierce.
21. Which hoofed animals have permanent horns?
22. Cows and oxen, camels.
23. Which shed their horns every year?
24. Deer.
25. Name some of the thick-skinned animals.
26. Elephant, horse, rhinoceros.
27. Which is the largest?
28. The elephant is the largest.
29. Describe the horse?
30. The horse is very useful to man. A long time ago they were all wild but now they are not so wild the Arab horses are the swiftest horses and there are some small horses, called ponies.

## Land, Law, Education—The Three Things Needed by the Indian.

Indians ready for Land in Severalty.

BY ALICE C. FLETCHER.

Continued from March No.

### KANSAS.

About 1000 Indians reside in this State, and occupy 143,401.931 acres, divided among five Reserves, four of which are under the charge of one Agency known as the Potawatomi and Great Nemaha, situated about twenty-five miles from Topeka, from which it is reached by private conveyance. The Reservations under the Agent, Major H. C. Linn, are situated from thirty to fifty miles apart. They are described as follows:

The *Pottawatomies* number about 410, and have 77,357 acres, in Jackson County. The *Kickapows*, 234 in number, have 2007 acres, in Brown County.

The *Chippewas* and *Muncies*, about 711, have 4,395 acres, in Franklin County. The *Sac and Fox*, numbering 75, have 2,862 acres in Kansas, the remaining 5,152 acres lying in Nebraska.

The *Iowas*, some 132, have 5,120 acres in Kansas, and 10,880 just over the line in Nebraska. These Indians are all more or less engaged in agriculture. The country about them is thickly settled, and branches of the Union Pacific, Kansas Pacific, Atchison and Topeka and other railroads skirt or touch these Reservations. Civilization is upon these Indians, pressing them more and more closely each year; and each tribe is divided into two parties, more or less powerful and aggressive. One party is composed of those who accept the requirements of the future, and desire to work and become educated and prepared to take on the responsibility of citizenship. The other party is made up of those who cannot shake their ties from the past, and resist every effort which breaks in upon ancient customs and tribal life.

Of these tribes, all but the Iowas used to inhabit the region about Lake Michigan and south of Lake Superior. Allotment states that in 1669 he formed a treaty of commerce and mutual defence with the Chippewas, Potawatomis, Sacs and Foxes, against the Iowas. Marquette, in 1698, mentions these tribes as living in what is now the State of Wisconsin. In 1766, Jonathan Carver thus describes the village of the Sacs, near the headwaters of the Wisconsin river, who were still dwelling where their fathers had lived a hundred years previous.

"This is the largest and best built Indian town I ever saw. It contains about ninety houses, each large enough for several families. They are built of hewn plank, neatly jointed and covered with bark so compactly as to keep out the greatest winter rains. Before the doors are comfortable sheds in which the inhabitants sit when the weather permits, and smoke their pipes. The streets are regular and spacious, so that it appears more like a civilized town than the abode of savages. The land near the town is very low. On their plantations which lie adjacent to their houses, and which are neatly laid out, they grow great quantities of Indian corn, beans, melons, etc., so that this place is esteemed the best market for traders to furnish themselves with provisions of any within 800 miles."

The territory of the Fox tribe adjoined that of the Sacs, to the west of the latter, lying along the Wisconsin river. At the mouth was a village of the Fox, called by the French "*La Prairie des Chiens*"; the houses were well built, after the Indian manner, and pleasantly situated on a very rich soil, from which they raised every necessary of life in great abundance. "About 300 families," Carver goes on to state, "dwelt here. The town is the great mart where all the adjacent tribes, and even those who inhabit the most remote ranches of the Mississippi, annually assemble about the latter end of May, bringing with them their furs to dispose of to the traders."

Whatever Indians happen to meet at this town, though the nations to which they belong are at war with each other, are obliged to restrain their enmity and forbear all hostile acts during their stay there. This regulation has been long established among them for their mutual convenience, as without it no trade could be carried on. The same rule is observed also at the Red Mountain, from whence they get the stone of which they make their pipes.

The story of the building of this town is given by Carver as follows: "About five miles from the junction of the river I observed the ruins of a large town in a very pleasing situation. On cultivating of the neighboring Indians why it was thus deserted, I was informed that about thirty years ago the Great Spirit had appeared on the top of a pyramid of rocks which lay at a little distance from it toward the west, and warned them to quit their habitations, for the land on which they were built belonged

to him, and he had occasion for it. As a proof that he who gave them orders was really the Great Spirit, he further told them that the grass should immediately spring up on those very rocks from whence he addressed them, which they knew to be bare and barren. The Indians obeyed and soon discovered that the miraculous alteration had taken place. They showed me the spot, but the growth of grass appeared in no way supernatural. I apprehend this to have been a stratagem of the French or Spaniards to answer some selfish view; but in what manner they effected their purposes I know not."

Negotiations for the purchase of the lands of the Indians living in Wisconsin, and for their removal westward, began in 1795 with the Potawatomis, and in 1804, with the Sac and Fox. It continued until comparatively recently. These removals meant the breaking up of homes and the crushing out of the ambition to settle down to agricultural pursuits. These tribes have almost lost heart, between the memories of their past life and the enforcement of conditions incident to the gathering of white men all about them. They have also suffered from the policy of the Government, which ignores the individual and recognizes only the tribe. The Agent points out the fact that the great stumbling block is the lack of an individual title of the land. The father is not sure that his children will reap the benefit of his toil. He hesitates to make permanent improvements on land which he does not own and control.

The *Pottawatomies* have 5,800 acres under cultivation. The crops are given as 35,000 bushels of corn, 6,500 bushels small grains, 2,000 bushels of vegetables. They own about 1,300 horses, 120 head of cattle, beside swine, sheep and fowls; 120 houses are occupied. There is a Government boarding school, and of the 55 children of school age, an average of 31 under instruction. There is no report of any Mission work among the people. An annuity of about \$12 to each person is paid.

The *Kickapows* have 1,000 acres under cultivation, and raise annually 20,000 bushels of corn, 800 bushels of small grain, 875 bushels of vegetables. These, with 330 horses, 105 head of cattle, swine and fowls, make up their store of wealth. Of houses, 75 are reported as occupied by the Indians. They received about \$20 each as annuity. The school population of 45—the average attendance at the Government Boarding School is 20. There is no report of mission work at this Reserve.

The *Iowas* have 1,549 acres cultivated; their crop is about 25,000 bushels of corn, 4,900 bushels of small grains, 1,180 bushels of vegetables. Of stock, 1200 horses and 200 head of cattle, beside swine and fowls, are owned by these Indians, and 300 houses are occupied by them. They receive an annuity of about \$32 each. There is a Government Boarding school, which for the past two years has been used for the Iowas and the Sac and Fox tribes. The school population for both Reservations is given as 46, and the average allowance as 26. The Iowas are said to be well advanced in the ways of civilized life, and to evince an interest in having their children educated. Some of the tribe are fully competent to take care of themselves, and if all are thrown more on their own resources, and not treated so much as children, their advance would be more rapid. The Presbyterian denomination has a Mission among these Indians and the adjoining Sac and Fox.

The *Sac and Fox* have 875 acres under cultivation. They harvest 25,000 bushels of corn, 3,500 bushels of small grains, and 200 bushels of vegetables; 70 horses, 700 head of cattle, beside swine and fowl, constitute their stock. These Indians receive an annuity of about \$100 to a person. They cling closely to old customs, and are opposed to education. Their experience since the days when removals began, and the demoralization resulting from the possession of large funds which keeps from them the stimulus of necessity, have left these people straggled. Their relations in Iowa are in the same general condition. The Sac and Fox Reserve in Tanja County, Iowa, is the only territory owned by Indians in that State. Their tract covers a total of 1,425 acres. This includes the small amount owned by individual Indians. This land was purchased some thirty years ago by these people, at a cost of about \$28,000, and the title is held in trust for the tribe by the Governor of the State. Out of the tribal funds the chiefs pay the taxes on the land, and the remainder of the money is divided among the people. They have about 215 acres under cultivation, 3,000 bushels of corn, and about 1,900 bushels of vegetables, represent their crop. Their Agent reports: "The Indians have worked very well this season; they have done a good deal of plowing and while a few years since it was a rare thing to see them at work, it is now no unusual sight to see several working

together in one field. They have also made over 800 rods of wire fence; have built one good frame and several bark houses. They are a quiet and law-abiding people, and live in harmony with themselves and with their white neighbors, and there has been little drinking among them for some time past. A large number can understand and speak English, and nearly all of them both read and write in their own language, while there is much better feeling manifested in regard to sending their children to school than formerly. The Agency industrial day school, under charge of Miss Allie B. Bushby, has been gradually growing larger, and many obstacles in the way of its success have been overcome. For honesty and truthfulness our Indians stand above the average white man with the merchants with whom they deal. They give no trouble to the State and none whatever to the Government."

### WISCONSIN.

About 6,300 Indians reside in the State, 5,000 of whom are under the care of Agents. The Potawatomi prairie band of 300 and nearly 1000 Winnebago live at large.

Four of the nine Reservations under the La Pointe Agency, lie in the northern counties of Ashland, Bayfield, Sawyer and Lincoln, containing respectively, Bad River Reservation, 124,333 acres; Red Cliff Reservation, 2,560 acres; Lac Court D'Oreilles Reservation, 69,136 acres; Lac du Flambeau Reservation, 69,824 acres.

Different groups of Chippewa Indians inhabit these tracts of land, and all except those living on the Lac du Flambeau Reservation are reported as industrious and rapidly advancing in civilization. Their lands are all more or less heavily timbered, and clearing a farm involves much persistent labor. Many have opened up fields and are engaged in agriculture. A large number of the selected allotments have realized considerable advantage from the sale of the timber standing on their 80 acres. A considerable portion of the people have of late years taken up lumbering, and the young men have found a field for labor. Drunkenness has been a grave drawback to prosperity, but it is reported as on the decrease, owing to the growth of a rational sentiment among the people of the injurious effects of the habit.

The railroad system of Wisconsin touches or passes near each of the Reserves and is bringing the benefits of business opportunities and the education they have already received. The Government and the Catholic Churches maintain schools on all the Reservations except the Lac du Flambeau. The isolation and difficulty of access to this Reserve, its approaches being impassable for teams except during the winter months, has delayed the construction of school buildings, but the means of access connect with the lumbering roads, leading to the Wisconsin Central railroad, will permit the Agent to erect the school house, and another year it is hoped will find these Indians supplied with the means of education, and an inroad will thus be made upon their present unprofitable mode of living by hunting and fishing. The Reservations placed under the charge of the La Pointe Agency—nine in all—are widely separated; four in the lumber regions of Wisconsin, five in the northeast part of Minnesota. Several are almost inaccessible at all seasons of the year, and it is often impossible for the Agent to make even a brief visit during the year to the more remote Reserves under his charge. The position of the Agent, Major William R. Durfee, is consequently a difficult and disappointing one, for he is unable to bring direct influence to bear upon those under him, and particularly those who stand in the greatest need of civilizing efforts. For years the Agents have urged throwing the larger part of the Chippewas in Wisconsin upon their own resources and withdrawing all Government support; and it would seem as though the best interests of the Indians demanded such legislation as tend to speedy consummation of citizenship.

The *Menomonees*, the *Stockbridges* and the *Ojibwas* Indians occupy Reserves situated further south in Shawano and Brown Counties, under the charge of Agent D. P. Andrews. The *Menomonee* and *Stockbridge* Reservations join. The former has an area of 231,680 acres, with a population of 1,400; the latter, 11,520 acres, with 136 inhabitants. The *Stockbridge* Indians are the remnant of the tribe which have been several times divided, a part at each division becoming citizens. Under the existing laws of Wisconsin, nearly all the males over twenty-one are unable to see any reason why the tribal relations be abandoned, and thus be brought under the influence and control of the laws of the State, but leaving their lands held in trust by the Government and

exempt from taxation for a limited period, if am inclined to the opinion that such a course would have a beneficial effect upon the morals of the members of this tribe and greatly improve their present condition.

The *Menomonees* occupy a region where it is estimated there are 300,000,000 feet of standing green pine. A large part of the tribe spend the season in hunting, to the detriment of their farms, and their lumbering is not very successful owing to fluctuations in prices and the lack of a concentration of interest and business management. The lumber on the Reservation is valuable, and unless some plan is devised by which the capital represented in timber can be conserved, there is little chance of any substantial benefit to the tribe being derived from the property. There are two day schools and one boarding school at the Agency.

The *Ojibwas* number 1,064 and the area of their Reservation near Green Bay is estimated at 65,540 acres. The people are considerably advanced, and are beginning to clamor for their lands in severalty. At present the land is held in common, each person being free to select and improve such land as he desires, and to hold it or sell the improvements to other members of the tribe. This custom is fruitful of difficulties, and checks individual endeavor, as a man can deprive his family of the home improvements, and for any chance mood abandon his farm for a small consideration, and when this mood changes he may start afresh on tribal lands. It is a well-known fact that individual ownership of the soil, with the safe guaranty of legal claims upon it, is one of the principal means by which the family relation is made stable and frugality and enterprise prominent.

These Indians have among them day-schools, and fifty children are accommodated at the *Menomonee* boarding school. They are instructed in education and are pressing forward in several ways. The missionary work among them has been fruitful. A very large proportion are enrolled in the Episcopal Church, and a smaller number in the Presbyterian Mission.

Of the 500 acres classed as tillable, 350 are under cultivation, and fair crops are reported. The people are well esteemed by the white neighbors, and are considered fairly ready for absorption into the State.

### MICHIGAN.

In Michigan, of the 9,600 Indians, 3,000 are upon their Reservation having a united area of 66,332 acres. The rest of the people are scattered over the State, some living upon lands which have been patented to them, others working at various avocations. Some of these Indians foolishly parted with their farms; such acts have taught others to be more prudent. Adversity has been a hard but efficient school master. Many of the Indians are woodsmen; hundreds are employed in the fisheries, a few being proprietors of fishing apparatus, and these men are succeeding well. Several day schools and one boarding school are maintained for the benefit of these Indians, and are fairly attended. Two more schools are soon to be opened. Those Indians scattered among the white settlers generally send their children to the district schools, and then learn to mix with their white neighbors. The Indians in Michigan are mainly Chippewas, with a sprinkling of Ottawas and Potawatomis. The Agent now in charge of this widely scattered group is Edward P. Allen, and the Agency is at Ypsilanti, Michigan.

## The East Band of Cherokee Indians.

BY AMICUS.

In 1835-8 the General Government, by treaty stipulations, purchased of the Cherokee nation in North Carolina, Georgia, Alabama, and Tennessee, their tribal land claims and gave in consideration about one-third of the Indian Territory and a small portion within the present boundary of Kansas, and in addition a large funded indebtedness, the interest of which was to be paid for education, agricultural implements, and supplies of various kinds for civilization and subsistence. An appropriation was also made for transportation from their homes to the Indian Territory.

The treaties with these Indians were marked by such devices as were common at that day in dealing with Indian tribes when their lands were coveted by the white man. Misrepresentation, deception and compulsion were exercised under the maxim "Might makes right."

The Eastern Band who counted as one-seventh of the nation of Cherokees, declined to become a party to the sale and refused to emigrate. The military sought out places where they hid themselves when the time for their expatriation began; but the Eastern Band being surrounded by the Smoky or Black Mountains on the west and the Blue Ridge on the east, found impervious hiding places and could not be induced to leave their mountain homes.

A subsequent treaty was made by which these Indians were allowed their "equitable proportion of the transportation and subsistence appropriation." They employed an agent to purchase lands of claimants under the Government sales, which was done from time to time, until in 1880, when they owned, by their own right, as a tribal unit, about 75,000 acres in one boundary, and in lots outside of this boundary, larger and smaller, about 13,000 acres, which aggregates about 88,000 acres.

This agent held these lands for the Indians in his own name. The lands never belonged to the United States. The original States retained the right to all the unpurchased lands within their boundaries, so that the purchase was made under North Carolina, and of course were not ceded to them by treaty.

In 1880, the United States Circuit Court for the Western District of North Carolina entertained the complaints of these Indians that their titles to their purchases by their agent were still held by him, and that said titles should be legally confirmed to them. The court, conjointly with the Governor of North Carolina, appointed a commission to inquire into their claims and have surveys made. They performed the work assigned, and made their report, which was confirmed by the United States Court and the Executive of the State.

It is generally conceded that the State of North Carolina has been exceedingly lax in her method of conveying land patents. Her lands are not bound by section and range lines, as ours in the West.

Thousands of acres lie unimproved in the mountain district, covered with the finest oak, walnut, pine, white hickory and chestnut in the world, but hitherto too inaccessible for the timber dealer to bear them to market. Two railways are reaching these forests, and the lumber dealer has already been making his purchases.

During the last 30 years, white men have measured out desirable tracts of land within the Indian boundary, and have applied to the State of North Carolina for patents, which have been given for considerations, which generally range about 12½ cents per acre. The State is reported to have sold the same lands to different parties some six times over. The purchaser finds himself encountering other purchasers having State authority for their claims, and the entire region is in a prepared condition to engage in interminable law suits.

When the United States Court and the Executive of North Carolina, confirmed the boundary of the Indian lands, they failed to oust the invading settlers, which leaves them still in trouble. It was believed, after full examination, that they could not find a hearing in the United States Court, and that when their title was confirmed to them their lands were placed by the court subject to the control of the Commissioner of Indian Affairs as trustee. This fact ascertained, Commissioner Price went to work with an earnest purpose to protect them in their rights.

For many years there has been a dissatisfaction in the tribe. A small party have been dissatisfied with the decisions of their council. These malcontents have times seized their chiefs and have been illegally authorized agents to make purchases. In 1875, when about \$46,000 remained in the treasury as indebtedness for commutation and subsistence, certain parties contrived to formulate a bill against these Indians for commutation and subsistence, for services, for teaching schools, &c., amounting altogether to about \$60,000. It was on its face in good legal form, but Commissioner Smith suspected it was not as it should be, and employed a detective to trace out the validity of vouchers, affidavits &c., which resulted in clear evidence of fraud throughout.

The Commissioner wisely concluded to withhold payment, and the claimant went to the Attorney General for aid. While the Attorney General was making examination, the Commissioner prepared a bill for funding the indebtedness of the Government for educational purposes, which passed Congress and received the signature of the President two days before the order of the Attorney General was presented, which order was made on the merits of the face of the accounts presented for payment. In this way the interest of which five schools are now sustained among these Indians.

The West Cherokees have kept friends at court and assumed control of all lands and proceeds of all sales, without recognizing the rights and privileges of the East Band in North Carolina, who hold by treaty a *pro rata* claim.

The Eastern Band, which now numbers about 3,000, consider themselves entitled to a one-seventh interest, and have commenced suit to secure their rights. Their claim is estimated to be from \$200,000 to \$1,000,000. If this addition can be made to their resources, they propose not to overlook their educational interests.

I should have stated that nearly all the discontented Indians have gone west to join the western Cherokees. The remaining 3,000 can not be persuaded to leave their hills and streams and pure mountain air. They think the western climate, rich as the soil may be, would soon consign them to untimely graves. Their safety where they are must depend on the vigilance and faithfulness of their friends.

The Friends of Western, (Indiana) and North Carolina Yearly Meeting have for years been making missionary visits to these Indians. By Government encouragement the management of their educational interests. Five day schools are regularly kept up seven months in the year, and a boarding school of forty girls and boys, an equal number of each sex, is sustained during the year. The girls are taught domestic arts in which they take great interest, and the boys are practically instructed in garden and farm work, and the management of horses and cattle, and arrangements are made for starting carpenter, smith, and shoe shops.

These schools are supplied with good skillful teachers, and the spiritual interests of the children are not overlooked. Everything moves forward to the satisfaction of all parties interested, and in a few years we expect the East Band of Cherokees to be self-sustaining, self-reliant, and fellow citizens of the old North State.

#### Mr. Herbert Welsh on the Opening of Crow-Creek Reservation, by Executive Order.

An event has recently occurred in the history of the Indian affairs which merits close and careful investigation upon the part of citizens at large. An Executive order, under date of Feb. 27th, 1885, has been issued which throws open to white settlement about two-thirds of a tract of country lying on the east bank of the Missouri river, in the Territory of Dakota, and known as the Old Winnebago and Crow Creek Reservation. This Reservation is separated from the Great Sioux Reservation by the Missouri river, but has always been considered a part of it, having been included in the terms of the treaty of 1868; which embraced in its provisions "all existing Reservations on the east bank of said River." The Indians living on the Old Winnebago and Crow Creek Reservation are a band of the Sioux Nation called the Lower Yanktonais. They number upward of one thousand souls, who have lived in their present lands for more than twenty years and have, during that time, made remarkable progress in civilization. Their relations with the United States have, during this long period, been those of unbroken peace. The circumstances attending the act by which a part of their land has been taken from them, have been such as to call forth expressions of profound indignation and astonishment from those interested in the progress of the Indian.

The project of issuing an Executive order, throwing the reservation into the public domain, originated in the office of the Hon. H. M. Teller, ex-Secretary of the Interior. It was there matured and executed with such secrecy that neither the Indian Bureau, nor any member of Senate House Committees on Indian Affairs, nor any of the friends of the Indians, were aware that such action was about to take place. Two years ago, when rumors were afloat that an attempt was to be made to secure the opening of the Reservation by Executive order, Bishop Hare wrote to the Interior Department protesting against such action, to which protest the Department responded that no such action was ever meditated. Notwithstanding this assurance, the blow has now fallen unheralded, as a thunderbolt from a clear sky.

It is a remarkable fact that, although the Indian Commissioner was in ignorance of the action of the Honorable Secretary in this matter, a gentleman residing in Dakota holding opposite political views from those which characterized the outgoing Administration was so fully informed of the progress of events as to be enabled to greatly improve his fortune thereby. Leaving Washington just before the order was about to be issued, he reached Mitchell, Dakota, where he was informed by telegram that the order was an accomplished fact some forty minutes before this intelligence reached the general public. He was thus enabled to secure by means of the purchase of scrip, a large quantity of the best land upon the reservation, before other claimants presented themselves. To the open statement of this gentleman, as well as to other sources, we are indebted for this information. We have therefore no reason to question his authority.

There are two grounds upon which earnest protest may be made to Mr. Teller's action in regard to throwing open Crow Creek to white settlement. First, that the reservation by Executive order should be annulled by the present administration, and: That taken in connection with attending circumstances this action was morally unwise, injudicious and such as is likely to be attended with additional detriment to the already shabby reputation of the Government in its relations with the Indians and with serious risk to the existing peace between ourselves and the Sioux Nation.

The Law Committee of the Indian Rights Association has examined the question so far as limited time and knowledge of the facts will permit, and in the legal brief prepared by it strongly expresses the opinion that the Executive order is illegal. It claims that the Crow Creek reservation is held by the Indians under the treaty of 1868, and has been manifestly included in its terms. It is therefore a treaty reservation, not one held by Executive order, and hence cannot be lawfully thrown open to settlement, except by joint consent of the Indians and Congress.

The Indian Rights Association has prepared a petition to the President and Secretary of the Interior, praying a suspension of the order until the question at issue shall have received full and careful investigation.

As to technical legal rights involved in this question, it is impossible at the present moment to say whether Mr. Teller and his little group of friends, or the Law Committee of the Indian Rights Association, occupy the stronger ground. We believe that the latter is the case. But what we wish publication drawn to is this—the extraordinary and pitiful attitude which Mr. Teller, as a Cabinet officer, has assumed in the present affair. Here is something altogether above and beyond technical points of law.

The post which he occupied as Chief Executive Officer of the Interior Department was supposed to be that of a wise and honorable defender of the rights of the Indians. In the eyes of the nation he is the Guardian, the Watchman. They are defenseless children looking to him as the man sitting under the Great Father, in whose hands their affairs may rest in perfect safety. He will shield them against the machinations of their enemies. Could any trust be more sacred than that which was reposed in Mr. Teller? Now what has he done? Quietly he has gone to work to discover a flaw in the title by which his wards hold their lands. He did this secretly, knowing that the Government and their friends believed this title to be secure and therefore would be quite unprepared for the blow; he took into his councils not those who, for official or other reasons, might be well advised regarding the wisdom of his action, but in one instance at least, a man who had a direct monetary interest in the successful execution of this transaction. Mr. Teller acted at the very close of the Presidential term, at a moment when, as he well knew, the incoming administration would be embarrassed by the novelty of its position and the immense pressure of business, naturally falling upon it, hence when any reconsideration of his action would be extremely difficult.

But beyond purely ethical considerations Mr. Teller's action is not one which can be approved on grounds of expediency. Its rashness seriously imperils the peace of the Territory. Major Gasmann, U. S. Agent at Crow Creek, was credibly informed and received no official notice of the opening of the reservation when hundreds, rapidly swelling to thousands, of white men flocked in upon the Indian lands. The Indians themselves, who were also ignorant of the turn affairs had taken, were alarmed and indignant but offered no resistance. Naturally a people subject to sudden outbursts of passionate violence when their confidence has been betrayed, their patience and self restraint in the present instance was as remarkable as it was admirable. Who could have justly blamed them had they appealed to arms? Who need be surprised if, in the not remote future, their wider and less docile brethren on the west bank of the Missouri, stung by the treatment their friends have received, resort to acts of violence? Whether Mr. Teller's present action shall prove to be protected by legal technicality or not we cannot now tell, but we confidently submit that in the light of the facts given above, that action, as was rash and unwise, as viewed from the standpoint of moral right, it was abhorrent to well recognized principles of honor and fair dealing.

We presume Mr. Teller is a competent judge as to whether in the eyes of that constituency which has just returned him to the Senate his reputation is likely to be enhanced, or we have chronicled, but he must remember that a man who accepts a position in the Cabinet of a President of the United States is open to the scrutiny of a larger constituency than even the broad boundaries of Colorado can enclose. He is then, in a certain sense, responsible to the people for the use he makes of the great powers which he has been intrusted. Good people to-day brand with merited contempt and reprobatum that man who in private life as guardedly plays off the sharper to his ward. What verdict will the honorable citizens of this nation pass on him, who standing in a position of highest trust, has acted in similar fashion toward a poor, confiding, and helpless people?

#### Letter on the Opening of his Reservation, From Chief White Ghost.

Crow Creek Agency, D. T.,

March 11th, 1885.

General S. C. Armstrong,  
Hampton, Va.

My dear friend: This day I write to you with a sad heart; pretty near all my lands have been taken by white people now they say that the Great Father has given the land to them but I doubt them very much. I know if the President has good sense he would not do it. No matter how much he disregards my rights, he would not do it without first consulting us. For this reason I doubt what the white people say. They have also taken lands which have been allotted to my people; they have also taken house logs which we had cut; they have also taken some frame houses and burned some, but these frame houses were not built by Government aid, the Indians bought the lumber and built the houses themselves.

The Big Bend, the pasture for our Texas cattle, the white people have also taken and the Texas cattle are scattered all over the country; this is the only place for herding and it is thrown open, there will be no place for herding and our cattle will die of cold or starve to death, and our domestic cows a great many of them have disappeared; we fear it is the whites who have taken them and so my friend I am in distress about my tribe, but I do not wish, my people to know that I am distressed, for if they know it they will be weakened; nevertheless do not fear for us, for my tribe has listened very patiently to our Agent and me. For example, to-day one of my boys, near his place, four white men were building a house, he went there and sat down with them in a house and shook hands with them, and one of them drew a six shooter from his pocket and intended to shoot him dead but missed him and shot through his moccasins. The Indian, Truth Teller, rose up, shook hands with him, and said, "Friend you come very near killing me, but you missed me; my heart is good and my heart is not bad toward you," and he walked out.

There is one thing I am afraid of; the white people who come on to my land bring plenty whiskey, especially at certain houses—six big barrels was there. They were drunk and they told our claims and they will be killing each other and accuse us of it. I dread this.

At many different places, with gun and ax they have threatened us.

You know it all, and I cannot teach you anything, but I pray you to defend me. I am very much frightened, so I wish you would show these words to all my friends and we wish you to go to the new Great Father and Secretary and plead with them for us. We can't spare even a foot of our land, for this reason, my people, two thousand and more, are coming here before the summer is over, so there will not be room on the land for them.

And our domestic cattle are increasing, and in the future there will be a great many more cows for which we have no pasture, as the white people have taken all the good pasture and water at the head of Crow Creek, Box Elder and the Big Bend, this being our only dependence for pasture.

So my friend I pray to you help us. May God be with you and help you do good work for us the Yanktonai Tribe.

I am the Head Chief.

(Signed) WHITE GHOST.

Witness:  
Gustav Jensen,  
Markwells, Alfred W. Dale  
H. Burt, Missionary.  
JOHN G. GASMANN,  
U. S. Indian Agent.

Why trudge along in old ruts, when labor-savers are appearing on all sides JAMES FLYER'S PEAKLINE heads the list. It saves labor of the hardest kind, and produces the best and cheapest results in the kitchen, laundry, and house-cleaning. Thousands of housekeepers have grown to think it indispensable, and we advise all of our readers who do not use it, to try it once. A fair trial will convince the most skeptical of its merits.

# The Reminiscences of a Missionary's Chair.

"I have wandered far over sea and land,"  
"O'er vale and hill, 'er desert waste and wild."  
It is strange indeed, that I, being superannuated, not to say broken down, should be called upon to write my own history. I say "write," but, as a matter of fact, I am dependent upon an amanuensis who has helped me travel past many a mile-stone in life's journey, and has, during most of that time, been my companion, and also my owner and faithful friend.

I have little recollection of my origin, but experience has shown me that, like Topsy, I must have "grown," probably on some New England hill-side, while I am well aware that in my perfected form I was presented to my owner, by Rev. Sylvester Holmes of New Bedford, from whose hospitable home we dated the beginning of our travels.

In the autumn of 1831, on a chilly November morning, nineteen human beings met upon their inanimate belongings, met upon the deck of a vessel which was to convey them to a pagan land, where some of them hoped to do the work ordained for them in the words of their Lord and Saviour. All was confusion and tumult in the ship, except among those few who seemed to say, "We are ready to be offered and the time of our departure is at hand." Amid the tears and good-byes of friends, the tremulous strains of the sweet hymn, "Ye, my native land, I love thee," floated away upon the ocean breeze, and the voices of praise and prayer, and their receding steps were heard upon the deck as I lay, bound, in a dark corner of the after cabin, listening to many sad adieus, to the noise of departure, the waving of the flag, the rough orders of the captain and mate, and at last to the heavy rush of waves as we left our harbor behind us and sailed into the fierce sweep of an Atlantic gale. We soon found that discipline was lacking upon our vessel, and as a result of this, not many days had passed before one of the masts was seriously injured; many articles which had been left without lashing were swept overboard, and the discomfort of our position were increased by the knowledge that we had more than the ordinary dangers of the deep to encounter. My condition was especially perilous for, being surrounded by boxes and the ship's rigging, I was subjected to many blows and much rough handling; and, indeed, carried a broken limb to the end of my journey. It is impossible to describe the filth, and disorder, the miserable berths, the dirty, ill-cooked food, which made the voyage hideous to those who were fortunate that I, were at the mercy of such things. My owner's stateroom had no ventilation except through the door, and was lighted only by a skylight, but it was a long time before she could emerge from it. At last she made a desperate effort and climbed the stairs to the deck, where she lay upon her husband's cloak in the midst of her fellow-sufferers, trusting that the fresh air would supply the need of food and drink. It was hardly possible to support one's self under such conditions, and when one day the captain decided that the vessel's injuries made it necessary to put into Rio Janeiro for repairs, the joy was great and universal. Immediately upon our arrival our ship was visited by a kind, Scotch merchant, who took my owner and some others to his house and entertained them hospitably during their stay. I remember hearing my owner say, on her return, that here for the first time, while riding with delight a spirited and gentle steed through the beautiful orange groves of the plantation, she was horrified by the sight of a gang of slaves chained together and bearing heavy burdens of coffee on their heads. The compassion and indignation which were roused by this spectacle she did not hesitate to express; and this was the only cloud upon the three weeks which were spent in perfect (but not unwillingly) in that magnificent bay. At last we were told that all was in readiness, and the captain, whose temperance principles were not of the strongest, was sufficiently sober to start. The moorings were loosed, the sails set, and once more we found ourselves gliding over shining waters, over-arched and bounded by the sun-spotted sky. We met one vessel with whose officers ours exchanged visits, news and gifts; and then, after days of alternate calms and breezes, we sighted a dark and forbidding shore, and recognized it as a fit place for the patronage of the men of whom it has been said that on their outward voyage "they hung their consciences on Cape Horn to leave them there on their return." Safely past the dangerous past with, as we hoped, our consciences still in our possession, we made the island of Van Fernandez, where boats were lowered and some of the men landed, finding a few Spaniards, some goats, and a most acceptable variety of fruits. A day or two after this brief rest, quite an excitement was caused on our decks by a shout from the mast-head. Quickly boats were lowered and manned, and, before night, a monster whale was along-

side the ship and the process of dissection began. The next day great masses of flesh were sent on deck to be tried out in iron boilers, and while the men were in the spirits the passengers were somewhat subdued by the fruitful odors which pervaded the whole vessel.

And so six months passed in alternations of suffering and rest, till finally we reached the port of Honolulu and were welcomed cordially by the missionaries who had preceded us, the Rev. Messrs. Bingham, Thurston, Ruggles, and Whitney. Then we landed, and those who were able walked up to the mission house, while the worn-out tired men were put into an old cart and drawn to their destination by bare-headed natives whose clothing consisted of a short shirt and a girder of paper cloth.

In a large unfinished room were gathered together the missionaries from the various stations; their yearly meeting, and we were received with grateful greetings, after which we all dispersed to our temporary homes. Soon the goods were brought ashore, the furniture examined, and I, and all of my kin who had been injured, were placed in the hands of a carpenter, whose skill soon made us whole. How my owner rejoiced at once more finding herself within my comfortable arms; and with what interest, from my place in the school-house, I listened to the discussions in regard to the affairs of the little missionary colony! I need not say. Letters were now opened, which informed us of the decision of the American Board that my owners with two other missionaries, the Rev. Mr. and Mrs. W., were selected to begin work upon the little-known Marquesas Islands. A deputation of three (Messrs. Whitney, Alexander, and Tinker) were sent as soon as possible to ascertain the condition of the Islands and the will of the chiefs in regard to receiving teachers. Hapi, the principal chief, was ill, but through an interpreter expressed his kind feeling toward the missionaries, and promised to prepare homes for those who were to come. So, on the return of the deputation, the Hawaiian Mission decided that work must be begun here, and accordingly I was again packed into a dirty, dark hold; where I spent a week of great discomfort. The native schooners were almost intolerable, and it was a comfort to change, at Lahaina, into a double canoe, in which I was tied, while my owner sat with the baby in her arms; her husband tried to keep their various belongings in place, and the natives roared in earnest, with the perspiration streaming from their unclad bodies. The passengers were carried on the backs of natives, through the shallow waters to the shore, where we were kindly welcomed by our good shipmates, and I was placed by the side of one of my own kin with whom I took counsel on the strange things about us. We lived here in grass houses, the floors covered with mats made of the leaves of the pandanus, and from thence my friend and I were carried, on Sundays, to the thatched church, where we were placed near the pulpit for the accommodation of our owners. We, with our occupants, attracted much attention from the crowds of people who squatted on the ground naked, except for an occasional kapa blanket. It was a coveted privilege to carry us back and forth, for the carriers would amuse themselves by placing us on the ground and attempting to sit on us.

A few months were spent here in teaching and preaching, and then we went back to the annual gathering. Here I was honored by holding Gov. Hoapili, and also his wife—one of the old chiefesses—whose weighty endurance to its utmost. But I had time given me to recuperate from the strain, for we were at once shipped to Honolulu, and thence very shortly set sail, on a small ship, for Marquesas.

It is not necessary for me to recapitulate the discomforts of this voyage, the only event of which was our coming to anchor in a beautiful bay of the Society Islands, where we lay for three days, most of which time our party spent on shore in the shade of orange, lime, cocoa-nut and guava groves.

We found our destination when we reached it, rich in the beauties of nature, but, in other respects, most unpromising. The natives who swam up to meet us, men, women and children, were naked and tattooed, and their noise as they screamed, laughed, and clapped hands with delight at the sight of the women and babies, was most unpleasant.

In a few days we were put into a dwelling like a house split open from ridge-pole to the ground and closed and covered with the leaves of the bread-fruit tree, ingeniously put on like shingles. It was about fifty feet

long, and the opposite side was left open, about five feet from the foundation, for the whole length. This house stood on a platform of stones some five feet in height; and the floor, which was mostly of stones with a little earth thrown over them, made my rockers quite useless. Our party set to work at once to improve things. They filled in the floor with pebbles, from the sea-shore, spread down pieces of matting which had covered their boxes; partly boarded up the open front, and arranged a "cook house" on a large pile of stones, under the spreading branches of a bread-fruit tree. We had few cooking utensils, and the families used them in common, all living together in the big hut which they divided into three compartments by means of calico curtains. Furniture of any kind was entirely new to these natives, and they especially admired our collection of chairs, some of which were painted in bright colors. The chiefs and their friends would come in and make awkward attempts to sit upon them, though they would soon give up and slide down to the ground, squatting against the chairs with their dark bodies liberally smeared with cocoa-nut oil, and some yellow dye, shining in the sun. Hapi, the head chief, was not well enough to stand or even sit up, but he coveted me greatly, and my owner had to struggle to maintain her rights. Our Sunday services were held under the bread-fruit tree where the chairs were placed in the shade, while the natives flocked around to gratify their curiosity. They were delighted with the singing, but would often interrupt the speaking. I remember one day a man said, suddenly, "Tirana koe" (you lie). "Your God is good for you, and ours for us," and another occasion when the whole congregation deserted in a body, rushing to the sea shore to capture a huge flying fish which was a delicacy among them.

We passed amid strange perplexities and annoyances, but we succeeded at last in getting for each family a new, clean house, standing close to each other for safety, and I found myself relieved from my fear of falling into Hapi's hands by the death of the old man who had lain, for a long time, helpless upon a mat spread upon stones, with a stone for a pillow. I never forgot the near approach of death that followed his death. The hills echoed to strange wailings, clapping of hands, howling of conch shells, thumping of drums, and other devices for producing sound. Both men and women intimated themselves with a drink made of some indigenous root which they prepared in a singularly unpleasant way. They chewed the baked root, then ejected it into a canoe filled with water, and when a sufficient quantity was obtained, covered the mess with cocoa-nut leaves and left it to ferment. Dancing was constant, and was combined with all sorts of lewdness. They gashed their flesh with stones, knocked out their teeth, being joined even by their hated enemies from the next bay.

Hapi, clothed in white kapa, lay on a canoe in his house. Red flannels obtained from some ship, was festooned about the body, with various decorations of dog's teeth and whale's teeth strung on long cords of bark round his head, with feathers in his hair. A rowing stick was tied to the side of the house, so that his spirit might not hunger, and one of his wives sat upon the floor beside the canoe, where she wailed and moaned, ate her food and selected another husband by way of diversion. The missionaries were permitted to hold services in the house and, during them, the heathen festivities were suspended. We were present at many of these horrible scenes and am never likely to forget them.

The process of decay in that climate is rapid, and soon the body became unclean, when it was taken to a beautiful brook, near by, where the bones were separated from the flesh and laid on a "heiau" (a pile of stones) to bleach in the hot sun. All these things were done with care to appease the wrath of the departed spirit. Hapi's house, during all this, was, of course, the centre of attraction, and the missionaries repaired there to endeavor to teach the people, but it was impossible to accomplish anything.

Among these wild people there had lived for some years an Englishman named Morrison, and on the arrival of the missionaries he had come to them with offers of assistance, which were gratefully accepted. He spoke the language fluently, and the natives told us that he was a parakeet in all their feasts and festivals, even to the eating of human flesh; but he attended our services and joined in the sacred music, sitting often within my hospitable arms. One day, when I was holding my owner with her baby on my lap, I heard him say how she could tell the natives not to crowd so close about her? His reply was: "Atakate kotu, hapi, naton nei." She repeated it and they at once scattered. I could not see that the ground and closed and covered with the leaves of the bread-fruit tree, ingeniously put on like shingles. It was about fifty feet

shell, the noise of fendish revelry—were all impressed upon her memory.

One dark night there came a rap at our door. It was a white man named Angel, a companion of Morrison's, who wanted my owner's husband (the medical man of the mission) to come to the assistance of his friend. One of the other missionaries was called to accompany them, and, with a lantern and a simple stock of medicines, they followed the trails across the valley to find Morrison quite unconscious, surrounded by natives, one of whom claimed to be his wife. All efforts to restore life failed, and the scene was one of pitiable confusion. During the absence of her husband, my owner suffered constant anxiety, for, as may be imagined, the expedition was none of the safest, and when he returned unhurt, the relief was unspeakable. Next day, preparations were made for the funeral. The natives were shown how to dig a grave—probably the first upon that lonely island—and the body, wrapped in a mat, was laid in the ground. While the prayer lasted the natives remained silent, but before the body could be lowered a roast pig was thrown in beside it, and before the grave was filled they began to quarrel over the few effects the dead man had left behind him. So ended the life of one who had been born and brought up in a Christian country, where a tender mother had often pressed her loving lips to the baby's feet which afterwards went so far astray. After his death it was discovered that he had conspired with the natives to kill the missionaries, and that for them it was fortunate that his life had been thus cut short.

After the excitement caused by Hapi's death had subsided, the missionaries again attempted to teach the people, but it seemed like pouring water upon the ground. My owner had a most reluctant class of women with whom she labored for a time, but they soon declared that, "reading made them sick," and one by one absented themselves. The people had never had kings or chiefs, as in Hawaii, and knew nothing of obedience or organization; so that they were much more difficult to deal with. They were dishonest, vicious, and eaten up with superstition. I remember once my owner, when walking with her husband, came to a threshold but which was none of their temples. She desired to enter, but they said, "No, no woman can enter there and live." Then she said, "Give me your consent, and then stand here and see me die." They consented, she passed the threshold, walked deliberately about and came out, "Here I am," said she, "not dead." "Ah," was the quick answer, "that is because you are a foreigner; if any of our women would have died instantly."

During the months spent upon this island, children were born to two of our missionary families, and I was never happier than when holding in my arms the baby boy, whose birth came near costing my owner her life. The natives wished to see him, but were told that they must keep quiet until the mother was better. At last a day was appointed, and they came in crowds, with their bodies adorned with cocoa-nut oil, dogs' teeth for bracelets and anklets, whale's teeth round the neck, bone ornaments in their ears, flowers on their heads, clean saplings round the body, or, sometimes, leaf-armor. Baby, wrapped in a blanket, was on exhibition in his father's arms. Loud were the exclamations of delight at the form and the garment which clothed it. They declared that it could be named, "Hapi," and retired quietly, well pleased with their young chief. Often, afterwards, in passing the house they would, call out, "Love to Hapi."

After a few months of steady effort, it became evident that there was but small promise of success, and as missionaries from the English Board were ready at Tahiti to take our place (with better hope of good results, on account of their nearness to their base of supplies), it was decided that we should return to the Sandwich Islands.

It happened that, just at this time, a whale ship came in for supplies, and the captain reluctantly consented to take the families to Honolulu, but had no room for the furniture, which was therefore taken by another whale ship to Tahiti.

One night the windows were darkened, and the packing done as secretly as possible, for fear of exciting the natives. The next morning the crews and captains of the three ships came ashore and hastily put the whole families and their belongings on board, while crowds of natives gathered round with spears and war-clubs, wondering at the change. They were told they could have the houses, and various presents were made them, but baby Hapi was the thing that they desired. The mother's heart fluttered as she said, "He cannot eat your food; I will care for him, and when he is a man perhaps he will come back and be your teacher." They shouted, clapped their hands and cried, "Mo kati, mo kati!" (good), and seemed satisfied; but there was no feeling of security until we were all safe on the deck of the ship, on our way to a land of comparative civilization.

As soon as we arrived at Honolulu we were sent off to a distant station; which meant a journey in a small, filthy schooner, canoes, and finally on an ox-cart, during which I was bound by bark cords wherever a place could be found for me. When we reached the thatched house which the chief had caused to be built for us, we found it leaky and uncomfortable; and I remember well the little fire made in a pile of stones, which our native cook was constantly putting out by upsetting the tea-kettle. A large school-house and church were soon built, and my master commenced in earnest till work, from which he never rested till 1860 he laid his armor down. My owner managed to learn the language by going to the school-house while the babies slept; and I was carried back and forth, besides being of constant service at home.

Our station lay on the slope of Haleakala, where it was often cold and damp, so that the children really suffered, for there was no way of warming the house except by a few embers in a tin-pot, which filled the room with smoke. The conditions were all unfavorable, and much sickness was the result. Little Hapi became very ill, and the only doctor lived fifty miles away. Our state was indeed deplorable, when a missionary friend came from a station thirty miles distant, and transported us all to more comfortable quarters. My master was carried in a litter. My owner rode a meager horse; I was borne on a man's head. Our road lay over gulches, sand-hills and plains, under a tropical sun, and the journey came near being fatal to my master. After resting for a few weeks, we were put into an ox-cart, jolted for miles over stones, and then transferred to a canoe which, after a day of weariness, landed us at Lahaina. Not long after our arrival, I held in my arms first a little new-born boy, and then the dying baby Hapi, who left us very suddenly while his poor mother was hovering between life and death. As she slowly recovered, I held her constantly within my arms; and, indeed, I may say that, for fifteen years thereafter, we were seldom long separated. Whenever she went I went also, though often with much weariness and stiffness of joints; but I was always glad to be of some comfort to my tired owner. Perhaps her hardest trial came when she and her husband decided that it was necessary to send their first-born back to America, to be trained away from pagan influences. That was, indeed, a terrible test of a woman's selfishness, and to my owner it was heart-crushing. Nothing but faith in God's goodness could have sustained her through such anguish.

The family had at this time removed permanently to Honolulu, where there was more comfortable, though there was plenty of hard work to be done; and many, many times has my master rested in my arms till his eyes closed in the exhaustion of fatigue. In the weekly meetings I was a comfort to many, and in my own way I have been a thorough worker. Kings, Queens, Princes, Princesses, Chiefs and plebeians have rested in me, and many distinguished travellers have honored me. Admiral Thomas of the English Navy, who returned the Hawaiian flag when it had been torn down by an English officer, has often sat in my arms; and played with the children of our family; and honorable men, of all grades, have tested my ability to impart rest and comfort. I stood by my master's bedside in his last illness; one by one I have seen the children, whom I have held from their birth, depart to distant lands; one by one the old friends have gone, until at last my owner and I folded our tents and turned away forever from the lovely sunny land for whose kindly people we had tried to do our best. Forcible were we both, as from the deck of the great English steamer we bade a last farewell to mountain and valley, palm grove and surf-beaten beach, and sailed eastward toward the Golden Gate. It seemed a doubtful return, but the cooler air and fresh scenes restored my owner to new strength, while I, in the hands of a skillful carpenter, renewed my youth.

She who knows me best, says that I have been a good and faithful servant, and altho' I can realize that my life-work is nearly done, I hope to be able to serve her to the end. As I stand in a pleasant, quiet room in San Francisco, memories and associations crowd around me; and sometimes I long, before my days are ended, to hold once more in my arms the children of her who has been to me a faithful friend, and who is always glad to acknowledge the help which, in her many trials, she has received from her long-tried servant. THE CANNIBAL CHAIR.

Horsford's Acid Phosphate.  
FOR IMPAIRED NERVE FUNCTION.

Dr. C. A. Fernald, Boston, Mass., says: "I have used it in cases of impaired nerve function, with beneficial results, especially in cases where the system is affected by the toxic action of tobacco."

Hygeia Hotel,  
Old Point Comfort,  
Virginia.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 72° in summer; 59° in autumn; 44° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

For further information address by mail or telegraph.

VOL. XIV.

HAMPTON, VA., MAY, 1885.

No. 5.

ANNIVERSARY DAY at Hampton on the 21ST.

OUR ABSTRACT of Indian bureau reports this month page 57—gives a comprehensive view of the Indians of Indian Territory: the wild tribes, semi-civilized tribes, and civilized "Five Nations."

THE REV. DR. CRUMMELL, one of the leading colored men of the country, a graduate of Queen's College, Cambridge, for twenty years a missionary in Africa, and now rector of the principal Episcopal church in Washington, has visited the Normal School, and made an impressive address to the students upon the duty of the colored youth, if they would not be failures, to consider not the glory merely, but the uses of learning, to build up the character, the family, and the race. With his good counsel he gave them an inspiring account of the successes of their people in Africa who have learned industrial arts as well as letters.

THE final action of President Cleveland in revoking the late Executive order for the opening of the Crow Creek Reservation, on the ground of its illegality, will rejoice the friends of justice as well as the helpless "wards" who were so near being driven from their homes by their "guardians." There will be some work for the U. S. troops in clearing the reservation, but the only sorry ones will be those who thought to profit by their early information of the project, and the ex-Secretary of the Interior, who is in the unpleasant position of having to explain his prominent part in a treaty-breaking act that might have precipitated another needless Indian war, with all its horrors.

THE next annual meeting of the National Educational Association of the United States is to be held at Saratoga, July 14-18. Public interest in the association was so widely extended by its great meeting and continental excursions last year, that a large meeting may be expected this year, even without such unusual attractions, which could hardly be surpassed except by round trip tickets for the moon. Saratoga is an ideal place for a convention, whether political, religious, scientific, or educational, as has long been proved, and many will take advantage of the opportunity to have their minds improved and see the diversions of the gay world at the same time at reduced terms—\$2.50 at the Congress, and \$1 a day at boarding houses, we hear. Even at these, there is hardly likely to be a large Southern representation of the most impecunious of professions. But Southern teachers have proved their self-denying ambition to improve themselves, and no doubt all will go who can. The newspapers will make up for their loss, in great measure, to those who cannot; but it is well that all do not think so, or they would have nothing to report.

THE SEVENTEENTH ANNIVERSARY exercises of Hampton Institute will be held this year on Thursday, the twenty-first of this month. A pleasant occasion is anticipated. As usual for several years past, the students who speak on the platform will be chiefly those who have been for one or more years out in the field as teachers. The day is more and more one to bring these into relation with the school, and encourage their important work, which is the end and

fruition of the school's efforts. Many who have not even completed the course have done good work, and such will be invited this year to form an organization for help and encouragement. On the Tuesday before the anniversary, the girls' May party will be held. The late spring having made it impossible to have it at the usual time, it will be delayed a few weeks longer, to give those of our guests who may be here the opportunity to see what is generally, though not a public entertainment, a very pretty scene.

MISS ALICE C. FLETCHER, whose great work in securing lands in severity for the Omahas has identified her with the cause of Indian elevation, has been taking advantage of the opportunities of the New Orleans Exposition to present the cause in that city. She writes us that one outcome of her work is that the ladies of the Episcopal churches of New Orleans will build a cottage at Hampton Institute for an Indian family—like the two "Omaha cottages" now there—pay two "scholarships" for the couple who shall occupy it and be educated in the school; and at the end of the term of three years, if that is the time agreed upon, they will loan the sum needed to build a house on their farm on the return of the couple to the reservation, the man to pay back the sum in installments as he can, until at last he owns his home by his labors; the couple to be from the Episcopal mission, and, if possible, Christians. As Miss Fletcher well says, an enlarging of sympathies cannot fail to be the result of such work, blessing givers as well as receivers. The Indian cause not in one place alone, but in all, is helped by every effort and enterprise which brings it into relation with the public mind and interest.

WE have lately received the Report for 1885 of the French Minister of Agriculture, which includes a large collection of official documents, statistics, and reports upon the condition of both French and foreign agriculture. The dense population of provincial France makes it essential that every rood of soil should be made to yield to its utmost capacity, and the resultant perfection of systems of farming is something which Americans—accustomed as most of us are to rough and slipshod work—may well admire.

WE have space only for two extracts from this interesting report, but they will perhaps give some idea of the tendencies of modern French agriculture. M. Risler, Director of one of the National Institutes, says: "While the struggle for existence is less difficult for the workman than in former years, it is becoming more and more serious for the industries which employ him. Those who undertake to direct and supply the capital for enterprises must keep themselves well abreast of progress in all directions, in order not to be left behind by their foreign competitors. Agriculturists must carefully choose the productions which are best adapted to their climate and soil, and, as industrial leaders, must possess the technical knowledge and the capital necessary to employ all the new methods which chemistry and mechanics have invented, and to diminish in every way the cost of production, in spite of high-priced labor. It is certain that the victory will be to those industrial and agricultural enterprises which are

the most thoroughly organized and carefully directed, for this is true of all commercial undertakings, and agriculture cannot escape the common law."

TO meet this demand, the French Government and private generosity are supplying opportunities for agricultural education, which will undoubtedly result in raising the standard of farming throughout the whole country. We give, briefly, the course of study in one of the schools, which will show how thorough a preparation for this work is received by the students who undertake it. The course extends over three years, and includes the following studies: "The French language, history and agricultural geography, arithmetic, geometry, carpentry and linear drawing, physics and meteorology, chemistry applied to agriculture, agricultural meteorology, natural sciences, general agriculture and special cultures of the region, viticulture, arboriculture, horticulture, rural engineering, rural legislation, hygiene of animals and sanitary police, agricultural responsibility, military exercises and gymnastics."

"Part of each day is spent in the class room, and the remainder at practical work in the fields, the garden, laboratory, etc."

COL. TAPPEN, Superintendent of the Government Industrial School for Indians established last year at Genoa, Nebraska, says that his experience there and in thirty years' previous observation in the Indian country, from Alaska to Mexico, has convinced him of the advantage of sending Indian children away from the camps to be educated. While agency schools are good and the teachers devoted, tribal surroundings and sentiment are too strong for the children to resist. "No child can learn where the public sentiment of their kin is against it; they can't learn to work where labor is ridiculed and the laborer laughed at. Once removed from the surroundings, influences and prejudices of a camp, and placed among civilized people, their advancement is rapid, and they become educated men and women instead of educated Indians—a great difference." Col. Tappen thinks Oklahoma should be held for homesteads for those who graduate from there in district schools. "At present we can only say to them, acquire knowledge, learn a trade, and then take your chances against our own mechanics. We all know what those chances are for young Indians." The Genoa school, though established but a year, is doing much to educate public sentiment as well as Indians.

THE great and increasing interest taken by the people of this country in "technical education" shows how strongly they realize the necessity for it, not only for those who are obliged to earn their daily bread, but for all who desire a full and healthy development, mental and physical. To turn out pupils who are able to do good work with the hands as well as with the head, is rapidly coming to be considered the aim of all true educators, and how this can best be done is for them pre-eminently the question of the day. There have, at all times, been individuals who have attained this result without the aid of any system, and in attempting, as we of the present day are doing, to work out systems which shall be generally applicable, it is some-

times helpful to study the lives of men who have in their own persons realized this ideal education. A notable example of what men who have known how to train and use all their faculties, can accomplish, is to be found in the history of the largest and most influential newspaper in the world, the London Times, the first number of which appeared on the 1st of January, 1788. Its editor was John Walter, but it is to the second John Walter, his son and successor, that the paper owes its power and continued prosperity. He organized its various news departments, wrote himself many of its leading articles, gave the tone to all its editorial work, and at the same time was a thoroughly trained printer, and could print his paper from first to last, being, in middle life, the inventor of what is probably the most nearly perfect steam printing machine in existence. On one occasion his men all struck without notice on a Saturday morning. Mr. Walter said nothing, but took off his coat and went to work. For thirty-six hours he was incessantly employed at case and press, and, with the help of a few inexperienced workmen, succeeded in getting the paper out at the usual time on Monday morning, to the great astonishment of the conspirators, who had assembled to witness his defeat.

Just after he was elected member of Parliament from Berkshire, he was one day at his office when the express from Paris brought the report of the French King's speech on the opening of the Chambers. The Times for that day had been finished, and editors and compositors had left the office. Mr. Walter, to quote from his biographer, "immediately set to work. He first translated the document; then, assisted by one compositor, he took his place at the type case and set it up. To the amazement of one of the staff who dropped in about noon, he found 'Mr. Walter, M. P. for Berks, working in his shirt sleeves!' The speech was set and printed, and the second edition was in the city by one o'clock. Had he not 'turned to' as he did, the whole expense of the express service would have been lost; and probably there was not another man in the whole establishment who could have performed the double work—intellectual and physical—which he that day executed with head and hand."

This is what "technical education," properly interpreted, means. We believe that it is to secure such end as this that our manual labor schools are tending, and assuredly there is no "higher education" than that which can produce such a man as Mr. Walter, member of Parliament, editorial writer, man of business, inventor, and journeyman printer.

DR. CRUMMELL observes a radical difference between the English and American mission on the West Coast of Africa, in favor of the former. When the re-captured Africans, rescued from slave ships by English cruisers, were set free in Sierra Leone, they were sent into the various villages around, and taught not only to read but to work. If you go to Sierra Leone at the present time, you will find all the different trades and industries among the native Africans there. The result is that the English mission in Sierra Leone is self-dependent; builds its own churches, supports its own ministers, and contributes very largely to Christian missionary societies in England. The laymen are

merchants, mechanics, and traders; have founded families, and, in some cases, send their sons and daughters to the English Universities and schools.

The American missions on the coast of Africa have been deficient in just these respects. That is, there has been a neglect of trades, and of industrial teaching. The missions are consequently feeble, and have to be supported from America to a very large extent. There is corresponding contrast between Liberia and Sierra Leone, due to corresponding causes.

Dr. Crummell has lived twenty years upon the coast, and is a man of intelligence and learning. In connection with his church in Washington, he has an industrial school for girls, numbering a hundred and forty.

We have seen no more sensible and just remarks upon the Negro problem than those of Mr. Ellis H. Roberts, editor of the *Utica Herald*, as the result of his observations in Florida. They are proportionately good of all parts of the South. He sees two phases in the colored problem there. The first is competition in labor produced by immigration of Northern laborers, who will not, however, work at as low wages as the blacks. Whether they stay or retreat will depend on whether the Florida lands can be brought up by fertilizing, when there will be work enough for all. In any case, the blacks will generally cling to the soil and get some sort of a living.

The other phase of the colored problem is that the lines drawn for intelligence, for thrift, for worth, cannot be determined by color. The lowest blacks are doubtless below the lowest whites, but there are plenty of low whites and respectable blacks.

In city and country, families and individuals are attaining a creditable standard in every quality of citizenship. Colored men are employed in secondary places about the railroads and steamboats, and about stores and shops. They train their families to habits of self-respect. They cultivate the sentiment of making themselves worthy of freedom. On the other hand, many of the colored race are shiftless, without a single aspiration, and these are tools for mischief in the hands of designing men. But the misuse of the ballot is not on the part of colored voters alone. The purchasable contingent includes whites and does not array all the blacks. \* \* \* On the contrary, the colored race, even as a whole, is advancing, and when looked at at intervals of ten years the progress is wonderful. The better class of colored people deserves to be recognized as numerous, worthy, and active in elevating others. This class is the pledge of hope for the race. It at least must be regarded as distinct from the degraded creatures who are pointed out so often as the types of Southern blacks. Add to the influences of education, of a share in the Government, and the elevating effects of self-dependence and self-support, this differentiation among the blacks themselves, as well as among the whites, and you secure the last element yet contributed to the adjustment of the problem, which is not one of color so much as of principle and tendencies—that is to say, of the conditions of civilization."

An occurrence of great interest and significance to Christian work in the world, is the recent departure from England for the China Inland Mission of several young men, graduates of Oxford and Cambridge, where one was stroke oar of a "university eight" and another captain of a "university eleven." All were men of prominence among their associates, one an officer of the Royal Artillery, another in the Dragoon Guards; some were men of wealth, and all have left brilliant prospects to devote themselves to the work of missionaries. The English papers speak

of the farewell meetings at Cambridge, Oxford and in Exeter Hall, London, as densely packed and of intense interest. Their act has created a profound impression at the universities and upon society, and others are preparing to follow their example. The *Missionary Herald* well remarks that "the departure of these young men is an event of promise not for China alone but for England." They will be powers in England more than if they had stayed in England; they will make good ten fold the places they leave, by the inspiration of their faith and heroism. Heart and soul and self flung into God's work, starts a wave of influence that travels in all directions. The vastness of the field on which these young athletes have entered is indicated by the statement of our Secretary of Legation in China, that at present there is but one missionary in the Chinese Empire to each one million and a half of the population. This proportion would give but one Christian minister to the State of Tennessee or Texas, or one for Maine, New Hampshire and Vermont together, with 224,000 people from a neighboring State. In view of these facts, in consideration both of her needs and the part she is likely to take in the world's future, there is no more interesting missionary field than China to-day.

The recent decision of the California courts that children of Chinese residents must have equal privileges of education with those of other nationalities, has resulted in the establishment of the first Chinese public school in San Francisco. The children have been taught English in the Mission schools and speak it fluently. They are bright and orderly; very proficient in arithmetic, and the public school teacher in charge of them, says she will have no trouble in carrying them to a high degree of attainment. The school is attracting many visitors and is likely to be educational to the white race, as well as to its young celebrities.

#### Col. S. S. Elder.

The death of this well known artillery officer, on the sixth of April, calls for remark.

Since 1869 Col. Elder has been instructor of Law in the Artillery School at Fort Monroe, and was a member of the Gun Foundry Board which recently inspected lake establishments in Europe. In both of these lines of duty his services have been valuable; no wiser, nobler, or more exemplary officer could have been placed in relations with the sixty Lieutenants detailed for two years' special instruction at this post—a pleasant neighbor to the Hampton Institute.

He served with distinction from the beginning to the end of the late war; "Elder's battery" did splendid service in the seven days Peninsula fights; in the battles of Antietam, Fredericksburg, Chancellorsville, Gettysburg, Drury's Bluff; in front of Petersburg and in the Appomattox Campaign.

The story of his escape after four months' suffering in a rebel prison pen in Columbia, S. C., shows a coolness and courage that were illustrated on many a hard fought field, and brought to him many honors and admirers. Aside from his high soldierly qualities and commanding presence, Col. Elder possessed rare social gifts, was the most genial and attractive of men, and was especially loved by children for he loved them. There are few so tender and kindly, so true and worthy as he; his sorrowing wife has our deepest sympathies.

Gallant was he as the old war ships that years ago with colors flying went down before the Merrimac in Hampton Roads, and we gladly give place in our columns for a passing mention; our farewell salute to this noble Christian gentleman and soldier.

#### Indian Arrivals.

Two new parties of Indian students have arrived at Hampton too recently for notice in our Indian department this month. Both are of Sioux. The first, from Crow Creek Agency, Dakota, consists of seven: a family of four whose magnet at Hampton has been the two little sons who have been doing well in the school for the last two years. The father, Fire Cloud, is a fine looking, intelligent man. An unexpected addition to the party was a mother, with her baby, whose husband and father had left them for California. The two babies of the party were welcomed with delight by the Indian girls who have greatly missed the "Little Bear" and "White Corn," who returned to the West with their parents.

The Fire Cloud family will occupy one of the lately vacated cottages. This party was escorted to Hampton by John Archambeau, an Indian student, who, after three years at Hampton, has been at home for nearly a year, doing well at his carpenter's trade, and now returns to school at his own request.

The second party, from Standing Rock Agency brought by Mrs. McLaughlin, wife of the good Agent, consists of six boys and six girls. One boy, Tiokasin, and one girl, Josephine McCarty, are old students who have made excellent records during their year at home. The others are all straight from the "camp." "Young Eagle," a son of an intelligent chief, "Two Bears," told his father, "I am now an Indian boy, I want to go and be made a civilized man."

The medical report on the party by the resident physician at Hampton is given below.

#### GENERAL ARMSTRONG.

Dear Sir:

The party of Indians which arrived April 17th were examined by me on the 18th. The party consisted of a family of four, a father, mother and two children, and another mother with her infant. Daniel Fire-Cloud, the father, appears to be in sound health, his wife and infant of eighteen months are also sound.

His little son, a boy of six years, has recently been sick at the Agency, but now seems in good health with the exception of a severe cold.

The other Indian woman does not appear very robust, though no local trouble is apparent. Her baby, four months old, took cold on the journey, but is improving and seems a healthy child. John Archambeau, a former student, who returned with the party, is also in good health.

The party of twelve which arrived on the 21st were examined on the same day. Four of the six young men are apparently sound. One of the remaining two has a badly formed chest, with deep infra-clavicular depressions and signs of incipient phthisis. The other has no marked local trouble, but is not a strong looking boy.

With two exceptions, the girls appear very well. Both of these have signs of pulmonary weakness, in one case decidedly marked. On the whole, the party compares favorably with any other of the same number which has been received.

Respectfully Yours,

M. M. WALDRON, M. D.

#### QUESTIONS AND SUGGESTIONS.

##### Work or Watermelons?

The Rev. Dr. Storrs of Orange, N. J. asks, "What of those of your graduates who do not become teachers? Does the result of manual labor training at school show that industry takes the form of saving and accumulation, with an eye to the future—foreseeing? Or is Carlyle's idea of the West India Freedmen the true one for all: 'O' Quack up to his ears in pumpkins is satisfied?'"

For pumpkins read watermelons, and the portrait may stand for a third perhaps of Quashy's American brethren, especially in the Gulf states. Even there, the proportion of Negro land-owners and tax payers shows a growing advance on the Carlylean idea. Further from the latitude of the West Indies, the greater necessity of working to get either watermelons or pumpkins, and the contagion of competition

and industry all around him, constantly stimulate the Negro's energies with the white man's.

They cannot but be further stimulated and confirmed by three or four years' training in a manual labor school to habits of industry and skill in useful trades that will always be in demand.

The proportion of Hampton graduates who have not taught, at least for a short time, is exceedingly small. No pledge is required, the object of the school to train teachers being known, and the purpose to teach being the aim of most who enter. Some who have left not intending to teach, long have become fascinated with the work and devoted their lives to it.

Quite a number however have, after teaching a longer or shorter time, given it up for one cause or another, and many more work at their trades or other occupations, during part of the year, teaching the other part. In 1882, a very thorough investigation was made on these and other points by correspondence with our graduates. An extract from the full records then published in our Report, and which are being yearly added to, will be the most direct answer we can give to our correspondent's inquiry.

"Of the 389 graduates and 37 senior-undergraduates—those who left before the end of the third year—entered in the 'Record Book,' 283 males, 286 females, 146, total 429, I have learned that 326 have engaged in teaching, and that more than three-fourths of the whole, i. e. 319, have made teaching their vocation since they left the Institute; 3 are licensed preachers, as well as teachers. Over ninety per cent. have engaged in teaching. Of the whole number, 27 have died; 2 become insane; leaving 397 to be 'kept track of.'"

Since October 1st, '81, letters have been written to all (not at hand) except 16, whose location I have not yet been fortunate enough to find. I have heard directly from 363, and indirectly from most of the others.

90 of our graduates are reported married—in several instances husband and wife teaching in the same school.

53 report owning land or other property.

7 own above 100 acres.

18 own from 50 to 100 acres.

class matter.

## The Southern Press. Both Sides.

Mr. Grady's reply "In Plain Black and White" to Mr. Cable's *Century* article has of course prolonged the attack of the critics upon the latter, and has in its turn done so much to provoke expressions of opinion. The southern white journals are unanimous in approval, and are ready to back up Mr. Grady in his statements, almost without qualification. The spirit of their reviews (usually editorial) is fairly shown by the following quotation from the *Augusta Constitutionalist*:

"One of the most dispassionate and convincing articles upon the negro question we have yet seen, is from the pen of Mr. HENRY W. GRADY, in the last *Century*." "In *Plain Black and White*" is an answer to Mr. Geo. W. CABLE's theory, remarkable only for its startling sentimentality and harsh conclusions. Mr. GRADY's writing is free from passion or prejudice. It is logical, incisive, sensible, and spells out the whole matter, letter by letter.

Mr. GRADY speaks in the name of the South, and is well equipped by training and experience to treat the subject from an standpoint.

Mr. GRADY reaches the wise conclusion that the South must be allowed to settle the social relations of the races according to her own views of what is right and best. The vicious armies of the North, had they rallied again from their homes, could have enforced and maintained among this unarmed people the policy indicated in the Civil Rights bill. The South must control the social relations of the two races. It is right that she should have this control. The problem is hers, and her very existence depends upon its proper solution. Every consideration of policy, of honor, of pride, impels her to the strictest justice. For these reasons she has assumed to herself the right to settle the race problem and this right she can never yield. This implies the clear and unmistakable domination of the white race in the South. Fully aware of her responsibility, conscious that every error may endanger her peace and her reputation, she says to the world, "Leave this problem to my working out."

This article is the soundest and most statesmanlike we have yet seen from Mr. GRADY. It is written with the air of a practical man and yet with the convictions of a sage, and is the clearest answer yet made to the vexatious queries of the race problem."

Over against this must be set the flat contradiction which the colored press give to Mr. Grady's facts, and their marked distrust of the arguments which he uses. The *New York Freeman* says:

"Mr. Grady's article in the current number of the *Century* in reply to Mr. Cable's article, has evidently upset the Waterbury (Conn.) state of affairs in the South. We would like our contemporary to remember that no Englishman has yet written a true opinion of the real condition of the Irish people or of the proper course which England should pursue toward that people. Mr. Grady sees only one side of the picture. All his feelings and interests are centred in his class, and it is to magnify the virtues of the whites and the vices of the blacks—the domination of the whites and subjugation of the blacks; instead of the peaceful joint domination of all classes of citizens zealous for the common good. To say that one class of co-equal citizens shall dominate at the expense of another; that one shall enjoy certain public benefits and another be denied; that such a thing as forever keeping separate classes, living as neighbors, having common interests and actuated by like natural and artificial desires—is most

absurd and ridiculous. The conditions in the South are highly abnormal, and the lines upon which the South proposes to solve the problem, as outlined by Mr. Grady, will bring trouble in the future, when colored men have acquired a more comprehensive idea of the common benefits, as well as the common obligations, of co-equal citizenship."

And again.

"Mr. Grady pleads that the South be left to work out the race problem as they deem it best and wisest. We have no doubt his plea will be granted. We protest against the lines upon which the South proposes to work out that problem, and venture to say, if conscientiously adhered to, it will eventually produce results which none of us honestly desire to see."

The *Christian Recorder* wisely decides that to "look forward and not backward" is the safer course:

"There can be no doubt that we are advancing. That is both races, in respect to the associate powers and duties of the two race-varieties. As a matter of fact, we have little time to deal with the shadows of the past. The coming events that cast their shadows before will, we trust, so revolutionize our minds, that we shall see how to walk with him, if not to walk with God."

But a correspondent of the same paper, on the contrary, is not so hopeful, and, we fear, only slightly exaggerates the bitter truth when he says: "many of the negroes would rather be white than go to Heaven."

"MR. EDITOR.—We have read so much from so many able men, on the restoration of the Democratic party to power, and the hardy knowledge that our opinion is of the change. However, this much appears: that there can come but very little good to the negro. The majority of the negro race in this country is in the South, and there to stay. Among the democrats or Southern whites (ex-slave masters), the negro has some friends in a general way, but that friendship depends almost entirely upon the negro's recognition of the place assigned by the white man. Whenever the negro gets above this, or rises in manhood high enough to feel himself the white man's equal, his white friends in the South are few, scarce one. Nor is there any sign of a change of sentiment in this direction in the South. The rising generation among the Southern whites are being educated in care much less than the less respect for the negro than their fathers did, many of whom have in former times sucked at the bosom of negro woman. (Many of the negroes had rather be white than go to heaven.)"

Considering these things, in addition to the fact that about all Southern white men are democrats, and how unfriendly to negro equality the Democratic party has always been and a large majority of it is to-day, and the fact that there can be no justice only in equality, we utterly fail to see wherein the American negro can derive any benefit whatever by the restoration of the Democratic party to power, unless it serves to bring out their (the negroes') manhood, drive them from white men to themselves, from the land where they have been slaves and sufferers to their own free land, there to lift up the banner of the King of glory and redeem them from darkness, superstition, heathenism and death. If the reign of terror that will follow the elevation of a Democratic President, especially among the low, ignorant, negro-hating Democrats of the South, shall fail to turn the eye of the negro toward Africa, we are bound to retrograde. We should therefore draw near to the God who started our emancipation, and there, at his feet, pray and wait until he completely breaks the chains that bind us, and are being tightened by cruel, hard-hearted, pretentious, ungodly white men, North and South."

It is true that the kindly relations which are indicated by such an incident as the following are, and must continue to be, of the past?

"At Trinity church, Staunton, last week Mary Ann Carter, a former slave, and a consistent member of that church, died. At her funeral a large number of the white congregation were in attendance, and the fine choir of the church gave the musical service. The pall bearers were all prominent white citizens, including the mayor of the city."

We quote almost entire from the *Memphis Appeal* an article which, coming from one of the influential journals of the South, is worth putting on record for reference in the future.

"A few evenings ago there was a large meeting of the colored people of Norfolk, Va., at which the regularly appointed officers discussed for several hours the proposition: 'Can a colored citizen become a Democrat through principle?' The affirmative speakers maintained that the re-

publican party, but to the use of their freedom and heartily commended the utterances of President Cleveland in his inaugural regard to the freedmen, and found not one obstacle in the way of their race to become Democrats."

The audience almost unanimously voted that a colored citizen could become a Democrat through principle. The discussion of such a question is as absurd as if the problem had been, 'Can a sinner become a Christian?' But the bare fact that the colored people have become so tolerant as to permit and engage in the discussion of a question which ten years ago they would have mobbed any colored man who had dared to take the affirmative side, shows the most hopeful and wonderful signs of progress. The Democratic party of the South is composed of the intelligent, taxpaying wealth of the South who give employment to the blacks, and to assume that it is impossible for colored men to become Democrats is to assume that there is an irrepressible conflict between the races, that their destiny and interests are diametrically opposite and that there is an antagonism which can never be reconciled. We hope the discussion which the colored people of Virginia have commenced will extend throughout the South, for it will throw a flood of light on their benighted minds and result in convincing them that at the formation of the government every State in the Union was a slave State but one, that the Northern people freed their slaves by selling them to the slave-dealers of the South, and that the Lincoln administration would have guaranteed perpetual slavery if the rebels had disbanded their armies and renewed their loyalty to the Union. The same laws govern all people, and that is immutable. The prejudice of the whites against the blacks in the North is five-fold stronger than in the South. While the North maintains its deep prejudice of race, the people of the South have a general and strong sympathy for the negro, and as both races are one in common interests they will ultimately vote together to advance and protect these interests. Immediately after the late Presidential election there was a panic among the blacks, who feared the fulfillment of the predictions of their leaders that they would be remanded back to slavery. In the future elections they will solve the problem, 'Can a colored citizen become a Democrat through principle?' by casting their vote on the principle that it is to their interest to co-operate with the whites in the management of the government, and in a spirit of conciliation, dealing with the race question. The people of no section can have such vital interest in the race question as the blacks and whites of the South. It is an issue which means everything to them—very day life, prosperity, peace, growth and progress. They are meeting the question without passion or prejudice, and with a full understanding of its tremendous import."

The *N. O. Picayune* has fallen into line on the question of Government reform and sets an example of plain speaking which deserves to be followed both in word and deed:

"The most favorable symptom observable in the present political condition of the country is not so much the actual adoption of any special measure of reform as the general awakening of the people to the necessity of reform in every department of public life. The standard has been elevated, and misdemeanors which were readily overlooked a decade ago are now pronounced intolerable. Indeed there seems to be no doubt that Mr. Cleveland's election was mainly due to the conviction of those honest thousands who held the balance of power, that no sufficient remedy for existing abuses would be applied by the candidate representing the dominant element in the Republican party. The Presidential contest of 1884 was not a struggle for measure, but for men—not for one man, or two, but for the purity of the whole civil list. Men saw that there was no longer any party issue so urgent that for its sake the extravagance and fraud which had become prevalent among Republican aspirants should be perpetuated."

Pope's proposition that that form of government is best which is best administered, does not bear the closest examination; but it is true that the best form of government may become inoperative or oppressive under an incompetent or a corrupt administration. It was precisely this discovery which induced the good people of the United States to retire the Republican party from the control of the executive branch of the Federal Government, and we believe that it is about to lead to some very general and important changes in State and municipal governments throughout the country."

Let us hope that the demoralization to which we have referred was only a passing phase in the history of the Union. There is, however, certainly a great deal to be done before we shall be thoroughly rid of the consequences of that era. As we intimated at the outset, the hope of the country for the present is to be found rather in the popular temper than in anything actually achieved, if we may except the election of Mr. Cleveland, and the initial steps of his administration. But public opinion, really alive and enlightened, is irresistible, and it is the solemn duty of the press and of all citizens of influence to keep it alive and enlightened. Without fear or favor, let the light into every dark and noisome recess of official iniquity, and the people will not be long in naming the men who ought to go."

We have recently seen here in New Orleans what a progressive impulse a little plain truth may prove to be. The people get on the trail of one villainy and it leads them to a score of others. Ring rule is a concatenation of mutually dependent evils; and, like every other chain, its whole strength lies in its weakest link. We strike at murder and we reach bribery, perjury and subornation of perjury; we find juries venal, jails insecure, and jailers negligent, worse than negligent. We ask ourselves why so monstrous a condition of affairs has been so long tolerated, and we discover that it is the direct result of a system of misgovernment formed in other times, through the State. We touch a remote member with the sword of justice, and the whole body writhes in agony. At last the people begin to stir for reform, and that all this time about the worst of wrongs has not been prompted by malicious and disappointed office-seekers. The truth dawned on them, and they are alarmed to find that the very foundations of civilization are rotting under their feet."

The *Charleston News & Courier* makes some statements in regard to the labor question in South Carolina, which are said to have been gathered from the reports of correspondents in all parts of the State, and which would, we believe, be corroborated by testimony from the South in general. The present generation of colored people are feeling most seriously the lack of the ability to work hard and steadily, which was their fathers perhaps the one compensation of slavery, and so long as they continue to be the only source from which the South can draw her labor supply, progress must be seriously impeded. Importations of skilled labor or training of the raw material already at hand, are the alternatives for the employer of labor, who refuses to accept ruin as inevitable.

"At least three-fourths of the agricultural laborers in South Carolina are colored persons, and their condition is somewhat better than it was a year ago. Provisions are cheap and abundant, so that the wants of the laborer are easily satisfied. The emigration of colored people from the particular parts of the State has not affected the effective supply of labor, as the farmers find that they can hire as many laborers as they need. It is probable, however, that the diminishing number of laborers is rather a tendency to increase the use of labor-saving implements and give more attention than formerly to the crops which require but little working by hand.

The rate of wages paid ranges from \$5 to \$12 a month, with rations. Where the share system is in vogue, from one-third to one-half of the crop goes to the laborer and the remainder to the land owner. Occasionally the laborers receive as much as half the crop and pay half the cost of fertilizers, or furnish one-half the number of work animals required. The estimate of the value of colored labor differ considerably, but it is agreed that the colored laborers are both diligent and trustworthy, when they are supervised and directed by the whites. When left without supervision, the results are much less satisfactory.

The colored laborers are reported to be careless and extravagant, spending freely all they make. It is a striking fact that the old slave negroes, as they are called—the actual freedmen who were trained as laborers in slavery times—work hard and steadily, and command good wages while the 'new' negroes, who have grown up since emancipation, are disposed to be idle and shirk work."

## SOUTHERN SKETCHES.

BY ORRA LANGHORNE.

## Colored People Further South.

Some months ago I learned, to my great surprise, that an accomplished Virginia lady, a teacher of long experience, known through our large connection as "Cousin Frances," had gone to one of the Gulf States to teach a colored school under the care of the Episcopal Church.

I was surprised, because our esteemed cousin, an earnest and conscientious woman, had always been intensely devoted to Southern ideas, and was, I fancied, altogether opposed to the new order of things in our land. Upon inquiry, we learned from a mutual friend that the manner of her going to her uninvited field of labor was on this wise: A worthy clergyman from the South, who had become much interested in a mission school for colored people in his diocese when visiting relatives in Virginia, expressed a strong desire to secure a first-rate white teacher for his school. Finding Cousin Frances without an engagement just then, he proposed to her to take the place. Cousin Frances had been teaching colored Sunday schools all her life, and had done much for the improvement of colored people wherever she had come in contact with them, but had never thought of engaging in educating them. At first she demurred from undertaking the position offered, but when the minister told her earnestly that she was like the prophet Jonah in turning from a duty committed to her charge, she at once gave up all objections and cheerfully set out to the modern Nineveh.

After learning this much, I was anxious to know more, and promptly wrote to the lady in question, making numerous enquiries in regard to her pupils and the colored people of the district where she is living. Cousin Frances kindly answered my questions, and also enclosed me a copy of a letter she had written some months ago to the *Southern Churchman* in order to satisfy the curiosity of others, who, like myself, were anxious to hear from her in this new field of labor.

## FROM THE CHURCHMAN:

"Our school at first consisted of about 25 or 30 pupils, but soon increased to 40. A small sum was charged each month, from 50c. to \$1.00. This was to pay for fuel, the care of the building, the services of an organist, &c. A lay reader opens the school. There is a short service from the Prayer Book, the confession, Lord's prayer, chanting the Venite and Jubilate, singing two hymns, and a psalm read responsively. Then follows a Bible lesson with explanations, and on Friday reciting the commandments. Then come regular studies, reading, spelling, arithmetic, geography, grammar and writing. Some of the pupils had attended other schools, but had learned nothing thoroughly. Only a few could not read at all, and these learned to read rapidly.

I have often been asked how colored children compare in capacity with those of our own race at the same age. It is hardly fair to compare them when we remember from what different surroundings they are taken. In the mere matter of speech, their dialect differs so from ours, words are so unknown to them, that explanations must be explained. Books they do not see or hear talked of at home; school is to them a new world, where they gain quite other ideas and aims from those they see influencing their families.

"From their circumstances, poverty, &c., they do not go about and 'pick up' as most white children do. One effect of this is the difficulty they have in grasping with geography. Distance is a mystery. As they do not hear English properly spoken, I am almost in despair at making them apply the rules of grammar, though some of my pupils say they have been 'studying it' for years. In arithmetic I am disappointed in them. They seem emphatically inaccurate in all their modes of thought and action.

"In this comparison, unfavorable on the whole, allowances must be made for the fact that it is drawn from only five months' experience in teaching colored children, and the further consideration of their degraded and pitifully ignorant condition in this region. If our race had been in the same condition for the last two hundred years, subject to the same influences of heredity and immorality, it is questionable if the same sad results would not have appeared. It ought surely to make those who see it feel it to be the duty of our race to go to the rescue of this people, and redouble our zeal and labor for their good."

## FROM A LETTER ANSWERING QUESTIONS.

"Our organist is a colored woman, a worthy member of the church and a really good musician—has 'taste, good ear, quick execution.' I have often wondered at the way her fingers glided over the keys and gave the ordinary chants and church music as creditably as many a professor with much

more pretension, for she had been a cook and washerwoman. She reads music remarkably well, and can play anything I ever gave her, at sight. I have wished sometimes that people who used to call me proud could have seen this black man teaching me a new chant, and heard her encourage me. 'I think you will soon learn it.' She is as well educated as any colored woman I have seen, though she has not much acquaintance with books, and speaks bad grammar.

"The lay reader is a very remarkable man, 70 years old, as black as jet itself, as keen and subtle a thinker and debater as one often meets. The Bishop says an argument he had with him lately would have done credit to a Philadelphia lawyer.

"I always give those assistants in our school their titles as 'Mr.' and 'Mrs.' though I know white people who would object to my doing so. I think it gives the colored people self-respect, and is a very small concession for us to make. If St. Paul could say 'all things to all men, if by any means he might save some,' surely we can do that little. I always try to realize that I am associated with them and that I would gladly offer my whole heart and hand to the cause of saving the colored people from sin. 'The conviction I feel of their needings a friend—thousands of friends—makes me willing to give to their need the rest of my life.'

"You ask to what churches most of the colored people here belong. The Methodist is much the most popular with them everywhere, I think, at least it is so in the South.

"As to the general quality of the colored people here, the most degraded, helpless, hopeless human beings I have ever known are the average cotton pickers. Very few own property—almost none.

"The Creole Negro, Spanish white blood, or rather Mulatto Creole, is of a more enterprising nature than the pure black Negro; and whatever of enterprise is seen with the colored people, seems to be among them.

"There are some good journeyman mechanics—carpenters and smiths—but no bosses, no contractors. I do not know of any who can be called rich; the best home I know of, owned by a Negro is a simple plain cottage.

"I have heard gentlemen here, kindly inclined to the race, say there are no stores, shops, markets, or even oyster stands kept by Negroes. This is discouraging as to their future independent or self-sustaining prospects.

## VIRGINIA IN CONTRAST WITH THE GULF STATES.

As Cousin Frances says, this account of Southern colored people is discouraging, and it shows that they are very far behind our Virginia Africans that I must confess to being quite proud of our colored people for the very gratifying contrast they present to this depressing picture. The difference is not hard to understand when one looks back a little to the condition of the two districts in ante-bellum days. In the far South where the land was held in large tracts, are people who often spent much of their time in distant cities, or when at home only came in contact with their house servants; the plantation hands being left wholly to the overseers, whose only interest was to get as much work as they could out of them. Very little was ever done for their moral and mental improvement, and as the slave trade was kept up to some extent in spite of the laws against it, there was a steady supply of the savage element from heathen lands mingled with those who were acquiring civilization under so many disadvantages in a Christian country.

As I have said before, Virginia is so much nearer the great centres, and there is so much travelling about done by our people, black and white, that new ideas are constantly introduced among us, and there are many evidences of progress in both races. In Lynchburg the colored people have almost a monopoly of the work in tobacco factories, which is a trade in itself. Those who have any spirit about them and do the work skilfully have good chances for getting a fair start on the road to becoming a property holders.

"The factories give rise to other branches of business, and there are numerous eating-houses and small shops around them, kept by either foreigners or colored people."

"Some of the letter writers very well in merchandize, and now keep large grocery and provision stores, the stock including a

little of everything likely to be wanted in the neighborhood, and being freely patronized by the white people around them.

As to the mechanical trades, the Negroes are getting ahead so fast in them that the color line often seems to be lost, and a Negro contractor constantly employs white hands, or vice versa.

Two of the busiest contractors among our house builders are colored men. One of them lost heavily by the flood some years ago, and, perhaps owing to his loss, "calm," has not been able to accumulate more than enough to buy a comfortable house for himself and his old mother, but the other is a very well-to-do man, owning valuable real estate, which he is constantly increasing.

The colored people are gaining a foothold in other trades in a way that is very encouraging, when one remembers the difficulties they have in learning the trades.

A white contractor will refuse to teach a Negro boy his trade, but if he can in some way pick up enough to be able to work at it, the white man will forget his prejudice and employ the Negro, always securing his services at a lower rate than white hands would demand.

I need not long ago, of a case which will illustrate the competition of among the chances of different races. A rich merchant of the city, noted for his frugal methods, wished to have his handsome residence repainted. He sent for one of the best painters in the city, who always positively refused to employ Negroes on work where they are employed. The merchant told him his business, and desired the painter to tell him what the work would cost, give him his ideas as to the most tasteful manner of doing it, the materials to be used, &c., &c.

The painter, supposing a good job was in store for him, answered to the questions asked of him, and freely discussed the work, the merchant busily taking notes the while. They parted, the merchant saying he would consider the subject.

A day or two later the painter, walking round that way to look after his job, found a couple of colored men busily engaged upon it, the merchant himself having purchased the materials and undertaken to do the work. The Negroes had managed to pick up some knowledge of the business, and having, by practice, acquired some skill in the materials and undertakings, the satisfaction of the owner, working at much lower rates than the professional would have charged, and succeeding fairly well, to his great disgust.

There seems to be a general desire among the colored people to own their houses, and the snug little dwellings occupied by families who have struggled hard for their position, might be counted by hundreds in Lynchburg.

A few more enterprising and more fortunate than the majority, own several houses rent them, not unfrequently to white people. I have had much curiosity as to the investments made by the successful colored people, and hear of one or two who have been buying bonds, though by far the greater number seek real estate. The country round quite a number of small farms are owned by colored people.

The house we live in was built by a colored man.

My husband has always said it is the duty of the old slave holders to employ Negroes to work for them, whenever it is in their power to do so, as it is impossible for the colored people to be honest and independent without the assistance and encouragement of their white fellow citizens.

When the contract was offered, the lowest bid, as usual, came from a Negro contractor. When it was given to him no little indignation was expressed by a white carpenter who had counted on securing the job, but had no better reasons to give for his opinions upon the subject, than that a "white man ought to patronize his own race."

The contractor sublet various portions of the job, doing the wood work himself, chiefly employing Negro carpenters, but part of the time an old German was in his force, who is in the habit of taking his wife with him to help him, and she is said to be quite skillful in putting on locks, hinges, &c. The brick work was given to a colored mason, who employed African bricklayers as assistants, and is one of the enterprising colored men of the city, already being a "boss" of sorts, and beginning to own property. He is extremely industrious, and when according to custom here, all the other hands stopped an hour for dinner, the brick mason would always eat a hasty meal and work steadily while the rest were loitering about.

This man is black, near middle age, was a slave in early life, and had no chances whatever for book learning. He signs checks and contracts in queer hieroglyphics, and I learned that he is unable to make a single letter except those which, by courtesy, are understood to form his own name. In talking with him on the subject, he said, regretfully, "while he was in the habit of presenting

checks, had insisted upon his learning to write his name. They had told him that a man who had so many business transactions as he, ought not to have to call on some one else to sign for him, make his mark, and call for witnesses, &c., and had so kindly offered to teach him to form the letters, and so patiently encouraged his attempts, that at last the difficult lesson was learned. It was hard for a man who had never been to school, and was unaccustomed to any penmanship smaller than a trowel, to handle a pen; but he had at last accomplished it, and his signature is not likely to be mistaken for that of anybody else.

The plastering was sub-let to a white man, who employed an Negro hards, and the painting given to a Caucasian, who, with the assistance of another white man, did his own job. The workers on the building all got along in the most harmonious manner, and perfectly kind feeling seemed to prevail among them.

The new Baptist church belonging to the colored people is one of the handsomest buildings in the city, and has cost over thirty thousand dollars. There is a small debt on it, but the trustees are energetically working to pay it off.

When, some time ago, they wanted to borrow part of the money for the building, they found the white bankers and brokers very willing to advance the funds on reasonable terms. I am very glad to say that, on the whole, there is good feeling between the two races in Lynchburg, and a thousand ties of interest and affection unite the white man and the black man, whose lot has been cast together in our land.

## How They Got Their Charts.

Two Hampton girls teaching together in an ill furnished country school, thus supplied themselves with charts.

We still teach the "Word Method." We have made several charts; a reading and an arithmetic, a picture, and a drawing chart. We have an arithmetic chart for our advanced scholars also. We made our reading chart this way: we bought sheets of paper three-fourth yards long and one-half yard wide, and we got a first reader and cut the leaves out so as to get the pictures. We then put the leaf with the picture right in the middle of the page with mullage, then cut it out on the other side, so as the second lesson with its picture could show. We then turned it on the first page and wrote all the words of the lesson around it. In that way they have the lessons both in printing and script. We did that way until we got sixteen charts. We then put them all together and bound them at the top making one book. Our Superintendent told us that our school was the best in the County last year, and it shall be better this year. We will describe our picture chart next time.

We are very truly yours,

R. J. D. & J. H. B.

## Horsford's Acid Phosphate.

IN NERVOUS DISEASES.

Dr. Henry, New York, says: "In nervous disease I know of no preparation to equal it."

## JAMES PYLE'S

## PEARLINE

The Great Invention,

FOR EASY WASHING,

IN HARD OR SOFT, HOT OR COLD WATER.

Without Harsh, F.B.D. or S.A.D. and

particularly adapted to Warm Climates.

No family, rich or poor should be without it.

Sold by all Grocers, but beware of false imitations. *PEARLINE* is manufactured only by

JAMES PYLE, NEW YORK.

Horsford's Acid Phosphate.

FOR LEMON'S OR LIME JUICE,

is a superior substitute, and its use is positively beneficial to health.

BY ALICE M. BACON.

It is rather a puzzle to one who is trying to help the people down here, to know how to best attend to the needs of the very poor in the vicinity of Hampton. The country is miserably poor; there are no manufactures to call for laborers; there is no capital with which to subdue and fertilize the waste, worn-out land; fishing and oystering are almost the only industries to which the people can turn in order to support themselves, and even in those businesses there are no directors or employers of labor; every man who works, works for himself, and consequently there is a waste of labor and a loss of power, from the lack of wise heads to employ and direct the many hands.

The population is dense all along the seacoast, and stretches back in unexpected directions into the country. To this region, under the leadership of Moses, the Israelites came during the war, and here they stayed, when the war was over, too poor and ignorant to go elsewhere but with no way open to them by which they might advance to a more advanced living than the life that will keep the human body and soul together, in the partnership in which God has joined them. What they have done for themselves, with the aid of the Lord, is a race, and a noble one, since the Lord and his angels ceased their thunder, is hopeful, even wonderful, and the rising generation is in many ways far in advance of the freed slaves who built the nation. But the older ones are still living among us who need our help and sympathy, and may perhaps be able to give to some of us in return some new ideas with which to carry on our work.

Do not think in this region there is much extreme want, much suffering from lack of the necessities of life. The poorest can obtain food for themselves and their families, and the poor are as numerous as the poor living in great cities, and except during a long hard winter like the last, following close upon a severe drought, I do not think that actual suffering is so great as it is in the cities. I do not get ahead at all in the struggle, the actual certainty of an old age of want when the working days are past is what seems to me the most pitiful thing in the lot of the poor. We must work, we must work enough to get around and keep all busy, and as a result there are a large number who get out of the habit of working and who spend their time loafing and going to work but generally come to work late.

There is within the school a Missionary Society which is trying, as best it can, to grapple with the problem which the conditions of life at Hampton present to all thinking minds. Our own class alone has a number of members, and does not have much money to give to the work that lies so appealingly before them, but there are many in the school who give of their little to help the work. The work consists of those found there. There are between fifty and sixty of the students, boys and girls, who every Sunday go out in different directions from the school to visit the poor and sick. And then back the missionary workers in the bracelet society which gives help in cases where help is needed. There is also a sewing society which give help for the last few months as there have been no funds to carry it on, but we are hoping to get it back into a working basis pretty soon. I have tried to find out the condition of those they visit and to help them as best they can. One of our most active workers collected once a week for the poor, and the money came from the students' dining room and carries them to the most needy of the families under their special care. After the heavy snow storm that has been falling, the poor people who have to wait into winter some few weeks ago, loads of wood were sent out to the poor people whose names were sent in by the missionary workers, and many a poor person had that came in that time of need.

A few days ago there came a knock at my door, and when I opened and looked out, I saw a Negro looking in. He had a basket on his head, a little Negro looking scarcely able to carry the great empty basket that she held on one arm. "Come in," I said, but the figure did not move. "Can't you get in?" I called. "I'm mighty trembly cause I has'n't had nothin' to eat." That she was "mighty trembly" was evident; so I brought her in and set her down in a chair and gave her something to eat. Before long she asked me questions. Then upon inquiry I learned that her name was Betsy Davis, that she lived over in Hampton, and that she was too old and feeble to do any work and had no one to help her except her daughter whose husband was out of work and who had a family of seven children. Then I remembered that Aunt Betsy Davis was one of the society now on the porch for

lack of funds. And since the society went down, the poor old aunts who had shared its bounties had felt as if their chief prop were taken away. Having cheered and encouraged her and attended to her immediate needs, I sent her home, resolving to visit her as soon as possible and see how she lived.

Sunday proved a bright day, so about ten o'clock I sallied forth to make two or three calls. If my readers care to accompany me they will see, I think, that I am not far from the truth.

Our walk leads over Hampton bridge and through the main street of the little town. It is too early for people to be going to church and the streets are full of loafers, young men either colored or white, gathered about the doors of one or two bar rooms. Soon we turn out of the main street, cross a bridge over a stream, and enter a street where there are some of the old time, picturesque low cabins and some of the newer, more pretentious, but ugly and ungainly clapboarded houses, which indicate the existence of a new quarter of the town. This is not a pleasant quarter of the town; many of the men that we meet, have hard, brutal, some of them even villainous faces, and the pleasant words that we hear are few and far between from the "missionary" are wanting, but in place is a suspicious, antagonistic look that makes us feel as if our visit to this street were not a welcome one. With bright smiles on their little brown faces and how they swarm about the cabin doors or on the fences in soggy, interested rows, watching the men engaged in the interesting and profitable game of cards.

But we are coming to the end of the street, and must stop and enquire for Aunt Betsy. Here is a pleasant looking man, smoking his morning pipe in the stupor by him his eyes are closed, and he is leaning against a pole, with a "mornin", ladies, that shows his willingness to answer our questions.

"I've been askin' ut where Aunt Betsy Davis lives, but they can't tell me," says a young man, who starts out a little low cabin a few steps farther on and tells us that she lives there. So we go, but stop on the way to admire a little cabin whose unpainted weather-beaten walls are so dirty that it is almost black. Instead of a frame work has entirely parted company with the ricketty brick chimney except just where the two rest upon the ground. Just by the door, growing up rapidly, is a small tree, a soft mass of delicate green against the grey boards and, in the tiny yard, a possum in the full bloom sways its dainty bushy tail in the air.

Streams of happy, ragged children issue from the door. Surely the "Old Kentucky Home" of the song could not have been more ideally picturesque than this little bit of

But as we pause to take it all in, our friend with the pipe comes up behind and points out the house we are looking for. "That is the place," he says, "and I will lose no time, for he follows on after us and does not leave us until we have knocked at the door and Aunt Betsey's feeble voice has called out, 'How do you do?' and the moving of furniture that leads us to suppose that the front door is not the one commonly used by Aunt Betsey's guests. Vainly we expostulate, vainly we protest, but he is too hard-headed to mind, we will go in at the back door. Having once started to let us in that way, she does not mean to have us go in by any other way." So we go in, and, after a short while, the poor soul clears away the furniture, and at last we are left in. "Well, Aunt Betsey, how are you to-day?" "See to'table Miss, I am as well as I can, but I am tired," she says, and she then shows us to the old woman hurriedly to find those chairs enough for her visitors.

And then while we sit there, she tells us the story of her life. She has had thirteen children there, and then was sold south to Louisiana, away from all her children, and how when she came on, her children were sold to the man who came with their slaves to keep them away from the Yankees. And the wrinkled old face lights up with a joyful smile as she says reverently, "But I am glad to see the man days over all and be done set us free."

"Yes Auntie, it was the Lord, more so than the Yankees, who set you all free," he said. "I'm thinking of that wonderful piece of history that was the purpose we were worked out through the selfishness and sectional disputes of men.

"Dat's so, boney, de Yankees, dey did it, hut de Lord he had de power over 'em all," he said. And then he went on and told us how South Carolina was sold after the war. "I was sold all over, thirty years after she was sold," he said. "South and how out of her thirteen children there were only three were left, 'and dey don't care for me no more'n if I was a dog, exusin' de dog, gal child, and she's got a heavy family of children," he said. "I takes kear er bibe 'em all," he said.

Such a happy face as Aunt Betsy's is, and such a childlike, immovable faith as she has

in the Lord, care for his own, that even here in life of bondage, of disappointment, of weary labor, and her unloved, childless, penniless, lonely old age can not take away her trust in him. He's done come to her, and she's glad. She finished her account of her life with a simple "an by-n-by de Lord 'll come an take his own, an now, honey, I waitin' for him." He's done come to her, and she's glad. The smile deepened and grew more radiant, while an "we'll get her hearers and silence dwelt for a moment in the little cabin. When we were in the little cabin, she was so full, and "of such is the Kingdom of Heaven" were the words that were in one minds as we went our way. There, in that little bare cabin, not knowing, spending an old age of hardship and suffering after a life of unrequited toil, lives one of the happiest women that I have ever seen. Surely "De Lord take his own, an now, honey, I waitin' for him."

But here we are at another house, where a sick girl lives with her parents and a little sister. We go in to find her sitting up on the edge of the bed, the curtains of the window behind her, the light of the day, and she is afflicted with the horror for two years with rheumatism and, unable to help herself, hates to be a burden on her parents. With an invalid's appetite, she can't eat the things that an ordinary person would eat, and she is obliged to eat the things that she needs for herself. It is a hard lot and she feels its hardness and rebels against it.

She has not that confidence in the righteousness of God which the saints possess, she has no faith in the health of Aunt Betsy's soul, she frets and worries and complains of her lot. How shall we help her? So far as outward circumstances to her is comfortable compared with Aunt Betsy's, she has no complaint. But her nervousness and irritability of an invalid, the entire absence of religious faith or hope, all these together make her too roughly unhappy. It is hard to help her for the reason that she is so much like you and me, which is that of so many others in the world, a need for something upon which to stay her restless, dissatisfied mind. We go away dissatisfied ourselves, and have set up our standard of life, and then we look at a hard young girl with great, wretched, pleading eyes as a foil to that old, withered but joyous picture that we found at Aunt Betsy's.

Let us stop in a moment at Mrs. Johnson's house, where our blind man's family is going to spend an hour in his absence. Through the half open back door, we see the children with clean shining faces, looking wondering, and at a rap bring the mother out of the nursery room. A curly-headed boy, with a round eye and a merry smile, looking like a little girl, her face is so young and childlike. If it were not for the five children, it would be hard to believe her more than fifteen. Thus the children is keeping her young, so she is quite young. The five children are healthy, fat and strong, and the little mother looks bright, and less careworn than before her husband went away. She says that she is "right smart" when we enquire about her health, and that she is "right smart" all well. She lifts the fat, fifteen months baby when we ask after him, and he stares at us placidly, sucking his thumb, clinging to his mother's neck, while the other little faces peering out from behind him, all look at him. He makes a pretty group in the low doorway.

We have one more place to visit, the house of a well-to-do family, but where there are six children left motherless six weeks after the death of their dear grandmother. The youngest was only two months old when its mother died, and the old lady feels a great responsibility in the care of so small a baby. The little mite is brought out for our inspection; a little brown, fat, round-edged baby, with a little pinkish-black hair and with great bright eyes that look intelligently at us while we talk. "What is his name?" we ask, and find some difficulty in making out the answer. "Brazilium" was all we could get after two or three guesses. The old lady's explanation of surprise at the unfamiliar word, the old lady adds "I don't know jes' what it is, Jeem," got it out a book."

But we must go on now, for it is nearly dinner time, so we bid good morning and depart, feeling that perhaps we have gained more good out of our morning walk than we would have if we had gone to church.

A week or so ago I was called to go over to the office to see a woman who had come applying for help. She was a large, strong-looking, very black woman, her auburn hair set off to advantage by a black headband. She was known to me as Ellen Parsons, widow of Sam Parsons, and her residence as "near Nick Johnsons." She began her story of her needs by saying "I 'sn't tellin' you nuffin I 's 'tendin' you de 'Lord's troof an' de 'troof's always true." Then she told me how she lived, and as she is a sample of the way that most of the colored people live who are scattered through the agricultural districts, perhaps my readers will be interested to hear. Ellen

Parsons has been a widow for six years and has a family of five children. She lives about five miles out from the town of Hampden in the hills of the "Bates Farm." She owns no land herself but has a house that somebody has allowed her to build on the land, and she hires two acres of this place for growing on which she raises her family. She has to pay a man \$1.50 an acre for plowing, and then the rest of the work she does herself. She expects to raise enough corn in the summer to keep her family through the winter, but then what time she has to spare from her own corn she hires out as a field hand, and so gains a little money for her use in the winter. She has a small garden, and the crop so that she had not enough to last her through, and her supply fell short before the long, hard winter was over, so she walked in to see what help she could get to help her along until the spring work began. I asked her if she hired them used to school, to which she answered that she had not, but that she was nuffin' but one on em had got right smart 'o book learnin'. She went to school for awhile but at las' she knowed more dan de teacher so den she did n't go no more. I asked her if she had any thing to help her any by her work, to which she replied that "two on em is big chillions and helps me some but one der three is little an can't do much." I asked her if she had any money every day de Lord sends, and dat's de troof," When I told her that I would come out and see her, she appeared much pleased and told me that she was glad to hear of my coming, and that "de troof" an de troof 's always welcome.

So they confide, day after day, each with a pitiful story, of struggles against want, of hard labor, of sickness, of calamity from fire or flood, of death, of sorrow, of grief. They are different in detail, so sadly alike in general character. Surely we owe them something; we can not let them suffer, and yet how can we help them in such a way that they will not be a burden to us? We can not help in any way, at any cost, help them permanently up into a higher condition of living, or must they be down here always, close to that terrible ocean of want, whose waves may at any moment sweep them down there, where there is no mercy? It seems but a drop in the bucket, the amount of work that one person or one society can do in relieving these people, but one helped up here and another helped down there, and so the work goes on, done more quickly than we think.

I have given these few gleanings from the great field that lies about us here, that Northern friends may find a little to school ground. Little by little, as much as in us lies there is being done a work that will we hope be rightly managed and thoroughly organized, in the future. The small means and the small benevolence may make small means go a great way in helping others, if only the real, greatest, need of the suffering person can be found. What we want is a more general recognition that the socialization whose workings shall be brought before the students in such a way that they can all understand them and shall be able, when they go out into the world, to teach and to obtain for the small means that they can obtain for similar relief societies in the places where they work. Toward this we are working and this end we hope to attain in course of time. We can be assisted by many different means and can only be helped by many trials more or less unsuccessful.

Some of our readers may gain new ideas of the difficulties of the English language if they will look over the following sentences made by the scholars of the Butler school to embody words previously defined and talked over with their teacher; many of the words had never been heard except in school. The sentences are taken from the book given to the first three or thirty different scholars. We give first the word and definition, then the child's effort to use the word in a sentence.

Sewer—a drain. "Get the sewer and drain the milk."

Lave—to wash. "I takes a lave every morning."

Poultice—a plaster. "We had a very poultice lesson."

Poultry—chickens, hens, ducks, etc. "I saw a large poultry of chickens."

Swab—to clean with a cloth. "I had a very pretty little swab and the cat eat it."

Scum—What rises to the surface of a liquid. "The milk is scum, it makes it look very poor." You may scum the milk.

Here are two sentences which are a surprise to their childlike frankness of expression.

"You looks very unclean."

"When a man is drunk, he looks very filthy."

"Toads is a noble effort at definition."

"Places that is dug in the ground and long is a ditch."

Two on the subject of toothache deserve mention.

"Toothache is a fluting in the head."

"Toothache is a very bad misery. I have it every night."

## Letters from Hampton Graduates.

ONE MORE CHRISTMAS TREE LETTER.  
FROM A LITTLE TEACHER WHO IS DOING MORE THAN A LITTLE. WORKING WITHOUT PAY. A POOR PEOPLE TRYING TO BUILD A SCHOOL HOUSE. GRATEFUL MEMORIES OF MR. AND MRS. DIXON. A NORTHERN SCHOOL HOUSE. FROM AN UNDER-GRADUATE TEACHER. TEN YEARS A TEACHER.

ONE MORE CHRISTMAS TREE LETTER.  
A little woman, who is making all her inches count in faithful work for her people, gives an interesting account of her school and temperance work, her Christmas tree, and the poor little ones for whom she is laboring under the extra disadvantage—which our graduates have not infrequently had to bear—of having to wait long for a well earned salary.

Dear Miss — Va., Feb. 15th, 1885.  
Our school opened the first day of October. We have a pretty large school, but not so large as it was last year, as a great many of our large scholars are out. Still we have children coming in nearly every day. We have but one hundred and nine on rolls at present; still our hands are as full as can be. We have finished our fourth month, and are just waiting for the snow, which is about knee deep, to melt a little, so as to begin our fifth and last month. I shall be very sorry when it is ended, as I have to give up these dear little children, and I shall hate to see the pleading faces of some of the parents begging us to return next term; but I am afraid that we can't return unless we get a school or something to do when we are through here. We haven't been paid but once this term, and then not for a whole month. They promised to do better, but they haven't so far. Last year I did not get a cent of money from the time I came to the county, in January, until September. If we could get something to do when our school closed, we could save a part until next term to live upon, and could afford better to wait. We had two barrels sent by some lady friends of mine to our children for their Christmas tree. We had popcorn, red berries, bags of candy. Christmas cards, glass balls, toys, and some things made of colored papers by the little kindergarten children of Brookline, Mass., on both trees, and clothes, shoes, and hats in pyramids at the bottoms of the trees. On the table, which was on a platform, between the trees, were toys, books, and four large dolls for prizes. The children were very much pleased.

A NEW STUDY.  
We have been teaching alcohol in our school this year. We didn't want to organize our society until we had tried to make the children see the harm of using alcoholic drinks before they signed the pledge. We organized our society two weeks ago. We have now sixty-four members. We had pledges sent from New York, and some from Mass.—I think several hundred, besides a large one to be framed. We are trying to have a little library for our Temperance Society. We just took papers, such as "Apples of Gold" etc., and sewed them together to make books. We have a Sewing Society also. Rosa sends love.

Yours truly,  
J.

—Va., Dec. 2, 1884.

Dear Friend:—  
I wrote you some time since, but don't think my letter reached you.  
Our school is much larger now than it was at this time last year. Still we have twenty-three scholars who have not come in school yet. I have been around to see why it was that they were not in school. To my surprise, in every case the cause of the scholars being out of school was that they did not have clothes and shoes to keep them warm at home, much less at school. Indeed, many of the scholars who are in school have not clothes sufficiently to keep them warm in school. Some of them suffer very much, coming and going from school.

As cold as the weather is, there are many who come without hats or shoes.  
There are many children within a mile of our school who seem not to have either mother or father, but live with some poor, old, helpless woman, who is not able to do anything for them.

The larger number of colored families in this neighborhood have a little piece of land and some kind of a house, but they are exceedingly poor.  
I spent all the money that I am able to spend, and have gotten everything from the

Board of Education that I can to make the school comfortable.

As I said in my other letter, we were going to have a Christmas tree. I think now that if I could get some articles of clothing for those very needy scholars, it would be the best thing I could do for them.

I came into my mind to-day that if I could write to you, you might be able to do us some good by speaking to some families, who might take pleasure in sending these poor children some old clothing which they cannot make use of themselves. They will be thankful for any kind of garment, or garments, let it be ever so little.

I am sorry to feel the necessity of writing such a letter as this, but I am sorry for the children, and I know no other step to take. If you do find anyone who wants to send anything, have them send it by the way of

I trust that I have not asked too much in this letter.

Yours truly,

S.

A POOR PEOPLE TRYING TO BUILD A SCHOOL HOUSE.

One of our most faithful workers adds his testimony upon the question of the colored people's interest in education.

—Va., Feb. 13, 1885.

Dear Friend:—  
I am very much obliged to you for the little "Manners" book you sent me. I was wondering where I could get such a book. It is just the thing I need in my school. It is very interesting.

The next meeting of the teachers' is to be at my school house to-morrow. I am afraid that the county superintendent will not be able to be with us this time, as he is called off to Richmond just now. He is such a good educator, that we are sorry to be without him.

My school has been better attended this winter than it was last. I suppose one reason is, the scholars know me better than they did last winter, and I know where to look for them when they stay away.

Our school house has been too small all the while; but as the school grows, the house becomes so crowded we have not room to scarcely turn round.

The county says it is not able to build us a larger one. Indeed it does not seem to be able to pay the teachers. Some of us, who have taught five months, have not been paid for the first month yet.

One day I thought to myself that I would call the parents and patrons of the school to the school house, and let them see the children, almost one piled on the other. They came and saw things just as they were.

After consulting each other, we made up our minds to go to work and build a room to the one which we have. Our present school room is 18 by 24 feet.

We want to put a room at the end of the present one, of the same size. The parents and patrons are poor, but they are giving a part of what little they have. The patrons, parents and teachers have given sixty dollars, and where they got this money is a wonder to me. The house will cost us a hundred and seventy-five dollars (\$175.00). We do not know where the hundred and fifteen will come from; but we feel sure that if we trust in the Lord, He will bring us out all right.

Our Sunday school is much larger than it was last year.

I am getting to do better work in both day and Sunday school this year than I did last.

Yours truly,

S.

GRATEFUL MEMORIES.

An early student of Hampton, one of the sixty students sent through the course on the fund collected in England for the purpose by Mr. and Mrs. Geo. Dixon, writes gratefully of his benefactors, and gives some account of the work he has been faithfully engaged in ever since he was prepared for it by their benevolence.

—Va., March 2nd, 1885.

Miss C—  
Your kind letter is at hand. I am glad to see that you understand me to be in earnest about the Master's work. I feel thankful that I am able to do something for Him. I am well acquainted with Mr. and Mrs. Dixon. They were my benefactors at Hampton. Had it not been for them, perhaps I should have been bound to-day with the cords of ignorance and sin. I look upon them as father and mother. I am sorry that they have left America. I have never attended the Alumni meet-

ing. It seems to be inconvenient for me to attend.

We have no maps of Palestine; would be very glad to get some. Just last week I was wondering what steps to take to get a map of Palestine. We need one while studying about St. Paul.

If you have any friend who would like to help a struggling little band, please tell them that we would be very glad to get some books for our library. We have very few on hand.

We are getting on very well with our schools.

The times are a little dull just now, but I think that business will open soon.

This leaves my family and self well. Hoping to hear from you soon,

I am, yours truly,

Y.

A NORTHERN SCHOOL HOUSE.

A Hampton graduate, who has done good work in the Butler school and night school at Hampton, and has just gone to take charge of a colored school in the North, is surprised to find disadvantages which he did not expect in that favored region.

—N. J., March 19th, '85.

Miss H—

I am glad to be able to write to you so soon, and to say that my school is now well under way, but am laboring under many disadvantages which I never anticipated. In the first place, I have 54 scholars, in seven different grades, in a room about one-half as large as my room at the Butler. The aisles are about twelve inches wide, and the desks so close together that a boy five years old cannot stand between them. I have very few (only two) blackboards, no maps or globe, and many other things just as this I am without.

They have had four different teachers this term, and as you may expect, the children are very noisy—not only noisy, but bad—at school, in the street, and, I guess, at home. Mr. Holmes makes no mistake when he says that much missionary work can and needs to be done. I think sometimes that stronger one than I should be here.

With all this, I am struck with the marked quietness of the place. Many Quakers, Oh, the scholars are just carried away by these plantation songs. They have begun to learn "Dixie." I have much confidence and hope in success.

I have not visited many homes yet, but have seen D—, T—, and the two W—boys who were once at Hampton.

I was visited yesterday by two of the members of the School Board, who told me they would do whatever they could to help me in making this a good school.

This is the only colored school in the city. I shall try hard to make it better.

Will you, please, as soon as you can, send me the price, name, and place of purchasing such maps as those in the Butler? I want to ask the board for a set like them. I shall be glad to have this as soon as you can send.

I arrived here on the 13th, about 3:15. Fred. P— died the same day, about 4 P.M., so I did not get there in time to see him alive. He was buried at this place.

I hope the Butler and its associates are doing well. I have a Monroe's chart, which was the property of Mr. P—. I find it very useful.

Very sincerely,

J.

FROM AN UNDER-GRADUATE TEACHER,

PREACHER AND TAILOR.

Much good work is done by some of our students who, for reasons not discreditable, have failed to complete a full course, but who, having an aptitude for teaching and a desire to do good, have thrown themselves heartily into the work. One such sends the following extremely interesting account of his work:

—Md., Jan. 12th, 1885.

Dear Miss C—

I have made several attempts to write you, to inform you how I am succeeding in the teaching work. You will not find my name among the graduates of Hampton, as I left the institution, on account of sickness, in 1876. Though an under-graduate, I am trying to do, and am given credit for doing, good work in the school here in Philadelphia, and have been teaching in this county since 1878. I have married and become a permanent resident of the place. I have been teaching my school here three years with encouraging success. My school is not as large as it might be. There are many persons

who cannot be induced to take advantage of the blessing of education. The white people are very friendly to me and my work. In many instances, where I have failed to impress the people of their duty in sending their children, the white people have pointed out the advantages to be gained from learning, and in this way rendered me great assistance. The relation existing between the white people and myself is cordial, in fact all I desire. The only ill-feeling against me, which is slight, is from my own people, and is the offspring of selfishness and jealousy. I have made it a purpose since I came here to show those people that the Negro, with his moral and intellectual attainments as found in most Southern places, must not be regarded as a true type of the Negro as he is found in intelligent communities elsewhere. A white man said to me, some time ago, "You have actions and principles like a white man, I always thought all darkies were like our darkies here." The people here are advancing slowly. One of their most pressing needs is an intelligent and fearless ministry. They do not receive from their ministers proper moral training; they look with horror upon a tune that sounds like a song, though the same persons have no scruple in lying and stealing. The teacher's work, if well done, will tell in fruit in future generations; but the ministers should be men whose lives and teachings will bring many of the present generation from darkness to light and religious light.

In connection with teaching, I carry on a little tailoring business, and am patronized by colored and white; so between teaching, tailoring, and gardening, I am kept busy. I hope you will excuse my first, hurriedly written, throw together letter.

Any reading matter that you may have to dispose of will be thankfully received by my scholars and myself.

Hoping that Hampton Institute and its officers may prosper, and that the new year may be full of health and prosperity for you, I remain,

Very respectfully yours,

B.

TEN YEARS A TEACHER.

One of our earlier graduates who has married, writes thus of the work in which both he and his wife have been engaged.

—Virginia, Nov. 8th, 1884.

Miss A. E. C—  
My school opened with brighter prospects for keeping up the required average than it has heretofore. My enrollment for the first month was over sixty. I am now entering upon my tenth year as teacher. Eight out of ten have been among the pupils of the place. I don't feel no ways tired yet. I like the business. I don't think any work is grander.

Mrs. C— is not teaching this term, she wanted to very badly, but her physician advised her not to. I have made out my monthly report. I have an average daily attendance of thirty-seven, and sixty on roll which you can see. As I near the end of this, I learn that Mr. Blaine is defeated for the presidency, which I am very sorry to learn. However, I hope that if Mr. Cleveland is elected, he will make us good presidents. I further hope that there will not be any material change toward the treatment of the colored people down South.

With kind regards,

C.

DIED:—at Salem, N. J., March 13, of consumption, Frederick S. Phillips, graduate of Hampton Institute, class of '78, and of Williston Seminary, class of '84.

The death of this young man removes one of Hampton's most earnest, faithful and promising graduate teachers, who, had he lived, must have risen to great usefulness and prominence among his race. Ever since he left Hampton, he has labored incessantly to improve himself and do good to his people. At Williston Seminary, he gained the respect and affection of his white associates and teachers, and graduated as salutatorian and second in a class of over fifty. He was prepared for college and would have entered Harvard next fall. His fine talents were consecrated by Christian principles.

DIED:—at Hampton, Va., William Copeland, graduate of Hampton, class of '78.

Mr. Copeland had recently come to Hampton to engage in business. His prospects were excellent; he was a man of solid worth and Christian principle and will be a loss to his people in the town among whom his influence would have been strong for good. He leaves a beloved wife and many friends to mourn his loss.

Horsford's Acid Phosphate.

MARKED BENEFIT IN INDIGESTION.  
Dr. A. L. Hall Fair Haven, N. Y., says: "I have prescribed it with marked benefit in indigestion and urinary troubles."

JOHN G. GASMANN.

"THE TIME was when the red men were the savages, but it is now the white men who are the savages"—says the *Springfield Republican*, apropos of the Crow Creek affair.

IT IS INTERESTING to learn from the Commissioner's Report that of the 73 crimes committed against Indians by whites in 1884, 11 were brought to punishment.

MR. HIRAN PRICE recently remarked: "There are 200,000 inhabitants in Washington, which is the capital of this great nation and the central point of its refinement and culture, and yet there is more drunkenness and crime there than among the 250,000 Indians who are savages and have never felt the elevating influences of our modern civilization."

THE HISTORY of the Crow Creek failure reads like a deliberate vindication of the Indian and his "self-constituted" friends. Newspaper comment on the affair has been very general and remarkably just. People have thought and talked and written about it. This fact, no less than the prompt and honorable action of the Government, shows us that the "world moves."

THE PERMANENT location of the Forest Grove school is to be at Salem, Oregon. The *Indian Citizen* says: "The new location is a good one, and possesses many advantages that will assist in building up the school, and giving it the opportunity of doing work, to an extent that the temporary nature of its present location has always prevented. Two grades of pupils will go to Salem in a few days to live on the new land. Supt. Coffin has made arrangements for the farm work to be begun, and the boys will commence at once to clear the land for the building site."

#### Oklahoma.

If the settlers who are so anxious to locate in that part of the Indian Territory they have called Oklahoma, would delay a few months they might enter the promised land with full authority. One of the last sections of the Indian Appropriation Bill authorizes the President to negotiate with the Creeks, Seminoles and Cherokees, for the purpose of opening to settlement under the homestead laws the lands in question.—*Morning Star.*

#### The Fate of the Reservation.

The Reservation must go! This is the moral of the political land-grab for the Crow Creek territory, (defeated because the means were unworthy, not because the end was undesirable) of the Oklahoma "boom," a land-grab on a larger scale; as well as of the act opening up the Santee Sioux Reservation in Nebraska, where their Agent, Maj. Lightner, has long devoted all his energies to securing his property in servility to every Indian.

The Reservation must go, not only because of a material, but a moral

necessity. The white man wants access to the land, and the Indian wants access to the white man's civilization. The difference between them is that the one knows and insists upon his right; the other doesn't. The Indian clings to his Reservation as his last chance of foothold; the little remnant of right left him out of great possessions. He is naturally slow to realize that it is a right which does him no longer any good. The tremendous physical consequences of the white man's advent which he sees and mourns, are of less importance to him now than the slow but certain moral effects which he is unwilling to acknowledge. If he could have escaped the first, he would have felt the second all the sooner, and instead of dying an Indian, he would perhaps have lived—a white man!

It is time we appreciated the fact that an Indian Reservation is not a provision of nature for the savage, but a scheme of mistaken policy. We put the Indian there to get him out of the way, and we succeeded but too well; we got him out of the way of society, of education, of religion, of law. We created for him unnatural conditions. We put over him a representative of the Government in the shape of an Indian Agent, whose relation to the Indians is one that ought not to exist. If he is the right sort of man, he may do great good in that slavery, as could a good master in the old slave days; nevertheless he is part of a system that has nothing to say to a free and enlightened state of society.

This then is the practical problem—How to open the Reservation *with justice to the Indian*. Without great injustice to him as well as to us it cannot long remain unopened. It is to be hoped, at least, that wire-pulling politicians have learned one lesson from recent events; fairness or something like it will be demanded of them in the conduct of an Indian policy.

The people expect it; and the people do, after all, rule the politicians. The time is surely coming (and until it comes justice will be denied to many,) when the weakest side will be the strongest, because a physical disadvantage will have become a moral advantage.

#### An Indian's View of Indian Education.

A meeting in the interests of Indian civilization through education was recently held in Lawrence, Kan., the seat of Haskell Institute. It is spoken of as a significant fact that among the people on the border there is already so strong a sentiment in favor of Indian progress.

Dr. Marvin, the head of the Lawrence School, (which opened last fall with fourteen pupils and numbers at present 362,) spoke at length of the claims of the Indian to an education and its powerful influence upon him. But "the most interesting part of the exercises" was the simple, straight-forward story of a young educated Pawnee Indian, and Hampton graduate, James Murie, which was "listened to with the closest attention."

Murie gave the salient points in the story of his life. "I was born in Nebraska, (the State where the Pawnees lived before we moved into the Territory) on the old Pawnee reservation, and there I attended a boarding-school for the first time. I was taught by one of the Pawnee school-girls who had learned her A B C's. She would take us into a recitation room, where she would teach us the A B C's, and then turn us out after we had been reciting for an hour or so. I remember once getting away from the school, and joining my parents on a buffalo hunt. \* \* \* When we got to the Territory we had to live in tents. At this time the Pawnees were receiving rations and therefore did not care about helping themselves. At night I would lie down on a hard bed with a blanket or so, and only one blanket to put over myself. Then I would think of the books I had studied,

and many times made up my mind that if ever I should get hold of a book I would study it very hard and learn everything in it."

These first thoughts of books are interesting. Murie, as he tells us, attended the first Government day school for a year, and was taken out by the Agent to become interpreter for the physician at the Agency. He soon left the doctor's office to attend the newly opened boarding-school for two years. The Agent then made him his office-boy, and he improved his opportunity to pick up many English words. In 1879 he came to Hampton and finished the course here. On his return home he was made assistant teacher at the Indian boarding school. His reasons for giving up this position, in which he did well, are worth noticing.

"My first reason was that I felt the need of an education; that I was not prepared for the great field of labor; that I felt that my knowledge of the Bible was not enough, and therefore I could not do much good among my people."

My next reason was that I could not save a dollar nor even a cent. As soon as the Indians found out that I was getting a salary, they became my uncles, grandfathers and cousins, and were very closely related to me! When I drew my pay they would crowd around me, and I hated to refuse them, as I knew they needed the money more than I did. They are very poor. What little I had saved I gave to those in camp who needed most help. The third reason for leaving was the prejudice and jealousy of the interpreters and others, who were constantly trying to throw him back upon camp life; and the fourth the matrimonial intriguing of some of the Indians, which was contrary to the "respect for young women, learned at Hampton."

From the vantage-ground of his present position at Haskell Institute, Murie speaks as follows of life and progress among the Pawnees.

"Many of the Pawnees have adopted the ways of a great people. Many have houses and farms and are doing well. My father is the head doctor of the Pawnees. It is very hard for him to adopt the white man's road, but he is slowly coming out from his superstitions, and sees the need of an education for his children. He is living on a farm of 320 acres, having a house built and a good piece of land broken. He raises good crops and is satisfied that it pays to cultivate the soil."

The Pawnees are a religious people and I tried my best to teach them all I could about the "wonderful stories" of the white man. I remember one time I went to a village and on entering a mud lodge I saw a man lying close by the fire groaning. I asked him to sit up, that I had something to tell him. I told him of a Great Doctor who could cure him if he would only call upon Him. I talked to him, and after a while he said, "Young Eagle, I feel better!" I left, and the next week I was surprised to see him in the store looking happy. As soon as he saw me he walked up to me and told me that the stories "were wonderful."

What the Indian lacks to-day is labor. He was brought up and educated to be a hunter and nothing else, and what I hope you farmers will do will be to take our students out on your farms, and teach them the art of agriculture, while on the other hand the Institution will be educating them in books. When the Indians find out what labor is, and are good farmers with a little education, then admit them to be citizens of the United States."

#### A Missionary Among the Six Nations.

Chief George H. M. Johnson—the somewhat anachronistic title of an educated Mohawk Indian—died about a year ago at his home of Chiefswood, in Ontario, Can. His death, which at the

age of sixty seven must be considered premature, put a dramatic close to an eventful career. "It is somewhat remarkable" says the *Magazine of American History*, in its sketch of Johnson's life, "that an Iroquois chief, should in our peaceful time and among the quiet and law-respecting people of Canada, die from the effects of wounds received from his enemies of European race, as doubtless many of his predecessors had died in the fiercer days of old. But the conditions were strangely reversed. The conflict was still one of civilization with barbarism; but in this case Indian civilization stood at bay before white savagery, and conquered in the end, though at the expense of a noble life."

The chief claimed descent from the famous Hiawatha. His father was an eminent war chief and orator and an educated man in the Mohawk tongue. When the boy was at school in Brantford his intelligence attracted the attention of a missionary of the church of England, who took him into his own family and trained him to be his interpreter. "To translate readily the recondite reasonings of an English sermon into a language of such a different type as the Iroquois was a task of no small difficulty. That Johnson finally mastered this art and was able to convey to an Indian audience, promptly and accurately, the meaning of the most complicated passage of an English speech, was admitted by all among his hearers who were acquainted with both languages."

He was appointed Church Interpreter and afterwards Government Interpreter, and held at the same time his seat as hereditary chief in the councils of his people. In all his duties he was watchful, active and enthusiastic. He waged incessant war against the illicit sale of liquor on the Reserve—an evil of long standing, toward whose extinction all efforts had hitherto been in vain. In his successful campaign against the white ruffians who thus ruined his people, the chief was twice brutally assaulted and the second time left for dead. After a long illness, he partly regained his strength but never fully recovered from the effects of his injuries. From that day, however, "the Reserve has been as safe and free from open violations of the law as any part of Canada."

But this was not all. During all this time he had been carrying out plans for the benefit and improvement of his people. His religious zeal, his progressive spirit in agriculture and every useful art, were of untold value to them. His beautiful home on the Grand River, which gained for him his Indian name of "He who has the great mansion," was a perpetual object lesson. "The attractions of the place and of the household," we are told, "brought many visitors, who all came away delighted with a reception in which Indian hospitality had combined with English courtesy and refinement to make the guests feel themselves pleasantly at home." His wife was a lady of culture and good family, the sister-in-law of his early patron, Mr. Elliot, who was of great assistance to him in his life-work. Perhaps no Indian has done more for the advancement of his people than the Mohawk chief and practical missionary, George Johnson.

### Incidents of Indian Life at Hampton.

In the Geography Class. "Where do you live?" "I live on the cat."

A Visitor. "Are they real Indians?" "Teacher. "O yes! This is a little Sioux girl!"

Visitor. (turning to a friend.) "Just think! She says this is little Sue!"

Some really artistic groups have lately been "taken" by the untiring Mr. B., including the Girls' Fancy Work Class, and the Boys' Reading Room. They make very attractive photographs.

It was an "object lesson" on the apple. "And what is this?" inquires the teacher, touching the stem. There is a moment's silence before a "prize scholar" confidently replies, "The handle!"

Almost every day finds something added to the attractions of the Reading Room. A large album is already partly filled with specimens of Indian art, and the long folds of a red curtain make an effective background for many cheerful scenes. A kind friend is recovering and cataloguing the Library.

Prof. Painter, the agent of the Indian Rights Association at Washington, came to Hampton immediately on the suspension of the Crow Creek Executive order, and by his kind "talk" at the opening of school greatly reassured the boys and girls. He also took part in our Indian prayer meeting and told an interesting story of a great General and an Apache chief.

On the third Sunday in Lent, Bishop Randolph confirmed sixteen of our Indians at the beautiful old church in Hampton. All the Indians were there, and the church was crowded with their friends, many of whom afterwards said that they had never witnessed a more touching ceremony. The well-chosen words of the Bishop's address showed that he entered fully into the spirit of the occasion.

A feature of the children's service Easter Day at St. John's, was singing by our Indians in their native tongue. A hymn was sung in alternate English and Dakota by the pretty children's choir of treble voices, and in the deep tones of the young Indian men, and the good missionary hymn, "From Greenland's Icy Mountains," with foreign words and familiar harmony, fitly closed the services.

### A NEW POCAHONTAS.

A finishing touch was put to the Senior entertainment on Easter Monday night by a series of graceful Tableaux from the story of Pocahontas, in which the five Senior Indians took part. The thrilling scene of the rescue of Captain John Smith was much admired, especially as to the girls, who were all in full Indian dress and decoration.

### A LETTER FROM OMAHA.

March 24th, 1885.

My dear Mrs. S—

I am going to write to you a few lines. We came home last week. My family they were very fond of Eddie, they talk to him Indian and Eddie he understand what they say and he talk to them English, and they said "we don't understand you what you say," and they just laugh. I miss you all teachers and scholars. Give my love to all. We have good time to see our families and friends. Little Eddie he want to go ride all the time; yesterday he cry after he; said he want to ride on horseback and Phillip he let him ride on horseback and he hold him. He said "I am not afraid of the horse; I am big boy and strong boy." Write soon.

Yours truly,  
MINNIE STABLER.

### A Sunday School Symposium.

"My Sunday class tires me out more completely than any other," remarked a Sunday School teacher a few days ago. "And you never realize that I am tired until it is over. I wonder why?"

"I suppose in addition to the mental effort of teaching Indians, there is a moral strain of which you are scarcely conscious at the time."

"I hope you do not mean to imply—" "Not at all!" responds No. 2 to this laughing protest, "and, so far as that goes, we are teaching morals, if not religion, every day of our lives! But there certainly is an immense responsibility in giving to these children their first ideas of Christianity."

"It's a beautiful opportunity; doesn't it seem so to you?" asked a third. "Think of taking up the story of Christ's life as we have done this year; following it through the dramatic scenes which create of themselves a culminating interest, and giving its plain lessons, so far as may be, in His own words!"

"And think of the Bible geography and history and biography often taught in the name of religion—things that are no more religion than are the history and geography of our schools!" exclaimed the first speaker.

"Yet they are deeply interesting in connection with the material growth of religion," replies a fourth. "It seems to me, I confess, one of the chief differences between a class of Indians and of ordinary white children, that the former can be touched much more vividly and directly. The average Sunday School boy for example, is already, in a sense, too familiar with much that he yet needs to know, and we have to interest him by a skilful, indirect approach to the subject."

"You know what my children are," says teacher No. 2. "Those small boys are so many independent atoms. If I lose the power of attraction for a single second, the result is—chaos!"

First Teacher. "I shall never forget my first trouble with a Sunday School class. One of my boys turned to look at the clock—and I was heartbroken!"

A Fifth. "Your class of beginners must be intensely interesting, Miss B.—but how do you teach them? They understand almost no English, I believe! Do you use an interpreter?"

A Sixth. "Not often. I teach by means of pictures—writing on the black board—occasionally by the help of a Dakota Bible and my own very imperfect understanding of it—when all else fails, I go by intuition!"

First Teacher. "What is the moral code of the untaught Indian? Do you get at it at all and do you find it much the same as ours?"

Sixth Teacher. "They have a strong sense of right and wrong—not invariably corresponding to our own. I think I find a leaning toward the idea that what is entirely natural cannot be very wrong. 'Why did God put it into our hearts?' they say, if he did not mean it to come out?"

First Teacher. "Some of our 'advanced' religious thinkers would be delighted! But on the whole we agree, do we not, with the Indian Agent's remark that a good Indian would be a pretty good man anywhere?"

All. "Yes, indeed!"

Second Teacher. "I should think they would find it hard to accept Christ's teachings of love toward our enemies. 'All's fair in war,' with the most moral savage, isn't it?—treachery and theft included!"

First Teacher. (reproachfully) "How can you? But you're right about one thing it is the 'savage' in them, and those are the very things they leave behind them as 'uncivilized.' When they accept the Christian spirit and doctrine, they accept it, too, without any of the mental reservations we occasionally allow ourselves. I don't think the Indian nature is 'subtle' enough yet for much self-deception."

Third Teacher. (gently) "How wise Mr. G.—is in dwelling as he does

almost wholly on the great, yet simple moral lessons of the Life we are trying to follow!"

Fifth Teacher. "How does the miraculous part affect them?"

Sixth Teacher. "O, they believe in it implicitly! Their own superstitions and faith in the marvellous have prepared them for that."

First Teacher. "Would the story impress them as powerfully without the miracles?"

Sixth Teacher. "No, I don't think it would. They rather expect them. Still, the Death upon the Cross would, I believe, be enough. The thought of Christ as the bravest man, means a great deal to them."

Fourth Teacher. "Speaking of the responsibilities of teaching Indians, I believe the responsibility of bringing them into the Church, is as great as that of leaving them outside. They are too ready to depend wholly upon our judgment and belief in this as in other things."

First Teacher. "O, I don't think so! It seems to me, as I said before, that they are thoroughly honest with themselves, and that joining the church means more to them than it often does to us. One boy said, 'I don't want to be a Christian, because if I do I must give up drink and smoking!' But he did make up his mind, we felt perfectly safe about him."

Second Teacher. "You remember, perhaps, what great man called the Indian the 'hottest heathen God ever made?' Who knows but he may become the finest Christian!"

### The Story of Columbus.

TOLD BY LITTLE INDIAN GIRLS.

Christopher Columbus is the first one who ever discovered the Western Continent. He thought about it for a long time but he did not know that there was another continent, so he thought he would sail around the Earth and come back to India again. So he wanted somebody to go with him but nobody did not believe him, so he went to the Queen and told her all about it. He could not go by himself because he was just only a poor man and the Queen and the King believe on him, so they sold all their jewels and got some money and they had their ships and after a while those men got tired sailing all the time and they got after Columbus about it but he did not say anything much. He said, "we will sail on three more days and when we could not find any land we will return." So they sail on three more days and after three days they found the water is shallow and they saw some little trees in the water and they thought it must be near land somewhere. The birds came around them flying about, and after awhile the man who is on the top of the mast call out "Land! Land!"

They were so glad, and soon as they got out of the ships they went on the land and kiss the earth and they saw some people very much different from them and Columbus called them Indians because he thought they were in India. Those Indians were very good to Columbus and his people, and he was going home to Spain again and he took some Indians with him and fruits and plants too, so they would believe him that he discovered a new continent.

And when they got home the people made a great shout at Columbus because he was very brave and great man too. After that he wanted to come back again and that time he had 200 ships and 90 men.

A. D.

There was once a boy whose name was Christopher Columbus. He was a very poor boy, he was born in Italy. He went to school when he was twelve years old, and he studied navigation and also about the heavens. He studied very hard and went travelling all the time on the water and once he got shipwrecked and he had to swim six

miles to the land. He used to have very hard times.

As he grew older he thought more about the earth and at last he thought it must be round, and he wanted to sail across it and find some other land that none of the people know about. So he went to all the places he knew and asked the people if they would help him to get ships, but they would not do it. At last he went to the Queen of Spain and asked her about it. First she would not listen to him and Columbus went back and after he had gone 12 miles the Queen sent for him and told him that she would help him. And she sold all her jewels and got money enough to get their ships and food to last them for two years. Next Columbus wanted some men, but the men were afraid and there were had to tell them to go, and there were 90 men. The ship Columbus was in was the biggest. They sailed on till one night they could see land but they had to wait till morning, and they let off a gun to the others, and in the morning they landed and just as soon as they touched the ground they kissed it. They thought they would never touch the ground again!

Columbus discovered the island of San Salvador in the year 1492. He went back and took whole lots of fruit and some of the Indians; he was welcomed by the Queen and the King very gladly. He went a second time to the New World all the new land there he could not find anything and the people told stories about him to the King and he was brought back to Spain in chains. And the people did not like it and they said "shame!" to the King, and he took the chains off Columbus and set him free.

N. F.

I think Columbus was a very brave man to stand and bear all the cruel treatment the men gave him. He had three ships when he first went; their names were Santa Maria, Pinta and Nina.

The second time he went he had twelve ships and more men. The men that he went with the second time were quarrelsome and scold at Columbus because he possessed all the new land he had found. The people thought only of gold and did not care whether they treated each other polite or not! The men told stories about Columbus to the King and so the King believed it and told the men to send Columbus home with chains on his feet and arms. And when he went back to Spain the people said, "Shame, shame on you!" to the King, and so he loosed him and let him go.

Columbus discovered America in 1492. Columbus grew to an old age and he was a very good man. The Indians are good to him and gave him corn, potatoes and other nice things to eat.

Columbus had a great many troubles to face before he died, and when he was a white-haired old man he went from door to door begging and after awhile he just laid down and died. This is all.

M. L.

The most popular Weekly newspaper in the world. It contains the latest news, scientific discoveries, inventions and patents. It is published every week, except on Sundays and public holidays. It is the best source of information for the general public. It is published by Munn & Co., New York.

**PATENTS.** Munn & Co. are the only agents in the United States for the preparation and prosecution of patents. They have a large staff of experienced attorneys and engineers. They can help you in every step of the process, from the first idea to the final grant of the patent. They are located at 37 Broadway, New York.

## Indians of Indian Territory. Their Classes, Condition, and Prospects.

From Official Reports and Personal Observation.

The Indian Territory is a favored region, about two hundred and fifty miles in extent, the eastern half being well watered and adapted both to grazing and to agriculture, producing a fine vegetable, corn, and cotton crops as can be made in the country, and containing considerable timber, coal, and other natural resources. Lying between Texas, Kansas, and Arkansas, and other rapidly growing States, it feels their momentum, already crossed by two intersecting railroads, and two more may soon be built. It is occupied by the five "civilized nations," and by many tribes or remnants of tribes which have been taken from the track of civilization and placed there. In the center of the Territory is a space of not less than three millions of acres called Oklahoma; so there is, in the Northwest, the Cherokee strip, twice as large. Both tracts have been purchased by the Government from the "Nations" and are reserved for the cattle of the red race, where many white people are asking that all the Indians may be finally placed. It is good grazing land but malarious, and is dreaded by the white men and tribes who have visited it. The western portion of the Indian Territory is in the arid region, excellent for stock, but, except along the rivers, unsuitable for farming, and is occupied by wild or blanket Indians. It gives them special advantages for cattle raising, for which they are adapted, but scant agricultural lands. Only as Indians settle on farms will they build good houses and lead regular lives, cattle raising alone perpetuates their barbaric life.

### WILD TRIBES.

The Kiowas, Comanches and Apaches occupy the southern part of this western section of the Territory. Under Major Hunt, Indian agent, these "blanket Indians" have made, in the last seven years, encouraging progress in agriculture, having over fifty well-fenced farms on Wichita River. They own horses and cattle, raise considerable corn, and, judging from the quantity of their goods, the business of the two local traders, they are not without thrift, for they purchase largely and intelligently.

FROM MAJOR HUNT'S REPORT FOR '84.

"The Kiowas, Comanches, and Apaches have, I think, made good progress since they left the plains, ten years ago, and settled down on their reservation. They have given up many of their savage customs and adopted many of the ways of civilized life; some appear in citizen's dress habitually, and many others occasionally, but, as no clothing was issued last fall, the number, using the dress the past year was less than the year before. Many of them cultivate the soil and have well-fenced fields, varying in size from one up to about thirty acres; I cannot report the building of more houses, very few having been erected during the year. There can be no doubt that these Indians are gradually learning and adopting the ways of civilization."

"The Kiowas have danced less this year than usual, and they seem to have given up their annual medicine dance, for as yet they have said nothing about it. The holding of this dance has always been a great occasion and considered one of their most important ceremonies, for they have believed it absolutely necessary to secure their health, and success in all their undertakings, either at war or in the chase. They have generally gone out on the plains from forty to sixty miles from the agency and been absent from five to six weeks. On several occasions, since the buffalo disappeared, they have suffered very much with hunger while out, and I hope we have heard the last of the dance."

### AGRICULTURE.

"A much better report may be expected hereafter of the farming operations of these Indians, for the care and attention to be given to the work by the additional number of farmers to be appointed under a late order from your office will add materially to the result."

### SQUAW-WOMEN.

"I had been nearly five years in office before I met with the common experience of a United States Indian Agent's trouble with squaw-women. Having had occasion during the year to take action against one of their number, they decided I was not such an agent as they wished to have, and immediately instituted proceedings by which they hoped to effect a change. There are some good men among this class who wield a good influence over the Indians, but there are others whose character and influence is so bad that it is futile to expect peace as long as they are permitted to remain among the

Indians; some decision is required defining their status; and certainly, if they are to be held amenable to law, Indian agents should be supported in all proper action taken against them."

### INDIAN POLICE.

"The work done by the police during the year was very satisfactory, and when provision can be made for quarters, and the proper subsistence of themselves and horses, that degree of discipline could be enforced from which greater efficiency of the force could be attained."

### FREIGHTING.

"The Indians hauled all the freight, and, except in cold weather, they have done it cheerfully and well. The total amount hauled was 543,071 pounds; nearly all of which was hauled from Caldwell, Kans., a distance of 150 miles, and for which the Indians received \$7,851.65."

### SCHOOLS.

"The two Indian schools, the one for the children of the Kiowa, Comanche, and Apache Indians, and the other for the children of the affiliated tribes of the old Wichita Agency, have been in successful operation during the year. The heavy drafts made upon these schools during the term to furnish children for the Chillicothe school and others, very considerably reduced the number of scholars in attendance. There were taken from the agency at one time seventy children for the Chillicothe school, and most of these were drawn from the two schools then in session. The Indians having been brought in their children and filled the schools, they are now in answering the call for a new supply to fill the places thus vacated, and as it happened that most of those furnished for this purpose the last year were not before attended school and the weather was very warm, they did not attend regularly."

A crop of corn and vegetables was planted by the children of each school the past season, but like the crops generally in this part of the Territory this year, the yield will be short.

The average number of children attending the two schools during the year was 84½.

### RELIGIOUS.

"The Rev. J. B. Wicks, who for three years past has been laboring as a missionary among the Indians of this and the Cheyenne Agency, made his home at the agency during the past year. A neat church building has been erected at the agency, and services held every Sabbath. The Rev. Mr. Wicks represents the Episcopalians of the Central diocese of New York, and this church was built by funds contributed by that Church. The Indian church, called so because it was built and is entirely controlled by Indians, has continued through the year the regular weekly meetings, and I think is in a prosperous condition. Its membership and support come from the Wichitas and several of the other affiliated tribes."

### CHEYENNES AND ARAPAHOS.

The Cheyenne and Arapaho reservation includes about four million acres in the northern portion of the western section of the Territory; good grazing land—except on the sand hills—ample water for stock, in the Cimarron, Canadian and Arkansas rivers, and their tributaries. The country is rolling, the high prairies needing only irrigation to make them yield abundantly as do the lower bottoms. The climate is delightful. The great trouble is the scarcity of timber, and the agency is poorly situated in low land, to which wood for building or fuel must be hauled fifteen or twenty miles.

The late agent, John D. Miles of the Society of Friends, is well known as one of the best in the service. The new agent Major D. B. Dyer is also a good man, worthy of confidence, as are the agents of Indian Territory as a rule, as far as I could judge.

In his first annual report, made in August last, Major Dyer gives the condition of things he has found and his impressions of the needs.

### OBSTACLES TO ADVANCEMENT.

"The most serious difficulty to the advancement of these Indians lies in the lack of power to control them, and the best results will never be attained until our roving and lawless Indians are under complete control, and forced, not only to stop depredating, but compelled to keep hands off of such Indians as desire to work. It is the practice of the 'dog soldiers' to compel the attendance of all Indians on their medicine making, and on refusal of any one to attend, he is cut up, chickens, hogs, and cattle killed, growing crops destroyed; they rule with an iron hand, and their will, right or wrong, is absolute law."

"We have here 2,300 Arapahos and 3,000 Cheyennes, making a grand total of 6,271 Indians. Outside of the United States police, a few half-breeds and the Indians employed in shops or in teaming, all wear blankets, live in tepees, and are uncivilized, have the manners, ways, customs, superstitions, &c., which have been attached to their races for generations gone by. There is not one full-blood Indian living in a house, except above noted. They lead a very nomadic life, and those that have small patches that they call farms, consisting of from one-quarter of an acre to 10 acres, abandon their crops at the slightest invitation, and go to medicine or a feast, which keeps them away oftentimes for a month when they are most needed at home. I have great faith that this state of affairs can be changed; first, as I stated, they must be controlled, and those who will work and wish to abandon their old way must be assisted, encouraged, and protected."

All Indians that I have ever met, I care not how ignorant, know the difference between right and wrong, and if told that the law is so and so, are as capable of obeying it as whites, and it is a great calamity to them as well as the Government that they should be allowed to exist and keep up their old customs and practices, &c., when a simple act of Congress, would so quickly transfer them to law-abiding citizens. The lower House of Congress at its last session, struck the key-note to the whole situation, and I am sorry that the Senate could not agree that—

Any act which, when done by a citizen of the United States, would be a crime, shall be and is a crime declared equally a crime when done by any Indian upon the same Indian reservation, and any Indian committing such crime shall be subject to the same jurisdiction, and amenable to the same process that any citizen would be in like case.

This is not complete enough, but would have been a splendid start in the right direction. They must conform to the will of the Government or take the consequences, and it is important that this should be made clear and significant to them. The speedy punishment of the Indians who took part in the raid of Horton, and forcibly took possession of over 200 ponies in May last, would have gone farther to break down the power and influence of the worst class of Indians, than all the threats that an agent could make during the rest of his natural days. In these tribes, like all communities, there are particularly hard cases who succeed better in general evilment than most of their friends, because they devote more attention to it, turning all of their energies in that direction, and bringing themselves to bear on it with an earnestness and assiduity that could not fail to render them prominent. The occurrence of many such raids will go further to break down the power and influence of the Government, if the guilty parties are left unpunished, than anything that can be done. These Indians ceased to be useful and became wholly ornamental when they quit hunting and settled down here to do literally nothing. They should have been from the start given to understand that they must work, and the power of the army should have been used to see that they did. I imagine that the thousands of hard-working mechanics, artisans, farmers, and merchants, who pay a large tax and have the best interest of our whole country at heart, would be surprised at a fair view of the 6,000 lazy Indians, who daily draw their pound of flesh, and the blood with it, hides and horns thrown in. At times get discouraged when I look over in the vast world to be done here, but so far from losing hope, I am only nerving myself to fresh exertions, and I know the best way to deal with Indians is, to neither promise nor threaten anything that cannot be carried out, and to deal with them always in strict justice, treat them as human beings, like ourselves, as they have much of human nature in their red skins, and are, as I have remarked, as capable of listening to reason, when the reason is good, as if the color was white.

Resources sustain nothing, but labor sustains everything. This is a good country for diversified crops, but the importance of agriculture among the Indians has been overlooked. I hope to organize the labor here so as to be able to produce all the wheat, corn, sugar cane, vegetables, and fruits required to support these people. I shall not increase the amount of money expended but shall try hard to get 100 cents' worth of value for every dollar of the people's money expended. Twenty-five good farmers as industrial teachers with agricultural implements and wire for fencing farms should be allowed us, for several years, and it seems strange that \$100,000 per year can be secured for the purchase of beef and flour, and that this all-important end to be accomplished is so neglected."

### CHEYENNES.

"The Cheyennes are said to be the smartest race of the two, but in so short a residence I am not fully prepared to give an opinion. That they are at present further from civilization I am positive, and that they are inferior, headstrong, domineering, and hard on men cannot be questioned. They have never been whipped, and boast that they could wipe us out at any time—a matter that should speedily call for the attention of the

Government, as no considerable progress can be made so long as this feeling exists and this element rules the actions of the tribe. My hands are manacled and the dog soldiers rule supreme."

The Indian question is one of great and absorbing interest to our country, and it is to be devoutly hoped that the Army will be called upon to compel this lawless element to obey the rules of this office, and exchange their rifles and pistols for agricultural implements, and settle down to farming, instead of continually riding over the country and depredating on every one who may come within their reach. It is a disgraceful state of affairs, discreditable to our Government, and should not exist another day. Men that can fight as these have, can work, and why a few score of young bucks should be allowed to interrupt public travel, levy tax on herds and freighters, intimidate, browbeat, and threaten the lives of people quietly passing through the country, compel the attendance of their own people upon the occasion of the medicine-making, whether they believe in it or not, under penalty of having their tents cut up, their dogs, horses, cattle, chickens, &c., killed, and create a disturbance at will, is more than a law-abiding citizen can understand. The relations between the Government and the Cheyennes have never been cordial. Nor is it strange at all when we consider that they have never been made to respect its authority. They are proud of their own tribe and despise the Arapahoes. Part of their dislike comes no doubt from the fact that the Arapahoes have stood by the Government when they were hostile. Cheyenne women sometimes marry Arapahoes, but I am told the men never do.

They make medicine several times during the season, which occupies several months of their valueless time. At the medicine some very extraordinary scenes can be witnessed. For the Buffalo and Sun dances a large number of the braves are selected on account of their physical strength and endurance; they strip and paint themselves to the waist; some torture themselves and dance until they drop from sheer exhaustion; not many stand it for more than a day or two without food or water. Their endurance is worthy of a better cause.

The idea of a future existence, I believe, is general among these people, but it is said if one dies by hanging he is forever lost. Their religion will change greatly as they advance in civilization, but superstition's will cling to them for generations, and it will be many years before they treat their women other than as slaves.

An Indian does not entertain the idea that girls exist merely to display fine drapery and look pretty; they have a decided notion that they were born to labor; and of the 75 acres reported as being under cultivation by full-bloods of this large tribe, hardly any of it was worked wholly by men. In addition to the above 75 acres, two half-breeds have farms of 100 acres, and the corn yield will be satisfactory."

### ARAPAHOS.

"The Arapahoes are generally quite tractable, good-natured and inclined to be progressive, but like all Indians, they lack adhesion and zeal and aggressive habits, and in the tribe there are some who can be compared with the worst Cheyennes; and while I have had little of our trouble at their door, I have done so because they are generally more inclined to the right, and if separated from the Cheyennes would, I think, do much better. Still some of the depredations reported are traceable directly to them, and while such reports are in some cases exaggerated, allowing a reasonable margin for enlargement, there is much that I know to be true that needs speedy correction. The ordinary police work of a great Government like ours ought to be sufficiently well done to render such scenes as are of weekly occurrence impossible."

The full-bloods of this tribe farm in a small way, having planted the past spring 422 acres to corn and garden vegetables; but I am safe in saying that not more than 200 acres of this will produce anything, owing to the fact that it was abandoned as soon as planted, for the medicine making."

### FARMING.

"The question now agitating the Indians is, shall we go to farming? If they can keep body and soul together by obtaining in some shape the results of the labors of others, as they say, they are not ready and will not be civilized, and look upon any one who will advance them in agriculture as their enemy."

### THE MENNONITE MISSIONARY.

Rev. S. S. Haury, reports two mission schools, the last opened Sept. 1884, together averaging 55; all Arapahoes, the Cheyennes refusing to let their children go to the same school with their rivals, and having had no promise of one for themselves. "With moral and religious instruction, the teaching is of the elementary English branches." "The majority of them, especially the younger

ones, understand the English language well and speak it freely among themselves. Industrial education was given as far as there was work for the boys on the farm, and the girls at sewing and house-work. "To encourage them, we have given some of the larger boys the privilege to plant and cultivate with our mission teams some corn for themselves. Some have two acres each; their corn is good and promises a rich return. In connection with the two schools, 80 acres have been cultivated, mostly by the larger boys under direction of the industrial teachers. The value of the crops—corn, oats, sorghum, broom-corn, vegetables, &c.—has amounted to almost \$3,000; the expenses of seed and cultivation, to less than \$1,400. Efforts are made to break up tribal relations by inducing families to live apart from the band, pledging themselves to send their children to school, to try to start a farm, to have no medicine dances, and not to add to the number of their wives. Six families are now located there in houses at the mission, some not doing well, others doing their best. One has broken four acres, and fenced twenty, paying for the wire."

These Mennonite missionaries are most sensible and efficient workers, and should be encouraged. The Friends of Philadelphia, have in past years done much for the tribes in western Indian Territory.

#### HOW TO MAKE THEM SELF-SUPPORTING.

Not only are these wild tribes led by the Government, but they will make trouble if we do not feed them, as last year's clearly showed. They were ready to fight, and the authorities yielded. But it is, I believe, quite possible to bring them all to self-support, thus making a vast saving to the Government, which is now giving them a gratuity above four hundred and fifty thousand dollars per year, chiefly in food.

The report of Major P. B. Hunt, Indian agent, published in the report of the Commissioner of Indian Affairs for 1884, gives a detailed, practical plan of creating a great herd of cattle, for which there is abundant grazing on the three million of acres on the Kiowa and Comanche reservation, which would, in ten years, supply all the beef they should need. The Secretary of the Interior cordially approved this plan and urged it on Congress. It calls for an immediate advance of the annuities due these Indians in the next five years, amounting to about two hundred and fifty thousand dollars, to be invested in cattle breeding. Government would pay nothing but what it already pledged, and would save at least five hundred thousand dollars. Probably nothing will be done about it.

Major John D. Miles, agent of the Cheyennes and Arapahoes, recently, in their behalf, leased three million acres of their lands, reserving enough for home use, to a syndicate of cattle men for the term of ten years, at sixty-two thousand dollars a year, to be paid half in cattle and half in cash, with the expectation of a herd large enough in ten years for ample supply of beef, making them independent of Government. These Indians, as well as those under Major Hunt, have agreed that their annual clothing allowance, amounting to over thirty thousand dollars, shall be invested in stock to increase the herd, which was done last year. They will get their clothing mainly by their own efforts. Beef is the one indispensable factor in Indian life.

These wild tribes have for several years hauled their own supplies from Caldwell, Kansas, the nearest railroad station, a hundred and fifty miles distant, giving complete satisfaction; they have often suffered from hunger rather than touch the food committed to their care. The Sioux have shown the same scrupulous honesty and efficiency in transporting their rations. This plan was, I believe, established by Mr. Carl Schurz when Secretary of the Interior.

Education is represented by good Government boarding-schools at both agencies, conducted on a manual labor basis, but confined to farming and household industries. Among all the schools for Indians which I visited or heard of in the West, no trades are taught, there being no adequate provision for it. The additional expense for thorough mechanical training would be considerable and is not likely to be allowed by the Government.

A number of these wild Indian boys spent last summer among farmers of Kansas with excellent results. No institution could do more good work than an agency for distributing them by hundreds every year in this way. Many would be willing to remain away for a year or two, then getting the best possible training. Farmers in Pennsylvania and Massachusetts are doing the Indian cause good service and themselves no injury by taking Indian children from the reservation and Hampton into their families, some for the summer and some for the entire year.

It is unfortunate that with all the effort for the red race mechanical skill has been most scantily taught. Only at Hamp-

ton and Carlisle is it done on a liberal scale.

These wild tribes, like the majority of their race, are about holding their own in numbers. When the conditions are favorable they at least do not die every year. White men's diseases and bad whiskey are, however, making sad havoc, and are threatening their very existence. In spite of the strict prohibition policy throughout the Indian Territory, considerable liquor is smuggled in, and many alcoholic drugs, like cologne, pain-killers, essence of lemon, etc., are drunk, for their intoxicating effect, with disastrous results.

#### THE CATTLE QUESTION.

The cattle question in this Territory has been much agitated.

There is an increasing demand for grass. The Indian Territory is a splendid pasture ground in relief against the nearly exhausted pastures of Texas. Experience shows that outside herders will drive their cattle upon unused pastures. Indian policemen and United States soldiers have failed to keep away Texas cowboys with their flocks; if driven back, they at once return. It is best, on the whole, to rent to the highest bidder the privilege of grazing cattle on Indian lands for it hardly increases the consumption of grass and it creates a revenue.

Indian Agent Miles, who leased the Cheyenne lands, stated to me that, in his opinion, the best thing was to supply the Indians with cattle, to be under the agent's management, and cared for by Indian herders; he had himself, in former years, established a large herd that was suddenly killed off by a most unfortunate order from Washington. The plan had been tried and had succeeded. But if Congress would not grant the money (which would, in time, put an end to annual appropriations of some \$300,000 for beef) to invest in stock, it was better, rather than to let lands be covered by white men's stock, to lease it to them and thus create a fund to buy a herd.

White men do not, as a rule, employ Indian herders; even the Indian cattle owners of the territory, so far as I observed, hire white men as herders. Indian employees are fickle, uncertain, and, while highly adapted to herding cattle, need looking after.

There appears to be a great demand for grazing lands, for which good prices are offered. There has been complaint that the lease of the Cheyenne and Arapahoe lands was not made in open market. The point seems well taken. The records in the Indian Commissioner's Office show. I am told, that Western capitalists are eager for this sort of investment, and wishes a fair chance.

Men "strong in political influence" who go into business operations involving the interests of Indians make, I think, a mistake; they cannot avoid a suspicion that does not attach itself to other kinds of investment. Any one hearing of a politician investing in these land leases, unless knowing his integrity, inclines to distrust the action. Western papers have strongly denounced those who take part in the lease of the pasture lands of the Cheyennes and Arapahoes.

There should be a most careful protection of the Indian in these matters, who so often has had the worst of what apparently were, and were meant to be, fair bargains.

#### THE MODOS.

Among the many fragments of tribes in the northwestern corner of the Territory, under the charge of Major Dyer, all of whom are industrious and prosperous, are about one hundred Modos, nine years ago wild and warlike Indians. They are now the most progressive of them all, although the rest were transplanted from Ohio, Kansas, and other States. This remarkable change is due to good management and surrounding influences. Living upon the Missouri border and near quiet Indians, with good schools, they have abandoned their old life, and will soon be self-supporting. Had the hostile Apaches been placed here or in like conditions, there would have been, in a few years, a like result. Even where they are, an adequate force of teachers and farmers would soon change them; but with no school and one farmer for four thousand, little is to be expected.

When instead of two and a half million dollars yearly for food and seven hundred thousand (\$700,000) for education, there shall be millions for practical Wichita Agency, less for food, we will have plenty of good Indians.

#### HALF-CIVILIZED TRIBES.

**Wichita Agency.** Between the Cheyennes on the north and the Kiowas on the south, and under charge of Major Hunt of the Kiowa, Comanche and Delaware, are situated the five hundred and fifty Caddoes, and two hundred and twenty Wichitas, with smaller remnants of tribes; the Wacos, Towacomes, Kocches and Delawares. They have been learning the ways of civilized life for many years past and are now almost in a self-supporting condition. They cultivate the soil, live in houses and wear citizen's dress.

#### OSAGES, KAWS' AND QUAPAWS.

The Osage reservation, Major L. J. Miles, agent, lies on the territory's northern boundary, near its centre. The Kaws and Quapaws are small fragments of tribes, and, though semi-civilized, wearing citizen dress and raising a little corn and vegetables, prefer dancing and gambling to work, live hard, and are rapidly passing away. The Osages numbered 1,570 in June, 1884, 355 being of mixed blood. They too are steadily decreasing in numbers, "and must continue until they give up their old customs. Yet they are apparently strong and healthy, and with proper care of themselves, there should be no reason why they should not become a healthy and prosperous nation."

#### From Agent Miles' Report.

##### THEIR FARMING.

"Experience has not proved that the Indians of this agency will in the near future become successful farmers. They have put in their usual amount of corn and vegetables, and have taken very good care of their crops, will have more than usual, and a large number of them will have potatoes to use. They enjoy rest, however, and a few acres is as much as the women care to tend, and they have the little help they get from the men."

A number of mixed bloods have large farms upon which they raise corn principally, for which they find a ready market at home from stockmen.

##### EDUCATION.

"Believing that to educate their children was the best possible thing that could be done for them, I insisted that the Osage council should pass some compulsory law, as a result they passed a law—that all children not in school eight months in the year should lose their annuity, placing the school age at from seven to fourteen years. As a result of this law, the school at Osage filed rapidly in March and maintained a steady attendance until the close of the school in June."

There has been no missionary stationed here during the year.

The Indians are naturally very religious in their way. The Osages maintain a kind of religious organization, to support which they will sacrifice anything that they have. The issues of cattle and the large cash annuities of the past two years have given them means to join this order, and large amounts of stock and merchandise have been spent for that purpose; even small children have taken the rite of the dove, as it is called. Many of them see that this custom is making the Indian poor. They often speak of the matter, but seem wholly under the influence of the medicine men, whose bread and butter largely depend in keeping the Indians interested in these religious rites. In the near future, they may be induced to accept something better. There is much need of devoted, active missionary work, those that can enter the service and master the language, thus inducing them to teach the Indians in their own tongue, leading them from their superstitious worship of an imaginary great spirit, through prayers and songs to birds and beasts, and respect of the laws of nature, to a knowledge of a real Savior."

#### PONCAS AND PAWNEES.

These reservations lie west of the Osage, are well watered and fertile. Major John W. Scott, agent, reports for 1884:

"The Poncas divide their attention about equally between farming and stock-raising, and are making fair progress in both. In this season had been as favorable as last they would have shown a very satisfactory increase, both of acreage cultivated and production. They are also gradually acquiring small herds of cattle, which, if no misfortune befalls them, will in a few years place their owners in comfortable circumstances."

In the matter of stock-raising they are making a very fair start. This branch of industry, I think, should be encouraged as far as possible. The country is well adapted to it. It is not to the same extent subject to the vicissitudes of wet and drought as is general farming, and offers to these people a readier means of competence and self-support than any other occupation in which they are engaged. The Poncas now own 1,000 head of cattle; 246 of these are the increase of the present season. They own also 54 American horses, 203 ponies, 93 swine, and 848 domestic fowls. In regard to the stock-raising the trouble heretofore has been that the Indians made insufficient provisions for a winter supply of provender and allowed the stock to "rustle" for a living as best they could during the greater part of the winter.

The result was that they lost every winter nearly as much as the increase of the summer. To remedy this I have encouraged and assisted them as far as possible to put up hay, and I estimate that they have secured about 686 tons."

#### THE PAWNEES.

"The Pawnees now number 1,142 souls, a slight decrease since last annual report. Hereditary and constitutional diseases are slowly but surely decimating this people. Aside from these, the general health and condition of the tribe has been remarkably good. The abundant crops of last year furnished them with food and nourishment as well as with a limited supply of cash with which their immediate wants were supplied."

There is no disposition to return to the ration system. Two years' trial without the ration system has undoubtedly resulted in good to this tribe since it became a necessity for them to exercise at least a degree of industry and forethought in providing the necessities of life. Agricultural pursuits engage the principal attention of these Indians, though several members of the tribe have a few head of cattle each, and one has directed his attention to mercantile pursuits with a fair prospect of success."

The Otoes and Missourians, under the same agency, are in less promising condition, but circumstances have been against them. Their children are bright and teachable, and take to industrial pursuits. Major Scott thinks that "when treated in a friendly and reasonable way, they will respond in a similar spirit."

The Nez Percés of Joseph's band, are also under his charge. "They are unusually bright and intelligent; nearly half of them consist of members of the Presbyterian church, and in dress, and propriety of deportment could not be distinguished from an ordinary white congregation. They give no trouble but are extremely anxious to return to their old home. Yet many have provided themselves with cosy, comfortable homes."

For all the tribes under his charge, Major Scott reports in general terms that "I am pleased to be able to say that the Indians have been remarkably quiet and peaceable. There has been no outbreak of any kind, no grave crimes, no serious disturbances, and very little violence has occurred among any of the tribe."

This record cannot be equalled in any white community of corresponding numbers.

These tribes all recognize the fact that they can no longer pursue the path of their forefathers, but must adopt the white man's way, and they accept the situation with resignation. Not only will they not hunt, but they have so completely abandoned the old way that the passion for the chase, either for amusement or as a means of subsistence, appears to have completely died out. If they cannot hunt buffalo or elk, they will not hunt turkeys or prairie chicken, both of which are abundant, and they never attempt to take fish, with which their streams abound. Few of them possess or seem to care for fire-arms; on the other hand they appear really and honestly anxious to adopt the habits and means of livelihood pursued by white men. But there is much more difficult task confronts them. It is easy enough to give up hunting buffalo when there are none to be found. It is easy enough to abandon the old road when it is completely shut up by the water, but the conquest of the new path is rugged and thorny. In entering upon a new course of life so much at variance with all their ideas, habits, and traditions, many and formidable obstacles stand in their way. Chief among these is their natural indolence. I think many of them really want to work, but while the spirit is willing the flesh is weak. They are easily fatigued, and easily diverted from the business in hand. They will quit the most urgent job on the slightest provocation or simply to lie in the shade. Regular and systematic work is what they need to be taught first of all. For this reason I consider it good policy, and good economy as well, to employ all the Indian labor that can be profitably used about the agencies. These men acquire habits of sustained and regulated labor, as well as knowledge of and skill in the use of tools and implements, and when they go out to make farms of their own experience proves that they succeed much better than others, and their example benefits those around them."

Another of the obstacles for their progress toward self-support is their inveterate habit of visiting. When the fit takes them to go off on a visit, they will drop the plow in the furrow, leave their wheat dead ripe in the field, or the mowing machine in the swathe and go. They have endeavored to affect a change in this particular. Another custom very much to be deprecated is the practice of wholesale visiting. A party of fifty or two hundred and fifty from their reservation suddenly quarter themselves on some one of my tribes and stay there, feasting and dancing, till they have eaten their hosts out of house and home and completely exhausted the patience and resources of the tribe, then they leave, taking with them a drove of ponies which their entertainers, for some reason, feel bound to give them, thus leaving

the tribe which has been the victim of the raid and depredations and impoverishment. Courts of Indian offenses, composed of Indians as judges, for the trial and punishment of offenses arising among their people have been heretofore made to organize such courts in connection with this agency. I have recently taken steps to form such courts in two of the tribes.

In settling the ordinary disputes and misunderstandings that occasionally arise among the Indians, I think they will be a great help and relief to the agent. As to their efficiency in preventing or punishing what are technically termed Indian offenses, such as bigamy, the sun-dance, giving property at funerals, &c., I am by no means sanguine. I think it will be difficult to persuade Indian judges to regard and punish as crimes acts which they and their people have from time immemorial looked upon as perfectly proper and right. What is needed is a radical change of sentiment among the Indians, and this must be effected by moral means. Coercion will never accomplish it. Here is a missionary field as needy and much more promising than that which can be found in Asia or Africa, and I would gladly welcome any effort that might be made in this direction and to what lay in my power to promote its success.

The Woman's National Indian Rights Association has during the summer inaugurated a movement which I regard as highly important and praiseworthy, by sending out two ladies to teach them the arts and economies of domestic life. The education of the Indian woman has been heretofore entirely neglected, but I feel confident much can be done by agency of this kind to improve their surroundings and elevate their condition. One of these ladies is at Ponca agency and the other at Pawnee. Their work, of course, is thus far in its incipient stages and results are not yet tangible, but the field is wide and promising and I believe it would be a wise policy on the part of the Government to appoint, especially at Ponca, a teacher to labor in conjunction with the society, as there is room enough and ample work for both.

All the tribes connected with this agency have within the last six or seven months leased their unoccupied lands for grazing purposes, and the lands so leased have been inclosed with substantial wire fence. The income derived from these leases, which is a substantial item in the support of the Indians, The Poncas received \$1,700; the Pawnees, about \$3,700; the Otoes \$1,100; and the Nez Percés, \$1,000.

In all the tribes the Indians have done all the freighting of supplies required for their several agencies, and have transacted the business in a very careful and satisfactory manner, no cases of loss or damage to goods through their neglect or inattention having yet come to my knowledge.

The members of the police force of the different reservations have been, as a general rule, quiet and exemplary in their conduct, and have promptly and efficiently discharged the duties required of them.

Upon the whole, these Indians are making substantial if not rapid progress toward civilization and self-support, and they will advance in an accelerated ratio as their stock of knowledge and experience accumulates from year to year, each point gained enabling them to make a still further advance till, within a shorter period of time than now seems possible, they will become independent and self-sustaining communities.

#### SACS AND FOXES.

The Sac and Fox Agency, in the very center of the Territory, includes four reservations, on which are legally settled five tribes: viz: the Sacs and Foxes of Mississippi, the Iowas, the Mexican Kickapoos, the Absentee Shawnees, and Pottawatomies, with some five or six hundred Indians from various other tribes scattered among them. Major Isaac B. Taylor, agent for all, reports in August, 1884:

"I find the Sacs and Foxes to be a people of good native intellect generally, but with a few exceptions, very much wedded to their old traditions. They are an extremely cautious and suspicious people; therefore it takes great patience to accomplish desired work, and the faithful fulfilling of all promises is essential to their confidence. They are very peacefully disposed. They draw large annuities, with good economy almost sufficient to support them. With the poor quality of land they are endeavoring to cultivate, which they draw semi-annually, with the privilege of using their credit with the traders for six months ahead on the strength of their annuity payments, who wonders that their conditions would grow down the energies of a majority of the whites. The Indians who are making efforts to put their living by the sweat of their brow, as a rule are

looked upon with a great deal of suspicion by many of their tribe, and I think this mainly arises from the influence of ill-designed whites who appeal to their prejudices, thereby getting them to watch their brothers Indians while they are accomplishing their own evil ends.

These people are well supplied with a good class of ponies, and a few are engaged in raising cattle. Chief Keokuk possesses the largest herd of any of the Sacs and Foxes.

Most of the families have small gardens; the principal products being potatoes of both varieties (sweet and Irish), beans, and onions. Their early gardens have done quite well. The dry weather has damaged all late gardening, as well as the corn crop. From the best information I can gather, the Sacs and Foxes have planted about 400 acres in corn, no wheat, one piece of oats of about 80 acres, which will probably yield 20 bushels per acre. The corn crop, which is on the rolling land, is almost a total failure from drought. The part on the bottom lands is promising quite well; with a few seasons' rains will produce 15 bushels per acre. I don't think it safe to average the present crop at over 5 bushels per acre, which will make the corn production of this reservation about 2,000 bushels.

A portion of the Sac and Fox tribe, 365 persons, are located in Tama Co., Iowa, where they own 1,340 acres held in trust for them by the Governor of that State. Their agent, Major Dayer says that of this tribe they have 235 acres under cultivation, furnishing all the food they need. With the sale of furs and horses and their annuities they are well off; are a quiet law-abiding people, and live in harmony with their white neighbors. The agency industrial day school is well managed and a success. A large number speak English; nearly all read and write in their own language. Their health is good. For honesty and truthfulness, they stand above the average white man with the merchants with whom they deal."

#### THE IOWAS.

"These people left their reservation in Nebraska and Kansas some five years ago, and have under no circumstances been able to get back since that time. Not being assured of their possession until the issue of an executive order in August, 1883, they made very little efforts to do anything in the way of agricultural pursuits, but since that time their efforts are commendable. They have planted this year from 2 to 8 acres of corn to each family, in all probably 1,200 bushels. For potatoes and about 15 bushels per acre, making 1,200 bushels. Besides, they all have gardens of potatoes, beans, and onions. They own neither cattle, hogs, nor poultry, but possess from 3 to 6 head of ponies per family. They are scantily supplied with agricultural implements.

They are very desirous that their lands in Nebraska and Kansas be sold and the proceeds of the sale thereof be placed in charge of the United States Treasury on interest, the interest to be paid to them as annuity yearly, except so much as would be necessary to build them a school-house, fit it out for school purposes, and maintain a school; also enough to build them a blacksmith and carpenter shop and maintain the same. They are bitterly opposed to allotting any of their lands in Nebraska to their half-breeds. In support of such opposition they cite the fact that these half-breeds once received lands by allotment and squandered them, and were taken back into the tribe, and another allotment, they claim, will be a repetition of the above. They are very anxious to have all their people settle with them."

#### MEXICAN KICKAPOOS.

"The Mexican Kickapoos now on their reservation are located on a reservation set apart for them by executive order dated August 15, 1883. The Mexican Kickapoo tribe of Indians, 326 souls, is composed of the Kickapoos and Pottawatomies who left their reservation in Mexico, from which fact their name. Their experiences have been varied. They are the crafty Indians in this agency, and are very shrewd traders. These Indians are now living a limited number of nations, consisting of the following articles for the fiscal year ending June 30, 1885: Beef, gross, 30,000 pounds; coffee, 2,000 pounds; flour, 25,000 pounds; sugar, 3,500 pounds; and soap, 1,500 pounds. If the present system of issuing rations to them could be modified so as to issue rations to the old women who are heads of families, for themselves and members of their families who are too small to issue and to the aged men in the tribe, and issue implements to those who are able to labor, I doubt not but it would be of material help in advancing them greatly in bettering their present condition, and such, a course, I think, would force the indolent ones to become self-sustaining."

#### ABSENTEE SHAWNEES.

"The Absentee Shawnees are living on the same reservation with the Pottawatomies, with the exception of those who left some years ago and settled on the reservations occupied by the Iowas and Mexican Kickapoos, where they have opened up small farms and are doing moderately well, under the charge of this agency, who are entitled to homes on the 30-mile-square tract of land, as described, upon which the Pottawatomies are now living. They take, however, the opposition to allotment, for among them are Indians of various tribes who cannot receive allotted homes, whereas if the land is held in common they pass for Absentees. This foreign element contains some of the best talent among them, and it is used in keeping up dissatisfaction, cultivating continuously the old Indian ways.

These people are engaged in raising hogs, ponies, and cattle, and are the most extensive agriculturists in this agency. Besides their gardening they will average about 8 acres of corn to the family, which will yield near 5,000 bushels."

#### POTTAWATOMIES.

"The Pottawatomies number about 500 souls. They receive no assistance from the Government whatever in the way of annuities or rations. They are engaged in farming and stock-raising on a small scale. They are not making the progress that is naturally expected of them for the past advantages they have had, but I think this owing largely to the land troubles which have been and are existing between them and the Absentee Shawnees, both parties claiming priority of rights. The Pottawatomies are, to a certain extent, nursing the idea that if they can succeed in securing certain money claims they claim are due from the Government they can purchase the entire tract, and thereby rid themselves of the Absentee Shawnees. However, some of them seem anxious to take their allotments, in compliance with the law of May 23, 1872. An act to provide homes for the Pottawatomies and Absentee Shawnee Indians in the Indian Territory," still, there is a speculative element among them who do not seem to desire the allotting of land consummated.

There is at this writing no school among them, and no provisions for one in the future, that I know of; but when the addition of the Absentee Shawnee school building is completed, lumber for which is now on the ground, I think there will be room to accommodate some of them, and the arrangements should be made to do so.

#### GAMBLING.

Has grown to a mania among the Indians of this agency, the women at times "taking a hand." About the time annuity payments are to be made, you see the gamblers commence gathering from the neighboring tribes, and some come from the States. Some white men who are married to Indian women are leaders in this vice. They seem to fully understand that an agent is powerless to stop them, and all official notices to prevent gambling and other vices are ridiculed by them. The respectable class of white men who are allowed to reside in this country on account of having married among the Indians, and the associates whom they keep around them, do more real harm against civilization and Christianity in one year than all the Christian ministers in America can counteract in ten years. Still this class of men goes and comes at will, while the law-abiding white man, whose example would be profitable, is kept out entirely because of his respect for the laws of his country. A good score with United States soldiers would be very beneficial."

#### MISSIONARY WORK.

"Chief Keokuk is the only chief who has adopted fully Christianity and civilization. He has been a great help to Christian work and in advancing his people in civilization. He deserves sympathy and great credit and encouragement."

#### CONCLUSION.

"My Indian employees are doing remarkably well. Too much credit cannot be given the Rev William Hurr, missionary and United States interpreter, for his zealous labors in trying to advance his race to a high-

er standing; the same can be truthfully said of Thomas W. Allpro, principal teacher at Shawneetown."

#### THE FIVE CIVILIZED TRIBES.

The eastern part of the Territory is occupied by the reservations of the Five Nations, under a "Union Agency," of which Major J. O. Tufts is agent.

"The Cherokees, Choctaws, Chickasaws, Creeks and Seminoles, comprising this agency, it is estimated number about 65,000, including white and colored adopted citizens. The number of full-blood Indians is decreasing while the increased number of mixed-bloods, and the adopted white and colored citizens make the population about the same from year to year.

The number of whites is increasing. The cause of this increase is, that the work done in the country is by whites and not by Indians. The mixed bloods will work some, but the full-bloods hardly ever. Under the laws of the country a citizen is entitled to all the land he may have improved. An arrangement is easily made with a white man who will make a farm for an Indian and give him a portion of the crop for the use of his name, and after a few years give him possession of the farm. Thus it is that more farms mean more white men. The number of whites within this agency who are laborers for Indians, employees of railroad companies, licensed traders, pleasure seekers, travelers and intruders, must be about 35,000, or half the number of Indians."

#### INTRUDERS.

"The number of intruders is increasing rapidly, and there being practically no law to punish for intrusion, it is only a question of time when they will control the country. The removal of intruders by the troops is a farce of the first water. When complaint is made by the Indian authorities of the presence of intruders, the military is called upon at once to remove the intruders beyond the limits of this agency. The troops go to the locality, and if the intruder has not stepped into the woods and out of sight for a day or two, they arrest and escort him to the State line, and turn him loose. The intruders have one or two breaths of State aid, and return to the Territory and the place from whence the troops took him."

#### INTemperance.

"Whisky is the cause of three-fourths of the murders in the Territory, and as the number of intruders and bad characters increase from year to year, the supply of bad whisky is more plentiful. It comes into the Territory from all directions, by wagon, pack, horses, railroads, and express, and in all shapes and quantities. The profit in the traffic is so enormous that parties will take all chances. The police and marshals do all that can be done, but arrest hundreds, who are sent to the penitentiary, but the country is so large and so much of it unoccupied that the whisky peddlers have ample opportunity to escape. Matters will not improve until the number of marshals is increased, and appropriation made to pay a large police force of good men to be on duty all the time."

#### STOCK AND CROPS.

"It is estimated that during the last winter, which was severe, not less than 15 per cent of the stock died from exposure. No feed is provided, nor care taken of cattle. The crops of corn, wheat, oats, cotton, and pecans promise an abundant yield."

#### SCHOOLS.

"Each of these nations has a public-school system similar to those of the States, and holds teachers' institutes at its capital annually. The settlements are so far apart that schools can be established only at neighborhoods where ten or more scholars can be got together. The neighborhood builds the house, and the nation furnishes teachers and books. Most of the teachers are educated Indians who teach the English only, in their schools. In addition to the neighborhood schools, each nation has academy and seminaries, boarding schools for their children only. The Cherokees have two fine seminaries that have been in successful operation for many years. They are managed and operated by Cherokees. The Choctaws have three large academies, one under the management of the Methodist Church South, and the other two by the Presbyterian Missionary Board. The Chickasaws have four academies conducted by contractors who are citizens of the Chickasaw Nation. The Seminoles have two, one under the management of the Methodist Church South, and the other of the Presbyterian Missionary Board, the nation paying the managers about \$80 per annum for each pupil, boarded, clothed, and educated. The Creeks have four seminaries under the management of the following religious societies: The Methodist Church South, Southern

Baptist, Presbyterian, and Baptist Home Missionary Societies, the latter for Creek freedmen.

In addition to the above, there are subscription schools. These are schools established by private enterprise and students paying tuition, except in cases where individuals or societies in the State pay tuition for certain students. These schools receive no support from the nation. The Baptist Academy, at Vinita, under the supervision of the Congregational Society, erected two years ago by funds subscribed by citizens of the Cherokee Nation, is one of the best in the Territory, and has an average of about 100 pupils. The Harrell Institute, at Muskogee, managed by the Methodist Church South, has about 140 students, and has in progress of erection a fine academy building. Indian University, at Tahlequah, managed by the Baptist Home Missionary Society, is a flourishing school. It will be removed to Muskogee as soon as buildings now in course of erection are completed. The schools managed by religious societies, either as pay schools or under contract with the nations, are generally the most successful.

The Five Nations, as a whole, are an illustration of missionary work, which, commencing seventy years ago with savages, has in two generations produced as high a stage of Christian civilization as could be expected; it is far weaker than that of the Anglo-Saxon, which has had a growth of a thousand years. There is not a blanket or a wild Indian among them; they have been humanized; they are clothed, right minded, intelligent, live in good, decently furnished houses, and self-supporting; a large class are moderate property holders. Absorbed into our national system, they would be carried along much more rapidly than is now possible, yet throwing their country open would create a struggle in which the weak (a majority) would suffer and the strong minority develop. This, however, must finally be done. Steadily improving, learning from the whites in their midst, becoming more and more Anglo-Saxon rather than Indian by admixture of blood, we shall ultimately have in this Territory an Indian problem without Indians; Indian blood may be practically extinct, while Indian rights may exist in full force. Where there is but one-sixteenth, or even one thirty-second part of Indian blood, the claim for rights is as strongly asserted as by those of pure blood. The advantage it gives over ordinary citizenship is tremendous and, I think, too great to last very long in a country like this, where the tendency is to an equilibrium of rights.

#### The City of the Holy Faith.

In the far west is a section of our country just waking up from the sleep of centuries and taking its first steps in the march of progress which is slowly but surely drawing all lands and all peoples to a day of better things. It is mostly a desert of shifting sand but a desert baptized may prove an Eden disguised, and New Mexico is not unlikely to verify the poet's dream. Explorers tell us that it is divided into five natural divisions. The plains on the eastern border; the valley of the Rio Pecos; the Sierra Blanca; the valley of the Rio Grande; the Sierra Madre, and beyond this the plains bordering on Arizona.

Historical dates are not to be thoroughly relied upon, but it is said that the Spaniards first found their way to this region about the year 1540, tempted on, through much suffering and privation, by the stories of mineral wealth told by the Indians. The limit to their endurance seems to have been reached when they halted on the spot where the City of Santa Fe now stands, known in Spanish records as *San Francisco de Asis de Santa Fe*, or the City of St. Francis of Assisi of Holy Faith. Here they established themselves and in a measure realized their dreams of acquiring wealth by working the mines of gold, silver and turquoise. The Catholic fathers of the church built, a few years after, the *Pecos* church near an ancient Aztec pueblo, whose vestiges of that almost prehistoric tribe of sun-worshippers still remain. To the north is the village of Laas, where the waiting Indians still keep their fires burning and watch for Montezuma. Nearer to the City is the church of San Miguel, said to be the oldest church in America. The walls are of immense thickness at the bottom, and the small slits of windows at the top let in a "dim religious light," emblematic of the soul blindness of the worshippers and their ignorance of the true Father of light and love.

Entering the city itself, a place numbering about eight thousand souls only a few of whom are whites, one finds a quaint, "olla podrida" of narrow crooked streets and one storied adobe houses, with several dismal looking Catholic churches and a few American houses; now and then a good school building. The walls of the adobe buildings are very thick; windows are scarce, with here and there a small door. A Mexican archi-

Hotel, Old Point Comfort, Virginia.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth.

The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygieia is four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 41° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful appliances of the Hygieia.

For further information address by mail or telegraph, H. PHOEBUS, Prop'r.

3-34-6-85.

fect's head evidently was incapable of originating more than one idea, for they are all of one style, in the form of a hollow square. Various surprises meet the eye of an inquisitive visitor who ventures into the *placita* or open enclosure. Sometimes it is transformed into a corral for burros (donkeys) sometimes a store-room for wood and brush, sometimes a burial place and sometimes a lovely flower garden. The public Plaza or square, is a cheerful spot in summer time and it is pleasant to sit under the shade of cotton wood trees while one listens to the musical performance of the U. S. Military Band. Within a stone's throw are two fine looking buildings: the College of the Romanist Brothers and the "Sister's Hospital." On one side is the palace of the Spanish rulers, a large one storied building of five hundred feet or more, now occupied by government officials. Not many rods away is the Cathedral, so old as to be unsafe and gradually being rebuilt. About two hundred years ago, when the Indians revolted against Spanish oppression and suddenly appeared demanding the surrender of the City, this old church was the scene of wild confusion and dismay, as men, women and children fled within its massive walls for protection against Indian savagery. Their cries and appeals were all in vain. All were cruelly massacred and the stones were red with the blood of both the young and the old.

To a stranger this seems like a foreign land. The narrow streets, the oriental looking houses and the numerous little donkeys driven by blanketed Indians or swarthy Mexicans only needing turbans to look like Arabs—remind one of scenes in Cairo or Jerusalem. There is a general air of thriftlessness and languor, an undeveloped condition of things peculiar to old Europe instead of new America. The people wear a dejected air of hopeless poverty and are ill fed evidently, though this dyspeptic look is probably owing to their excessive use of "chilli colorado," one of the slow poisons, also tobacco and bad liquor. But all this will pass away. With the coming in of a new tide of civilization from the east the comforts of life are being introduced. Steam and electricity are doing their work here as elsewhere.

A far more hopeful sign to one who believes in a Christian civilization as the only true foundation for a permanent prosperity is the work being done by the faithful, self-sacrificing teachers of the Presbyterian Board of Home Missions, among the poor Mexicans chiefly. The University of New Mexico under excellent Christian teachers is also doing good work among the whites mainly, but is free to all. An industrial school for Indians is soon to be started and promises to be one of the most far reaching charities of the West. The buildings are purchased, the teachers engaged, and prospects are all favorable. The harvest truly is plentiful, and it would seem, from the number of highly educated, devoted Christian women in the East eager to enter into the work, that we no longer need to say the laborers are few.

I have failed to note one of Santa Fe's chief attractions and one which in future is going to make it one of the finest sanitariums of the world: its climate. The altitude of seven thousand five hundred feet affords a clear, rare, dry, electric air more than favorable for certain kinds of physical ailments. Are not all people, all lands, all climates, even the gold and precious gems, in the hands of God, and will He not make all these things work together for good and for the development of his kingdom of peace and good will to men? Then shall this desert blossom as the rose, this bitter turn to sweet, and this darkness into light. J. A.

#### Horsford's Acid Phosphate.

ADMIRABLE RESULTS IN FEVERS.

Dr. J. J. RYAN, St. Louis, Mo., says: "I invariably prescribe it in fevers; also in convalescence from wasting and debilitating diseases, with admirable results. I also find it a tonic to an enfeebled condition of the genital organs."

#### DENTISTRY.

DR. T. H. PARRAMORE.

begs to inform the residents of Hampton and vicinity that he has resumed the practice of his profession in Hampton. Office on King St., opposite Barnes' Hotel.

VOL. XV.

HAMPTON, VA., JUNE, 1885.

No. 6.

Seventeenth Anniversary of Hampton Institute.

Hampton has had occasion again to be thankful for a beautiful anniversary day, — a real "Hampton day," set like a jewel in a setting of storm and fog. The clouds that were thundering and pouring at seven, cleared away long before eleven, leaving no sign but added lustre to the face of nature, flower fragrance in the air, and freshness in the water that came over the shining waters.

Among our visitors from abroad, were, Rev. J. A. Vickar, rector of the church of the Holy Trinity, Philadelphia; Rev. Dr. Watkins, rector of the church of the Holy Trinity, New York; Rev. Dr. McPeckson of Chicago; Rev. J. A. Moore; Rev. Samuel May of Andover, Mass.; and his cousin Rev. Jos. May of Philadelphia; Rev. Dr. Edwin M. Phillips; Rev. John W. Long of New York; Rev. Dr. C. C. Longmadow, Mass.; Rev. Dr. Cooping of New Bedford; Rev. Dr. Armstrong and Rev. Dr. Burrows, Rev. Dr. Spiller, and Rev. Dr. Smith (the last two colored ministers) of Norfolk. The board of trustees were composed of Rev. Wm. F. Foote of Boston, ministerial-list with Rev. W. F. Foote of Boston of New York; Alexander H. McKenzie of Cambridge, Mass. It was further increased by four of the colored ministers of Hampton, Mass., Rev. J. A. Young, Young Jackson, Rev. L. B. Strieby, Foote and McKenzie. There were present of the board of trustees Dr. Lewis H. Steiner, librarian of the great Pratt Library, Baltimore; Rev. J. A. Ogden and Mrs. M. M. Kimber of New York; Judge F. N. Watkins of Farmville, Va.; Mr. Charles L. Mead, of New York; Mr. Moses Pierce of Norwich, Ct.; Geo. F. Peabody of New York and Rev. F. B. Marshall the pastor of the Episcopal church of St. Andrew, Westport, Mass. Among the other guests, were Mr. Hobbes, manager of the Indian schools of North Carolina; Col. A. Stevens of the Smithsonian Institution; Mr. Stevenson of the Smithsonian Institution; Mrs. Dr. D. C. B. of Baltimore; Mr. J. D. D. of Baltimore; Mr. Wm. B. Lent of New York; Dr. C. C. Bombaugh of Baltimore; Rev. E. M. Garrett of Richmond, Va.; Rev. Dr. Clark, and Rev. Dr. S. A. of New York; Miss Bush, lady of the State Normal School at Farmville; Va.; Mr. Shield of Baltimore, Md.

The exercises were reported also for the *New York Herald*, *Post*, *Christian Union*, *Boston Journal and Advertiser*, the *Hartford Courant*, *Springfield Republican*, and Philadelphia, Norfolk and Hampton papers. Citizens of Norfolk and Hampton, and Old Point, and visitors from the Hygeia were present in numbers.

The recitations of the morning compared favorably with those of other years as did the written examinations of the three previous days, which were the severest test of the students' knowledge and standing of the class. The visitors' attention was, as usual, divided between the two classes, the white students in the twelve class rooms and the colored students in the twelve class rooms. The apprentices were found for half the morning, then going to their classes, while the work students of the night school remained in the store building and the day school remained in the store building, showed some improvements, and for a new feature, the school prohibited the wood carving work; brackets, benches, backlogs, paper knives, platters and church collection plates, picture frames and other articles were made by the students during the day. The class consisted of colored students and from 2 to 5 Indians. The teacher states that she finds no noticeable difference between the work of Indians and whites, the only real defect being that the Indians have less among the Indians thus far; it is perhaps too soon to generalize; she sees no difference either, between the work of the boys and girls, and the work of the boys and girls, which, the boys, naturally, have the advantage.

The "Indian training shops" train both Indians and Colored students in carpentry, tin-smithing, shoe and harness making. Of carpenter work, school furniture of various kinds was shown. Noticeable also was a very perfectly made teacher's desk with drawers and cloth top, by the manager to be one of the best. Also, by the manager to be one of the best, a mechanics of two years training has ever seen; many white journeymen cannot do as perfect work. The tin ware exhibit was artistically arranged upon a frame work of conductor pipe, and made a

shining display of beauty in utility, to which a touch of sentiment was added in some curious baskets, square and round and melon shaped, deftly braided of strips of tin, the genius of a former Virginia workman, having thus forced his way to expression in a new and useful form. The shoe shop made its usual creditable exhibit, and has done more custom work and repairing than ever this year. The head of the harness shop reports a colored apprentice as his best workman at present—"able to make a day's worth of harness right through; could run a shop of his own." The carpenter foreman however to boast of the super-excellent stitching of a former Indian pupil.

Certainly no handsome stitching could be done by hands of any hue than that we find on some garments on the Indians' work table. Not many of the Indian artists, however, are prepared to suggest, but seems pleased to hear it made. He also is a dress, cut and neatly made for herself by one of the young Indian mothers. On an adjoining table, a young woman is busy with the "Cooking class" in the Sewing and Tailoring department. We find handsomely made and laundered shirts and neat uniforms and other garments, the use of colored stuffs and the artistic arrangement and display of the work. The attractive and artistic arrangement of mittens. The attractions of the table of Indian decorated pottery, are increased by some curious Indian dolls. Photographs of the Indian men and women are also on display. A very attractive house artist, cover another table. The green houses supply the general decoration of the room. The Farm exhibit shows the first straw berries, the first season. The exhibit also displays a variety of handsome sheaves of rye, oats and grass; no wheat yet, because of last year's drought and this year's cold. The cunning brown faced baby boy of last year's exhibit, is now a handsome boy. The "Hemenway Farm" might crown the last named exhibit.

the march of the whole school to Virginia Hall at noon for dinner, was a picturesque sight as usual. The cadets of the well-drilled battalion ranged in two long lines on the lawn, gallantly "uncover," while their sister schoolmates march through the lines, then "fall in" and follow, while the band discourses stirring music. The fifty graduates who were able to accept the invitation were renewed by their Alma Mater, took lunch merrily together in Virginia Hall Chapel, and the other invited guests in the new Lodge.

The afternoon exercises, held in the spacious Gymnasium, the gift of the late Mr. Frederick Marquand of New York, were the crowning interest of the day, and were conducted according to the following programme.

**MUSIC.**

SALUTATORY: "*Our Mission.*"  
Sarah F. Peake, *Hampton, Va.* Graduating Class.

Trustees.

1998 年 12 月

There were several points of unusual interest in these exercises. The salutarian, Sarah F. Peak, was introduced as a young representative of the family of faithful "Mary Peak, who, just out slavery herself, gathered the refugees around her under a Hampton live-oak, and taught the first "contraband" school. This introduction roused the warmemories of the Rev. Dr. Strieby, and taking the young girl's hand as she stepped on the platform, he said:

"General Armstrong has opened the floodgates by that name. I shall have to exert myself to remember what our friend and trustee Mr Pierce—who knows all about steam engines—tells us—that if a speaker has neither "cut off" nor "condenser," it is bad for the audience.

Five days after war was declared," the slaves began to take shelter under the walls of Fort Monroe. "They were in families, carrying their babies, leaving their hats and their hands and asking to come into the lines. They had nothing to eat, little to wear. Word came to the office of the War Department. We sent down Miss Mary S. Peake, a Quaker, with provisions, food, and, in September, 1861, we sent a missionary. As he walked past the fort he heard singing coming from the full of ex- building, entering and leaving it, full of low- "on God for deliverance. When their prayers were ended, he rose and told them who he was, and how he had been sent down from the North to help them help themselves. If the roof had been open- above them and an angel come down, they couldn't have felt more astonished and thankful; their prayers were answered." On the 7th of September, 1861, the first "The roof was opened for the refugees, and Mary S. Peake was the teacher.

"Miss Peake, I am rejoiced to take your hand, and pray for the blessings of God to be upon you."

The speaker's essay closed with a tribute to Hampton's ever remembered, ever beloved friend, Miss Mary Anna Longstrech, whose gentle pictured face smiled down upon us from under its living crown of lilies — "whose life has passed from earth, whose work, please God, shall never die." The returned graduates of their work, the condition of their people and their relations with the whites. For the first time, a place among the speakers was given to one of the faithful under-graduate teachers, who, of the number of 50, are doing good work, doubling the force of Hampton's army in the field. As such told how he built a first new school house, "working by day and praying by night."

The "negro" class" was represented by Baptist ministers of Hampton, who gave an account of the Old and New ministry; some of what characteristic of both. An Indian young man gave his own reasons for claiming a desiring citizenship for his people; which were, ist, that the Indian also is a child of the white man's God; 2d, that he was of the owner of the land; 3rd, that without the protection and help of citizenship, he cannot prosper; 4th, that with it, he can become a useful member of the nation; a man among men. An Indian girl pleaded for the Indian woman, and prophesied against the use of "savage" as a synonym of Indian, so long as "there are also white savages, black savages, and blue savages."

A handsome gold medal was last winter presented by Mr. Wm. J. Demorest of New York, to be awarded according to the judgment of the teachers. It was decided to give it to the member of the Senior class who should pass the best examination in the Junior studies, thus emphasizing

the Junior-Senior School's estimate of foundation work, preparation of the graduates for their duties as teachers. No "coaching" was done. The whole class went through the thorough examination in arithmetic, geography, grammar, and letter writing, and reading in the first four written examinations, and the papers criticized for spelling and handwriting. The result was very gratifying to the class in general. Four young men below the first received honorable mention.

low the first received a general average on the written examination, above ninety. The medal was gained, and awarded with the plaudits of teachers and scholars to a young man named in the above programme: H. Barrett, of Henderson, Ky. It was presented to him by his friend and former employer, Gen. J. F. B. Marshall, with the following hearty words.

nearby words: ( )

"Harris, it gives me peculiar pleasure to be chosen by the trustees to give you this medal. I know you Harris, and believe that you thoroughly deserve it. And the plaudits with which your name was greeted when the medal was awarded, prove to me that your teachers and schoolmates agreed with me. In my employ as clerk; on a New England farm, as hay maker and carpenter; in all my relations with you—I have always found you faithful and competent, and it gives me the greatest pleasure to present to you now this beautiful gold medal which has been awarded to you for excellence in elementary studies."

The medal is a beautiful work of art, a shield about 1 x 2 inches, bearing on its face the inscription: *Hampton Normal and Agricultural Institute*, and on the reverse, *Demoree Medal. Presented to Harris Barrett for excellence in Elementary Studies*. It is suspended from a bar pin inscribed, *Class of 1885*.

It shone proudly on the happy wearer's breast as he delivered his essay on "Pioneers,"—calling on his classmates to take their places as the leaders of their people in the ways of wisdom and prosperity.

The representations of the Past, Present, and Future of Indian life will not be forgotten by those who saw them. The Past—barbaric glories were typified by a young brave and Indian girl in the beautiful dress of the wilderness. They stood silent before a vision of the ancient days while the story was told. The Present's pathos was represented by "Lo," the very "poor Indian," and squaw, in shabby blankets, wandering as their Indian interpreter man, knowing the loss of lands and buffalo, a asking where to go—"white man ever where." The Future's hope by a promising pair of Hampton students, able to speak themselves, work for themselves, and teach

themselves, work for their redemption, and for the redemption of their people with their white brethren's help on the Christian's road. As the two groups stood in striking tableau, a visible embodiment of truth which we wish every white citizen of the United States could have seen and taken to heart, their common bond of brotherhood was made manifest. The Indian school rose behind them, the old started a Dakota hymn, recognized throughout the strange words but familiar melody—"From Greenland's Icy Mountain."

As the plaintive strain died, it was taken up in English, by the teacher, fuller chorus of the schoolmates, while the audience rising joined in the grand chorus, "Shall we whose souls are light with virtue and with peace of mind, from their hearts. The first of one sister from the youngest of a minister's children have graduated at Hampton, the last with the honor of the valedictory. Hark! say discussed complete manhood and need of symmetrical development of the men, especially of the colored race, for the valedictory which won praise from some of its distinguished leaders and was especially gratifying to the whom it was addressed, as indicative of genuine growth of heart and mind, those from whom it desired not a countenance, but a throng to their account.

In the necessary absence of Mr. Elbow, Monroe, President of the Board of Trustees, the diplomas were presented to the graduating class of 42, (Colored girls 17; boys 10; Indian girls 3; boys 2) with the following kind and encouraging words, by its President, Rev. Dr. M. E. Strieby:

"Dear young friends: I wish to repeat the regrets expressed by Gen. Armstrong in the absence of your very high esteemed president. But I wish to tell you that he has gone to see with his own eyes that he may more fully sympathize with you and do more to help, the races helped here.

I am to give you these diplomas as a recommendation of your teachers, but I feel that I express the sentiments of all the teachers here in saying that you have given us a reason to see for ourselves that you are the best of the young men of the world. We have reason to be glad that you are the proof of this which you have given us today, and especially of that we have

11 to-day, and especially of the

In the truthful and touching tribute of your valedictory to your Principal, the expression of his and your recognition of what these privileges mean, as well as your improvement of them. It has touched all our hearts deeply. If you can go forward to the work for which you have been trained, not only with ability of head and hands but with such hearts, we have reason to be gratified indeed. If you can go forward to the work for which you have been trained, not only with ability of head and hands but with such hearts, we have reason to be gratified indeed. If you can go forward to the work for which you have been trained, not only with ability of head and hands but with such hearts, we have reason to be gratified indeed.

With these words I give you these diplomas. Take them, and go out to illustrate to the world the principles to which we have listened to-day.

The music which lightened the programme, deserves mention. Besides the plantation melodies which were given to be the most precious possession of the race, the chanting of the Lord's prayer and Luther's "Judgment Hymn," by the school under direction of Mr. Hamilton were impressive, while a chorus of voices, under direction of the band instructor, Mr. Rathbun, gave "The Heavens are telling," from Handel's oratorio of the Creation, with beauty that showed the full capacity of the race for music of the most cultivated order.

The programme completed, time remained to hear from some of our most distinguished guests from North and South. Rev. Dr. Armstrong of Norfolk was introduced with the remark by the Principal that "The education of the Anglo African on this continent in the school of God's providence did not begin with his emancipation but back in 1620, when in first association with the white race he began to acquire language, labor, Christianity." Dr. Armstrong spoke as follows:

"Unexpectedly called on to speak to you, I cannot hesitate to respond briefly, and mainly to express my pleasure in the evidence I here see of the progress and elevation of the colored race.

I have spent my life among the colored people. And in the old days, I was usually set apart by the Presbytery I attended, to preach to the colored churches. I always asked to be. I know you well as well as most people of my age can; and I say here (with feeling) I am surprised, and I thank God for your progress. I am especially pleased with the advance in the sentiments you express. I have been here in former years on such occasions, and I am struck with the advancement and see the hand of God in it. On the very first occasion when I was here, I looked around, and those of us who had been on opposite sides so recently, we felt like stretching out our hands to each other on this common plane. In speaking then, I referred to that feeling, that we were like men climbing up different sides of a mountain, but meeting on the top, and when we got near enough, recognizing each other as brothers. But the feeling of opposition is rapidly passing away, and a kindly feeling taking its place. So it is with the feelings that have existed between the ex-slave and former master, feelings that have excited and worked upon (as one of you has said) by those not existing in your race but in their own selfish ends. I never was a slave owner, but I saw and knew their feeling. I did not wonder at it—or your feeling as to the Democrats. I am not a Democrat—not a Republican—I am not a politician of any kind—but I saw how you have felt. Now you see you are just as safe under Democratic rule as under Republican; and the longer you live, the more you will see it. The gap is filling up between us—God speed you."

The Principal introduced the Rev. Dr. McVickar of Philadelphia, who spoke as follows:

"When the great Daniel Webster was asked to make an oration on the completion of the Bunker Hill Monument, pointing upward to the towering column, he said impressively, 'the real orator of the occasion stands mute and silent before you.'"

So to-day, it seems to me not fair to risk the feelings this occasion has stirred within you by words of mine.

I have often heard of Hampton and have been disappointed several times in being unable to visit it. I am glad that I did not know before what it really was that I was losing, for if I had I should not have been able to bear the disappointment. Now that I have come, I must say, that the half has not been told me. I do not think that I have ever had my heart so deeply stirred. I have listened to many valedictories, a better address I have never listened to, and the best thing about it is that it is the very expression and symbol of the life and influence of this institution—its central idea and its spirit—manhood.

Manhood! There here is sought on earth that ought to stir our hearts as that stir us

any object in life surpassing that in dignity! anything to fire our hearts to such ambition! Manhood!—erected in the image of the great Father above, glorified in the coming of his Son, showing what manhood ought to be.

It seems to me that if there ever was an institution calculated to cultivate and bring out manhood it is just this institution.

I am loath to add one word to that beautiful and merited tribute we have listened to, to him who stands at its head and center. But to every word of it let me say a loud Amen. God bless him for the noble work he has done and is doing in this grand institution, which by his work has grown up around him. God bring us to that day when we shall see and know its results even as we cannot know them now.

The doxology, "Praise God from whom all blessings flow," was sung by the audience standing, and the exercises were over.

Then the stormy forces which had held far off all that perfect day, said "Now it is our turn," and rising in their might rolled in a huge sea fog through the capes; in ten minutes blotting out the blueness of wave and sky, the greenness of the shore, the smiling landscape far and near, until the building after another—like a great white sponge to wipe out the very day itself from the tablet of time—but it cannot be effaced from the tables of memory.

By special request we print below the essay of Zallie Kulo, the first Indian girl graduate to speak for her sisters on Hampton's platform. It is in all respects entirely her own.

#### THE INDIAN WOMAN.

DEAR FRIENDS—

I am glad and happy to have an opportunity given me to speak my few weak words for my race.

You all know, that once the whole of America belonged to the Indian alone. The white man made his way over here and our forefathers had no learning and no power to protect themselves; they were driven like animals off their good lands and forced to go from this place to that place.

The war fought for the colored people ended twenty years ago. A war is now going on for the Indians. It is six years only since it began. Our white friends are not fighting for us in the way some of the white people fought for the colored race. They are fighting with their minds.

Some people say it is a long time since the Indian had the light and truth of God; why did he not accept them? Why is he not yet "civilized"? I'll try to answer this question. So it is a long time, but if one boy is feeding a cat at the same time another is whipping him, is the cat likely to stay and eat while one boy is whipping him or is he more likely to run away from them both?

The white missionary was feeding the Indians at the same time the other white man was fighting him, and the Indian lost faith in the missionary because he and the man who fought him, were of the same race and so would not accept the food of the Bible.

We Indians who are at school desire to do away with the two words *savage* and *wild* or to use them only in the right sense.

If you should go to my home in Dakota, you would see a great change that has been made during six years. Many lands that used to be dotted with tents are now dotted with houses. There are still tents, but the number has greatly diminished. If you should enter the tents and talk with the people, you would find they are savages. You would find most of them in their Indian dresses; ask them why they do not dress like the white people, their answer may surprise you.

I have an uncle of whom some of you would be afraid, simply because he wears the Indian dress. I once said to him, Uncle, why do you not dress like a white man? He answered, "Why, niece, if I had the white man's dress, or a way to get them, I should gladly do so." I then said, you have to pay for the Indian dress. He replied, "Yes, but not near so much as for the white man's clothes." Many others say the same.

A great number of them dress their own way because they cannot afford the citizen clothes. Many of my people in their Indian dresses are true Christians and good thinking men and women, but they are called savages or wild Indians by other races. They do not deserve to be called so. Where there are savages, we would rather have said the *red* savages, because there are white savages, black savages and yellow savages.

Some white persons sometimes speak of wanting to go to our homes as missionaries, but they say they are afraid to go because the savages might kill them. Such missionaries will not not to teach our people. We want missionaries who trust God more than that. We want earnest and brave mission-

aries who do good work for the sake of doing good as much as for the sake of money.

During last year in Dakota, there was one white man killed by the Indians. How many Indians do you suppose were killed by the white men? There were six Indians killed by the white men. Of which savage did you think you would be most afraid, the red savage or the white?

I say the Indians are not savages, because they did not kill the white men for nothing. The white men let Indians alone, the Indian will not bother them, but they will help the white men to obey the laws although they do not help them to make the laws. When the missionaries go to teach my people, they do not refuse to be taught. My ny of them are now longing for teachers. As many of you as can, I ask to go and teach the Gospel to them, and we Indians will gladly and earnestly help you to give the light to our people to walk by.

Many of the Indians do not know what good white people are.

They have not seen them as much as we who come to school do, and for this reason I should think they ought to be more afraid to send their children East than the good white persons ought to be, to go West to teach them.

I am an Indian girl, and I wish to speak next of the Indian woman. She has been neglected too long now. It was the Indian woman who made the Indian race what it was in the past. It was the Indian woman and her missionaries who made my people what they are to-day, and it will be the Indian woman to make the Indians what they will be in the future. The higher position is given her and the sooner she reaches it, the faster will Indian civilization grow.

Therefore, I believe in educating just as many Indian girls as boys. Let these Indian girls be taught to be kind and respect their Indian girls while they are at school as white boys are taught to respect the white girls, and it will be a great help.

In the past days, the Indian woman was expected to do most of the work that was to be done. She used to put up the tipi, carry her own wood and water, sewed clothing for the family and prepared the food. She was supposed to prepare meals three times a day, but as a general thing she prepared them four or five times a day. In cold weather she kept the fire burning all day of the night. She sometimes took care of the horses but it was when her husband was not able to do it.

When she got through with the necessary work, she took up her bead work.

All the work she did she thought her duty, and went ahead and performed it quickly and well.

The man did very little work, he used to hunt most. When he was at home; he was invited to feast with his friends or at some great feast. He also called others to feast with him. If their friends called in the evening they would first have something to eat. When they were through eating, they would smoke the same long pipe and tell their stories of spiders, toads and owls, which they enjoyed very much.

While sitting in the tipi, it was thought very impolite for the woman or children to pass before the men, but it wasn't anything for the men to pass before the women. It is the way the Indians used to live and it is the way some of them live to-day, but I am glad to say that many of them live differently. At my home in Dakota, many of the Indian men carry the wood and water for the women and they never think now to ask the women to plow or to cut hay.

We sometimes read of women in the Eastern countries who drown their little girl babies because the little girls are not much thought of there.

It is not so among the Indians. The love of an Indian mother for her children is indeed great. To be sure the love of any mother for her children is strong, but I feel tempted to say that the love of an Indian mother is greater than that of a white mother.

The Indian woman does not love her children in the way a white woman does. She thinks the white woman who sends her children to school perhaps across the ocean or at other far places, care very little for them. After the white daughters and sons are educated they take care of themselves and in some cases they have their dear friends to live far from them, and they may never think them again on earth. This is a dreadful thought for the Indian mother, for she loves her children in this way. She wants them always to be where she can see them at any time. She wants her children to know how to do such work as we do, to read and write, and especially to know how to play on the organ. They are very fond of music. Where there is but one girl in the family she is very much cared for. All the finery in the house belongs to her. The

best horse the father has is hers. She has her own way about every thing. She does very little work.

The Indian girls are sometimes bought for wives but not so much so as in the past. Those that are bought, as a general thing, are bought by the men they love.

For all the ignorance that used to be in our country before our races came here, we do not know who was responsible. But we know who will be responsible for the ignorance and darkness that are in our land at this present time. We are glad that we have kind friends in our land to whom we can look for help. We thank with all our hearts, those friends of our race who are helping us, for all their kindness to us.

It seems to me that all those Indian territories and dark states of the colored race in this United States, were placed with darkness so that the white people could have a chance to do something for their Heavenly Father.

#### Extracts From Essays.

We have room for a few extracts from the other essays, which will show at least their spirit.

#### OUR MISSION.

"We stand to-day on the threshold of a new life. Before us lies the unknown future. We do not go away from Hampton to spend a life of luxury and ease. Should we dare to if we could? No, if such a lot, is ever to lie before the colored girl as she graduates, it must be in some future generation, not for us who look around upon our less fortunate sisters and brothers and see them groping in darkness and imploring our aid. There is a great work to be done, and we are the ones to do it. We have not to go far to find our mission. Within but a few miles in any direction from this building in which we are now gathered scenes of poverty and distress which, if we will, we can do something to change. Let us look into one of them. As we pass along the streets and roads how many little children we find looking up to us pleading for our help to lead them out of ignorance and evil surroundings. Here is work for us. Let us think that among these little children are some who will be leaders of our people. Let us set about making these future men and women what they should be. As they grow up, so will our race be in future years."

#### CITIZENSHIP FOR THE INDIAN.

"When I left home I was ignorant of the great work to be accomplished, I hardly knew why I was coming to school; I had no desire to see my ignorant race raised to a higher position, but thanks be to God and the instructions I have received here, I have been made to see more clearly the true condition of the Indian, and a desire has been created within me to see the day when my race like other races shall stand as men among men—when they shall be called citizens of this, that you call the Land of the Free. I don't mean to complain, for there is now taking place a great change, and good men seem trying to compensate the Indians for the wrong of the past. I only want to lay before you my condition, for I have formed the idea that the majority of people think that the Indian is not under any restriction but is as free as the grass which covers his native plain."

It is this possibility for the Indian to rise is shown by Indian students in this and other schools; that he can drop his old ways and change from habits which have surrounded him for centuries to ways entirely different—which is a hard thing for any race to accomplish. On the reservation, where he has had a chance, he has begun to open fields and farms; he is learning that labor is not a disgrace.

Since he has started in a new life, it is not going to be hard to complete his civilization. The great majority of the Indians have no desire to become citizens. They seem content to live in the old way. But they are not all content; there are some wise men among them who look ahead and see what is best. Many are ignorant that such a right exists. But others are far enough advanced to know and desire it."

The question of citizenship has been in the minds of many friends of the Indian, and it has been before the House of Congress. This is a good proof that the day is coming, when he is better prepared, that the Indian will have given him his rights, which will make him feel as a man ought to feel. I think that then the trouble with the Indian will cease; that instead of holding in his bosom a feeling of hatred to his white brothers, he will love them and be ready to support the flag and the laws of the Union. He will feel that the white man, the red man can live in peace in one great brotherhood, and he will feel himself and be recognized everywhere as a man among men."

(Continued on page 76.)

# SOUTHERN WORKMAN.

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October)  
Printed on the Normal School Steam Press  
by Negro and Indian students trained  
in the office.

H. F. LUDLOW,  
M. F. ARMSTRONG. } Editors.

REV. H. B. FRISSELL, Chaplain,  
MR. W. N. ARMSTRONG,  
MRS. ORRA LANGHORNE,  
MISS ALICE N. BACON,  
F. N. GILMAN, Business Manager.

Regular  
Contributors.

Terms: ONE DOLLAR a year IN  
ADVANCE.

Entered at the Post Office at Hampton, Va., as second  
class matter

HAMPTON N. & A. INSTITUTE.

Seventeenth Annual Report of the Principal.  
For the School and Fiscal Year  
ending July 1st, 1885.

To the Trustees of the Hampton Normal  
and Agricultural Institute.

Gentlemen!—This, and the accompanying annual reports, are intended to give not only the record of the school year just closing, but, as in previous years, an outline of the entire work, making material for a small pamphlet to supply the constant demand for full information upon its ideas and methods. Hence some repetition which, it is hoped, will not render them tedious reading to those familiar with previous reports.

The outline of our many-sided work is gradually completing; the school is substantially built up, since 1863, at a total cost of about \$400,000; no more large buildings are likely to be required. There is no debt, except of the fund, which we see our way to pay ere long.

By building a new dormitory for girls at a cost of \$15,000, by expending about \$2,000 in improved cooking-room and facilities, by the erection of a laundry costing \$4,500.00 and by many minor improvements, all within the past two years, six hundred boarders are now comfortably accommodated; it is our limit on the present basis; an increase is not, I think, desirable.

I will refer to some Special matters and discuss School Finances and the Race question, before taking up the Work of the Current Year.

## SPECIAL MATTERS.

(1.) Since 1870 the school has worshipped in an attractive frame chapel, in the National Cemetery, within our grounds, built in 1864, for the soldiers in hospital here. We have outgrown it; it is decaying, and the land on which it stands is needed by the government which owns it. Happily, at this juncture, the school has received a kind offer to build, at the expense of an individual, a beautiful substantial chapel as a memorial to a good man, to be placed in the centre of our system of buildings. It will complete it and crown them all.

(2.) The school's twelve (all but three of them brick) structures that, fronting Hampton river, stand in two parallel lines, in *echelon*, each unmasking the other, are now heated by two sets of boilers, 2000 feet apart, which also supply steam for cooking and for four engines. The cost of fuel and skilled labor and the risks of life and property would be reduced by combining into one "nest" these two sets of boilers. To do this, heat the new chapel and two other buildings now with their own apparatus, and make boiler room enough to do the work easily, would require the purchase of two sixty-horse-power boilers, several hundred feet of large iron pipe to run underground, the moving and resetting of one of our present boilers, and a brick building to cover the boiler system; done by the best mechanical

skill it would cost not far from \$8,000. The Committee of Trustees on this matter, Messrs Monroe, Pierce, Mead and myself, have carefully examined the matter and propose to send an engineer to survey the ground and buildings with reference to a complete map of everything on which can be based plans for as perfect steam heating apparatus as can be secured. This is, I believe, a wise, and ultimately, economical course, though it will be difficult to get funds for the purpose.

(3.) Of all the school's industrial enterprises the engineering department is the least developed. While our wood working establishment is satisfactorily employing 49 students, and paying its way, there is no outfit of tools for the new and commodious machine shop, the gift of Mr. Moses Pierce of Conn. I am glad to acknowledge the recent gift from Mr. George H. Corliss of Rhode Island, of a new, most carefully and perfectly built "Corliss" engine of thirty horse power, embodying some new inventions of his own, with a 40 horse power upright boiler of his make, which is designed to supply power not only for the shop machinery, but for a grist mill to do home work and give Colored and Indian boys a chance to learn a useful trade, and for a small iron foundry.

As the exhaustless yellow pine forests of North Carolina are our resources for the saw mill, so, by favorable rail-road lines, southern iron can be brought here and manufactured into various kinds of hardware, ultimately, at least, to good advantage.

An outfit of machinery and tools, a suitable grist mill and a small foundry, would, it is estimated, cost \$7,000. Of this amount \$1,000 is already provided.

An advantage is that the regular school engineer, already in our service, is to manage the shop. Manufacturing goods, however, is a different thing from selling them; I think giving the manager an interest in sales as part of his compensation would be wise; the interests of all parties would thus coincide, and all care would not fall on the school administrators. Our market for lumber is right here; that for iron work would be mostly abroad.

The iron industry of the South has a great future. The Negro is adapted to handling this metal in every way from getting out the crude ore, to managing it in its most highly developed forms, such as locomotives, saw mills and other machinery.

## SCHOOL FINANCES.

### Annual Expenses.

Aside from the government appropriation of \$200,000.00 a year, which pays for the board, clothing and general care (but not tuition) of one hundred and twenty Indians, at the rate of \$167.00 a year apiece, and besides the cash payments by Negro pupils for personal expenses, board, clothing and books, amounting to about \$5,000 a year (or ten per cent. of what they are charged, the rest being paid in labor) the school requires not less than \$65,000 a year to meet its bills for salaries, supplies and expenses of all kinds. Sixty-five officers, teachers and assistants cost \$35,000. Repairs, improvements, furnishings, fuel, insurance and general expenses amount to, say \$15,000; about \$12,000 are required to make up the loss in giving students \$45,000.00 worth of work. Personal aid to students (who are charged for board &c. over \$50,000) is given to the extent of \$3,000. In all \$65,000 a year.

The State of Virginia gives us, for doing the work of a State Agricultural College, \$10,000 a year; the permanent funds of the school and certain rentals yield \$5,000, leaving to be raised by annual contribution the sum of \$50,000.

For half of this we look to gifts of annual scholarships of \$70 each. An average of \$10,000 a year has come in from donations in moderate amounts for general purposes and for the Indian Fund, and \$3,000 for direct aid to students. Unexpected receipts and legacies have made up the rest: a total of \$65,000 from all sources; not including receipts

on account of board and clothing of Indians, and colored students' payments in cash and labor.

The annual cost and receipts of the school are thus given in general or approximate terms. Success in future seems assured, first, by doing our work well and thoroughly; second, by keeping it before the public. The latter is a considerable tax on my own time and strength and on that of Rev. Mr. Friswell, chaplain. But our work is not only for money, it is to help make a public sentiment that is vital to the settlement of these race questions. The people of the country need this education as much as our pupils need theirs.

## Endowment.

The \$50,000 to be raised annually is five per cent. interest on a million dollars. A partial endowment in the near future, I think, desirable. For the sake of other like work to be done in the South, the need of which is unspeakable, for the strain of it that can not always be kept up, and for other reasons, it is not best, I think, that this school should remain many years longer in the front rank of charities, and so largely dependent. Should it have an invested fund of half a million of dollars, as I hope it may ere long, it would still need a strong constituency of friends and helpers, could not live without vigorous effort, and would remain an important interest of the people, a relation with whom is a mutual benefit and inspiration.

A large fund to meet the repairs and general expenses, leaving scholarships to be raised as now among friends, is the thing to be desired.

## Remarks.

A loss of about twenty five per cent. on students' labor is to be expected when instruction is made paramount to production; making up this loss, say \$12,000 a year, is a heavy tax on our resources. What can the shop do for the student, is quite as important as what can he do for the shop or farm. From the student's own standpoint, the money is earned; in many cases they are, compared with the outside market, overpaid; we must pay them enough to make self-support possible; but, when we are through with them they are well worth their wages. Nothing false as to the value of their labor is taught.

## RACE QUESTIONS.

### Of the Negro.

There is a marked tendency among colored people in the country regions where land is cheap, where the most and the best of them live, to buy lots of from one to ten acres apiece, induce others to join them, and thus create small villages, which are usually situated near the large estates where they can work by the day or week, returning home every night, or on Sunday. These homes are a refuge when out of employment, and, what with pigs, poultry and potatoes, keep them from want. Obtained by industry and sacrifice, they are a most significant feature of the time. To get land is the ambition of the better class of adult Negroes, as to get education is that of their children. There is, no doubt, a large mass of dregs in our black population, especially in the far South, where, in overwhelming numbers and rapidly increasing, they threaten civilization. Their condition there and everywhere is a national as much as a local question, to deal effectually with which our legislators have so far found themselves unequal. Yet in the railroad, steamboat, lumber, iron, in all the business and in the agricultural interests of the South, colored men are steadily coming to the front—in this generation to secondary places, in the next, to better places, if they shall have the preparation. But at least half the race is drifting, with no decided tendency, subject now to more evil than good influences. They need school teachers and a pure gospel to counteract the effect of rum, sensuality, demagogism, and low preachers.

This tendency to country village life is a wholesome offset to the catnip and undesirable influence of cities, which strongly attract the Negro population. It is due, I think, to their strong social and exclusive instincts. It sifts out the enterprising and self-reliant, and simplifies the question of how the races will live together. Liberal minded, far-seeing landowners of the South, have done much to encourage this movement; it secures to them "the best labor in the world," and to the ex-slave the best conditions of citizenship and of manhood; it is brought about by no outside aid, but by the friendliness of the whites, and by the sense and sagacity which characterizes the better class of Negroes. It means peace and good will among the people of the South.

These hamlets, near each of which there is, or should be, a school, supplied by the State, is the place for our "graduate," whose formative influence, not only by regular teaching, but through Sunday school, temperance, and humane work, has already proved in many cases of incalculable good, changing the character of the surrounding people.

The life is hard: the teacher sleeps in the garret of a log cabin, and may see stars and feel rain through the rough shingled roof; the fare is plain, but at school they learn to sleep on beds of straw, and they are no strangers to "hog and hominy." They are cheerful and contented where those more daintily fed and highly polished might flinch or fail.

While holding their own admirably in the graded schools at Norfolk, Lynchburg, Farmville and other cities of Virginia, even being in demand for the colored public schools of New Jersey, where only high qualifications will secure positions, the majority of our graduates go to the country where the great majority of the Negro population lives.

The simple, earnest and most hopeful portion of this race are to be found in rural regions, living in their own homes; they yield readily to good or bad influences. Wholly by itself I think a large black population would not easily advance; but in small communities near to civilizing influences they seem to have the best conditions for progress.

This school is largely filled with those who have had little chance to learn, for country schools have short sessions, and few good teachers; they are not afraid of work, and need the advantages of our industrial system, entering usually as work students for one year, studying at night for mental and material gain. The one hundred and seventy of them in that class alone, make a severe strain on our resources, for work and wages must also be given to the two hundred and fifty in the Normal classes who labor two days each week. But it pays; it makes the men and the women that are needed. There is very little direct charity in this education.

As the whites are divided into the Bourbons and progressives, the hopeless and the hopeful, the black race, both by imitation and by instinct, tends the same way, prevented, however, from advancing rapidly in the right direction and held in its sad condition by an ignorance for which they are not wholly responsible.

### Of the Indian.

The Negro makes public sentiment, but it makes the Indian. The former, in fixed relations, chooses his own course, and we may well be anxious about it; but the latter, in miserably unfixed relations, is at the mercy of well-meaning legislators, who are, as a rule, ignorant of or indifferent to the facts of his condition, vote him millions for food, which pauperizes, but provide most inadequate means for the kind of education that will make a man of him; and such salaries that competent agents are the exception, while the Indian's agent is his "Father," shapes his future, and should be the best man that can be found.

The details of his management are, in some respects, assumed as much by the legislative as by the executive department of our government; hence a hydraulic control that makes progress difficult. Measures that could, in the next five years, push Indian civilization farther than it has been in the past fifty years, approved by the Senate, have lain neglected before the House of Representatives.

The real difficulty is a lack of public sentiment; for this the cause of Indian progress waits. The remedy is by the organizations as the "Indian Rights Association," and the "Women's National Indian Association," through whose friends and agents facts, gathered at first hand, are given through the press, platform and pulpit, to the public, whose responsive interest has already had a marked effect at Washington.

Mr. Herbert Welsh, Secretary, and Prof. C. C. Painter, Agent of the Indian Rights Association, have been especially instrumental in this good work; thousands, through their efforts have been saved from starvation, and hundreds of Indian families kept from homelessness and saved from cruel wrong.

The material and moral support of those who base their work upon the results of personal investigation, is the duty of all who have any care for the welfare of the Indian race. As the facts are known, interest will increase, and create a sentiment that will insure the needed legislation and hasten the solution of a question that has vexed the nation ever since English and Indian civilization first met upon this very shore; the scene of the first conflict is said to have been close to the grounds of this school.

The earnestness of the present administration in doing justice to the red man, gives reason for the hope that during the next four years rapid progress will be made in providing measures and means for his improvement, to which the Indian will, I believe, respond in a satisfactory way.

There are to-day twenty tribes or parts of tribes ready to take up lands in severalty, waiting for necessary legislation, herded meanwhile on reservations, without hope. Probably not three thousand out of the eleven thousand seven hundred Indian youth now enrolled in boarding and day schools are getting a thorough practical training; fifteen thousand would take it if they could; thirty thousand need it. Weak, half-equipped schools will never do the work. Payment of the treaty debt of over four millions of dollars, urged again and again, by the Interior Department, would, wisely used, without costing the country a dollar of its own, push forward the whole line of Indian life.

The Indian question has become the Indian crisis. Game, the basis of life, has gone, replaced in part by the false and mischievous one of Government rations. With scarcely diminished numbers this people has been pushed across the continent, brought at last to bay on lands which they cannot long hold in a tribal way—for the reservation must go—pressed on all sides by our strong, selfish civilization, they need a strong, wise care. Their salvation is in citizenship, in the right to vote, in "land, law and education." The practical difficulty is not in the Indian, it is in Congress. The remedy is public sentiment.

The best training we can give an Indian is three years at school, dividing the time equally between study and work; then from six to eighteen months at home where he proves himself; he is apt to feel his imperfection and apply to return, which is allowed on condition that he shall fit himself specially for a teacher, farmer or mechanic. His education then covers practically six or seven years, and, with fair conditions, there is very little failure about it, bad as reservation life is.

The test of the trained Indian is not his record at school, but at home, and that depends more on the kind of agent

in charge than on surrounding barbaric conditions. An efficient Indian agent, such as Major Gasmann at Crow Creek, or Maj. McLaughlin at Standing Rock, Dakota, and others, has more or less trouble with returned school boys and girls, but, by looking after them, finds the results far from discouraging. There is little hope for Indian youth who go back to the care of weak agents, and weak agents will be the rule so long as they are so poorly paid.

The following is the record of Hampton's returned Indians, the first 30 of whom I took to Dakota in 1881; 18 of the 145 mentioned below are at school again after finishing a three years' course; 25 have died; we know of 12 who are not doing well.

The record of two thirds is fair or good; not one has become a renegade.

Died since return—both sexes.	20

This does not include 32 poor and sickly material, who were here only a short time, some a year, some only through the summer, nor the 17 Cheyennes and Arrapahoes who, in 1878, came under Capt. Pratt's care from St. Augustine, Florida, most of whom have turned out well.

By providing, last year, twenty-five assistant farmers, our government recognized the need and wisdom of helping the present generation of Indians with practical teaching for their daily life; ten times that number should be employed to help them select farms and prepare and plant them. A good farmer to every hundred Indian families would accomplish much more practical result than a teacher of thirty Indian children collected a few hours a day in a school room on a reservation. When Indian farmers or agents are appointed for political reasons as some have been, they are usually worse than none at all.

The Canadian government instituted, some years ago, Home Farms on their reserves, on which Farm Instructors resided, raising crops with a view of showing Indians how a farm should be managed. They have done a good work, diminished the cost of supporting Indians, and are an example to those who manage our own Indian affairs.

#### OF THE CURRENT YEAR.

The work is divided as follows:

#### ACADEMIC DEPARTMENT.

1st. *Normal School*, an English course from 9 A. M. to 4 P. M., with intermission. Junior, Middle and Senior and Pastors' Class.

2nd. *Indian School*, from 9 A. M. to 4 P. M. A three years' preparatory course. This includes all who speak a foreign tongue; the chief study is the English language. (21 Indians are in Normal and 10 are in the Evening School.)

3rd. *Evening School*, from 7 to 9 P. M.; preparatory to Normal School.

#### INDUSTRIAL DEPARTMENT.

1. Household division.
2. Agricultural division.
3. Mechanical division.

#### ACADEMIC DEPARTMENT.

The report of Miss Mackie, Lady Principal below, gives the details in full, from which I extract the general

statement that the total attendance this year has been 667; average 595; total last year was 647.

Three hundred children attend the "Butler," a graded day school on our grounds; public from October till March, private from April till June.

#### Normal School.

The course is practically four years, as the large majority in it come up through the evening class, for whom a better mental and moral foundation is laid than have usually those who enter as Juniors.

The classes shrink rapidly as they advance, from these about equally operating causes:

1st. Incapacity for further progress at the rate at which the class advances.

2nd. Repeating the year for the sake of greater thoroughness.

3rd. Lack of funds, which compels students to seek teaching or other work.

Hence, out of last year's Middle Class of 133, there are but 44 Seniors.

According to the decision of the Trustees, at the last Annual Meeting, instead of continuing their studies, those who shall hereafter be promoted from the Middle to the Senior Class will

teach one year with a view of making the Senior studies more profitable.

Already fitted for work in the common schools, probably some will not return; many of the best workers sent from here have had but two years' instruction; but those who do come back will, through experience and discipline in the field, it is believed, make more of the last year's studies than any previous class has done. Quite a number of the last Middle Class remained out, voluntarily, to get this advantage, and with others, will make a small Senior Class next year.

I invite your attention to the reports of the Normal School teachers in the appendix, in which are detailed, in an interesting way, the duties of each one, with comment.

Practical instruction as well as book knowledge can be given in classes. Cooking is taught in this way (see report) and, as soon as a salary can be provided, technical instruction in the use of tools should be given to every member of the Senior Class; in a somewhat limited but most useful way to girls. In this there is no production, no profit or wages; students earn nothing but can learn much. Lessons of two hours two or three times a week in the principles of carpentry, brick laying, wheelwrighting, blacksmithing, painting, glazing and in leather work would render our graduates "handy" with tools, able to make or repair their own windows, doors, benches, black-boards and school houses; keep their own homes in order; build fences, gates, out houses, mend implements of all kinds; all with varying success according to their natural gifts and their enterprise in applying the principles which they had been taught at school. A few would develop into skilled workmen; all would be better citizens, better fitted for a life of exigency, and to be examples to and leaders of their people.

Eventually, special training should be given to special students. It is only a question of time and money when we shall have a technical department here equal to any in the Northern cities. It is precisely in the line of our development. Constant work for wages and discipline is the foundation of our Industrial and Academic system; special class training in mechanical principles for the higher walks of labor should be its complement.

#### Indian School.

This is fully described in the reports of Miss Richards, in charge, and her assistants, in the appendix, to which you are referred.

On the mental, moral and religious side, and industrially, Indians improve rapidly; but have a tremendous task in learning our language and habits. In three years they get a fair English vocabulary, but are slow to use it; they quickly learn how to work, but not al-

ways to stick to it. Physically they are not, as a rule, strong; not that the race is dying out, but recent changes in all the conditions of their life have weakened them. Getting their food by Act of Congress rather than by the sweat of their brows does not promote robustness. The death rate here has been very serious this year among pupils from Lower Brule and Crow Creek Agencies; not unusual or serious among the rest.

In two cases this year a disaffected father has secretly sent money to his son urging him to return home, without permission, which has been accomplished with bad effect on the runaway and on Indian students; the mother of one of the boys was most anxious that her son should remain at school out of reach of his father. Both will probably be sent back here.

Funds to erect two new Indian cottages, (\$500 apiece) for Indian ladies, were provided, this year by ladies in Utica, New York; and, as the result of Miss Alice Fletcher's statement upon Indians at the New Orleans Exposition, the money for one and probably two more is pledged from churches in that city, which also provide funds for the tuition of their occupants.

There is every encouragement to educate families in this way. They learn in detail the lessons of actual life; mutual support on their return is assured and is the best guarantee of their future steadfastness. It is proposed to loan funds to some of these couples from the Omaha reservations who shall erect good houses and repay as they can; this is the seed of civilization. It should be sown broadcast and is worthy of attention from government.

Accommodations for Indians will be complete when there shall be hospital provision, as recommended by the physician.

The mingling of the black and red races in the past seven years has worked well. With many different characteristics, a never subdued and reticent, and a race of ex-slaves, demonstrative and yielding, need the same lessons; of the dignity of labor because the one has never had it to do, and the other did it under compulsion; of manual skill, because they must either work or starve, from books, because both need a modicum of education to do their duty as citizens; and the most capable of either should be taught to become teachers and leaders of their people. Each race has learned much from and been helpful to the other. There is no friction and no nonsense about race superiority. This is a school for civilization rather than for any one class, illustrated by the fact that several youths of various nationalities, especially Asiatics, who have drifted to this country, have applied for admission during the past year.

#### Evening School.

For the account of this I refer you to the report of Miss Baldwin in charge, and her assistants, in the appendix. This department was not in the original plan, but was created by the poverty or ignorance, or both, of the class who principally sought admission here; those who had only labor to offer in payment of their expenses.

Opportunity is prized according to its cost; in spite of eight or ten hours work, evening students are the most earnest and plodding of all. They have made better progress this year than ever before. The sixty of the entire class of one hundred and seventy, who are trying to master the studies of the Junior year by evening study—the rest expect only to enter the Junior Class—will generally succeed; and it is likely that a night class will ere long attempt the studies of the Middle year. Three years at a trade, at the same time making the first two years of a course of study, entering only the Senior Class for a year of regular day study, would be a creditable achievement; the graduate would probably leave a creditor of the school, though he entered in poverty. The possibilities are not, I think, confined to the Negro race.

## INDUSTRIAL DEPARTMENT.

Every student has a place in this; labor being required of all. The work before us presents an alternative between personal charity, and a labor system, itself a heavy tax on 'charity. The principle that instruction is as important as production makes an industrial department a source of expense. To require it to be profitable is to destroy its chief value; yet, single branches of industry may be, and we have in some cases, made them so.

I refer in some detail to the following divisions, the reports of those in charge not being printed, as they would make too large a volume, and their essentials are stated here:

## HOUSEHOLD DIVISION.

Miss C. L. Mackie, in charge; Miss Harriet Andrews, Assistant; Miss M. A. Wheeler, Superintendent of Laundry.

## GIRLS.

In the Laundry, twenty-four work all the time, studying nights, and sixty-three from the Normal School work one day in each week. By the help of a steam mangle, and a new washing machine added this year, the laundry work has gone so easily that the increase in numbers has not been felt. In the four kitchens (diet, cooking school, students' and teachers') there are nine cooks and assistants; the latter caring for the dining rooms—all work girls; seventy-one school girls set tables and wash dishes three times a day; sixty-one do general housework, including the care of teachers' rooms. These are one nurse. The one hundred and thirty-one girls in the Normal School are employed one entire day each week, either in the laundry or sewing school, and one hour each day in housework.

## BOYS.

Young men are employed as follows: Two cooks, three bakers, and one for general duty—all night students. Forty school boys serve as waiters in the different dining rooms at thirty-eight tables, averaging sixteen at a table; and there are nine janitors in charge of school rooms and dormitories.

The large amount of work in the household department is wholly done by student labor, excepting a hired hand in the teachers' kitchen and laundry. While non-productive, it is a vast saving of expense, and most profitable as practical training. All have regular wages but are paid in kind not in cash, except small amounts for necessary expenses.

A capacious airy kitchen with bakery attached has been fitted up during the year in the basement of Virginia Hall, which gives plenty of room and facilities for doing the work more easily and better than ever before. The new brick oven, 11 by 13 feet, is a success and comfort. It consumes 270 pounds of coal in heating three times a day. The old one 9 by 11 feet was heated by wood and consumed one cord per day. The former kitchen has been turned into a dining room, furnishing ninety additional seats.

## AGRICULTURAL DIVISION.

Mr. Albert Howe, Manager.

On the Home Farm, including the Normal School grounds, there is a daily detail of nine colored and six Indian boys, except Monday, when half the entire detail for farming—fifty-six in number—is out, giving, each week, to every boy an average of a day and a half labor. Eight milkers and drivers are employed all day and study at night, for one year.

The 100 acres of the Home or "Whipple Farm," as it was named in honor of the first President of our Board of Trustees, is cultivated as follows: In apple orchard, 10 acres; peach and pear orchard, 5 acres; potatoes, 10, cabbage 2 acres; all followed by second crops, such as corn fodder for soiling and ensilage, late cabbage, sweet and Irish potatoes, kale and spinach for school use in the fall and winter. Of corn, 10 acres are raised; of oats, 20; of rye, 9, and of clover 10.

A leading feature is the milk dairy; twenty-four graded Jersey and Ayrshire cows supply from fifty-five to sixty gallons of milk daily; of which about one-half is used in the school, and the rest sold at Fort Monroe and at the Hygeia Hotel.

For the third year 140 tons of ensilage have been put up with good results. A bushel of it with four quarts of bran is given to the cattle morning and night, and a feed of clover hay in the middle of the day.

Last year 40 tons of clover and of orchard grass were raised, chiefly for 23 horses and mules (4 are boarders and 4 are kept for driving). A thoroughbred Morgan and a Percheron horse are kept, doing farm work.

Fifteen tons of pork have been slaughtered this winter, and there are now on hand 125 young swine; the Essex and Berkshire crossed with Chester breeds are preferred.

Sixteen Indian boys under the special care of Mr. George Davis, a graduate, assistant to the Manager, help in the care of the cattle, in plowing and planting, cutting and bunching asparagus, and in all kinds of farm work. They are generally well disposed and easily managed; a few are tough cases.

The "Hemenway" and "Canebrake" farms, four-and-a-half miles from the school, under the immediate care of Mr. Charles Vanison, a graduate, make a fine grain and stock farm of 550 acres, worked by ten students, who labor all day and study evenings. It is cultivated as follows: In wheat and oats, 75 acres each; in corn, 125 acres; in clover and grass 50 acres; the rest is pasture, excepting 7 acres in an orchard and a vegetable garden. The stock consists of 20 horses and colts; 25 head of cattle; 225 sheep, including lambs; 100 breeding fowls; over 500 head of poultry being supplied annually for school use.

The buildings, barn, etc., are in good condition and ample, excepting that a new stable is needed which will cost not over \$500. The boys are doing well at their work and studies; beginning here with nothing, they lay the foundation of regular active habits, skilled farm labor, prepare for the Normal course, earn enough to pay school expenses, and graduate without a dollar's aid in charity.

In the Farm Repair Shop, wheelwrighting and blacksmithing is taught to an equal number of colored and Indian boys, three working mornings and the other three afternoons, in each shop. Here all carts, wagons, and implements needed are made and repaired, and a few are sold each year in the neighborhood; our horses are shod and the general work of a country establishment is done. Many a complete cart has been made by an Indian boy.

## MECHANICAL DIVISION.

The Huntingdon Industrial Works.

Mr. A. Howe, Manager.

Mr. W. T. Westwood, in charge of the sawmill department, reports that over two million feet of North Carolina pine have been cut into building material. Work has been furnished to eighteen regular hands (evening students), and for two days each week to thirteen in the Normal School.

The year has been favorable for business; the yard is well stocked with material for the market. One student bids fair to become a good sawyer; another at the matching and planing machine has just taken the place of a skilled hired hand.

Mr. James A. Brinson, in charge of wood working machinery, reports in his employ thirteen students working the entire time, and five from the Normal School—working two days each week; with three hired journeymen as instructors and helpers.

The progress of apprentices has so far been satisfactory; they require less help than in former years; the period of service was changed last fall from two to three years, to insure more

thorough training. Business has been good; a variety of fine articles in wood ware have been made for customers. Orders for every kind of machine-made building material have come in from Hampton and vicinity. No workmen are sent from the shop to compete with outside mechanics.

This department built the new girl's dormitory and will probably do the carpenter's work of the prospective chapel.

## Girls' Industrial Department.

Miss M. T. Galpin in charge.

Sixty-two girls from the Normal School each work one day every week, doing the clothes mending for 360 boys, and making household furnishings for the school. There are twelve regular work girls, and two young men in the Tailoring Department, which is in charge of Mr. Robert H. Hamilton.

In this have been made the past year 160 uniform coats, 236 pair of trousers, and 92 vests, of Middlesex blue flannel; also 50 work suits of Kentucky jeans, 226 linen, 174 Percales, with 348 collars, and 233 "hickory," and gray flannel shirts, besides 363 pair of drawers, and 375 night shirts for the use of students. Making, with about 500 other garments, a total of 2,522 pieces so far this year.

A marked gain has been made this year in employing less outside help by one-half than last, in making uniforms; now, the full time of one, and half of another, is used.

The Green House 100 x 20 feet, has, since last July, been under the care of Mrs. E. E. Coolidge. One student is learning the business. Roses are principally grown; but geraniums, heliotropes, ferns, etc., are raised; sales have been made greater by twenty per cent than last year, and running expenses somewhat less. With a propagating house, costing not over \$500 and no additional outlay for labor, much more might be produced, and the green house become a source of profit.

A "Carving School" was opened October 1st, in charge of Miss Kate Baker, in which one colored boy has been steadily employed; an average of five work an hour and a half a day; two being Indians; twenty-five have taken lessons and practiced more or less steadily; class hours are from 4 to 6 o'clock, P. M. Book-shelves, book-racks, crickets, bread-boards, picture-frames, paper-folders, alms-plates, etc., have been made, and sold fairly well.

## Printing Office.

Mr. C. W. Betts, in charge.

In this are employed 8 steady hands, (evening students) and three Indians, who work two days each week; also three outside hands, former students, with occasional help from journeymen; also one book binder, journeyman, a veteran from the National Soldier's Home, near by; others from the Home are occasionally called into our work shops, when short of hands. Two Indians left during the year, one from ill health, the other from expiration of time; two colored boys left, one under discipline; the other to take charge of a printing office, at Tuskegee School, Alabama.

Business has been good during the year. The "Southern Workman" and "Alumni Journal," (monthly), and "African Repository," (quarterly), are still published; also a small weekly paper for the Soldier's Home. Sales of stationery has nearly doubled over that of last year; the Bindery has held its own. Sickness of employees has been a drawback, without which a decided gain would have been made over last year, in the employment of outside labor.

## Shoe Shop.

Mr. E. F. Coolidge, in charge.

It employs two Negro and ten Indian boys; two of the latter all day, the rest half o. each day; and most of the time one or two outside hands to do all

the work required which has been as follows:

Made for students, 671 pairs shoes. Outside custom 55 pairs shoes. Students' shoes repaired, 1655 pair.

The work in the shoe shop has gone on more smoothly than ever before, but has been embarrassed by the unusual sickness of the year, requiring more outside help; five Indians have left for ill health; one to return home and two to go to school steadily.

A substantial \$2.00 shoe is made for girls, that long outwears the cheaper and more showy store shoe. For the boys we make an English Balmoral for \$2.25, our regulation shoe. Six hundred pairs of men's brogan shoes are being made for the government for the Indian service at \$1.25 per pair; there is no profit in this, but it gives the boys work.

## Knitting Work.

Of this, Mr. F. N. Gilman, acting Treasurer, has charge.

Upwards of 1200 dozen pairs of mittens will be made this year, a slight gain on last year; 24 boys have been employed, 12 of them all day, (night students), and 12 from the Normal School, two days each week. All is piece work, which is the best plan, and desirable in every labor department.

Until February, all "finishing" was done by school girls; since then, from loss of hands by sickness, five outside helpers have been employed. Two are permanently needed, one to repair machines and one to examine the work. This is again at an average of thirteen outside hands employed last year.

## Engineer Department.

Mr. J. B. H. Goff, in charge.

Seven work students and five from the Normal Department are employed, besides two hired firemen, and, for three months, one skilled hand; one outside man is hired for general work.

The work for the year has been putting steam, water and gas in the new girls' dormitory, doubling the capacity of our Laundry machinery, and making a new well with a capacity of 30,000 gallons per day; 72 iron bedsteads have been made by students' labor. General repairing has been kept up, nine boilers and four steam engines, water and gas works cared for; 95 gas burners are in use and the works can supply 200 more. The average daily consumption, when the nights are long, is 6,500 cubic feet; when they are short, it is 4,500 feet; cost per thousand feet \$1.01. A million and a quarter feet are consumed per year.

The Fire Department is in good condition, but our hand engine is too old to be relied upon. A new steam fire engine of the second class to cost about \$3,500 is needed for the protection of our many and valuable buildings.

Permit me to refer to the resignation of Mr. Goff, who has for eleven years, faithfully discharged the duties of School engineer, rendered most prompt and efficient service at the fires and alarm of fires that have often startled the school and neighborhood, and trained a number of young men to proficiency in the care of boilers, steam engines and in the use of tools for iron work of various kinds. The extensive water, gas and steam works of the institution, are monuments of his skill and energy.

## Indian Training Shop.

Mr. J. H. McDowell, in charge.

Carpenter Shop. Twelve Indians and four colored apprentices are employed, Indians on half time, colored on full time, studying evenings. A journeyman instructor has been hired. All are paid according to the value of their labor. Work has been done as follows: 34 wardrobes for the new girls' building; 30 settees, (each to hold five students,) for study-room in basement of same; 24 settees and 12 writing desks for Academic Hall; General repairing of buildings and School furniture, making fences etc.

Repair work at Fort Monroe, amounting to about \$475.00, three-fourths of it labor.

**Paint Shop.** There are two Indians and two colored apprentices, under a journeyman instructor, working as above.

The girls' building has been painted and varnished; old buildings and furniture have been repainted and kalsomined and glass-reset; a part of four buildings at Fort Monroe and four others in the vicinity have been painted.

**The Tin Shop.** employs four Indians and two colored apprentices; one journeyman instructor.

Work done: Twelve thousand pieces of contract tin ware for Indian service, (tin cups and coffee boilers) tin roof on girls' building; repairs to roofs gutters, spouting and tin ware for the School; and outside work at Fort Monroe, on five buildings for the Quartermaster-department.

**Harness Shop.** Three Indians and three Negro apprentices, one instructor. Work done: 277 sets of double plow harness for the Indian service; 12 sets of carriage harness to order; general repairs for school and neighborhood.

The spirit of work in all the shops has been good; more improvement and less friction than in any previous year, and a better quality of work produced.

One colored and eight Indians left for home on account of sickness; four Indians transferred to other departments, where they would thrive better; seven Indians returned home for expiration of time; all places have been re-filled with material better physically, if not in other respects. The present set of Indian hands is hopeful as to bodily strength and is superior to any we have had; they seem to appreciate their opportunities.

Paying them wages, from \$1.00 to \$15.00 a month, is most beneficial and, I think, indispensable to their taking an interest in daily work, and becoming good mechanics.

#### IN GENERAL.

##### Of Graduates.

Of the 572, including this year's class, who have taken the full course, 90 per cent. have taught more or less, and 75 per cent. have made teaching their life work. Less than 10 per cent. have failed in respect to conduct and character. Our girl graduates, numbering one-third, have shown a remarkable steadiness and efficiency; they are in special demand as teachers, among country school superintendents.

The actual working force sent out includes, also, not far from five hundred who left at the end of the Junior or Middle year. The demand for teachers is still great and beyond our power to supply. All can get salaries of from \$25 to \$50 per month for sessions of from four to six months. They must shift for themselves a part of each year; here their industrial training comes in and saves them. Indian graduates and ex-students are doing well in the West in spite of the terrible surrounding conditions. The record of two-thirds of them is encouraging.

Your attention is invited to the reports in the appendix of *Miss Cleveland* and *Miss Tilton*, correspondents.

No work is wiser than attention to and care of those who have gone out from us. This, as every year, there is sent to each one an invitation to attend anniversary exercises, and a lunch on the same day given them by the school. A goodly number is always present. Their loyalty as a class, to their "Alma Mater" and to its teachings, is a constant encouragement and inspiration to us. I believe that the record of a Christian work for no other race has been so satisfactory as seed sowing as that for the ex-slaves of our country; for the work done, the harvest has been speedy and ample; the only regret is that the laborers are so few.

#### Physician's Report.

By Dr. M. M. Waldron.

This report, to which your attention is invited, gives the health record of this year, and states the sanitary conditions of the school, which have improved this year more rapidly than ever before, though the sick list has never been so large. Care has been taken to ascertain and create the best possible conditions of health; no money is better spent than in preventing disease.

The recommendations of Mr. Frank Wingate, of New York, Sanitary Engineer, who made a careful inspection have been, or will be strictly carried out. The unusually large medical work of the school this year has been well and most faithfully done, severely taxing the strength of our medical officer. Increased help is needed in nursing the sick.

The health department of the school needs an ample provision by way of a hospital for colored and Indian boys, to which most of the cases could be carried instead of being visited, as now, in separate buildings to great disadvantage. It should contain eight beds, and, without furniture, would cost \$4,500, or \$550 for each bed. Dr. Waldron recommends a building in the form of a Greek cross, each of the four wings to contain 2 beds. The cost of each wing would be \$1100.00.

#### Of the Library.

You are referred to *Miss Bacon's* interesting report, which shows a marked gain in its use and influence. A taste for good reading is invaluable to those who are to live in a low moral atmosphere. Creating this and supplying reading matter to our widely scattered workers is a help to better living that they need and appreciate.

Friends are asked to send or give what they can to build up the school library and its fund, and supply reading for distribution.

Bad literature will, as a knowledge of reading shall become more general, find a wide and profitable field in the South. The unusual attention given this year to interesting students in books, and their eagerness for knowledge makes the library more deserving than ever of encouragement. It is pleasant to acknowledge the receipt of a gift of \$375.25 as a basis of a library endowment fund, which I hope may steadily increase till its income shall be at least \$500 a year.

#### Report of the Business Agent—Mr. F. C. Briggs.

The supplies of the school are, other things being equal, purchased as near home as possible, from first hands.

While home products are used to the utmost, they make a very small part of the quantity of beef, bacon, flour, meal, etc., required daily by six hundred student boarders and sixty officers and teachers on the place, with their families—not less than seven hundred are supplied. Your attention is asked to Mr. Briggs' report, which shows in minute detail the cost and distribution of everything purchased for the school; the cost apiece of every student, and the total cost; also a comparison with the cost of previous years.

At the beginning of the year a complete inventory of the school property was taken, which is submitted for the information of the Trustees.

#### Report of the Acting Commandant—Mr. George L. Curtis.

From July, 1878 to July, 1884, a United States Army officer was detailed as Instructor in Military Tactics, in virtue of the school relations to the State as an Agricultural College—a private corporation administering a public fund. An application to the Secretary of War for the detail of Lieut. Geo. LeRoy Brown another term of three years having been refused, it was preferred to conduct the cadet organization without applying for a new

officer. Mr. Geo. L. Curtis, of New York, was invited to take charge of the discipline of the students, and the "internal economy" of their life.

*Mr. Arthur Boykin*, a competent and well-trained graduate, was appointed Drill Instructor of the battalion, and has done the work well. See his report.

The military part is in excellent condition not only from the efficiency of those in charge, but because of the work of Capt. Henry Romeyn and Lieut. Geo. LeRoy Brown, of the Army, whose faithful labor of three years each, laid the foundation of and made possible the present satisfactory system.

The conduct and influence of our colored Captains, Lieutenants, and non-commissioned officers, has notably improved in response to the appeal for their best efforts to make good the loss of an army officer; the morale of students is better this year than ever.

You are referred to the report of Mr. Curtis, for full information.

#### Report of the Chaplain—Rev H. B. Frost.

The Chaplain is also acting Principal and is in charge during my absence; his relation to the school is large and increasingly important, as the work becomes more vitally related to the cause of Christian civilization in the South. By direct preaching and teaching, by an organization in the school for religious, temperance and benevolent work in the neighborhood, by visitation with representative men of the country, taking cognizance of the wretched prison system of the State, and by his work for colored pastors in this vicinity who are more and more looking to us for light and help, he has done much to make this school a power for good. I commend to your careful attention his report, which closes the series in the Appendix. It makes clear, I think, that there is no better seed ground for Christian ideas than, the "despised races" of our country.

You are reminded that, as the end of the school year is June 15, and that of the fiscal year, June 30, reports prepared at this date, are sufficiently complete in other respects, but are not so as to financial statistics. Each report will be revised by its writer after July 1st, and published, as usual, covering the entire year.

The only report not referred to above is that of Mr. F. N. Gilman, Acting Treasurer, which is made directly to the Trustees. His administration has been able and satisfactory.

Relations with the State of Virginia, through the six Curators of the College Land Fund, the annual income of which, ten thousand dollars, has been regularly paid, are pleasant and satisfactory. Respectfully submitted,

S. C. ARMSTRONG,  
Principal.  
Hampton, Va., May 20, 1885.

#### Appendix.

The following reports are from the instructors and officers in charge of the departments and studies specified, in each of which there are from one to three teachers engaged.

#### Report of Miss Mary F. Mackie, Lady Principal.

The 17th year of the school opened on the 6th Oct. last, the previous Thursday, Friday and Saturday, according to our custom, being devoted to the examination of new students as well as of those who, during the past year, had been members of the Night class and were now candidates to enter the Junior or Middle class of the day school. The examinations for the Junior class are always oral, those for the Middle written, and cover the ground gone over in the studies of the Junior year.

The total enrollment of students has been 275 girls, 34 boys. Grand total 659, of whom 177 are Indians, and 20 day scholars from the town. The daily average attendance for the year is 595.

The classification is as follows.

Normal Students.			
YOUNG WOMEN.		YOUNG MEN.	
Senior Class	20	Senior Class	22
Middle	60	Middle	64
Junior	77	Junior	97
Total Indian Stud '84		Total Indian Stud '85	
"Even'g"		"Even'g"	
275		384	

#### Pastors Class 16

The peculiar features of our work naturally divide our pupils into three general divisions.

The Indian classes study and work half of each day. The Evening classes work daily ten hours and study two, while the Normal classes work two days of each week and study four. The time allotted these last students for class work is as follows. From 8.40 a. m. to 12 m. From 1.40 to 4 p. m. Morning study hour from 7 to 8.20. Evening study hour from 7 to 9.

We employ 35 teachers, 9 of whom belong to the Indian Department, 9 to the Evening School and the balance, 17, to the Normal.

#### NORMAL SCHOOL.

*Miss M. F. Mackie, in charge.*

The Senior class of 22 shows a large falling off from the Middle class of last year (103). This is accounted for, not only by the number going a second time over the Middle year, but by the fact that many belonging to this class have been obliged to teach a year in order to secure funds to meet the bills of the Senior year. We consider this year of experience for them a most valuable part of their training, and they themselves are realizing its value. One writes that he has become so fond of his work, he feels it will be hard to give it up and come back to the year study which intervenes between him and his diploma.

Of the 124 students in the Middle class 11 were admitted from the Night class, 6 came to us from abroad and the balance were either promoted from the Junior class of last year, or were such, as having failed to pass the examination at the close of school in June, '84, for promotion to the Senior class, were condemned to repeat the studies of the Middle year.

Of the 174 Juniors, 81 are from the Night class, 14 from the Indian school, 31 are repeaters and the balance 48 are entirely new to the school. Of the 340 pupils at present in the 3 upper classes, exclusive of 21 Indians, 153 have, during their course, been members of the Night class for at least one year. It will thus be seen that a large portion of our students in each class have had their preliminary training on our own grounds, while at the same time they have been laying up funds with which to pay their board bills when they have entered the Normal classes; and it is a great satisfaction to say that the leading scholars in both the Junior and Middle classes have come from the Night school, which is very creditable to them when it is remembered that their recitations and the preparation for them, are crowded into a little more than two hours at the end of a hard day's work.

The year past has in some ways been a very unusual one with us. The school has been larger than ever before and in consequence the classes also; a much larger proportion than usual of our teachers are new to the work, which must always be a cause of regret as it is of weakness. We have shared the sickness which has been prevalent everywhere and while we have had comparatively few fatal cases, considering our large number of students, the work of the school has been more or less broken by the sickness, not of the pupils only, but what is a new experience for us, that of the teachers also; as a result I think our classes have hardly gone over the usual amount of ground, but there has been no falling off in thoroughness.

The general tone and morale of the school have been excellent, and in all points of discipline, order and promptness of attendance there has been a marked improvement on other years. We have adopted the monitor system entirely for securing the record of attendance in all school exercises, and by so doing have gained a very appreciable amount of time which has enabled us to lengthen our morning study hour 20 minutes. For the day scholars who come to us from Hampton and its vicinity we have established a study hour from 1 to 4 p. m.

The concentration of our Seniors for the elementary studies has been strengthened by the offer of M. Demorest of New York to give a gold medal to the member of the present grammar class who shall pass the best written examination in the primary studies, i. e. such as belong to our Junior year.

In accordance with the decision of the "Trustees" last June that all students promoted to the Senior class shall engage one

year in teaching before taking up the Senior studies, we have given the "Methods of Teaching" to the present Middle class, preparing them for their work as teachers. At first there was a feeling of disappointment at not being able to complete their course of study as soon as they had anticipated, but I think now the prospect of a year in the school-room as its "Head," begins to look attractive to many and they are deeply interested to fit themselves as thoroughly as possible for their work.

A special effort has been made this year to direct the attention of the pupils to an improved enunciation and the importance of clear, distinct, good tones of voice in all class recitation. In this effort we have been very much helped and stimulated by the work of Miss Adela Rankin of New York, who was with us a month and gave special instruction in our Reading classes, tending to the development and the right use of the voice, or of "voice building."

We constantly see and feel the need for our girls of some training which shall do for them what the Military drill does for the boys to straighten them and correct the tendency to lung disease so prevalent among them. This year, through the interest of a friend who has made the subject of "Light Gymnastics" a special study, we have made a small beginning which we hope will develop into a permanent good and blessing to our girls.

Mathematics.

The work in the Mathematical department, especially under my care, has made some of the usual progress. This year we have confined our attention entirely to arithmetic, mental and written. The advanced section of the Senior class were given their choice whether they would take up Algebra, having finished arithmetic, or spend their time in making themselves more thorough and familiar with the branch they are most likely to teach; an almost unanimous decision was given in favor of Arithmetic. Later in this class we have been using a text book by Wentworth and Hill, made up of sets of examination papers issued by the various colleges in America and England, also of problems given in German and French schools; these papers vary in length from one hour to two an "a half." Correctness of work, neatness of paper and promptness in time all enter into consideration of the papers sent in, and thus far the work done has been very satisfactory and the interest of the pupils grows as they find themselves able, often without any opportunity or desire to consult a text book to hand in a perfect paper. In place of "Inventive Geometry" which we gave the Seniors last year, we have given this term Free Hand Drawing, with a fair amount of success.

REPORTS ON THE STUDY OF ENGLISH.

Senior Class Studies in Literature.  
By Miss Helen W. Ludlow.

Our aim with this class is always to educate the faculty and cultivate a taste for good reading rather than to accomplish any set course. Hence, our work naturally varies from year to year with our material and facilities.

This year, the material has been better than usual. The sections are, for the most part, well graded, and the spirit of both has been very good. There are some excellent readers among them, more good readers at sight than in any other class I remember to have taught.

Our studies have been principally in American literature. We have used no text books. The students have had blank books into which they have copied notes taken in the class, with poems and extracts. They have taken much interest in these books and have generally kept them very carefully.

We began with a consideration of what literature is, its classifications and development; then took a bird's-eye glance at the development of English literature, with a specimen or two of the old English literary curiosity. While waiting for the copy books, we read a little of Julius Caesar, but they had more of this in their reading class.

With the note books, we took a more careful, but sketchy, view of the history of American literature, dividing it into the Colonial, Revolutionary, and Early and Late XIX Century periods; considering the character of each with its causes; making lists of the prominent writers of each, in the various departments of authorship; and reading illustrations of the most representative; bits from speeches, novels, essays &c., or entire articles, as I chabod Crane, Rip Van Winkle, a poem and an essay of Emerson (needing some explanation, but then enjoyed).

Not having a text book and making my own selections, it was not possible of course to have copies enough to go round in the class, except of such as could be found in their reading books or were short and valuable enough to have printed in our office. But

from the library, or by borrowing, it was generally possible to obtain at least two or three to pass from hand to hand among the boys and girls to read from while the rest listened. Sometimes I read to them. Questions and comments were always in order; but analysis was rarely carried to disgust, and that I tried to avoid.

We took up more particularly at last, the study of Bryant, Longfellow, Whittier, Holmes and Lowell, Julia Ward Howe, Helen Hunt Jackson and Celia Thaxter. Our previous studies having been chiefly prose, in preparation for these we spent a little while in considering, with much interest to the class, the nature of poetry as a fine art; its analogies with music, a painting, and its essential elements of form and spirit; poetic figures, construction and rhythm.

After reading a few of Bryant's shorter poems, the class being especially impressed by "Thanatopsis," most of them copying it entire, I stopped for six weeks or more on Bryant to read to them his translation of the Iliad, skipping only the parts less interesting or important to the story. I believe that it was time well spent. It not only gratified in the best, and for most of them the only way possible, their universal longing for a taste of the classics; but was a real bit of culture. Enthusiasm was roused to the utmost pitch. The inevitable school sobriquets were exchanged for the names of Greek heroes, and the young Agamemnons and Hector watched with eagerness their favorites' varying fortunes. While a few matter of fact minds were puzzled at first to separate fact and fancy, asking for the argument new and old, "Was that true?"—all soon got into the spirit of the stirring epic, enjoying it with a freshness that added to the enjoyment of reading it to them. The five Indian members of the class were especially interested, and surprised to find the echoes of their native ideas and customs coming from so far "down the corridors of time"—the games and auguries; the funeral rites of Patroclus; the heroes and captives sent to serve their masters in the under world. Lively discussions were held upon the acts and motives of heroes and gods. They despised his, were divided upon Agamemnon and Achilles, were moved by the devotion and sorrows of Andromache and the enthusiasm for Hector and lamentation for his death. They were surprised to find the gods so much like men, and struck with their difference from the pure ideals of Christianity.

In considering one day, at my suggestion, the changes in the standards of heroism with the progress of humanity, one of the boys pleased me by observing of his own accord that after all, the idea of self disregard is common to all of them. Pages of extracts have been eagerly copied into their books from the Iliad. I prepared them so that they might have their choice of their favorite passages, but most of them wanted all. As their composition exercises in the previous year had been directed to making their own outline previously thought out by themselves, so, in studying short poems this year, they were required to look for the author's outline, to see if there was an introduction and conclusion, and what were the natural divisions of the poem. Then they would go over it to study the beauties of each part; the descriptions, figures, allusions, the general feeling and deeper significance; at last reading it through to enjoy it as a whole.

A pleasant incident in this part of the year's work was keeping Mr. Longfellow's birth-day, his picture wreathed with flowers, and each member of the class bringing a short poem or extract to read, from his works. In our first reading of "The Day is Done," we stopped to guess what Mr. Longfellow's reader selected to

"Soothe the restless feeling  
And banish the cares of day,"  
and to think what we would like to have read to us in like circumstances. Various suggestions were made by the class, but "Ichabod Crane" was one unanimously approved.

For the remainder of the year, we are trying to get a little glimpse of the literature of England; with a few representatives of its most important periods.

A text book exactly suited to our needs would have been a great help, but such an one was not found and we spared the students the expense of one crowded with an amount of detail impossible to get through with or remember, with illustrations, and those scraps or not always what we wanted. "Swinton's Studies in Literature" highly recommended to us by Prof. Alfred Salisbury last year, has on the other hand nothing at all of the history or biography of literature, which must be supplied by the teacher, and while its footnotes and questions for "literary analysis" are excellent generally, selections, especially the "characteristics" of the authors by other distinguished writers, are in great part quite beyond our students.

There is some advantage, I think, in seeing and handling a whole volume of an author's

works even if it has to be passed from hand to hand. Many of my class express the intention of buying Bryant's or Pope's translation of the Iliad, and Whittier or Longfellow's poems, as soon as they can save the money. All are treating the subject of cheap publications, given them by their reading teacher, whose co-operation with my work has been a great assistance to it.

Another year, I should like to have the lists of representative names which they have copied into their note books, printed for them, to save time for copying more interesting things, or for more composition writing than they have done this year.

The Longfellow, Holmes and Whittier "Leaflets," printed by Houghton and Mifflin, have been distributed for insertion in their books and have been greatly prized. I wish others were published.

For the most part, I am gratified by what the class has accomplished this year, though I wish we could have done more.

Junior and Middle Classes.  
Grammar and Composition.

By Miss M. J. Sherman.

As was the case last year, the Juniors have spent the entire term thus far in the study of verbs. My aim has been their mastery of rules, definitions, illustrations, synopsis and conjugation, together with drill in parsing. Combined with this study of technical grammar, there has been constant practice in sentence-building, to illustrate the use of the various forms of the verb. The remainder of the term will be spent in letter-writing, since this is the form of composition our students will hereafter find most occasion to use. In these letters they will give bits of personal experience, describe scenes familiar to them, and write stories suggested by pictures or by what is read to them. With this work, there will be careful drill in correcting the errors made in the letters.

Such is the course pursued with the first division of the Junior Class, which it has been my lot to instruct. Substantially the same plan has been adopted by those who have charge of the others. Although on the whole, there is a gain in the class of students we receive, the vast difference between the previous sections of the Junior Class, especially in their language work, shows that there is still lack of proper training in English in the country schools from which so many of our pupils come.

For admission to the Middle Class, we required this year only a thorough knowledge of verbs and the ability to write a fair letter, thus deferring more than one-half of what was previously been crowded into the work of the Junior term till a later period in the course.

Our text books are Reed and Kellogg's "Graded Lessons in English" and Powell's "How to Write." To the students, the latter seemed at first sight a very easy book; but as one of the class remarked not long ago, "I've had to study it harder than any other." The book abounds with pictures, somewhat juvenile in their character sometimes, but exceedingly helpful notwithstanding. The fact is, we need books designed especially for such students as ours, who, though young men and women in point of age, are pursuing in many respects, the studies of grammar grades in northern schools.

Three months have been spent in the analysis of sentences as set forth in "Graded Lessons." Of course, the poorest Junior material cannot enter the Middle Class. Those, therefore, who undertake the analysis are all able to do fairly well, and can do the work in less than half the time the Juniors of previous year have required for its accomplishment, and this, though there has been more sentence-building than I have ever been able to secure before. The exercises in "Graded Lessons" are admirably adapted to the use of our Middle students, while I have always felt that they were beyond the ability of the average Junior.

With the study of text-books and the writing of exercises, there has been intermingled connected composition work. The work thus far has been, however, largely in the form of written exercises designed to illustrate the special point under consideration. These have been prepared almost daily, and the result, in some cases, is marvellous. It is interesting to compare the sentences now written with those produced by the same students last year. Then they wrote of dogs, cats, and "John;" now they tell of the formation of the earth, the solar system, the structure of the human body, and characters and events connected with English or American history.

For the remaining two months of the term, they will write compositions at least twice a week, and always from topics. One of the chief excellencies of "How to Write" is the stress it lays upon this point. The students have already shown a degree of facility in writing from outlines, and promise good work in the future.

My special aim has been to teach the Middle class how to use a text-book on grammar. In the Junior term it seems almost necessary to give oral instruction before assigning a lesson on any new subject. With the Middle class, I have been able to pursue a different course, usually requiring them to study the lesson until understood, learn definitions, and by sentences of their own, illustrate the principle studied, all without explanation on my part. There was delay at first, but with the average student there is now good work. I insist on the committing of definitions to memory, for few of our students have sufficient command of English to make their own.

As is the case with the Juniors, some are excellent scholars, the majority are fair, while a few are very very poor. I think more care should be taken in promoting from the Junior to the Middle Class, for unless the foundation-work, especially in English, is thoroughly done the student is hampered ever afterward. If any year of the course must be repeated, let it be the Junior.

I have never required so much from any Middle Class as from the present one, but any one does faithful work. The majority have shown an earnest, painstaking interest in the sometimes dry details of the work, which deserves much commendation.

Report on Natural Philosophy.

By Miss S. E. Wentworth.

This year marks another advance in the possible value of the work in Natural Philosophy, in that it is to be hereafter a Senior study, instead of being begun by the Middle Class in February. The change will make the classes smaller, while the students will be older and more thoughtful, and their year of teaching will have developed in them an ability for original thought which will make their work of far greater benefit to themselves. This being the transition year, there has been no class since February, but during the first half year the subject of Energy, as shown in the phenomena of heat, sound, light, and electricity, was studied as thoroughly as time allowed. The practical bearing of the various principles proved as interesting as useful. The theory at times seemed hard and tiresome to some of the class, but when the application was made, all the interest that one could wish for showed itself; and eager questions would be asked about facts which the student had never associated with any special cause. Whenever possible, students were sent to the blackboard to draw simple diagrams illustrative of the principles at which they had studied, and some individual experimental work outside of the class room was asked for. The topical arrangement of the text books was followed, and as each subject was finished, it was reviewed from the analysis and followed by a written examination. We have used Cooley's New Physics but it is not entirely satisfactory for our work. Much has to be omitted as too technical for our students, while a greater number of practical applications are desirable. As a whole, the record of the work done is good, and some of the boys have shown themselves original thinkers. As explaining the simple events of every day life I am sure that to some of the class a new world has been opened, and if our crowded year's work gives but a glimpse into the wonders of the physical world about us, it opens a door which will never be entirely closed again.

Report on History.

By Miss J. S. Webster.

Closely connected, as our pupils are, with many of the great events in the history of the country, and surrounded by ground on which famous battles have been fought, the study of the subject in which their fortunes have played so important a part is taken up with interest.

There are numerous stumbling blocks in the way of the beginner; the new words, the small command of English, the inability to grasp the idea from the printed page and to distinguish between the important and the unimportant, make the work slow at first. The lesson must often be read in class, important points marked, words explained, and places laboriously found on the map, before it can be studied. But by patient effort, helped on by the interest always taken in a new subject, stimulated by stories of exploration and adventure, frequent reviews, written lessons, and examinations, the difficulties are gradually overcome, and much better work is done the latter part of the term.

Scudder's History of the United States has been recently introduced into the Junior class with good results. The greater simplicity of language and the interesting way in which the story is told make it much better suited to the needs of the school than the text-book formerly in use.

The Middle class show the good effect of the half-year's training in the more intelligent

gent way in which they study. Although the same faults are noticeable, there is a steady improvement to be seen through the whole course. The aim has been to fix great events firmly in mind, to accustom them to trace the relation of cause and effect, and to introduce them to books from which they may fill out for themselves the somewhat scanty outlines learned in school.

Many knotty points in connection with the lesson, such as questions of generalship, tariff, the justice or injustice of certain acts of the government, etc., were discussed with much animation. The stirring poems of Holmes and Whittier, and Collier's vivid descriptions have helped to give reality to the events of which they have studied. Their interest in the Civil War may be judged from the fact that within a few days of the time they began to study about it every book on the subject was drawn from the library, and the supply was hardly half equal to the demand.

The Senior class, in the time devoted to Ancient History, can take only an outline of the Oriental monarchies, Greece, and Rome, which must necessarily be brief, and correspondingly unsatisfactory. The majority of these young men and women will never be called upon to teach it except as it is connected with Sunday school work, yet the study is valuable to them in many ways aside from the mere knowledge of facts acquired, the broadening influence of a more intimate acquaintance with famous events and old time heroes, and the kind of literature it brings to their notice. Here again, the lack of books of reference is a great drawback. The few volumes on each subject are eagerly seized, sometimes several days in advance, and most of the class must go.

Considering the shortness of time and the obstacles in the way, the progress of the classes and the results of the year's work are encouraging. If some knowledge of the way to study has been gained, if some of the great lessons have been learned, if a desire for good books has been created, the time has not been spent in vain, although much that is desirable has been left undone.

#### Report on Moral Science and

##### Political Economy.

By Miss Alice M. Bacon.

The teaching of Moral Science in the school has its own peculiar difficulties as well as its peculiar interest. The special difficulties arise from the following causes: 1st. The lack of language on the part of students. They find it very difficult to limit the meaning of a word or to comprehend a familiar word used in an unfamiliar way. I have tried to make them frame their own definitions as much as possible in order to accustom them to the exact use of words. A second difficulty arises from the fact that the students have not been used to thinking at all upon abstract or metaphysical subjects. The little of theoretical-morals that I have tried to teach, has been taken hold of only after very hard work on the part of teachers and scholars. Conscience, the moral law, the moral character of an action, these and similar expressions have required careful and repeated explanation, and could not before they could be finally grasped and comprehended.

A third obstacle is the lack of a text-book just suited to our students' minds. The book now in use is Wayland's *Abridged Moral Science*, but there are some serious objections to it. It is hard to find a book which will take up ideas suited to an adult mind and put them into language adapted to a child's vocabulary. That is the kind of book that is needed for our work. The trouble with Wayland is that it is written for children's minds as well as for their vocabularies, and hence does not come up to the minds of our scholars. There is also this objection to the book, that the definitions and divisions of the work are not exact or strongly marked enough to make it altogether easy to teach. To overcome this difficulty the definitions proposed and accepted by the class and the main points of each lesson have been written upon the blackboard and copied by the students into their note books.

The peculiar interest in teaching moral science here lies mainly in the fact that you are leading the students for the first time to the study of their own minds. The students are all engaged in the task of exploring hitherto unknown regions in themselves, and the result is a lively and absorbing interest in the study that keeps every student eager and alert all the time. They become conscious of a new power as they see gradually unfolding before them a science drawn by their own processes of reasoning from their own minds. They are told that nothing must be taken on the word of the teacher, that their own minds, their own consciences must make the final decision in every case, and they work hard to reason out for themselves the belief which they have always taken for granted before, and then having found the ground of those beliefs, to follow them out to their logical sequence. All

that the teacher can do is to guide them in their reasoning, to point the way in which they should go.

The work in Political Science is interesting in some respects unsatisfactory. The boys enjoy it and take hold of it well, follow the arguments and remember the conclusions very creditably. The girls are doing much better this year than last, but naturally fail to take the same interest in political subjects that the boys do. From lack of interest they do not do nearly as well as their classmates of the other sex, though what it comes to any question of political morality the girls show a quicker understanding generally than the boys. The book used during the last two years has been Nordhoff's "Politics for Young Americans," but though the book is an admirable one as a text-book for scholars from twelve to fifteen, it does not prove to be quite what is wanted here. There is a lack of exact and clear definition and a taking for granted that the reader already knows some things, which make the book better for use among scholars who have had the advantages of cultivated homes than for these students who have almost no general information to fall back upon. Note books have been used and definitions, explanations, etc., copied into them from the black board, but it takes a great deal of the students' time when the deficiencies of the text book have to be remedied in that way.

#### Report on Geography.

By Miss Anna G. Baldwin.

Heretofore the study of common school geography was dropped at the close of the Junior year and with the pupils did not have in that class, they were obliged to make up as best they could for themselves. The hurried review taken by the Seniors as preparation for teaching, showed how necessary it was to have more thorough work in this subject, consequently a change was made this year, giving a half term's work in geography in the Middle class, and the results have been much more satisfactory both to the teacher and the pupil.

The work now laid out for the Junior year is the first half of Guyot's geography—to Europe. Now that the time is lengthened, for a change of text books seems desirable, for although the physical maps in Guyot's are excellent, the subject matter is meagre, and necessitates much additional labor in preparation on the part of the teacher.

Map drawing has been made a prominent feature of the work, particularly with the Juniors. The continents and groups of states have been drawn on the board, and on paper, both from the books and from memory. Commercial maps have received particular attention in the Middle classes, some of whom have done very creditable work.

The principal faults of our students in beginning the study of geography in the Junior class are, inability to locate places definitely and to reason correctly as to the products, location of cities, etc. In both of these particulars they have shown marked improvement.

In learning the physical features of the countries, recouling has been used largely, and maps drawn from the outlines thus made.

The Middle classes were required to do considerable reading in connection with their lessons, and books, travel and illustrated magazine articles were in constant demand for that purpose. The information thus gained served as a basis for composition work in the form of descriptions, letters and journals.

#### Physical Geography.

The 1st of February the Middle classes began the subject of Physical Geography. They have shown the most intense interest in it from the outset. Occasionally some of them demur at statements which seem to them so utterly impossible as not to be true. For instance:—After talking at length upon the solar system in what the teacher flattered herself was a very lucid manner and just when she thought even the dullest of the class must comprehend it, one of the pupils raised his hand and asked, "Do you expect us to believe all that?" Upon an affirmative answer being given, he replied, "Well, that may all do very well here, but they would put us out if we tried to teach it in our country schools."

The firm conviction held by one of the teachers that we have a decided advantage in having pupils who are familiar with the tides, seems to be verified in this instance, for they have been unusually quick in grasping the theory given them, although at the same time they are not entirely satisfied, because the book says the explanation is not perfectly satisfactory.

At the beginning of the study, it seemed as though the teachers had all the sciences to teach at once, for the pupils had no previous knowledge of physics, geology, astronomy or chemistry, but most of them have proved themselves equal to the emergency, and the term's work has been very enjoyable.

#### Report on Reading.

By Miss Margaret Kemwell.

In looking over the work of the year, preparatory to making this for the usual report, we observe that we have encountered much the same difficulties and encouragements as formerly. We have not yet found any means by which reading at sight may be taught in an hour to a pupil who has hardly seen the inside of a book before coming here; nor any art by which neat distinct articulation can be produced by immobile, inflexible lips long habituated to slovenly ways.

We still believe that the only royal road to reading is practice, practice, practice, and that to awaken a love for books is one of the surest means of securing that result.

On the other hand, the fact that the classes are filled from year to year with younger pupils gives encouragement for better future results. These show the effect of better training, and, besides being better readers at entering, have the advantage of more acceptable minds. This is already apparent in the Senior Class which has been said by a teacher who has daily opportunity of judging, to average higher in reading than any preceding class she has taught.

What the older pupils lack in susceptibility, however, they often make up by earnestness and zeal. In this they outrank their juniors. What is true of reading is true of other elementary studies, particularly of spelling and writing. Hand and lip and brain seem alike inflexibly unpliable. A curious contradiction of this fact that some of the best minds, some who are able to grapple successfully with a knotty question in political economy or like studies, are frequently so deplorably defective in these rudiments as to make it questionable whether they ought to be graduated. Along with knowledge comes the demand for the power to use it.

The work in the Junior classes has been similar to that of previous years. It has been under the direction of a teacher who has received special training for the purpose. Particular attention has been paid to learning words, to articulation and voice building. This has been supplemented by a month's drill by a specialist—Miss Rankin of Brooklyn, Y. Following are the reports of Miss Chickering and Miss Rankin.

#### Miss Rankin's Report.

"I came to Hampton Normal and Agricultural Institute for one month to give special training in lung strengthening and voice building. I have found in all my classes, with the exception of the Senior, that the pupils were inclined to be hollow in much, to outline their voices too slowly, so that they were often indistinct in enunciation. I have tried, in various ways, to make the lips flexible, and to enable them to obtain a neat, quick, ready action of the jaws, lips, tongue, teeth and palate.

The pupils were anxious to improve, quick to respond and desirous to please, so that I found my labors lightened, by the pleasant manner in which each class obeyed my directions in each exercise.

I have found my heart filled with affection day by day, and I have been conscious that my pupils were cultivating for my best and most enthusiastic efforts, because of the child-like trust and earnestness of their nature. Having had eight years' experience as a teacher of elocution, in many large seminaries in our Northern cities, I say with pleasure that I never enjoyed classes more nor found more appreciative and eager pupils than I have done in Hampton.

They have done good work during this month and have now reached a point where I am sorry to leave them.

It is with a feeling of deep regret that I shall look upon their bright and familiar faces no more, and earnestly trust that I have done them all good, during the weeks I have been among them.

I have had to work harder with my Indian pupils than I have done with the colored pupils, yet I have been rewarded for all the efforts I have used to awaken and hold their interest. They are observant and keen in wit, and very affectionate and willing to obey, after a teacher has won their confidence and esteem. They are very amusing in their originality of remark and anxious to do their best, to please a teacher who shows them the desire to do them good.

I leave one and all with a feeling of happiness that I have been among them, and sorrow that I am to know them no more.

I have met with kindness and courtesy from all the teachers whose classes I have had during these weeks, and I thank them all for their assistance in my labors."

#### Report of Junior work by Miss Chickering.

"In a school like this where time is so precious, and where every hour should, if possible, show a gain in some direction, the question seems to be always, in every branch of study, what is the quickest way to attain

desired results? In the department of reading the question takes this form: In what way can the student soon learn to articulate distinctly and to read intelligently?

No better system of teaching articulation can be found than that given by Monroe, as we have it in our charts. This system is used in teaching the deaf and dumb, and their organs of speech are certainly more inactive than those of our students. Teach the student the science of the letters, especially those letters difficult to pronounce, such as, r, d, t, b, etc. Daily practice in words containing these letters is also to be recommended, and is, in fact, necessary.

The exercises given by Miss Rankin are also good and have produced good results. Great interest has been awakened, and I have noticed with pleasure that the students have tried harder to overcome these faults of speech. These exercises should be practiced daily for perhaps ten minutes, together with certain other physical exercises. But after we have finished the exercises we take up our reading books and how do our Juniors read? In the highest section the reading is fair—comparatively few words are misread, and, as a rule, the reading is distinct and intelligent. During the greater part of the year the sections have been too large. When we are teaching children to read we expect them to have a chance to read every day. Our scholars when they come here, have most of them read less than children in our primary schools, and consequently need practice day after day, month after month, year after year.

And they must also have something to read which will interest them. They are too old, most of them, to enjoy children's books, yet they must have ideas clothed in simple words. The text books usually neglect this, and most of them the ideas are childish and the words large, just the reverse of what is needed. For instance the book tells us that "the King was clad in plain habiliments." In speaking of runaway gaiters, the book has been brought back, the same selection reads "the geese were once more congregated on their allotted territory." The students all seemed interested in history. If some simple book could be introduced to make the "Boys of '76" it would be a good thing. To inspire the pupils with a love for reading so that they would be likely to read outside the class room, would be to do a good beginning in this rather up hill work."

The work in the Middle class has varied, somewhat from the course pursued formerly. The regular text book has been Dickens' *Child's History of England*. This has been used on the days when the classes were full. When the classes have been smaller, on the work days of the Section, more time has been given to individual students and to the study of elocution as usually understood. Speeches of great orators and poems of great writers have been chosen with reference to the tastes and needs of the students.

While not forgetting, in reading history, that the primary object was to learn to read, in order to obtain intelligent reading and constant attention, as well as to gain some knowledge of history, the students have been required to make topics and to hold themselves ready for frequent reviews and occasional examinations. The results have been most satisfactory. A very intelligent familiarity with English History has in most cases been acquired. The interest and enthusiasm of the pupils in the narratives of the atrocities of Richard III and Henry VIII, their wrath at the tyrannies of kings and the oppression of their civilization and an illustration of their democratic principles. Their sympathies are very quick. They have been interested in the stories of Prince Arthur and Joan of Arc. When asked in review to name the character they most admire or the story that has most impressed them, the chorus is loud for the "Maid of Orleans."

The Senior class began the year with Shakespeare's *Julius Caesar*. The enthusiasm kindled was sufficient to carry them over several weeks of rather tedious technical works which followed. The question is sometimes asked, Do the students understand or appreciate the play? There can be no doubt of their appreciation in the sense of enjoyment at least, and but little of their comprehension. Almost every question asked on the meaning of the text found an answer in the class. Of course not of every member, but always from one or often from several.

The text book used this year has been "Brooks' Elocution and Reading." This was chosen partly on account of the full and excellent "Manual" with which the book opens. The definitions are pretty what the student will need in his work, for suggestion and methods. The book contains besides much valuable matter which will be found useful for reading selections for recitation, and school exercises.

Beside the work already mentioned, the class has studied Lowell's *Present Crisis*, Goldsmith's *Deserted Village* and selections from the *Merchant of Venice*. These have

receive analysis for the The physical dis- Const- through reading- ing of a word an used in a sent synonymous w been varied by famous name it with a quotic I have found much in term, a ed aim. This b- cises of the clat I have rience have to and greater of becom- mental study.

received a careful literary analysis as a preparation for the elocutionary analysis and for the correct rendition of the piece.

The students have had frequent drill in physical and vocal gymnastics calculated to develop and strengthen the organs of speech. Constant attention has been given to the thought of the piece, to secure intelligent reading. A pleasant exercise on the meaning of words has been a response to a call with a word and definition, a word correctly used in a sentence or with two or more synonymous words. Sometimes this has been varied by responding with a fact or a famous name in their history. Sometimes with a quotation or the name of an Author.

I have found my work made easier and much more satisfactory from having had, this term, a pleasant airy room which has belonged almost exclusively to the reading classes. This has made it possible to arrange exercises on the black board before the arrival of the class and to have the use of the vocal charts.

I have great hope that the year of experience in teaching, which future classes will have before graduating, will raise the standard of reading. By stimulating them to greater efforts as they realize the importance of becoming perfectly qualified in this fundamental study.

#### Report on Spelling and Writing.

By Miss Anna E. Kemble.

If spellers are born, some of that fortunate class would certainly find their way into this school; but upon questioning the good spellers among us, of whom there are not a few, I find they have had training in good schools where written exercises were frequent, and most of them began going to school when young.

Our poorest spellers are those who have had the poorest advantages, and these in schools where written exercises were not required.

In many cases, even oral spelling was omitted, and when it was given, small words of every-day use received little attention. Consequently many have formed a habit of mis-spelling small words almost impossible for them to overcome.

So strong is this habit with some that I have known many pupils to write a word correctly twenty times, and then to go back to the old way in a few days, if the word occurred in some lesson where writing was not the leading feature.

The class who entered this year are much better spellers than those of five years ago. This is probably due to their freer use of books, and the increase of better prepared teachers in the field.

We are still combining the spelling and writing, a method with which most teachers are familiar and which we adopted with a great measure of success three years ago.

The lessons are made up from the new and hard words in the class studies—geography, history, reading, &c., and from lists of words taken from Swinton's Word Book.

The mis-spellings were from the written examination frequently make a profitable lesson. Just here I would say that the lowering of the students' average on account of mis-spelled words in all examinations throughout the year has been one of the greatest helps to the spelling teachers.

At the beginning of the hour, about five minutes is given to the drill and analysis of letters. The pupils are then given the spelling of the class after copying the Spencerian written lesson from the board on space-ruled paper for even a short period is very remarkable.

Since a word is of no use to a pupil unless he knows how to use it, and a clear idea is not always received by a dictionary definition, words are defined by use of them in sentences.

From observation I am led to believe that careless pronunciation is one of the causes of bad spelling; not that all words are spelled as pronounced but many are. The pupil who pronounces seriously *seriously* naturally spells it *seriously*. The *e* who leave off consonant sounds at the ends of words when speaking leave them off when writing. This is a proof of the need of oral spelling with clear and distinct pronunciation, which we give often by oral reviews. I have sometimes thought a reading class would be a good place in which to teach spelling.

To conquer the spelling of the English language with its many variations is no easy task. And considering the lack of opportunity that many of the students have before coming here and the short period in which spelling is given as an especial study, we have every reason to be hopeful.

To stimulate the interest, a spelling match has been arranged to occur the last of the term, in which a prize will be awarded to the successful competitor.

I would suggest that some good modern spelling containing words met with in ordinary reading, and *discriminated words* to aid in pronunciation, be put in the hands of the members of the Middle Class. This would give us more time, which is greatly needed, for drill in pronunciation, and in the use of

words in sentences and for teaching to some end the derivation of words with their meaning and suffixes and prefixes.

#### Report of the Cooking Class.

By Miss Bessie Morgan, in charge.

Thirty-five Indians and an equal number of colored girls, have received instruction in the cooking classes this winter. They have had practice lessons entirely and have made good progress. They are, with few exceptions, fond of cooking and enjoy their lessons. The old theory that the colored people are "born cooks" having perhaps some truth in it, though they are inclined to season their food too highly. Many of the Indians had to struggle against the disadvantage of not speaking or understanding our language, but even the most advanced among them are not much inclined to ask questions or feel an interest in knowing why things are done in a certain way. They are intelligent, and with little learning I believe will make excellent cooks and housekeepers.

The classes have averaged 7 each, the Indians cooking from 10 a. m. till 12 m.; the colored from 4 to 6 p. m. Each class has one lesson a week. Sessions are given from Jan. 1st till May 1st.

#### Report on the Butler School.

By Miss E. Hyde, Principal.

We have enrolled at the Butler this year 360 children; for this number of pupils we have had six teachers, two of whom are residents of Hampton. In the higher grades, under Miss Bentley at the training school, are five or six applicants for next fall's Middle class; in the highest room at the Butler, we have had about sixty children, every one of which passed his or her Junior examination last fall. We have had an older and more difficult class of pupils to deal with this year, as they are not allowed to enter the Normal unless they can enter the middle class. There has been very little sickness among the children and the average daily attendance has been higher than that of any previous year. Our school was as usual free for the first five months, (from October to March) since then it has become a pay school, at ten cents a week and every third child in the family coming free. This has brought the numbers down to less than two hundred pupils; these will gradually drop off as the weather gets warmer, and there is work for them to do in the fields. It is not an unusual thing to have a child stay out one day in the week to earn money to take him through the remainder. The twenty-four boys and girls in the Kitchen Garden Class have completed the course of lessons given to the class, and are now ready for review and supplementary work in house-keeping. A new feature of the school is the girls' sewing class under Miss Bentley and Miss Grace Lytle. Although having only one meeting a week, the girls have made great progress. I have been surprised at their interest in the work; they are constantly begging for an extra hour, and are impatient if the weather necessitates a postponement. One of the first exercises was a lesson in darning; they were told to bring their stockings, but these were found to be in such a condition that they required the work of an expert rather than that of raw recruits, so they were furnished with other material upon which to take their first darning lesson. One small child brought me a new stocking and asked me to please cut a hole in it for her. I had a suspicion that the only other pair she owned was on her feet. One girl of fourteen, who has full charge of her father's house, two older brothers and a small sister, sat quietly darning away on a big hole. She always looks so neat herself, that I had rather taken for granted that she was an expert with her needle, so did not call at her work until the close of the hour, when to my dismay I found that she had two layers of stitches and had begun a third, but they were merely laid one above another without being woven in and out at all. I asked one child what she did when holes came in her stockings. She said "O just wear 'em." I am glad to report that at the end of three or four lessons, they all knew how to darn. At present they are very much interested in aprons, which they are to have for their own, when completed.

In closing I would say that next fall we shall need an extra room; our rooms are crowded to allow the best work to be done. I am very anxious to have a room nicely fitted up, in which the older girls may be put and given the best chances. Through the kindness of Mr. E. Thompson Gale of Troy, N. Y., who presented the Butler with a check for a hundred dollars, we shall be able to fit up a room in the east wing of the building. The next step is to make application to the county for an extra teacher.

#### Practice Teaching.

By Miss Hyde.

The lessons given this year by the Seniors to the Training School children have proved the wisdom of giving methods during the middle year. As a whole, they have excelled

in originality and excellence the lessons given by any previous Senior class.

There are four grades in the Training School, the lowest class consisting of beginners of about six years of age, the highest of pupils who hope to enter the Middle class next fall. This gives a variety of teaching, and probably covers the ground found in the majority of the schools taught by our graduates.

So far the Seniors have given lessons in reading, spelling, language, composition, writing, drawing, number, arithmetic and geography. I hope before the close of the term to have each Senior spend an entire day in the Training School, thus getting an idea of the management of a school as a whole.

#### The Middle Class.

The Middlers have had Practice Teaching since February. As they are to go out to teach at the close of the term, I feel the necessity of taking them on in the work as rapidly as possible. Of course they will not be able to half a term to cover the same ground that the Seniors have in a year, and they will have to take their practice and work out their methods in their own school, yet having had the advantage of the Training School and its criticism; still, as a class, they seem to be very much in earnest and many of them, I am sure, will do first-rate work in the school-room.

The institute to be held after commencement, which is to be conducted by Mrs. E. L. Walton, of Massachusetts, will be open to both Seniors and Middlers, so that they will go out to their work with new ideas and renewed interest.

Instruction in Political Economy, in the Science of Government, and in topics of general interest, is given by the chaplain, Rev. H. B. Frissell. See his Report below.

#### REPORT ON INDIAN SCHOOL.

By Miss Josephine E. Richards, in charge.

Hampton Indians, at present number 125; 74 boys and 51 girls, including two babies. These are representatives of eleven different tribes, by far the greater proportion being Sioux. Two girls also are in Massachusetts.

This has been a year of great change in the school lists, partly from the fact that the three yearly course of some of the Indians expired last fall, and others were brought on to fill their places, partly because the Government is now ready to support 120, instead of 100 pupils, as heretofore, which further increased the new arrivals, while sickness and delicate lungs caused many to be returned who had been with us but a short time. A party of 13 Omahas arrived in August. In September, the Rev. Mr. Graves, and one of the lady teachers, escorted 25 to the West, and brought back 29. Since that time 12 have been sent home on account of ill health, and 8 for other reasons. We have left on the new responsibility; 7 have died. During the month of April 5 came to us from Crow Creek, and 12 from Standing Rock, Dakota. "The plan is that about July 1st the school should return to the West, and during the summer and early fall about 12 Omahas, and 12 Sioux, should be added to our number.

The interest of the year of our course has centered very largely about the outgoing and in-coming parties, watching the progress of the new-comers, listening eagerly for reports of those who have gone back to their old homes. There has been very much of hopefulness in both aspects. As we look along our line at the West, from Fort Berthold in the Northern part of Dakota, to San Carlos Agency in Arizona, at many points we see our boys and girls doing good service in the field.

At Berthold, to be sure, the few sent back last summer and fall have not done much to combat its barbarism and heathenism, though we have heard of one of the girls as assisting in the Fort Stephenson School. Two of the girls seem to be at home, and the boy has worked a little at his trade and now talks of farming.

The same must be said of San Carlos, where the helps are small and the temptations of Indian life and army life very great. Of the three who returned, one has followed his trade; another purchased a wife we bear, but is interpreter at the Agency. The two Pimas seem doing well. Of the seven taken back to Standing Rock, Dakota, all, with but one exception, from the reports of Agent McLaughlin, have made an excellent record. One of the Cheyenne River boys is also there, acting as herder, in charge of some 600 head of cattle. At Yankton, one boy is working at his trade of shoemaker, another is teaching in the Government School. "I wonder how they got on without him," says the Rev. Mr. Cook. One of the girls who has married, is assisting her husband in his school near Pine Ridge Agency, far from her friends, yet happy in her home and her work. "I did

not think I could be so brave," she wrote to her teacher. Two of the girls have been inclined to be wild, but latest accounts are more reassuring. Almost all taken back to Crow Creek add Lower Brule Agencies, (also in Dakota), had proved unthrifty in health and had been with us, some only a few months, some a year or thereabouts. Nevertheless, a teacher visiting Lower Brule last fall, writes, "I counted fourteen Hampton students in the little church, not one of whom I was ashamed to own." Two of our most promising boys spent the summer at Lower Brule, and after proving themselves very efficient helpers and teachers there, returned for further instruction, one bringing a sister, the other a wife.

Two of the Crow Creek pupils have not spoken well for the school.

The three girls taken back to Indian Territory are all at school. John King is doing well as a clerk. Alford and Murie are still teaching. Very pleasant testimony was lately borne to the fruit of Hampton's work in that Territory by Franklin Elliott, a member of the Society of Friends, who places it in the foremost rank.

Of the two Winnebagoes who went home, one has died, the other is feared has gone back to Indian ways, but we hope to have her here again, as she was quite young.

Of the 34 sent back since last Spring who had completed their three years' course, our estimate is that about four fifths are doing creditably, some of them admirably. [For results as a whole and for further particulars see Gen. Armstrong's Report.]

Here, the progress of the new students has been very encouraging. In the main, they have been remarkably faithful and eager to learn, and very quick in adapting themselves to their new surroundings. The methods used in teaching them in the classes will be gathered from the reports of the teachers.

The Indian classes average about thirteen pupils. This small number calling for a larger corps of teachers than would otherwise be necessary, allows much more attention to each scholar, and lessons being prepared in the evening study hour, each teacher can give all her energies to the recitation in class.

The Indians in the Normal School have two work days, those in the Advanced Class of the Indian School work on Monday, while six are voluntarily Work Students, and attend the Night School. Three of these are there for a second year.

From the shops and the farm where they are trained to use hands as well as heads, comes a favorable verdict. "Less friction than ever before," says the head of the Training Shops; "the quality of the work also better, its quantity about the same as usual." A similar result of the year's work is found in the Shoe Shop, making it on the whole the most satisfactory of any year. In the Printing Office the Indian boys have been faithful to their tasks, and anxious to perform them to the best of their ability. Everywhere the sickness of the year is referred to as having interfered with the actual work accomplished.

The plan of throwing the boys on their own responsibility in their cottage life has been continued with great success. It has been done, as may be seen from the Report of Mr. Talbot, to wake them up morally and intellectually and to stimulate them, not only to self-reliance but to industry. Each other, and in helpfulness to those who have just come.

It may be noticed in the reports of the workers at Winona, that its arrangements differ in some respects from those often adopted in boarding schools, and that there is about them very little of purely institutional life. Instead of long dormitories, put in order at the beginning of the day, and only visited afterwards by inspectors and guests, each room is a little castle for the two or three girls who occupy it. Here in leisure hours they can read, write, sew and receive their friends, while the little ones have many a nice play with their beloved dolls. In this way too they learn that putting a room in order in the morning, and keeping it in order amid all the vicissitudes of the day, are two quite distinct things. The same principle holds good in the making and the care of their clothes. In the Laundry they are taught to wash and iron, but it is not clothes in general they are to labor over; each one has her own particular pile, and knows every step of the process from collecting the soiled garments in her room on wash day, to laying them away white and smooth in her bureau drawers ready for use. Surely this is good practice for the little Indian housekeepers of the future. Even in the purchasing of their dresses, hats, and minor articles the older ones are allowed considerable scope. Their judgment and taste are thus cultivated, and the value of money is learned.

In the Winona Dining Room, as at Virginia Hall, rules of absolute silence are not enforced; the aim is to put down anything rude or boisterous, but to make the room a bright, cheerful, home-like spot. To pre-

serve a happy mean between restraint and lawlessness, to thaw out the true Indian shyness and silence of new-comers, yet at the same time to bridge the little tongues of the over vivacious, is not always easy, but the success already attained is cheering.

The beds are hard, the fare is plain, yet in the utter comfort of a great building like Winona Lodge, and a little Dakota cabin, the thought may arise, will not the newly acquired ideas of order and cleanliness be left behind with the spacious halls and long corridors, as something clinging only to them? And just here step in our Indian Cottages, showing that in the least as well as the greatest, Heaven's first law may be carried out. Two of these Cottages have been built and occupied for more than a year; two more are building, and from New Orleans comes the kind offer to install yet two other families in Hampton homes with an eye to caring for them also when they return to the West.

There have been in all nine married couples here this year; two were obliged to go home on account of the delicate health of the husbands. Another family, father, mother and little boy, left this spring, having nearly completed their course. They, with one other couple, were the first to come, and having watched their progress from beginning to end, we cannot but feel that in this instance at least, the bringing on of families has proved a beautiful success. After learning to keep a tidy room on the ground floor of Winona, they were promoted to a little house of their own. Last summer they drew rations from the Diet Kitchen for their breakfasts and supper. This Fall \$1.50 a week was given them, besides their flour, that they might do their own marketing for these meals. The husband learned the carpenter's trade, and made very fair progress in school. The wife was sometimes kept at home to care for her child, yet was an excellent scholar, while the little boy, as he learned to talk, spoke only English. Not only for this life but for the life to come, we trust Hampton was a Training School for them, and they returned to the West confessed disciples of the Great Master.

Another Omaha couple has moved into their vacant Cottage, and it is interesting to see how, having a house of her own, seems to develop the girl's rather flighty, young wife, from a child into a woman.

The course of true love does not always run smooth with our Hiawatha and Minnehaha. Caudle lectures seem not unknown even in Indian tips, only in our experience Mr. Caudle is always the lecturer, and the assistance of the teacher is sometimes invoked by the liege lord in the request, "Please talk her," but on the whole, Hampton's experiment with married couples is full of encouragement and cheer.

It was pleasant to note the growth of modern thought in the History Class one day, when after studying an illustration of the chief was taking his ease at the door of his lodge, while his wife toiled at the fire, the boy who had been remarked—"Give him zero." It was pleasant still to see at Winona a young brave whose wife was unable to sweep the Assembly room, but allotted morning task, arm himself with broom and dust pan, with head protected by a blue veil pressed, quite of his own accord, to discharge her duties himself.

This work for Indians often calls for all the tact and patience one can muster, yet there is something about it which wonderfully stirs the sympathies and enthusiasm of those who enlist in it. It were hard to resist the plea of an untutored brave, fresh from camp life to our Chaplain—"You know about that Man came down from Heaven to be kind to people? I hope you kind to us."

#### Report on English.

By Miss Laura E. Tilton.

English is one of the most interesting classes to have with the Indians. They are all eager to learn, but being ready to learn does not always mean ready to use a word, and it is not unusual to "Stand awhile on one foot and then while on t'other," while the noble Red man calmly maps up his mind about answering your "How do you do?" and there is no need to try to keep cool, for a chill of uncertainty creeps up and down your back bone as you consider that he may decide not to say it at all. Still, they are very interesting to teach, and this year the Classes which recite in five Divisions in English, as in other studies, are unusually well graded.

The Fifth Division is the lowest. Boys 14, Girls 12, and is subdivided the girls and boys reciting separately. The teaching for the first half of the year was simple words, names of common things and acts. It was done in the case of things, by object teaching, and the actions were acted out, often to the great amusement of the class. Now they can use these words in short sentences such as "Please

give me some chalk." "I can open the door," etc. The ages of this Division range from eight to twenty-two or three years, but they work together well and some have learned rapidly.

In the Fourth Division of 14 members there has been remarkable progress. Most of them are boys about 16 years old, who came July '84, and several, three months ago, began to use "only English," and succeeded in speaking it for five or six weeks. By the Fall, when the school year began, they had learned the names of the things about them and could ask for different articles of food or apparel very well. The first three or four months was devoted to Adjectives, Adverbs, Prepositions, Pronouns and the Past and Present forms of Verbs. These were taught in the class, written in sentences on the board etc., until they could combine them themselves. How much these boys knew when they came, we are not sure, as they spoke Indian always and seemed to understand very little, but now, after 6 months, they can carry on a fair conversation and understand so well that the teaching has been turned into primary lessons in term of words. Long words are a great delight and even circumstance and diameter do not stagger them. Funny mistakes continually happen from our attempts to act as a means of instruction, in showing an Island with the sand board, the wish to use "surrounded" called for an example of its meaning. The most convenient material was glass, and the teacher was soon standing with a circle of eager, laughing faces about her; everything seemed so pretty plain. "I am what?" she said. The answer was ready "Surrounded." By what? "Boys" or "Indians" came again in lusty tones, while a girl suggested faintly, "You 'fraid'?" Then all returned to the sand. This was what? pointing to the miniature island. "Land!" said the class. "Surrounded by water," with a shout of perfect confidence of saying the right thing; surely a new definition of an island.

The Third Division of 21 boys and girls understood quite well but spoke very little English at the beginning of the year, and having spent the greatest part of the term in correcting the habit of not using the words which they knew. To bring them out at first a sort of game was invented where questions and answers were written on cards and the correct word of the term in which was represented, one playing doctor and others coming in to complain of head aches, or for medicine, or get excused from some duty on account of illness. Now they are familiarized with the different parts of verbs, and use of the first, second and third persons, both singular and plural, and in conversations they write in blank books, and memorize, so gaining confidence in themselves and their English, and most of the girls belong now to the English speaking clubs.

The Second Division work is still more advanced. Most of the children can speak and write very good English, and have had an excellent drill this year in composition and letter writing. Subjects for composition were sometimes drawn from a picture book, and sometimes an object, and often a story was read aloud and reproduced from memory. At present they are studying U. S. History, which gives them excellent practice in telling a story, for they are interested enough to wish to talk, and the teacher has a chance to correct mistakes in their use of our language.

The First Division numbering 17, stands at the head in the course, although in reality they do not speak English as much or so well as the 2nd division; but they are much older, and quite able to understand and use the grammar used in the Normal classes. They have devoted most of their time this year to the verbs, learning the Principal Parts, Mode, Tense etc. Tense seems the hardest, and with some it is impossible to stick to either the Present, Past or Future in a sentence of any length, while such an example as "Last summer I went to New York" had seen too much houses, is not uncommon. But they are improving, and will be able to enter the Junior Class and do better work next year, than if they had not handled this book and made their many blunders now.

And so, as we go through the five divisions, we find the plan of work carried from words to sentences, conversation, composition and finally construction.

The English speaking outside of the class room has been very fluctuating, although the boys to try to use it has been better than ever before. Rules have been made allowing them the use of their own tongue before breakfast and after supper of each day, and all day Sunday, but no severe punishment has been given if these rules were unheeded and Indian spoken out of school. We have rather vainly tried to have English a voluntary effort and offered prizes for its use. Little star pins

are given at the end of the first week, and if kept for four successive weeks an eagle is given in its place. The number who have worn the star at one time has vacillated between 15 and 40. The general spirit of helping each other is good; one of the boys helped a new Indian learn English very fast; when I first came here if I try to speak English old boys laugh, but now not that way, we teach these boys and help them all the time, and that makes encourage. In addition to this, the girls have a Fancy-work Class which meets once a week. Materials sent in answer to our letters in the Southern Workman and Christian Union have been made into many pretty things for the girls' rooms, and rewarded them for an extra effort, for they cannot use Indian from Monday morning until Saturday night. There are ten regular members, and twenty have been in the class at one time.

#### Elementary Branches.

By Miss Harriet A. Holbrook.

The question first asked by nearly every visitor is, "Compared with colored pupils, what would you say of the ability of the Indians?" And when that fails because of lack of experience with the colored race, the query comes with regard to their whiter brothers.

Comparison is almost impossible. Years of experience in teaching white children of the Indians, for the latter often are men and women, and recent methods used for the former, saying, "That's the way," consequently, methods and work with the Indians must be essentially different and original. White children begin with not only some sense of idea of number, but also a fair command of English with which to tell what they know. Indian boys and girls come here, many having no knowledge of our language, and they must learn what they can from signs and by constant repetition. One can have little idea, till he has watched the struggle, of the difficulty in grasping new ideas through the medium of an entirely new language.

Number is perhaps the easiest subject for beginners, as there seems to be something favorable for them to seize upon: the objects are there—they can see them. But with combinations—there is the difficulty. A man who had tried hard to overcome a subtraction at last had help in his own language from a girl who had conquered the English. As light dawned upon his befuddled mind, he exclaimed, "No wonder the colored boys learn faster than we, they understand what the teacher says to them."

Geography is interesting to them; they enjoy telling about the mountains, rivers, and prairies which they have seen. No need to teach them to observe the objects around them, as so often our children must be taught. They are delighted to learn of those who live in other countries, their appearance, habits, and manner of living; and are always interested in the different people with whom they are brought in contact. Those farther advanced have made some difficulty in gaining ideas by themselves from geographical and histories, even from the simplest text books that can be found. What would be perfectly intelligible to our children is simply Greek to them, and they do not bring their own language prominently into use.

Working day after day at their reading, repeating, "See the cat," "I see the dog," and like inspiring sentiments, makes one long for a set of readers written especially for the Indians, giving facts worth remembering, and with stories which they can comprehend, and which interest them. Books for ordinary school use are either too hard, or else so childish as to make it dull work for pupils as old as many of them. Yet, in spite of the dullness, their interest seldom flags, and in course of time their patience is rewarded.

Our language is hard, undeniably, and words in most common use are perhaps the hardest to understand. "What that word *and* mean?" I not know," said a tall Omaha. Which proves another stumbling block. Alas, that English should be such an unexplainable language!

#### The Advanced Class.

By Miss Cora M. Folsom.

An entirely new feature of our Indian school this year has been what we term the Advanced Class. The Indian cry is ever for school all day, but the industries being considered quite as important, the hands have hitherto had to share the day equally with bare only that. This year after the return of four of our former students from Dakota, the number of applicants for "higher education" became so great, that a new plan was deemed necessary, and an exception made in their favor, allowing them a whole day of school with a long evening study hour, and only one day of work that day being the only day. This work, done cheerfully and bravely carried out.

The members of this new class had all finished their term of three years. Some had been home and there served a time as teachers—others as preachers, and others—one young man in particular having formed and taught a camp school of fifty-four scholars, besides conducting the Sabbath services. All are looking forward to a life of similar service among their people.

In this class of twelve members—eleven young men, and one girl of sixteen—the average age is twenty-two years, the youngest being nineteen and the oldest twenty-seven. Four have wives here with them.

In every case the Indian, when he came East, knew nothing of the English language nor much of civilized life, but being a man, brave, even while he saw the younger ones leaving him far behind on the "white man's road." Being so backward in English, these men could not this year enter the regular normal classes of the other department—although in thought and understanding they are far above the average. No one is especially brilliant as a scholar, but all have a steady, honest purpose and are earnest in preparing for the life which they have chosen for themselves.

The religious work at home will be mainly in the native language, but the English will be all-important in their work as teachers and leaders among their people. Grammar, geography, arithmetic, U. S. history, natural history and all other studies are taught with this thought ever on the teacher's mind.

The Indian is naturally religious and readily takes to the religion of Christ to himself as soon as he understands its teachings, but the English Bible is to him a sealed book for a long time. Those who have been home and undertaken to teach others, find the Bible have found how great was their need, and have come back urgent in their request for further instruction. Most of the class are looking forward to being at least able to read and understand among their people; hence they have been given the ordinary theological studies in their simplest forms—Bible and Church History, Christian Doctrine, and kindred subjects being put in the simplest English possible. The Rev. Mr. Gravatt has taken the class once a week and helped us over the harder places.

Every afternoon at the opening of school, this class meets in their recitation room, and each takes his or her turn in conducting the ordinary opening exercises, concluding with an extemporaneous prayer in English. This though hard and attended with many stage frights, has been a great help in giving confidence and practice where it is so much needed. Another great help has been our habit of committing to memory certain of the Psalms and selections from the Gospels, and repeating them daily at our opening exercises.

Where an interpreter is needed, a member of this class has been employed when practicable. One of these boys has interpreted for me very acceptably all winter for a large S. S. class of new boys. On one occasion, while interpreting the verses of St. Matthew, he was so much interested in the words "tax," and proceeded to do so, making the future disciple a collector of "little nails."

Abundant opportunity for practice teaching has been given this enthusiastic class during the winter by the illness of teachers. I think they have made the most of their chances and done themselves credit. Having had these young men in my classes since they first came in blankets and loam hair, I have had the best of chances to watch their development in every way, and find it as wonderful as it is interesting.

This summer some of this class will return to their homes, while others will remain to take the regular normal course.

#### Natural History and Botany.

By Miss Elaine Goodale.

These studies, as taken up by the Advanced Class, have been a somewhat new feature of the Indian school this year. The idea has been, not so much to teach systematic Botany and Zoology with their complete nomenclature, for which our students are scarcely prepared, as to correct error or false notions of animal and plant life, and to encourage habits of exact observation.

The keen eye of the Indian, and the intimate acquaintance with all our doors of which we are apt to credit him, would make this lesson, one would suppose, both easy and interesting. Experience seems to show that he does not find it so easy as he anticipates, and that his teacher discovers in him both a surprising ignorance and unexpected knowledge.

Occasionally some piquant disclosure concerning the habits of beaver or turtle gives zest to the lesson, and again an absurdity or mere superstition, clung to with at least equal tenacity, tries the teacher's patience to its utmost. As might be expected, they know what they can see rather than what they have to think about. As regards the various respiratory organs, for example

of birds, fishes, or knowledge or even discernible? Specimens have of course, of blue, green, or red fields, h more! usually the draw been bo

of birds, fishes, insects, an entire absence of knowledge or even of apparent conjecture, is discernible. Specimens, both living and preserved, have of course been used as far as practicable, and occasional raids upon the barn yard or green-house, or excursions in woods and fields have created a diversion, if nothing more! Their examination papers have usually showed good memories, and some of the drawings made upon the blackboard have been both amusing and excellent.

#### Indians in the Normal Classes.

By Miss Helen W. Ludlow.

There are twenty Indian students this year, ten boys and ten girls, in the regular classes of the Normal School. Ten are Sioux and one Arikara, from Dakota; four Omaha and two Winnebago, from Nebraska; two Sac and Fox and one Absentee-Shawnee from Indian Territory. Four are all-breed Indians; the others of mixed parentage, English or French, and in one case, Negro, on one side. Most of them knew a little English when they came; fourteen, however, so little that they had to spend from one to three years in the Indian preparatory classes, and eight have practically learned all their English here. Eleven are in the Junior class, four in the Middle, and five in the Senior class, graduating this year.

They are, for the most part, keeping up well with their respective classes. The very fact that they can enter the regular school and pass from grade to grade with no more special help than can be bestowed by their teachers upon individuals in their large classes, shows, of course, that they are, on the whole, good material. An examination of each in the various studies, reveals, however, interesting differences and coincidences, which seem to give a basis for some generalizations. This will be clearer, thrown into the tabular form, perhaps, as below. The averages of proficiency classify themselves rather strikingly. I would explain that each per cent. is calculated from the Indians taking the study named, and the first column is included in the second; so that the per cent of Indian students, falling below a class average may be found by subtracting the second figure from 100. By class average is meant the average of the whole class or section, colored and Indians together.

Practice Teaching (Seniors & Middlers).	22	44

The report of each student by each teacher was made separately, and the per cents made out for one class after another, as it happened, by no means in the above order into which, on a general view they classify themselves. A glance at them suggests the fact that the Indian may do well in studies requiring observation and perception, and manual dexterity, and in those requiring reasoning powers, if they do not demand much expression in language. In English these are fair, as of course they must be to enter the school; but in reading they are very low, as one would expect who is familiar with the common weakness of voice and habits of reticence and shyness, and the way of speaking their own language. In the higher studies, which demand deeper thought and more confidence of expression, and both in a strange language, the average must go down, though their interest in these keep it higher than we might expect.

Most of them indeed, are deeply interested in their studies, and there is not one named that does not appear "up to the average" on its much as one class roll; though some are poor enough to make their promotion doubtful or impossible.

In the Night school, composed of work students, learning trades, are six Indian young men; one Pawnee, two Onondagas from New York, and three Sioux. They are on the same basis with the colored students in these classes. Their studies are arithmetic, reading, and English lessons, including writing and spelling. Their per cents in their classes are

	<i>Above Av.</i>	<i>Up to Av.</i>
Arithmetic	.50	.80
Reading	.16	.32
English	.16	.32

The spirit of the classes, as between Indian and colored, is in all cases excellent. The colored students take evident pleasure in

encouraging the Indians, and having them helped.

There is every evidence here that it is entirely practicable to educate the Indian, and that association with English speaking schoolmates, near himself in advancement, is an aid in the work. The suggestion which has been made by one familiar with it, that Hampton would do well to take a larger proportion of those able by a knowledge of English to enter the regular Normal School; at once, that so none may receive the benefits of such association, seems worthy of consideration in the light of these reports.

#### The Indian Sewing School.

By Mrs. Lucy A. Seymour.

There have been connected with the Indian Sewing School the past year 73 girls, some for a few months, others the entire period. The 26th of May, thirteen girls returned to their homes, the most of whom had been here three years, the health of the others would not warrant their remaining. In June, 7 more went to New England to work during the summer months, thus reducing our number to twenty-seven. But the hours of vacation were not to be idle ones, for word came to prepare for seven who were expected from Dakota, with Rev. Mr. Frisell in June, and six with Mr. LaFicche from Nebraska; these arrivals increased our number to forty, more than ever before during vacation. Soon the willing hearts and hands of all had placed our new friends on a comfortable basis, and they in turn were ready to assist in replenishing our stock of clothing for those who were to leave in October, and the nine who were expected in November. Four others have left this Spring—all these changes have made great demands upon the clothing department. Ten of the older girls have been advanced to the Normal School; they are unable to do much more than make and repair their own clothing, still, with only one assistant, our girls have made one thousand seven hundred and sixty garments for themselves, and household articles for Winona. Friday is mending day, when each one is expected to repair her clothing, and have it ready for inspection, that evening. I am often asked, "Do they learn quickly, and accomplish much?" I think the answer is plain when you look at the amount of plain, well-made clothing they can show; few girls can do better.

#### House Work at Winona.

By Miss Lucy A. Mayo.

At the beginning of the present term there were fifty-two girls in the Indian department; more than ever before. With this goodly number of workers, prospects for a well kept building, looked brighter than in previous years.

Another encouraging feature was that there were some girls who did not return to their Western homes, that had had several years of experience in Winona Lodge. With their influence, and many willing, but untrained hands, we began our work. For a short while things went on nicely, until sickness came into our midst and for a time stopped many of our earnest workers. This misfortune has followed us all through the term, and the absence of the sick girls from their duties, has caused the more fortunate ones to have extra cares. The willingness with which they have taken hold and performed their duties and those of their disabled companions, all these months of unusual illness, deserves great credit.

It is an interesting sight to watch these girls as they go about their regular morning work. At half past six o'clock, when they return from their breakfast, they go directly to their rooms and put them in order. When the bell rings at 7 o'clock, they report each girl at her particular charge, in the different halls and corridors, with dust caps on their heads and with brooms, brushes and dust pans in their hands.

Here they work away until each worker's share is in proper order. By eight o'clock their rooms and the halls and corridors are ready for inspection. Some of the more capable girls have the care of teachers' rooms. The teachers give up their rooms at eight o'clock, their breakfast hour, and by the time the girls can possibly tidy them up, the bell calls them to school. In addition to the above named cares, the girls have to make, wash, iron and mend their own clothes.

In spite of an unusual number of drawbacks, Winona Lodge can boast of better treatment during the past months than she has ever before had the honor of receiving.

#### The Laundry.

By Miss Georgie Washington.

The work in the Laundry has been done better this term than ever before. Washing was at first the hardest work for an Indian girl, but now it is better understood, and a great deal of pride is taken to make the clothes look as nice as possible. The

girls that came to us last fall have learned to do their washing very well indeed, for so short a time, and by next term they will be good workers. We have had a great deal of sickness among the girls this term, quite a number were taken out of the Laundry, some for a few days, others for weeks. The first week, that the youngest Indian girls were put in the Laundry, one of them said in a very hopeless way, "Big sheet, can't wash." Could you have seen those tiny hands, you would have thought there were other things not as large as a sheet, that she could not master. The big sheet was taken away for stronger hands to wash, till the owner insisted on doing it herself, and surprised us all by making it look as "nice as the Big girl did."

The most troublesome part of our work is, getting the clothes dry on rainy days; we have to keep a very hot fire, all the week sometimes, in the Ironing Laundry and hang the clothes there; this of course puts us out for ironing, as both must be done at the same time. We hope very much to have a drying room soon. I only hope that leaving the Laundry in Winona Lodge, with all its conveniences, and returning to the West to make a few such luxuries, will not lessen the desire in these girls to keep their clothes neat and clean.

#### Care of the Sick.

By Miss Lucy Lovejoy.

During the summer months the Hospital was very busy, but on the approach of Winter, bringing with it epidemic diseases, we found the hitherto spacious quarters too narrow, and the overflow was scattered around, even teachers' rooms being pressed into the service.

Some of the girls have suffered from serious illness, but many have had some slight ailment which made it necessary to remove them for a time from their more fortunate companions.

The former have always been quiet and submissive, not murmuring and rebelling as many sick people do, making the prescribed remedies, and yielding with but little irritation to the restraint placed upon them.

The convalescents and those slightly ill are more difficult to manage, when suffering from a cold or severe cough they cannot see the impropriety of sea-ing themselves in an open window, with a damp, chilly wind blowing freely upon them. Their disregard of all the laws of health makes the care of them very trying; they sometimes seem to have the feeling which one of them expressed when remonstrated with for some carelessness, which the nurse said a white person would not do, "Because the white man is afraid to die, but the Indian is not," was the reply.

#### Diet Kitchen.

By Miss E. F. Patterson.

The work in this department as in the Hospital has been very heavy this year.

There is a dining room in connection with the kitchen, where the convalescents and those whom the Doctor thinks in need of a change of diet, have their meals served to them. To those who cannot leave their rooms, meals are carried by a steward appointed to that work. The average number of meals served to colored students in Diet Kitchen during the year was 633, to Indians 376, number sent out to colored students 962, to Indians 372.

Situated near the Diet Kitchen is a pleasant room with a long table in the centre, covered with a snowy cloth, neatly set with white china. On the walls are pictures, and the windows are draped with bright figured curtains; this is our little Indian girls' dining room, where about twenty children take their meals; some set the table, others wait on the table and others wash the dishes, and all may be seen on their knees scrubbing the floor every Saturday morning, each having a certain number of boards to clean.

In this way they learn to do useful work while they seem to enjoy their tasks very much.

#### Home Life at the Wigwam.

By Mr. Dudley Talbot.

Home life at the Wigwam, the Indian boys' cottage, has a peculiar charm, from the opportunity it gives one to come in close contact with the young men who have left their homes in the West, and are striving to watch their improvement from month to month; to become familiar with the difficulties which they meet, and to arrange for their advancement by adapting the means at command to their use.

Here are fifty-seven boys from ten different tribes. It is but a few weeks since many of them were free life of the plains, now they find themselves surrounded by the necessary restraints of a large boarding school. It is surprising that these conditions are accepted so well.

It is difficult to imagine that this erect and manly Cadet, with neat uniform and well kept person, was less than a year ago a careless boy running about the Agency, with long hair, a strange costume and a blanket thrown over his shoulders.

The effort is made to have the house-life as attractive and elevating as may be; to fill it so full of good influences that there shall be no room for evil; to give opportunity to spend spare hours profitably and pleasantly, and to encourage the growth and expression of the Christian virtues, by acts of kindness forbearance and mutual helpfulness. That something of this spirit exists may be seen by watching three games played harmoniously at the same time, with the one set of croquet, possessed by the boys, the members of one game quietly lifting and holding the balls, when in the way of others; the occasional knocking out of the way of one of the balls being given and accepted with good humor.

One of the most useful features of this work is the social life that has gathered around the Reading Room, which was furnished through the kindness of friends, who would feel well rewarded if they could hear the expressions of enthusiasm which has occasioned, and see how much good it has done.

It is supplied with a variety of papers, books and games; besides plants, pictures and mottoes. The esteem in which the books are held, is delicately expressed by the hesitation of some to take out the newer ones, for fear of soiling them. There is unmistakable evidence however that this scruple has been overcome in some cases. Here during certain hours of the afternoon and evening, some of the busy teachers and interested friends, meet the boys and select such reading matter as they desire; and here from the annual reports of the officers of the Government, they can get annual information about their people, and a wider knowledge of their condition and needs and of what is being done for them.

This contact socially with refined women is doing a great deal to produce gentlemanly deportment, and to change the former of the assembly room as an arena for wrestling to its intended purpose of a pleasant sight on cold or stormy afternoons, to see the groups absorbed in games or reading or conversation in this room.

Family prayers at nine o'clock are conducted by the boys, two taking part each night, one reading a verse from the Bible, one making a short prayer in English or Indian, and all singing a verse and repeating the Lord's prayer. This is the first time that boys who have united with the church this term, and those who were members before, an opportunity to take active part in religious exercises. These few moments also give the officers of the school an opportunity to speak a timely word of admonition or encouragement, in regard to conduct, cleanliness, etc., and for the boys to question them about any puzzling matter.

A "Lend a Hand" Club has been formed, whose aim is not only to provide entertainments which may be profitable for all, but also to lend a helping hand, to those students who have returned to their homes, by sending them papers, etc., and keeping up communication with them through its corresponding secretary. Besides the usual officers, there are committees in charge of its various branches: Debating, Literary and Temperance Societies, Brothers' Club and Prayer meetings. Saturday evenings are usually devoted to the exercises of this Club. One evening was spent to advantage in organizing a Town Meeting, at which the boys prepared a warrant; and discussed various questions of interest to them.

The Brothers' Club consists of those who take a brotherly interest in some particular boy, aiding him in every way possible to improve. It is interesting to trace the marked improvement of some of the boys, to the influence of some of its members.

A set of tools has been provided, with which those who are aiming may find attractive occupation, and with those who are well, make up various articles for decorating the Wigwam, or for sale, to provide a fund for the use of the "Lend a Hand" Club.

The hope in this work is to produce such a picture of home life in the minds of those who may be brought in contact with it, as may lead them to strive to realize it upon their return for themselves; and to provide opportunities to make immediate use of the thoughts which they are gathering, and so to be ready for action among their own people.

#### Little Boys' Home.

By Mrs. Irene H. Stanbury.

This is the third year that Div. A. has been the home of the little boys, in which to receive the special care that all small children require for their moral and physical development—whether they are born on the plains of the West, or in the crowded cities of the East.

At present there are eleven in number, ranging in age from eight to fifteen years.

and representing five tribes viz.: Pima, Omaha, Sioux, Sac and Fox and Winnebago. Six are "full blooded" the remaining five are "half" and "quarter breeds."

Though these small braves at home are unaccustomed to restraint, they are not difficult to control. Moral suasion, except on rare occasions, has been the only force necessary to use.

Like all high spirited, manly boys, they are full of mischief, and are never so happy as when making a noise, but some of their civilized brothers could take lessons from them in refinement, truthfulness and patient endurance of suffering.

With the exception of a few cases of eye trouble and pneumonia, their health has been good during the year.

The younger they are the more readily they learn English. One little fellow nine years of age who came in the fall, can make his wants known, and understands what is said to him.

The picture books that are sent them by their kind friends at the North, are a never-ending source of amusement, and they enjoy being read to, if the story is founded on fact. The "Story of the Bible," is their favorite book. The courage of its heroes excites great enthusiasm, but their brown eyes grow full and anxious, and their little hands which have been punching each other a few moments before, become still while they listen to the "Story of the Cross."

There has been a decided improvement in their English, neatness and thoughtfulness during the year.

Two have pledged themselves to be Christians "braves," and "to fight under His banner until their life's end."

Altogether, this year has been one of encouragement.

Div. A. is also the temporary home of two Indian couples, who are waiting for their cottages to be built. One of these couples arrived a week ago bringing with them their two youngest boys, one five years old, and the other nine months. Their arrival completed the family group having sent their two eldest children, one over a year the other last fall to Hampton. The joy of these little ones on being told that their father and mother would soon be with them was most touching and the meeting between the long separated parents and children was a scene not easily forgotten.

This couple in sending their young children and their coming themselves, many weary miles to learn the "white man's road" and the English language, have set an example which we hope others will follow.

#### Social Life at Winona.

By Miss Caroline K. Knowles.

Saturday night Winona welcomes the Indian boys to its spacious Hall and Assembly Room for an evening with the girls.

A variety has been given to these meetings by the Helping Hand Clubs, one for the girls and one for the boys, which were formed this winter, each club choosing its own officers; thus taking initiatory steps in self government. Once in two weeks the clubs join at Winona, every other meeting being literary and musical in its character, the boys and girls having recitations, readings or singing, and the alternate evening is given up to social enjoyment.

At these gatherings the ball presents an animated scene, with groups gathered at tables around the room, where they play checkers, dominoes and various games, while in the centre are others marching through intricate figures, striving for prizes to be given to those who are most successful. It was at one of these gatherings a little Sioux girl came, with a doleful look on her face, and said of a Celestial who has recently joined us, "I can't make that Chinaman have a good time." Their enthusiasm is often kindled by the presence of visitors who are always glad to avail themselves of an opportunity to spend an evening with the Indians. "Tis very interesting to see the old boys and girls try and help the new ones to overcome bashfulness and join in games with the others, and watch the rapid progress made by boys in learning the differential, gallant bearing that they are expected to have towards the girls who receive the graceful courtesies as if 'no the manor born.' You cannot imagine the home life of our Indians, you should see it for yourself. Winona is truly the "Elder Sister" who receives with open arms all the young or brothers and sisters who come in their joy and sorrow to her. Here, those who are homesick and weary after the long journey from the West, first find a resting place, and from here are borne some who have gone to their heavenly home, trusting in the Saviour they have learned to love. We have representatives from various agencies. The Omaha cottages have formed a centre for those from that tribe, as the Sioux, now building, will for theirs. At Thanksgiving and Christmas, the Northern and Southern customs were observed with home

gathering and feasting by the Omaha clan, giving them new ideas of real home life. These little homes are intended to be object lessons, showing the Indians how much can be done with limited means, and thus far the experiment has proved successful.

Thursday nights we have our weekly prayer meetings, and many are the heart felt touching prayers sent to the Great Spirit from our home chapel. Sundays here cannot be quiet and restful but are as busy as days can be. In the morning we assemble for a prayer service, when verses selected for the day are recited, and afterwards, drawing around the piano we spend a pleasant social half hour singing familiar hymns, before the boys go to roll call. In the evening comes our Sunday School, which closes in time for the service at Bethesda, the Indian and Colored uniting in service there as in Chapel at night.

The general spirit of the Indians in all religious services is good, they never tire of hearing Bible stories, and their interest in this part of their education is unflagging.

#### Religious work among the Indians.

By Rev. J. J. Gravatt, Rector of St. John's Church, Hampton.

During the past year I have held regular services with the Indians. Some attend morning service in St. John's Church, and in the afternoon we have a Sunday School for the whole Indian Department. I desire to acknowledge the efficient services of the faithful teachers who assist me. It is evident they make it a joy to love.

Thursday evenings they assemble in the little Chapel in Winona for prayer and praise and instruction in God's word.

In addition to the above I have met once a week a class of advanced students for special Bible study. This is a new and important feature in the work.

I have never known the religious tone of the school to be better than during the year past. There is a growing sentiment against what is wrong, against willful disobedience, and Christian Indians are the leading spirits in the Indian school.

Five have been baptized, and eleven who were baptized in the West have taken upon themselves their baptismal vows. Sixteen were confirmed by Bishop Randolph in St. John's church March 15, a service which no one who was present can forget. Some are now awaiting confirmation. Rev. Mr. Friswell will no doubt report those who joined "Bethesda Chapel."

God's presence is with us and we have abundant cause for thanksgiving to Him for His great mercies.

#### NIGHT SCHOOL.

By Miss Anna G. Baldwin, in charge.

The number of applicants for admission to the night school last October, was greater than ever before.

Total No. examined to April 1, 1885.....	177
Girls.....	56
Boys.....	111
No. examined at the opening of school.....	148
No. admitted.....	126

In addition to these there were 53 students who were in school the previous year, most of whom were obliged to remain on account of their trades. The average attendance for the term has been 170; 65 girls and 105 boys.

The standard of admission has been more rigidly adhered to than was possible in former years, and many whose expectations of "getting an education," were high, have been sadly disappointed on learning that they must be able to read in the "Third Reader," write legibly and be prepared in arithmetic through subtraction, in order to be admitted. A number of applicants who were refused admission the previous year for this reason, went away and prepared themselves in the necessary branches, and returned to pass a successful examination last October.

Of the number who have dropped out during the year, most have gone on account of sickness, as only those who are physically strong are able to endure the double strain of work through the day and study at night. Others have left on account of mental inability and unsatisfactory work, while a small proportion have found the discipline and pressure of the school more than they could bear, and have not had the moral strength to hold out.

Although the night students enter at the day scholars do, on three months trial, they must give double satisfaction, for this reason, just as important a consideration as their scholarship, and at least, once a month, the heads of the different work departments are consulted, and an estimate made of the scholar from their standpoint. Fewer changes have been made for this reason this year than last, which is all the more encouraging, as the required time for learning some of the trades has recently been lengthened.

Some changes have been made this year in the course of study. Allusion was made in the last report to the fact that pupils who require the most time for their trades, are generally the ones already prepared to enter the day school. Hereafter it was thought unwise to attempt more than admission to the night school, as the pupils who require the most time for their trades, are generally the ones already prepared to enter the day school. Hereafter it was thought unwise to attempt more than admission to the night school, as the pupils who require the most time for their trades, are generally the ones already prepared to enter the day school.

It is still an experiment, but I feel convinced that in time we can have a "Middle Class" in the night school as well as in the day school, the effect of which will be beneficial in many ways. It will certainly take two, and in all probability, three years to accomplish what is done by the day scholars in one year, but, judging from the determination and ability already shown, I think its fulfillment among the near possibilities.

Another new feature which was introduced during the summer vacation, for the class already alluded to, is mechanical drawing. I give Miss Baker's report on that subject, in full, also Miss Mitchell's for the preparatory grade.

As showing the two extremes, I quote from Miss MacLeod's report for the highest grade. The scholars have reviewed grammar, dwelling at length upon the verb, and in connection with this have used Powell's "How to Write." They have reviewed both United States history and geography, and which will be completed before the close of school. Those who have not taken drawing, have had arithmetic through denominations, numbers, and part of percentage, and have received no instruction in the work which will be continued through the summer.

In addition to the preparatory Junior class already mentioned, there are three others—the A Junior, in charge of Miss MacLeod, the B Junior, under Miss Baker, and the C Junior under Miss Jobs. There are also three preparatory Middle classes.

The B class under Miss MacLeod, the first of the year, and later under Miss Waterman; the C class under Miss Benjamin, and the D class under Miss Arquit, making in all, eight classes in the school. In all the classes, preparing for the Junior of the day school, the plan of last year has been followed for reading, using the Geographical Reader, which is followed by "Stories from History." A great deal of time is required for drill in pronunciation and articulation. Phonic spelling has proved the greatest aid in these two particulars.

Spelling has been taught mostly from dictation, which emphasizes the language work. Drill is also given on words misspelled in examination and other written exercises. Owing to our limited time written work forms a prominent method of recitation—not always the most interesting to the visitor, but furnishing the most thorough work.

With the exception of the highest class, which has writing lessons in the form of copying history and grammar topics, all the classes have had at least one regular writing lesson a week. Particular attention must be given in this subject to revision and exercises, as the style of writing among these students is heavy and labored, particularly among those who are so largely self-taught.

Arithmetic for the Junior Preparatory classes has consisted entirely of drill upon the fundamental rules, bills and United States money. The Middle preparatory classes have dealt almost entirely with fractions, although some of them have gone farther.

For language work, the teachers have followed Mrs. Knox's "How to Speak and Write," which is admirably adapted to these pupils in giving them a great deal of work in punctuation, capitals, letter-writing, exercise in the use of "is and are," "sit and set" &c.

In grammar the Middle preparatory class have spent the greater part of drill upon the corresponding classes of the day school.

In United States history, they will finish the Wars of the Colonies, the Revolution, and in geography, North and South America. The usual plan of study for history is as a reading lesson one evening and a recitation the next. At the beginning of the study, the pupils were required to draw a map of the United States, and as they learned of discoveries and settlements, the places were located. As time allowed, maps have been drawn in geography. Not nearly as much attention can be given to this as is desirable, still good results have followed what has been done.

The number of Indians in the night school has been less this year than last. Of the night who have attended, all are doing well, some of them remarkably so.

The branch of the school represented at Hemenway Farm numbers 12—eleven boys and one girl. The boys are employed exclusively on the farm and the report of their work in general is good. These scholars are of two grades in arithmetic but all are preparing for the Junior class and follow the same course of study pursued in the regular night school. Since Nov. 25, this class has been taught by Miss Martha Page, a graduate of the school, who boards at the farm. Before this it was under the supervision of Mrs. Vanison.

Since the middle of February, the girls have occupied the new building which they enjoy greatly, and their appreciation of it is shown in many ways. There are some decided advantages in thus having the work girls by themselves, the results of which are already being shown.

In looking over the year's work, the results are very satisfactory in most respects. We have been particularly unfortunate in having frequent changes in the teaching force, owing mainly to sickness, but although at times the outlook has been discouraging, the difficulties have by no means proved insurmountable.

The grade of scholarship is being gradually raised and the spirit and tone of the school are encouraging. It seems almost superfluous to speak of the intense eagerness for study which is shown by the majority of the pupils. The very fact that those who are learning trades are willing to spend three and four years of day work and night study, speaks for itself, and also does much toward answering the question, "What is the value of that Negro who has no determination, and must be forced to work?"

It is an example of "the survival of the fittest," for those who have not sufficient pluck and moral stamina are sure to drop out. And although vast patience and perseverance are required by both teacher and pupil, I think none who have ever tried it will answer that it does not pay.

#### Junior Preparatory Class, D Section.

By Miss J. A. Mitchell.

This class ranks lowest in school, both in scholarship and mental capacity, but in energy and earnestness it is second to none. When I made my first attempt at teaching these pupils, their lack of ability impressed me to such a degree that I almost lost my enthusiasm in the work and was giving up in despair. But upon becoming better acquainted with them and seeing how greatly they desired an education and how heroically they struggled with their Herculean task, I found enough to inspire me to even greater effort than before. Energy and will power combined, make a very good substitute for natural mental capacity.

Our work has necessarily been quite elementary. In reading, I have endeavored to have them pronounce correctly, articulate distinctly, and comprehend the idea contained in the lesson. It requires a great amount of drill to accomplish these three things with these students, but when done there is little trouble in getting a correct expression. Before reading the lesson, I write the most difficult words upon the board, and have the pupils spell them—dividing them into syllables—and pronounce them again and again until their tongue catches the correct articulation. I give them a short exercise each night in phonic spelling, which helps them very much in pronunciation and articulation.

In arithmetic, we began with the rudiments and have now about completed the fundamental rules. I have aimed particularly at rapidity and accuracy in the different mechanical operations and when they have reached a certain standard in this, I shall give them problems and forms of analysis to develop their reasoning powers.

They have had but little regular language work as yet, although this is an important part of the work assigned them. Most of the time thus far has been spent on writing and spelling, but they are now ready for the language work proper.

I think I can see a marked improvement in the class; some of them have already been promoted to a higher grade. One thing is certain, that if they have not progressed in their work, it is no fault of theirs for they think no effort too great for them to make and are ever ready to comply cheerfully with the wishes of those who have them in charge.

#### Mechanical Drawing.

By Miss Kate Baker.

This class consists of twelve of the boys who are learning trades. One is in the blacksmith shop; one in the carving school; two in the printing office, and the remainder in the carpenter shop.

There are too many necessary things for pupils of this institution to learn, for them to spend their time with drawing. It is a remark I have often heard made by those who are not students, that the boys who are in the

think of Industrial but is in fact as the carpentry, mation, and the drawing, is like writing. Dra Even though of this work, and the prop ch deval to amply obtaini The cla in dr we? bring able drawing stance, after of dividing a equal parts, the blacksmi a strip of car certain num must fit a given space is applied to what angle turn an draws All been scale of the com room. Many of the problems I think t gress. I am made rapid most of it drawing as primar class work. Tt puzz post right man ing th whose course in grets that ble for all it. The pu were a s would tal for stu absolute

By be sin nar regn prop rectly I I hoped meeting interest Some for who so earn would n in Octo memb- I tro cor rec po uat where I have culty I know or no winter Norfol school non- ter no tr tr

think of drawing is not an accomplishment. Industrial drawing is not an accomplishment, but it is as practical in every day life to the artisan as the multiplication table. To teach carpentry, machine and building construction, and other common trades, without drawing, is like teaching language without writing. Drawing is the language of form. Even though no industrial use is to be made of this work, the habit of accurate thinking, and the proper use of the senses of sight and touch developed by it, are valuable enough to amply repay anyone for the time spent in obtaining it.

The question at first put by every one in the class was, "Of what use is drawing going to be to us? We don't have to be examined in drawing to enter the Middle class, so I don't see how it is going to be of use to us." So I have made every endeavor to show the benefit of mechanical drawing to their individual work. For instance, after giving the geometric method of dividing a given line into any number of equal parts, I give the carpenter a board, the blacksmith an iron rod, and the printer a strip of card board, to be divided into a certain number of equal parts. The carpenter must fit a given number of squares into a given space. In the same way the octagon is applied by the carpenter in finding at what angle a mitre must be cut to exactly turn an octagonal corner, the blacksmith draws an octagonal shaped nut and shows where a bolt should pass through it, &c.

All the rules for parallel perspective have been given and applied. A plan drawn to a scale, of each side of the school room has been made, with separate working drawings of the doors and windows. These have been combined in perspective, showing the room, showing the floor composed of tiles. Other applications of perspective problems have been made, as stairs drawn in different positions, boxes, tables, &c. Some members of the class have also taken great pride in patiently working out difficult problems in perspective by themselves.

I think the class has made very good progress. I am not sure but that the pupils have made rapid progress considering the fact that most of them have never had such simple drawing as is now given in Kindergartens and primary schools, and such as the Senior class is now taking in preparation for their work in the common schools.

The best scholar in the class was greatly puzzled because an angle formed on the opposite side of a line was not called a left angle. I am much indebted to Mr. Brinson, for many practical suggestions and aid in selecting the most useful work to give a class whose time is too limited to take a full course in mechanical drawing, and he regrets that heretofore it has seemed impossible for all the boys in his department to have it.

The pupils seem to like the work, but if it were a study of the regular course, they would take more interest in it, as it is natural for students to do best in that which is absolutely necessary to promote them.

#### OF GRADUATES.

By Miss A. E. Cleveland, Correspondent.

Nearly five hundred and fifty circulars have been sent to graduates and ex students since October 1st. This is a much larger number than I have ever before sent, but I regret to say that the returns have not been proportionately large. I have heard directly from one hundred and fifty-seven. I hoped that one effect of the Alumni meeting last May, would be an increased interest in this branch of Hampton's work.

The result is somewhat discouraging. Some letters doubtless fail to reach those for whom they are intended. The request, so earnestly made last year, that graduates would notify Miss Tileston and myself early in October, of their whereabouts, was remembered and acted upon by a very few.

I wish they could realize how much time, trouble, and expense would be saved by a compliance on their part with this simple request.

Rather more than four-fifths of my correspondents have been teaching this winter—terms varying from two to seven months.

One, who has taught ever since her graduation in 1874, has had a school this year where they never had one in Virginia, teachers in some counties have had no *industrial* experience more than the *usual* difficulty in getting their pay.

One writes me that she has been teaching for six months and has received \$15 only. I know of several cases where, as yet, little or nothing has been paid them for their winter's work. The recent bank failure in Norfolk has had the effect to shut the school terms in that county.

In view of tardy payments and short terms, how could these teachers, *live*, had not Hampton given them no *industrial* training, to which they can turn when not teaching?

Another serious difficulty with which they have to contend is insufficient accommodations for the scholars that flock to the little houses provided for them, though *some* have to sleep in the name to give to the huts in which some sleep.

One writes, "I often have to send scholars home because there is no room for them, and other schools in the neighborhood are in the same condition." He adds, "They sit as the people in a crowded church to hear some able minister preach."

Several teachers in Gloucester county have taken into their own hands the work of making the necessary additions. After vain endeavors to get the School Board to do the work, one teacher called the patrons of his school together, "to see the children almost one piled on the other." They decided that the addition must be made; and at last accounts \$125 of the \$175 needed has been raised. He writes "I have succeeded in getting all the patrons and friends of the school interested in the work. I feel that the greater part of them have given all that they can give." These are the teachers that are needed who will put their own shoulders to the wheel, and arouse the community to interest and effort.

Through the kindness of Northern friends many of the teachers were able to make last Christmas a very happy time to their scholars. A Sunday school in Salem, Mass., sent a sugar-burr full of things to one of last year's graduates, for her school. A school in Newburgh related the heart of another teacher with most generous gifts for her little ones. I know of many private individuals, besides several other schools, that sent boxes.

A Christmas tree, where nothing of the kind has ever been seen before, made a sensation, and is a great success.

Teachers write of the encouraging effect of their Christmas celebrations, both upon themselves and their scholars. Parents also are gratified. "When I told them that the presents were sent by a Northern lady, they said, 'God bless dem! dey hadn't forgot us. De Lord put it in dar hearts to help our children.'"

I hope that more may be done in this direction another year. I shall be very happy to furnish names of teachers to any who would like to get up Christmas boxes for their schools.

About thirty of my correspondents have not been teaching this winter. Four or five, whose hearts are in the work, have been kept from it by illness. One is rector of three parishes in Virginia, having taken a theological course at Petersburg, after leaving Hampton. Another is settled over a church in New York State. Another is a postal clerk with a salary of \$1000. Two are postmasters, one in the Custom House. Four have been studying at Richmond University, and at Howard and Lincoln Universities. There are not many politicians among our graduates, though one young man wrote me in the Fall that he was "just now trying all his might to elect our great chiefs, Blaine and Logan." As he did not succeed, I presume he has gone back to his trade, which is that of a carpenter.

Ten of Hampton's sons and daughters have "doubled their boys' this last year. Among them one of the first three graduates. No white man could write with more tender appreciation of wife and home than this "stolid" Indian.

The classes of '78, '80 and '82 mourn the loss of two members from each; while '75 and '77 have each lost one.

May the example of their fidelity to duty encourage and stimulate those who knew and loved them.

#### OF DISTRIBUTION OF READING MATTER.

By Miss R. G. Tileston.

The third year of my work as "Graduates' Correspondent for Reading Matter" is just closing, and I had hoped for better results, which can only be reached by a quicker response on the part of the graduates, a more prompt notice of their addresses at the beginning of the school term. That the papers taken by them are fully appreciated and needed, is shown by their letters, some of them having no other reading matter; but it is a curious fact that many seem to take it for granted that we know of their whereabouts by intuition. The month of October was quite encouraging, my P. O. box receiving many letters daily. As strenuous efforts had been made to make them *useful*, they had been made, as I informed, we hoped our plan had proved a success, but in spite of cards and notices sent by Miss Cleveland and myself there have been but few of the list of \$50 in my address-book who have sent us the address or change of address, which is almost a sure thing in the early spring months. This is a great drawback to the plan of sending reading matter, if they are neglected on this point it is almost impossible to help them. I have found it necessary since returning to my work (about the middle of March, after an illness of three-and-a-half months) to send out postal cards to all the graduates, hoping in this way to be sure of reaching many, and preparing the way for the work next October. I have received and am receiving daily, some replies, but there are still many to be heard from. All the letters up to the middle of December were answered by me, for although my work does not include letter-writing I found that the bundle of papers that I sent as a reply was not sufficient; "Miss T., you did not answer my letter," greeting me from all sides at the Alumni meeting, last June. "No, I sent instead, the papers." But that did not satisfy them; they want some word from Hampton.

The Reading Department at present has a generous supply on hand, kindly contributed by Northern friends, and it is a trial to send off bundles of really valuable papers without being perfectly sure of the address. We have received a good many picture-papers this year, also Sunday school papers, and "The Companion," "St. Nicholas," etc., all of which are very acceptable. Often applications are made for papers or books with short pieces of poetry or prose for some exhibition, and children's magazines or papers are particularly useful. One teacher who came to see me, especially valued pictures, as he said he had one bright fellow in his school who could reproduce them on the board and so have one serve for a general object lesson.

The graduating class this year will add 41 names to the number already enrolled. Northern friends wishing to send reading matter to individual graduates from their weekly supply of papers, can receive names and addresses by applying to me. As many applications are made for help with Christmas, Christmas cards, etc., any small gifts of books, or names sent to any churches or societies wishing to send a barrel to any particular school.

#### REPORT ON THE LIBRARY.

By Miss Alice M. Bacon in charge.

The library work this year has been most satisfactory and we close the year looking forward to even greater usefulness in this department in the year to come.

Since October, 2006 books have been issued of this number 1352 have been drawn by boys, 658 by girls and 666 by teachers. The number of books taken out this year is more than double the number taken out by the graduates during the same time last year. This large increase in the number of books drawn may be said to be entirely due to the faithful and conscientious attention that has been given by my assistant Librarian, Miss Helen S. Baldwin, to the work of the position. She has studied the Library carefully with a view to learning which books could be made useful to the students, has raised queries when advice was asked, and has taken pains to see that all books or papers likely in any way to prove injurious were excluded from the shelves and tables, and has in all respects so thoroughly discharged the duties of her office that the Library is to-day a force in the school whose influence for good can hardly be calculated. In many cases students have been led from fiction to history or travels, others have turned from novels or Sunday school literature of the weak and goody kind up to works of a higher, more bracing and helpful character. Of the 658 books drawn by girls, 374 have been issued during the same time last year. The number of books given have been the same as last year, the girls themselves have been of a better character.

There have been 562 books added to the library during the year. Of these about 50 volumes have been purchased, the rest have been given by friends of the Institution. Many of the books given have been works of which the Library has long been in need.

Lippincott's Biographical Dictionary, Chamber's Cyclopaedia of English Literature, Merriam's Roman Grammar, Grose's Dictionary of Periodical Literature, are some of the largest and most valuable works. The card catalogue, though capable still of many improvements, has proved successful, and the students have quickly learned the use of it. Upon the back of the card that contains the catalogue, is a bulletin board upon which lists of books recommended by different teachers to their classes, lists of new books and of interesting articles in the magazines as they appear, are posted for the benefit of those students who need help selecting their reading matter. There are now received for the reading room table, 85 weeklies, 8 dailies and 50 monthly periodicals. The attention of students has been drawn to the monthly magazines by a list of the articles most likely to prove interesting to them, which has been posted on the bulletin board once a month. In this way the magazines, which were formerly very little by the students, have become quite popular and do their share in the educating work which the library is trying to accomplish.

Until now the library has had no fund upon which to draw for books but has been entirely dependent upon contributions, given from time to time by friends, or upon appropriations from the general school fund. I have this year the pleasure of reporting the gift of between seven and eight hundred dollars as the beginning of a permanent Library Endowment Fund. This insures to the library an income of between twenty and thirty dollars and we hope it may prove a nucleus about which other gifts will collect to form a regular source of revenue for this department.

The work of the Library is especially encouraging and hopeful to those engaged in it, for the reason that all work done in connection with the library by the students is entirely voluntary and is done by them in time taken from the small amount that is given them for recreation. This being the case, a card like the following, the card of a work student, who works all day, studies all the evening, is very satisfactory. The card shows books read by one student during a year.

History of the Negro Race, Williams. Life of Napoleon, Scott, Vol. 1. Great Expectations, Dickens. Life of Napoleon, Vol. 11. " " " " The Stolen White Elephant, Mark Twain. Old Folks at Home. The Innocents Abroad, Mark Twain. A Fool's Errand, Tourgee. Harpers Magazine, bound vol. Hot Ploughshares, Tourgee. Stories from Virgil. History of Troy. Tales from Shakespeare, Lamb. Washington and Other Great Commanders.

#### MEDICAL REPORT.

By Dr. Martha M. Waldron, Resident Physician.

An unusual amount of sickness has occurred in the school during (the present year) the greater part having been due to two epidemics—German measles and tonsillitis. Cases of sickness from pulmonary diseases have also been unusually frequent. The cases worthy of note are as follows: 1. October, one case of continued malarial fever and thirteen cases of chills and fever. The latter were mild cases, amenable to treatment, in all of which measles was shown itself previous to the student's entering school. In the month of November, German measles appeared and ran its course with varying severity in both Indian and colored departments, being notably severe among the colored students. Of this disease twenty-one cases occurred in the month. During the same period there were twenty-five cases of tonsillitis, one extensive necrosis of the scapula, clavicle and head of the humerus, one case of facial erysipelas, one of broncho-pneumonia, one of phthisis and nine cases of chills and fever. All of the last-named were old cases, and in the month of December the two epidemics of measles and tonsillitis ran their course together. Of German measles there were thirty-eight cases, of tonsillitis fifty-four, of measles three, of facial erysipelas two, of chills and fever four cases, of rheumatic fever one case, of acute Bright's disease one case, of broncho-pneumonia one case.

In the month of January there were of German measles twenty-one cases, of measles four, of tonsillitis thirty-five, of chills and fever eight, of rheumatic fever two, several cases of local rheumatism of pneumonia three, of hemorrhage of the lungs three, accident cases three, phthisis with intercurrent pneumonia, one case.

In the month of February there were of tonsillitis twenty cases, of pneumonia two, pleurisy two, acute bronchitis three, chills and fever six cases, rheumatic fever three, continued malarial fever one case, and one accident case.

In the month of March, of tonsillitis there were three cases, of pneumonia two, of pleurisy six, of local rheumatism five, of scrofulous neck, four cases, of phlyctenular ophthalmia with pannus one case, tonsillitis three cases and two cases of continued malarial fever. The two cases of phthisis with intercurrent pneumonia were fatal. Both cases were Indian girls, who had been many months in a decline. At the time when returning parties were sent home, they were too weak to make the long journey to their agencies.

In the month of April, of tonsillitis there were three cases, of pleurisy, four, of pneumonia one case, hemorrhage of the lungs one case, malarial fever, one case, scrofulous neck, five cases, phlyctenular ophthalmia one case, and mumps three cases, measles 1100

Besides the more serious cases above-mentioned, there have been during the year more than the usual number of minor ailments, as colds, sore throats and mild cases of rheumatism, for the development of which the season here is elsewhere has peculiarly been favorable.

The frequent occurrence of pneumonia and the prevalence of pulmonary disease, especially among the Indian students, has been a marked feature of the year. Twelve Indian students have been sent home on account of ill-health; all were consumptives. As many more have been able to continue their work only by the most constant treatment and care. Of the Indian students who have bucken down with consumption, the greater part have been from Crow Creek and Lower Brule. Students from other agencies have had about the same proportion of sickness and death as in previous years. The average health of the colored school has been good throughout the year. The coexistence of two epidemics, tonsillitis and measles, gave a large number of cases (235), some of which were prolonged and serious, but all of which made perfect recoveries.

The number of serious fever cases has been less than in any of the last four years. Three colored students have been sent home with phthisis. One of these has since died. There have been twelve deaths in school during the year. Five of these have been from phthisis, three from pneumonia, one from malarial fever, one from erysipelas, one from acute Bright's disease, one from extensive necrosis of the clavicle, and one from the head of the humerus. The scapula and head of the humerus of a student named Case was taken ill soon after his arrival and in whom this condition existed at the first medical examination. On account of the large amount of sickness at the school, Mr. Charles F. Wingate, Sanitary Engineer from New York, was engaged to inspect the condition of the school buildings and premises. His report was very favorable, assigning no local cause of sickness. His excellent suggestions in regard to ventilation, etc., are being carried out. Mr. Wingate had already made a thorough investigation of the sanitary condition of the school two years before, and the important suggestions made by him at that time had been carefully followed.

Among the important sanitary improvements of the year may be mentioned the new Girls' Building, which by diminishing the overcrowding of Virginia Hall, undoubtedly will be of great value in raising the health rate during another winter. Also the filling in of the low ground in front of Virginia Hall and construction of a permanent bulkhead to prevent the deposit of sewage by the tide. The improved ventilation of Virginia Hall chapel is a measure of importance, as the room is in daily use for the girls' evening study hour. The ventilation of the main drain from Virginia Hall by an iron cylinder carried up outside the building to a point above the roof, is an important improvement suggested by Mr. Wingate, which, with changes already made, will place Virginia Hall in excellent sanitary condition.

#### A Hospital Need.

The pressing need of the health department of the school is a comfortable and suitable place for the care of sick boys, both colored and Indian. The inevitable waste of time and force incident to caring for the sick in the many and remote buildings in the place should be prevented as far as possible by a hospital building, to which most of the cases could be carried. Such a hospital should contain ample space for eight beds with room for a nurse and closets for hospital appointments; the form of a Greek cross is recommended. The want of such a building has long been felt, and the accommodations which it would afford are indispensable to the comfort and proper care of the sick. The estimated cost is \$4,500.00; that of each bed, \$550.00.

#### REPORT OF ACTING COMMANDANT.

By Mr. Geo. L. Curtis.

Gen. S. C. Armstrong—

Sir: I have the honor to submit the following brief report from the department of discipline for the school year 1884-5.

The loss sustained by this institution last year in the removal by the War Department of the officer detailed from the regular army for the past six years to fill the position of Commandant, necessitated a new departure and various changes. The general duties devolving upon this office have been performed this year by the undersigned; while the instruction in drill and military tactics has been given to the Battalion of Cadets by Mr. Arthur Boykin, to whom subject reference is here made.

#### The Battalion.

The military system, so long a marked feature of this institution, has been vigorously maintained. At the beginning of the school year a Battalion was organized, consisting of all the male members of the Normal and Indian schools, divided into four companies and fully officered from their own number. These were added at the same time two companies composed of the boys of the night school, formed in the same manner as the foregoing, the whole placed under the command of Mr. Boykin with the title and authority of Major.

Special care has been taken to prevent by increased watchfulness, any falling off in tone and *esprit du corps* which might follow the loss of the regular army officer. Promptness in attendance upon military duties has been strictly enforced by marks in department, fines, public reprimands and other punishment given to the delinquent, while at the same time successful appeal to ambition and pride has been made in the monthly publication of the Honor-Roll, composed of those who always responded to their names. The roll calls and marching to meals, the morning inspection of the ranks before school, the weekly drill of each company, and of the whole battalion every Friday afternoon, the full dress Sunday inspection before marching to divine service in Betbesda Chapel in the National Cemetery, as well as the regular daily performance of guard duty by a detail of officers and men, have been powerful aids not only in enforcing discipline and securing subordination to authority, but in developing personal neatness, uniformity of attire, better physical carriage, self-control, a sense of personal responsibility, and a love of many and sterling moral qualities. By no other method could our large number of students be successfully handled by our small force of school officers, or the rude and uncivilized children of the plantation and the prairie be so speedily metamorphosed into civilized and self-reliant young men.

The officers of the battalion have this year been made to feel their own personal responsibility for the maintenance of good order and discipline as never before. The loss of the army officer has in large measure been offset by increased care and zeal on their part. They have been called upon to furnish models in their own conduct for that of the privates in their command; to yield more implicit obedience to school regulations and authority corresponding to increased rank, and to impress their own individuality and their own spirit upon the men intrusted to their training. Their response has been loyal and hearty, and their record in these respects for the past year is one upon which both they and the school can look with pride. Weekly written reports from the captains on the condition of each company, and a weekly meeting of the officers for the discussion and settlement of questions arising, have rendered material aid in reaching the privates through the medium of the officers. Promotion has been made not on grounds of military skill and efficiency merely; but with equal regard paid to character and conduct as tested in the school and in the shop. The instances have, as a consequence, been rare where such confidence has been placed to be misplaced. Reduction to the ranks has in such cases speedily followed.

While the equipment of the battalion with the school uniform has not been as full as could be desired, there has been a growing improvement in this respect throughout the year. All officers have been required to wear the full uniform during military exercises, all privates to provide themselves first with the regulation cap, then with the uniform pantaloons, and later with the coat and vest as rapidly as their funds would admit. The result of personal pressure on the individual has resulted in a better and more uniform appearance of the ranks than ever before in the history of the battalion. Another year should show yet better results in this direction.

#### Discipline.

The number of grave offences which have come before the Acting Commandant during the year for decision has been encouragingly small. The vast majority of complaints which have been presented at his office have been for mild peccadilloes or comparatively trivial breaches of discipline. The only serious case of insubordination to his authority occurred early in the year. That successfully met, no further difficulty of the kind has been encountered. Moral suasion, whenever practicable, has been the means of correction first tried; if unavailing, then followed by marks, fine, reduction of privileges, increase of labor, confinement, temporary banishment to the farm at Shellbark, or dismissal. The fines thus deducted from the students' earnings have been placed to the credit of the Library fund, and thus has contributed to the benefit of the school at large. The door of the guard house has been closed

upon but three offenders, one colored and two Indians. But one difficulty has arisen between members of the two races, and only one between those of different and naturally jealous tribes. In neither case could the origin of the trouble be traced to existing race antipathies. The two races have marched and worked side by side, and maintained a healthy balance of power in the school.

In all cases, both in dealing with the Negro and the Indian, no pains have been spared to set clearly before the mind of the culprit the character of the offence and the justice of the punishment. With the Indian, no less than with the other, justice—"the straight way"—is the prime requisite. That and even-handed impartiality, however imperfectly attained, have been the constant aim of the disciplinary officer. As a result, it is hoped that the *morale* of the school has improved during the year, and that "constructive discipline" has strengthened rather than crushed the character of those who have felt its hand.

In the discipline and control of the students, great aid has also been furnished the Acting Commandant by the janitors of the boys' dormitories, of whom seven are students and the remaining two graduates of last year. Their daily written reports of the condition of the buildings under their charge and the conduct of the occupants for the preceding twenty-four hours have afforded a convenient and effective method of maintaining good order in the dormitories. They have rendered most faithful, fearless and efficient service; have consulted the welfare of the whole school, rather than that of the individual; and, by their uniform approval and disapproval, have secured their trust in a manner most creditable to themselves and satisfactory to their superior officer.

No less valuable help has been rendered by the officers' court, whose members are appointed for a term of weeks by the Acting Commandant, whose sentences are referred to him for approval. Many delicate cases have been brought before this court martial for decision. Its proceedings have been marked in all cases by great dignity, firmness and fairness, and the good judgment and discretion displayed in the sentences have secured their uniform approval and execution by proper authority. Justice has not suffered at their hands; while the effect upon the whole school has been most salutary.

A careful and complete record has been kept this year at the office. It embodies not only the usual data in regard to age, address, condition and location of each male student on arrival, but all complaints and offences as daily reported and decided. As a result, the condition and character of each of the young men as shown by his daily conduct may be seen at a glance. Such records have been found valuable in determining the standing or tracing the progress of individuals, and are preserved for future reference.

#### Neatness and Order.

Much effort has been directed towards improving the personal habits of the students. This has been especially necessary in the case of the colored boys, and in particular those of the "high-ones"—coming, as most of them do, from homes of poverty where neatness is unknown.

Each room has been constantly subjected to the closest scrutiny; while the personal neatness, cleanliness, change of attire and habits of living of the occupants have been made matters of discipline.

Among the many helps used to secure improvement in these respects have been the daily reports of the janitors after their morning rounds, the more careful and critical weekly visits by the lady teachers to the boys' rooms, and the regular Sunday morning inspection at the sound of the bugle, when every room in the dormitories is formally visited by an officer of the school, every student required to be present, and every object to be in as nearly faultless condition as possible.

This last has been productive of most satisfactory results. A series of familiar talks on practical topics connected with personal habits and good manners has also been given to further enforce the general teaching in this direction.

Outside of the buildings the accumulation of rubbish about the grounds has been removed by the regular "police duty" performed after school every Saturday afternoon by the whole battalion detailed for this purpose. Each student is thus made to feel a personal interest in the general good appearance of the grounds and the good order of his own quarters in particular.

It was with no little misgiving that the Acting Commandant assumed the duties of his present position—bringing to it neither experience nor previous training. Whatever good results may seem to have followed the labor here bestowed, he feels are due not to himself, but to the personal influence of the Principal, felt in the battalion as never before, to the cordial sympathy and co-operation

of the teachers and officers of the school, for which he is most grateful, and to the hearty support of the officers and janitors among the students, who have proved themselves reliable, efficient and trust-worthy to a degree surpassing his most sanguine expectations.

I am, Sir, very respectfully,

Your obedient servant.

Geo. L. CURTIS, Acting Commandant.

#### REPORT OF MILITARY DRILL.

By Mr. Arthur Boykin, Instructor, and Acting Commandant during summer vacation.

On the 15th of June, 1884, I entered upon the duties assigned me. A Battalion, consisting of four small companies, was at once organized with its full corps of officers.

The Rules and Regulations governing the conduct of students through vacation, were put into each boy's room, and in every conspicuous place in the buildings, and occasionally read to the whole school.

Roll call at 6 a. m. and 9 p. m. and Sunday Inspection at 4 p. m., were kept up through the three and a half month's vacation. Military Instruction was given at night to any who wished to come. Many came who were not connected with the night school. The guard and police duty were kept up, or performed by students employed especially for the purpose. A detail of two boys was made to act as hall and outside guard during Chapel services, exercises, etc.

The young men, both Negro and Indian, took great pride in the debating societies and mock congress. The reading room was used by them a great deal. Every pains was taken to make the vacation pleasant. In spite of the many evil temptations and bad influences that surround us, not one act of serious misconduct worthy of note occurred by any of those who had won the respect and confidence of the school authorities and teachers.

My duties as acting Commandant were discontinued in favor of Mr. Geo. L. Curtis, Oct. 1st, 1884. I had the appointment of military instructor with title of Major of the Cadet Corps. The vacation organization was disbanded.

The work of military drill commenced with morning inspection at 8.35 o'clock.

At noon, instead of marching at random, each company is required to form with the Battalion, and march with the band or drum corps; often they are maneuvered for a few minutes. At the morning inspection the Adjutant announces the Officer of the day, the Officer of the guard, Sergeant and Corporal of the guard, and the eight privates detailed by the Sgts. Major. Two privates and one officer are regularly detailed for duty from each of the four companies of the day school, companies E and F, being all Night School men, are exempted from all duties except the three daily roll calls, including the noon parade and Sunday inspection.

Each company has its weekly drill day, from 4 to 5 p. m.; regular Battalion drill, from 4 to 5 p. m. on Fridays. General police after school on Saturdays, from 4 to 5 p. m. and Sunday inspection at 3.45 p. m. The Gymnasium, the valuable gift of Mr. Monroe, has been highly appreciated by the students, and has given us a good and comfortable place in which to drill during the bad weather.

An Officers' school has been organized, and books containing instructions on the drills distributed among the students.

Instruction in Infantry Tactics is given to all the young men. Special attention has been paid to the "setting up" drill during the first part of the term. Military instruction has its work to do in helping to shape these young men for future usefulness, producing that good which comes through drill, discipline, responsibility and guard duty. No training is better for young men than that which helps them to govern themselves and others. They learn to respect inferiors and obey superiors. My work has been agreeable; and for the hearty co-operation of officers, teachers and students, I hereby express my thanks.

## PASTOR'S REPORT.

By Rev. H. B. Friswell.

The thousand teachers that Hampton has sent into the field are doing good work in the moral and religious training of their people.

In the country districts the graduate from Hampton is often the only instructor in Bible truths that the people have. Their preachers are often ignorant men unable to teach their flocks out of God's word, and having in most cases, several churches to which they minister, their visits are very frequent. To the teachers of their day frequent. The colored communities look for their knowledge of the Bible, and of all moral and religious truth. The report on correspondence shows how much of the time and thought of our graduates is given to this part of their teaching. In the city of Danville, I found Hampton graduates acting as superintendents in every Sunday school. I was present at a missionary meeting and a Sunday School Union in the same place and in each case our teachers were the presiding officers. I found them very prominent in religious work in the other cities of Virginia, and in certain counties, I found the whole character of the religious teaching of the people and the preachers themselves, changed by their labors. Within the past year the Hampton students have associated themselves together for religious work, in some of the districts. The undemonstrative character of their training heretofore tends to take part in the churches where they go without regard to their sectarian peculiarities.

What is true of the colored students is true also of the Indians. I shall not soon forget the pleasant picture I saw of a Sunday morning at Lower Brecon on the banks of the Missouri. Bear Bird, one of our Hampton boys, was marshalling the students of the agency boarding school in orderly line for church, going before them and leading them to God's House.

Luke Walker, the faithful Indian rector, told me that he looked to Hampton for his best help. The fifteen returned students who stood in his little chapel and uttered their hearty responses, meant much; the sixty children that Medicine Bull, son of a Chief and one of our Hampton returned students, collected together of a Sunday afternoon away out in the White River camp to teach them the Bible, had even a deeper meaning.

The part which the moral and religious training has to do in forming character at Hampton makes it important. The fact that these students are to become the regular teachers that the school is preparing to work in the Sunday Schools, the temperance societies, the cottage meetings and the young people's Christian Associations have a no less important part to perform in the up-building of the people.

The work within the school the past year has been encouraging. There has been an advance in its general tone, and in the character of the students. The cottages where the boys live, have been cleaner, there has been less tobacco, less bad talk, less theft. The leaders in the school have been good men, who not only talk in private meetings but led straighter lives. Prominence in public prayer has been found down upon where the lives have not corresponded. Cant has been at a discount.

There has been marked religious interest this year among Indians and colored students, between fifty and sixty coming out as Christians. Thirty united with the school church at one communion. There was no excitement, a simple acceptance of Christ and a starting out in the religious life. And not only in the highest but in the lowest class in the school has the year brought with it an improved condition.

The night class is of interest, because it more nearly represents the feeling of the masses of the colored people than any other in the school. There is the most superstitious here, the most suspicion, the strongest inclination to divorce morality and religion. Yet there is no class in the school more earnest to learn or more susceptible to religious impressions. The lengthening of the apprenticeship in the trades has brought into this class a number of our best students, and they have had much to do in the uplifting of the whole. A number of these students came out as Christians and have lived exemplary lives.

During my absence from the school in the summer, Rev. Mr. Gravatt, the pastor of St. John's Church, took charge of all the religious services on the place and did valuable work among the students. The rest of the year, with the exception of his instruction in the Pastors' classes, the students were confined to the Indians, over whom he has exerted a very strong influence for good. Those who come from the Episcopal agencies, attend his church on the Sabbath. In the afternoon he holds Sunday

School with all the Indians at Winona Lodge and has a prayer meeting with them during the week. Mr. Dudley Talbot has done valuable service in the religious education of the Indians, organizing the boys for missions, and giving them the general oversight of their prayer meeting, and their home life. A fuller account of the religious work among them will be given in the other reports. A number of them seemed anxious to take a more decided stand as Christians at the time of the religious interest in the school. Several of them were admitted to the school church, and some were confirmed in St. John's Episcopal church in Hampton. Their daily evening prayer meeting, which they conduct themselves, has been one of the most earnest on the place.

The religious work among the girls does not show itself so quickly as in the case of the boys. They do not so readily accept our quieter ways. They are more emotional and are not so quick to accept religious truth and act upon it. Their roots after leaving school however, shows that the labor spent upon them bears even better fruit than that among the boys. They make better teachers, and are more devoted to their work, and as a rule, are purer in their lives notwithstanding the terrible temptations to which they are exposed: They have not the same opportunities here as the boys. The military organization of the school gives the young men training, and chances for self government, while there is nothing which corresponds to it among the young women.

## Sabbath Services.

Our Sabbath at Hampton is not altogether a day of rest. At nine o'clock a. m. is held the student's prayer meeting of the whole school, Indian and colored, conducted by themselves. At its close a number of the students go directly to the Sunday schools - of Hampton to teach. At eleven o'clock a. m. the colored Sunday school meets in Academic Hall. Immediately after dinner the students go out to hold cottage prayer meetings in the cabins of the old and poor. At 2 p. m. the Indian Sunday school is held under care of Rev. Mr. Gravatt. At 4 p. m. the whole school gathers for the preaching service of the day held in Bethesda church in the National Cemetery grounds. In the evening the exercises are usually conducted by the students.

The prayer meetings have been sustained with interest through the entire year and the students have discussed the subjects placed upon the cards containing the list of topics for the quarter. I have been asked whether these meetings did not encourage cant and expressions of feeling that they did not possess. This discussion of Bible truth has helped to take away that character from the meeting and they have thus commanded the respect of the best students in the school.

Our Sunday school is the centre of Christian work on the place. The work at Hampton is germinal and formative to a great degree. The lady teachers are the real Pastors of the school. They have a power over the student that no man could ever have. They meet them every day in their classes, they watch them with an eager interest to see whether they are developing right and exert an influence for good that is immeasurable. Hampton is unique in its great company of devoted lady teachers, and I believe that its success is largely due to that source. Every student that comes out into the Christian life is watched over and feels the influence of a pure Christian woman. This year we have introduced a system of written examinations which has shown very good proficiency in Bible study.

## Young People's Christian Association.

This organization which now has its branch associations among the graduates, has a general charge of the religious and missionary work within and without the school. It has committees of teachers, graduates and students who have in charge the prayer meetings on the place, the missionary and temperance work, and thus, so far as possible, every student is made to feel that he has a definite duty to those around him. A similar association has been formed this year among the Indians.

## Missionary Work.

An average of seventy students have gone out into the country about, helping the poor to build, repairing cabin floors and chimneys, supplying fire wood and food to those in need, reading God's word to the aged, gathering the children into little Sunday schools, teaching in the regular schools and lending a helping hand everywhere. Some real help has thus been given to the poor people about, more have been saved by the students. Several of the Indian children have helped in the Sunday school work and that among the cottages of the colored people and several of the Indian boys have gone with Rev. Mr. Gravatt to sing for the soldiers at the Soldier's Home the Sundays that he preached there. Reports have been

made at the Sunday evening meeting, needy cases brought to notice, and the students have given of their small earnings to the help of those who were in greater need, and thus the school has been brought into greater sympathy with the colored people of the place than ever before. At Christmas, all the children of the colored Sunday schools of Hampton were invited to the Gymnasium on the school grounds, the ministers and Superintendents were invited upon the platform, and a Christmas service was held. Nearly a thousand children were present beside the students of the Normal school.

## Temperance Committee.

The meetings of the Temperance Society on the school grounds have been largely attended and most of the students are members. A branch society has been started across the creek by the members and two others carried on with much success in Hampton.

## The Band of Mercy.

under the care of the young man who has charge of the horses on the place, has held regular meetings for the promotion of humane feeling for the lower animals. A prize has been offered for the best article on this general subject of kindness to animals, and much interest has been shown.

## The Pastors' Class.

has completed its second year. The attendance of the pastors of the vicinity, has been very encouraging, considering their scattered flocks, and the number of their other duties. In the preaching of this region, is beyond question. "They would choose a man to preach in a church around here unless he attends the class," said one of them. "They increased my salary \$800, thinking I might come," said another. "Our council has decided not to ordain a minister who can't preach plain sermons," said a third. "I used to commence preaching like a horse run by a new man, now I start out very sober," said one of the pastors of the class.

"When we started coming here, they made fun of us, called us school boys, wanted to know if we have got our lessons; now they won't have a preacher who don't come to school," said one of the older members of the class.

Rev. Dr. Woodfin, the white Baptist clergyman in Hampton, has taken up the study of the Old Testament, with the class. Rev. Mr. Gravatt, the Episcopal Rector, the study of the New Testament. Rev. Mr. Tolman, Congregationalist, has pursued in a most practical way the study of Theology with them.

Miss Alice Bacon has gone over the History of the Bible, and I have taken up the Preparation and delivery of sermons. In all the departments, the teaching has been of the most practical character, having as the object, the giving these men an insight into the Bible truth, and enabling them to present it to their people, in an intelligent manner. The class has numbered seventeen during the year, and there is a prospect of an increase in the year to come. Three of the graduates of the school entered last fall, and the students who live on the place, earn their board and clothes by the work of their hands, like the other students of the school, and need scholarships of \$70 a year for their tuition. It is hoped that during the present year cottages, costing \$300 apiece, may be erected on the school grounds, where those who are married may live, and thus the wife be elevated at the same time that the husband receives help in his studies. The experiment has already been tried with the Indians, and has worked successfully.

In considering the results of the work of the pastors' class the effect which it has had in producing a kindly feeling toward the school among the colored preachers ought to be considered. Formerly they looked upon the work done here with suspicion, but now they are warm in their praises of it, and seem to appreciate the endeavors it is making for their help. The missionary work of students and graduates has through this means come to have their hearty support. Another important result of the class has been the bringing together of the white and colored ministers, and the establishing of a friendly relation between them. It has also brought the colored ministers together, and done away with much of the bigotry and jealousy of one another, that formerly existed. The older members of this class are now the only students on the place who came out of slavery, and it is pleasant to have this link to connect us with the past.

## News Items, Political Economy and Civil Government.

In order to have as many points of contact with the students as possible, I have met the school every morning for discussion of the items of daily news. The effect of these discussions is showing itself in more intelligent debates in their literary societies, and a gen-

eral interest in the news of the day. As these students will in many cases be the only sources of information as to the topics of the day and the politics and government of the country in the region where they teach, this part of their instruction is of great importance. With the same thought in mind, I have met the Senior class once a week, for a talk on the Civil Government the early part of the year, and Political Economy the latter part. They receive instruction in these branches during the year from Miss Bacon.

## Visiting the Graduates.

In order to keep in sympathy with the work our graduates are doing, and understand so far as possible their needs, I have spent some part of each year for the last three years in visiting them in their schools, sometimes passing through the country on horseback and sometimes visiting the larger places on the railroad. I can see a marked improvement from year to year. The Hampton graduate of to-day is a much better equipped man than the one of five years ago. Yet with the old and young graduates, the record of our Hampton students for earnest, thorough work is encouraging. Some of the old graduates have kept closely at their books since their graduation. One of our teachers in Danville received a first grade certificate in an examination given to the most advanced white teachers of the city. I found at Lynchburg that our graduates were teaching classes far in advance of our Seniors. Everywhere they acknowledge the thorough drill they have received at Hampton. I am hoping to get out among them again this summer and to hold an institute for Bible study in one of the counties in the western part of the State. In addition to my travels in the South, I have been able the past year to spend a month among the Indians in Dakota, taking with me our students to their homes in the West, placing them as teachers in schools and workers in the shops, and bringing with me to Hampton from their reservations on the Missouri's Indians. I believe that none of our work among them is lost. I found some of them in the blanket, in the camp, but even then there was a sense of shame as they met me that gave promise of better things. Some of them had relapsed partially. They would go back to the camps for a time, but the better life would assert itself and they would come back, ask for work, and struggle for better things. Many of them in the face of physical weakness and terrible temptation have fought a good fight. Out in a cemetery on the banks of the Missouri the interpreter showed me the grave of a Hampton student, and in his broken English he paid him his tribute of respect. "He try hard to walk to white man's way; too hard for him." He had died in the struggle. Some work steadily, cultivate farms, have nice respectable houses, and live Christian lives.

In closing, I would respectfully make two suggestions. The first is as to the introduction of systematic instruction in music. We have at Hampton two races especially susceptible to its influence. There have come back from the returned Indian students requests that we would sing a favorite hymn for them at our prayer meetings. I was surprised to hear the Indians, whom I brought from the West, singing Moody and Sankey hymns on board the train, and when I asked where they learned them they pointed to one of our returned students and said he had taught them out on the reservation. The influence which a thorough knowledge of music would give our colored graduates in the Sunday schools and day schools would be very great and its influence in their moral education here would be helpful.

The other suggestion I have to make is for more systematic Biblical instruction in the regular classes. The Principal refers in his report to the tendency of the colored people to separate themselves from the whites into little communities where they often have no regular preacher and the teacher from Hampton has the entire charge of their religious instruction. My own experience bears out the statement. This being the case, it seems to me that the knowledge of the Bible gained on the Sabbath is not sufficient, and that there is need of regular instruction in this department. "I came to Hampton to learn to read my Bible," said the Omaha boy in his speech. "When I ask the Indian boys who come to my study what we shall read, they always point to the Bible. The teachers have worked hard at school and at odd times on Sunday to meet this felt need. There are many students who have not missed a single opportunity of this sort during the whole year. But these extra hours added to the work of a long day is too much for the teacher and cannot be open to the whole school. Our respect, for there is no knowledge more serviceable in most colored communities or that brings with it more influence to its possessor than the knowledge of God's word.

## AND Hampton School Record.

VOL. XIV.

HAMPTON, VA., JULY, 1885.

No. 7.

THE HAMPTON NORMAL COURSE has been completed, as for the last three years, by a series of lectures and lessons by Mrs. E. L. Walton of West Newton, Mass. Mrs. Walton has been more than usually pleased by the spirit, preparation and ability of the class, and has been as usual highly successful in interesting them and emphasizing this school work.

BESIDES the 42 new graduates, Hampton sends into the field this year her whole Middle class, with few exceptions; 56 in all, to teach for a year, before entering the Senior class. This is not a measure of discipline. The young people are not "rusted" but sent forth with their Alma Mater's blessing and aid to take one term in the school of real life, and return better fitted to receive and use their Senior studies. It is an experiment to watch with interest, and one in which the results of individual cases give us just faith. The Senior class of next year will be made up of the exceptions aforesaid, most of whom have already had at least a year's experience of teaching, and of some who have stayed out this year—as some do every year—to teach. After the coming year, the classes will be regularly made up of the returning teachers. There will be probably some percentage of loss, but we believe that it will be more than compensated by the advantage to the great majority and to the School.

TUSKEGEE NORMAL SCHOOL held its fourth anniversary exercises on May 28th and graduated its first class, fifty young women and five young men, who have all completed a four years course and all go out to teach in the public schools of the State. The account of the anniversary reads like one of Hampton's, with its morning recitations and inspection of industries, and its afternoon rhetorical and enthusiasm. The industries now include a carpenter shop, farm, printing office, brick yard, paint shop, poultry and stock yards, and girl's laundry and sewing room. The carpenter shop is making the furniture for the girls' new building, Alabama Hall, which has just received an unexpected donation to help its completion, from a lady in England. Prominent men of Alabama, members of its legislature, and other citizens, white and colored, were present. Eloquent speeches were made by Prof. J. C. Price, and Hon. Solomon Palmer, State Superintendent of Education, who presented the diplomas.

WE HAVE long deplored the want in a certain class of teaching of text books and reading books of simple language but something more than childish thought, adapted to pupils whose maturity of mind is far beyond their familiarity with written English. A small book just published by Little, Brown & Co., Boston, is an admirable example of what is needed. "Lessons on Practical Subjects, for Grammar School Children, by S. F. and C. W. F." Designed for intelligent children of from 12 to 16, who have reached the grammar school but are, many of them, likely to leave it to enter upon a life, the language is such as any of them can comprehend, but the subjects are such as will be of practical interest to them all through life; subjects in which every working man and woman, every one who has a living to make,

every American citizen, ought to be interested and well informed. Such "Practical Subjects" as "What is Money, Coin and Paper Currency, United States Bonds, Taxes, Corporations, Strikes, Debt and Saving, Savings Banks," are put in clear light, simple words, familiar illustrations, with a few excellent review questions on each chapter. The style is vivid and interesting, the type of good size, making a little book of 150 pages, 6 1/2 x 4 1/2 inches—that any teacher and scholar would enjoy. We wish there were more such.

WE CANNOT strike our lines of progress and reform as the Czar projected the rail road from Moscow to St. Petersburg, with a ruler and a straight line and an imperial order, "Make it there." Now and then a great war or other moral earthquake does a little blasting—that dynamite won't do—and makes a short cut for a way, but for the most part we must go zigzagging as we can between opposing interests and opinions, making a loop now and then, but content—let us be—that the general course of things is onward and under a Conductor who knows our destination better than we who sometimes mistake a side station for the grand terminus. And sometimes, with-out earthquake or dynamite, there is a land slide, and the mountain of prejudice melts away, undermined by a quiet current of interest. It looks miraculous, but is only the miracle of nature. Some such land-slide threatens the race, prejudice which keeps thousands of dollars worth of Negro travel from Southern rail roads for fear of insult, according to Mr. Booker T. Washington's letter reviewed below. Till it comes, we commend to colored travellers, or home keepers, Mr. Washington's admirable example of wise and level headed common sense; and the consideration for their comfort that there is not a simple common privilege enjoyed by the masses of their white brethren, which was not at some time withheld from them by prejudice claiming as natural an origin and as divine a right.

How the Freedmen's Case in Equity may best be plead by himself is shown by a letter in an Alabama paper from Mr. Booker T. Washington, who, as Hampton graduate and principal—we may say, founder—of the Tuskegee Alabama colored Normal School, is well known to our readers.

Some weeks ago, four of Mr. Washington's teachers, attending a Teacher's Institute in the State, two of them young women, three of them Hampton graduates, two whose whiteness might pass unchallenged North and South, and all of peculiarly refined appearance, were turned out of a car and forced to ride in a smoking car, though they had paid full fare and held first class tickets.

Mr. Washington's letter, published in full with an editorial comment by the prominent Democratic paper to which it was sent, does not once mention the special occasion of grievance, but discusses the general subject of the rail road and colored passenger with a self control and acuteness which doubles its strength. He puts the matter on a partly business stand point. "It is not a subject with which to mix social equality or anything bordering on it." "With the Negro"—and with the rail-road corporation too as he afterward makes it appear—"it is a matter of

dollars and cents." He does not care at all to ride with the whites, but only to ride as comfortably for the same money. Why should respectable colored people paying full fare be herded into a filthy, crowded smoking car or half coach, with chain gang convicts and drunken white men? Why should rail roads be allowed to make discriminations that no business corporation makes—the merchant or the editor—and sell two classes of goods for the same price? He is in favor of assortment, but on the ground of dress and behavior, and has noticed that in Virginia where colored people are not prohibited from riding in a first class car, colored passengers when not well dressed voluntarily take the second class.

One Alabama road, between Selma and Marion, solves the difficulty by providing separate first class coaches. "Running in one direction the whites use these and in the opposite direction the colored use the one previously used by the whites—they are equal in all respects." The general courtesy of the road was recently acknowledged in a resolution of thanks from its colored passengers, and the arrangement seems satisfactory all round. In time possibly, with increase of travel, the road may become as chummy of extra cars as some Northern roads are, but the complaint of too much room will not come from the colored passengers. As to the question of expense, Mr. Washington claims that thousands of dollars worth of Negro travel is lost to the Southern roads every year by these discriminations. There are ten times when he would take his wife or a lady friend on the rail road, that he only does so once, and then only when necessary, because he shudders at the mere thought of the "accommodation." Since the New Orleans Exposition opened he has asked many colored people in the North if they were going, and in almost every instance the answer was that they would like to, but feared the railroads.

Mr. Washington's argument is the one to find the soul in a "soulless corporation." We are glad to observe that he states that many of the country papers of the South are outspoken in consideration of the wrong, and that he has not conversed with a single intelligent progressive white man who has not shown the right spirit in the matter. The editor of the Montgomery Advertiser which publishes his letter, declares that there is no difference of opinion on the point among people who recognize the simplest dictates of justice, and with respectful introduction of "Professor Washington" commends his letter to railroad officials. Their attention is only a question of time.

### The Indian Rights Association In Need of Funds.

An organization which undertakes to do a philanthropic work, one which concerns the public welfare, and in which all good citizens are supposed to feel a greater or less degree of interest, is justified in asking for money—if by its record it has proved itself capable of performing its self-imposed task. The public may fairly ask of the Indian Rights Association when, in conformity with the general law which governs such societies, it presents its appeal—"What have you done?" The Association fortunately can, at the present time, return a thoroughly satisfactory answer to this question. It can point to the appropriations of \$50,000,

made by Congress last January, for the starving Piegans, Indians, and to the still more recent and important revocation of the Crow Creek Order—which saved a friendly tribe from an infamous land robbery—as the evidences of its efficiency. As matters only secondary in importance to these signal victories, it may justly claim to have effected during the two years of its existence, an improved public sentiment in regard to the treatment of the Indians, and to have stimulated national effort in behalf of their civilization. The Association makes no claim to be alone in this great work—it is but a part of a large system which, under God's Providence, moves toward a given end. But it does claim to be a necessary part of this system, and that its work greatly increases the efficiency of all the other parts. The Executive and Legislative departments of the government, in their relations to Indian affairs, Indian schools, Indian missions, Indian students and Indian farmers, find in the Association a faithful and vigorous ally. Its present operations are much embarrassed by want of funds. The members of its Executive Committee, whose work is altogether gratuitous, appeal for contributions so that present obligations may be fully met and plans for the future may be carried forward. Journeys to the Indian country, upon which two of the representatives of the Society ought now to be setting out, are at the present moment delayed because there is no money in the treasury to meet their expenses. Any person who may feel interested in meeting this need should send contributions to C. Stuart Patterson, Treas., No. 38 S. 3d St. Phila., or to Herbert Welsh, Cor. Sec'y, No. 1316 Filbert Street, Philadelphia, Pa.

### Dr. McGillicuddy.

Few Agents in the Indian service have done better work for the Indian than Dr. V. T. McGillicuddy, as those who have examined the condition of affairs at Pine Ridge Agency, Dakota, can testify. The price he has been obliged to pay for his vigorous and successful administration has indeed been a heavy one. For years he has been fought by the malignant opposition of white men living on the reservation whose schemes could not be successfully carried out under his vigorous rule. This element, which so frequently at other agencies has proved itself the bitter enemy of progress, has at Pine Ridge, as elsewhere, made constant use of the non-progressive element among the Indians to destroy the influence of the agent. Dr. McGillicuddy has recently been summoned to Washington, at his own request, to answer the oft-repeated charge of dishonesty and cruelty which Dr. Bland and Red Cloud have brought against him. In the words of a gentleman whose character and large experience in Indian affairs add great weight to his utterances, and who was present when the case was recently heard before the Indian Commissioner. "The prosecution of the agent was a complete breakdown." If the decision of the Interior Department shall prove the agent's case as strong as we have always believed it to be, it is a matter of the highest importance that he be sustained at his post. In our opinion an agent of McGillicuddy's progressive force and fine administrative ability, is absolutely essential to the credit of the Government and the good of the Indians at Pine Ridge.

# SOUTHERN WORKMAN.

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October)  
Printed on the Normal School Steam Press  
by Negro and Indian students trained  
in the office.

S. C. ARMSTRONG, }  
H. W. LUDLOW, } Editors.  
M. F. ARMSTRONG, }

REV. H. B. FRISSELL, Chaplain, }  
MR. W. N. ARMSTRONG, } Regular  
MISS ORRA LANGHORNE, } Contributors.  
MISS ALICE N. BACON, }

F. N. GILMAN, Business Manager.  
Terms: ONE DOLLAR a year IN  
ADVANCE.

Entered at the Post Office at Hampton, Va., as second  
class matter.

Subscribers are reminded that the "Work-  
man" is reduced to eight pages during the  
next four months, resuming, in November, the  
twelve page form.

## The Southern Press—Both Sides.

In an interesting series of letters by  
Prof. McCants Stewart, published in  
the New York *Freeman*, there is offered  
testimony in regard to the color line  
in the South, which ought not to be over-  
looked.

Prof. Stewart writes clearly and well,  
and the touches of humor with which  
he enlivens his subject, show that he is  
capable of seeing more than one side of  
it.

From one of the first of the series we  
quote the following:

"It was at a station beyond Petersburg,  
I groaned in spirit, because, starved and  
weak, I felt in no condition to fight for  
rights which the Supreme Court decision  
has denied. However, pronouncing blessings  
upon Cable and maledictions upon Grady, I  
took courage and entered the cozy dining  
room, bold as a lion. I took a seat.  
The colored waiter dashed at me in  
good style and waited upon me in good  
old Virginian fashion. I made him smile  
all over his face on leaving, because I ap-  
preciated his attentions by manner, words and  
glance. While eating 'a ploughman's meal,' I  
meditated. Thus far I had found travelling  
more pleasant, or as a grammatical friend  
would say, 'much more better,' than in  
some parts of New England. Of course, I  
made no special reflection on the section  
which cradled liberty. My experience there  
has been what it was in Old England. I am  
convinced my mind is in my present  
condition. For example, I have ridden for  
hours to New England cars without plando-  
ing or speaking to a single soul. To one of  
my social temperament this has, at times,  
been trying. Everybody could see that I  
was a stranger. Nobody spoke. If I  
was a stranger, no matter how much I wanted to do so,  
not a word was said. It is no unusual thing for a  
man to ask the waiter, to remark about the  
weather, to enter into conversation. I think  
the whites of the South are really less afraid  
of contact with colored people than the  
whites of the North. On the Stooling  
whites of the North, the colored passenger  
waiters invariably seat a colored passenger  
at a separate table. I submit to this treat-  
ment whenever I am compelled to go into a  
dining saloon, but I feel indignant at having  
a delicate and subtle discrimination  
made against color, and that, too, by a col-  
ored man; but suppose he sat at Milford (21 miles  
below Petersburg, Va.) and at Wilmington,  
N. C., contrasted strongly with much that I  
have experienced in dining rooms in the  
North.

In a later letter, so bright and pleas-  
ant an impression is given of an experi-  
ence which might justly have been ex-  
pected to be very different, that we re-  
print it almost entire:

### Editorial Correspondence of The Freeman.

"I am writing now from Sumter, S. C., my  
old home. Ten years ago, I began life here.  
The friendships then formed seem to have  
grown stronger with years. I have mingled  
freely with my old neighbors, I have driven  
twelve miles into the country, leaving the  
line of the railroad, and visiting rustic friends.  
I have seen change everywhere, but on every  
side improvement manifests itself.

As soon as it was noised abroad that I had  
arrived, two visitors came to the door. They  
were the United States Marshal and the  
Town Marshal, old friends. But it looked  
suspicious that two officers of the law whose  
duty is to make arrests should be the first  
callers. I say to my friends, who laugh  
heartily, that no arrest was made, but that  
the Marshals inquired after my time of de-  
parture. They did not want to spoil my vis-  
it but when it ends—what is coming, who  
can say?

Letters from the South are insipid if they  
are not full of skulls and cross bones. I  
have almost decided to let this be my last  
communication, as I have nothing spicy or  
exciting to write. Nobody will interfere  
with me anywhere, on the cars or in the  
streets, in the city, town, or country; and of  
course I am not the man to "raise a row."  
On leaving Washington, D. C., I put a whip  
on my shoulder, and inwardly dared any  
man to knock it off. In a crowded car bound  
out of Washington for the South, I fairly  
foamed at the mouth imagining that the con-  
ductor would order me into a seat occupied  
by a colored lady so as to make room for  
white passengers, some of whom had to sit  
on their baggage. But no imperial conductor  
or insolent brakeman came. A white  
Virginian made for my seat. "Ah!" said I,  
here comes the tug of war. To my surprise  
he politely asked, "Is this seat engaged,  
sir?" I, with smile and gentle manner, said,  
No, sir; but I have some bundles (my over-  
coat lay on them), and it would crowd us to  
share it. Of course, I can't occupy two seats,  
and if you insist, I must make room. I was  
astounded to hear him say, "Never mind,  
sir, and out in the smoking car, he went?"  
Well, so it has been going. For the life of  
me I can't "raise a row" in these letters.  
Things seem (remember I write from the  
Boston) as smoothly as a New York or  
move along as smoothly as a New York or  
South Carolina has never fallen into the  
depths of proscriptive and oppressive  
which Grant lifted her. Secondly, there is  
no political campaign on hand to disturb  
the harmony which always prevails between  
the races in the South in the absence of po-  
litical effort and strife. If you should ask me  
to confine myself in making answer to the im-  
limited observations and inquiries which I have  
made; I would say, "The morning light is  
breaking."

After ten years from my first coming here,  
I return to Sumter; see the country from  
the railroad, and take a buggy and ride out  
for miles into the woods, visiting the huts  
and cozy cabins. What strikes me? Im-  
provement everywhere.

I see better churches, better preachers, a  
more intelligent worship of God, improved  
homes, undiminished thirst for becoming  
better teachers; and every man seems to be  
buying land from the city lot to the planta-  
tion of five thousand acres. I have a church  
in mind which ten years ago was not worth  
three hundred dollars. Now, it is as neat a  
chapel as one wants to worship in, with at-  
tractive grounds, with sweet toned bell  
and with an organ for which they have paid  
five hundred dollars.

The following items are of interest  
as showing how strongly the tide is set-  
ting in the South as well as the  
North in favor of technical education.

"Manual labor schools are growing in favor  
in this country. The New England theory  
as to the conduct of public educational in-  
stitutions has not been found to yield the re-  
sults anticipated, and after enormous ex-  
penditure through the whole Republic it is  
found that something more than book-learning  
is necessary to fit people for the duties  
of life.

Good books, well mastered, are of  
great value; but every man and woman in  
the world ought to know how to make his  
or her living. Manual labor schools are in-  
tended to improve the system, and these  
should be organized wherever a community  
has the means. There is nothing more hon-  
orable than honest labor, and we are clearly  
of opinion that practical instruction, when it  
can be afforded, in the useful arts should be  
made a part of every system of public ed-  
ucation."—*Norfolk Landmark*.

JOAQUIN MILLER, the poet, was lately  
here in Charleston. He writes most inter-  
estingly to the *N. Y. Independent* about the  
Negro as he saw him down here. We give  
an item or two from his letter:

"Briefly, but emphatically, the course  
of the black man here is not upward. The  
white man is going ahead here. The black  
man is falling far behind. Schools are here  
for him; but the back streets, the sandbanks,  
the gutters, are all alive and swarming with  
idle, indolent, dirty, and worthless little blocks  
of ebony that ought to be looked after."

Indeed, were I a young woman at this hour,  
casting about me for a place to go to work  
and do some solid good, I would come right

here, and settle down among these black  
children, and open an illustrated kindergarten."

The Negro's chance for education here  
in Charleston is excellent. A wiser suggestion  
than the above would be some means of  
promoting industrial education, such as the  
Slater Fund contemplates, and such as the  
Northern Methodist ladies propose to do in  
Savannah, Ga.

"The W. F. M. S. of the Northern Meth-  
odists, of which Mrs. Ex-President Hayes is  
the accomplished head, have bought a large  
brick house in Savannah, Ga., in which they  
propose to open a boarding school, where  
colored girls will be taught by Northern la-  
dies lessons of practical utility in house-  
keeping, sewing, botany, and probably some  
of the higher branches, in addition to those  
of the rudimentary order."—*Christian Ad-  
vocate*.

"Industrial education is becoming a fea-  
ture of Southern education and we are pleased  
to note the fact. The recent publication in  
the *Freeman* of the very good work accom-  
plished and being furthered by Prof. B. E.  
Washington of the Tuskegee (Ala.) Normal  
School having fallen under the observation  
of the Hon. T. T. Allain, a member of the  
Louisiana Legislature, that wide-awake mem-  
ber of the race declares that at the next ses-  
sion of the Louisiana Legislature he will in-  
troduce and seek to secure the passage of a  
bill to establish such an institution as the  
Tuskegee school in his State.

Some time since, Prof. Gilliam pub-  
lished in the *Popular Science Monthly*, and  
the *North American Review*, a col-  
lection of statistics in regard to the in-  
crease of the Negro race in this coun-  
try, which excited general attention,  
and in the opinion of many who re-  
ceived them as final, gave good reason  
for alarm.

Prof. Gilliam's deductions  
from these figures were so startling as  
to lead some of his readers to question  
them, and this questioning has led dur-  
ing the last month to a presentation,  
from several quarters, of the census  
figures in a shape which seems to make  
Prof. Gilliam's position quite untenable.  
Prof. Gilliam (again in the *Popular  
Science Monthly*) claims that no conclu-  
sion can be based upon the Ninth census it-  
self, so far as the Southern States are  
concerned, is the merest guess work, and  
that therefore the rate of increase of  
the two races as computed by Prof.  
Gilliam, (20 per cent for the natives, 35  
per cent for the blacks) is nothing  
more than the expression of an individ-  
ual opinion. For his own part he de-  
duces from the same figures a very dif-  
ferent result, viz: for native whites 31  
per cent, for blacks not above 35 per  
cent. "But," he goes on to say:

"All such comparisons, based upon the  
results of the ninth census, are utterly un-  
reliable. No reliable conclusions regarding the  
increase of Negroes can be drawn from a  
comparison in which the statistics enter.  
The extent of the omission can be a mat-  
ter of any value are those made during  
the statistics of the eighth and tenth cen-  
suses. That the former was, to a certain slight  
extent, incomplete, is doubtless true, espe-  
cially in regard to the colored element, but  
the omissions were trifling as compared with  
those of the ninth census. A comparison  
between the results of the eighth and tenth  
censuses shows the advantage to be clearly in  
favor of the native whites, who increased 61  
per cent, in the twenty years, while the col-  
ored element increased but 48 per cent.  
This great increase of the native whites was  
effected in spite of the fact that the ranks  
of the adult males were depleted to the ex-  
tent of over a million by the casualties of  
war, which the Negroes scarcely felt."

He claims, furthermore, that "this  
relatively greater increase of the whites  
is sustained by the record during the last  
decade of slavery," his figures, taken from  
Scribner's Statistical Atlas, going to  
show "that the only period during  
which the colored element increased  
faster than the white element was be-  
tween 1800 and 1810, during the contin-  
uance of the African slave trade which  
ceased in 1807."

"Between 1790 and 1860 the proportion of  
colored to total population is seen to fall  
from over 79 per cent to but little in excess  
of 14 per cent—a decrease of fully one-fourth.  
In the half-century which elapsed between  
the date of the first census and 1840, dur-  
ing which time immigration was very slight-  
ing, it decreased not less than 2-3-4-100 per cent,  
although for one-third of this period the  
slave-trade was being carried on."

Such being the history of the Negroes in  
ante-bellum days, when they were property,  
and when every consideration of self-interest  
prompted their owners to watch over their  
health, to encourage childbearing, and to  
protect and preserve the children, it is to be  
supposed for a moment that this careless-  
improvident, ignorant, race, thrown sudden-  
ly upon its own resources, should at once, or  
within a generation, take on a rate of in-  
crease more rapid than before emancipation.  
The wonder is, that in the past twenty years  
they have not fallen further behind."

The "Appeal to Caesar" of Judge  
Tourgee, Mr. Gannett puts out of court  
on the ground that it contains "many  
important arithmetical errors" which  
of course vitiate his conclusions. He  
quotes Judge Tourgee as saying:

"That in the South Atlantic and Gulf  
States the Negroes have increased steadily  
in proportion to the whites, while in those  
States which he classed as border States  
they have relatively decreased. This mass-  
ing of the Negroes in what he termed the  
border States, demonstrates the cotton States,  
coupled with the steady sharpening of the line  
of separation between the two races—a line  
which, as the author claims, becomes in-  
creasingly pronounced as an inferior race  
increases in numbers and advances in educa-  
tion—will lead to inevitable conflict between  
the two races. As the Negro becomes  
merely the stronger element in the popula-  
tion, he will commence a struggle for the mastery  
and the days of the Ku-klux will be eclipsed  
in blood and slaughter. Such is the argu-  
ment to which these ill-fated States are hur-  
rying. To ward off this impending evil,  
Judge Tourgee urges upon the General Gov-  
ernment the work of educating the blacks.  
Such, in brief, is the 'Appeal to Caesar.'"

In respect to this Mr. Gannett says:  
"The fact is, that the Negro is not mi-  
grating southward. There is no massing  
of colored people in the cotton States. In 1860  
the colored element of these States formed  
66 per cent of the colored element of the  
country. In 1880 it formed precisely the  
same proportion. Between 1860 the colored  
element of the country increased 48 per cent.  
The same element of the cotton States in-  
creased, in this interval, in precisely the  
same proportion, neither more nor less.  
These figures are conclusive upon this point,  
and from them there is no appeal."

He holds furthermore that Judge  
Tourgee and those who hold similar  
opinions are using the most direct  
means to strengthen the evils they de-  
plore, for, as he suggests,

"According to the author's own state-  
ment of the situation, the education of the  
Negroes would but precipitate the impending  
conflict. Our only safety would seem to be  
in leaving them in ignorance."

Finally, Mr. Gannett claims that,  
Considering the colored race in this coun-  
try as a whole, it is seen that it has not held  
its own, either in a state of slavery or thus  
far in freedom. It is but another illustration  
of the fact, that an inferior race can not  
thrive side by side with a superior one. It  
could seem, therefore, under the circum-  
stances, more profitable to study ways and  
means for preserving and strengthening the  
manual labor element of the South, rather  
than to debate the methods of getting rid of it."

The New York *Times* takes up the  
statement made at a recent meeting of  
the General Assembly of the Presby-  
terian Church in Cincinnati, by the Rev.  
Dr. Allen, Sec'y of standing commit-  
tee on Freedmen, and corroborates Mr.  
Gannett's figures, which differ material-  
ly from those of Dr. Allen. The *Times*  
says:

"If those who had audibly predicted in 1871  
and 1873 that the colored race would perish  
from the land, had known that the census of  
1880 was almost worthless, they would  
have wasted no time upon the calculation  
that pointed to gloomy a result. And Dr.  
Allen had known just how much the  
census figures of 1880 were worth, and had  
carefully studied the figures for other years  
of which we have spoken. Let us see what  
some of the facts are. The col-  
(Continued on Page 8.)

## Education in Alabama.

The subjoined statistics indicate a sincere devotion on the part of Alabama to the cause of public education. The total amount of the public educational fund for the year 1883-84 was \$1,074,992. But private funds support a very large part of the educational system pursued in the State. To both the State and private funds must be added the important item of city or corporation aid to schools. The University of the State at Tuscaloosa, the Agricultural and Manufacturing College at Auburn, one white and three colored normal schools, the School for the Deaf, Dumb, and Blind at Talladega are State institutions.

There are 3,148 teachers of white schools in the State, and 1,569 teachers of colored schools. The whole number of teachers of public schools in Alabama in 1880 by the Federal census of that year was 4,637. The whole number of teachers of public schools in Illinois in the same year is 15,902. The total assessed value of all the personal and real property of Alabama as given by the Federal census of 1880 was \$122,867,228. The total assessed value of the same kind of property in Illinois the same year is \$768,616,354.

In Alabama the pro rata of public-school teachers to assessed values of all kinds of property is one teacher to \$86.65. In Illinois the pro rata of public-school teachers to assessed values of all kinds of property is one teacher to \$48.316.

These facts are not cited for the purpose of instituting comparisons which Alabama is well prepared to abide. They are allowed as a legitimate demonstration of the anxiety of the people to keep evenly pace with the highest attainments and blessings of advanced civilization.—*Birmingham (Ala.) Iron Age.*

MR. CARL SCHURZ'S PAMPHLET "The New South" is the result of two prolonged visits to the Southern States, the first in 1865, the second, twenty years later. The object of these visits was, he tells us, "not to verify the correctness of preconceived notions, but to gain by impartial investigation, a true view of things."

This, it seems to us, he has admirably succeeded in doing. In the first place he has the advantage of being, as a foreigner, exempt from any pre-existent race prejudices, or the conditions which such prejudices impose, and in the second place he is in no sense a sentimentalist. The terse common sense of his observations is delightful; his propositions prove themselves; only one wonders that they should ever have been thought to require demonstration. Neither Southern whites nor Negroes could desire a fairer statement of the present condition, nor of the series of events which have led up to it, than is given by Mr. Schurz. Broad in view, succinct and vigorous in expression, this little pamphlet is quite unique in its value both to Americans and to foreigners interested in American politics.

For it must be confessed that the "game," for it must be confessed that even now there are very few Americans sufficiently unembarrassed by their past, to be capable of doing such work as Mr. Schurz has accomplished. It is really a matter for gratitude that a man, thoroughly permeated with American ideas, in the finest sense, and at the same time free from the clogging of prejudice which vitiate so many of our political processes, should have found opportunity thus to formulate his impressions for the benefit of other people. The one quotation for which we have space, shows the spirit and tenor of the whole paper.

"While this discussion was going on, a non-political but most powerful influence asserted itself. The Southern people got to work again. Immediately after the war the average Southerner was laboring under the impression that the emancipation of the slaves had brought the whole economic machinery of the South to a complete standstill, and that, unless some system of compulsory labor were restored, there was nothing but starvation and ruin in the future. Encouraged by President Johnson's erratic manifestations, he made all sorts of reactionary attempts, but failed. He had, after all, to try what could be done under the new order of things and he did try. Gradually he discovered that the Negro as a free man would work better than had been anticipated. He discovered also that white men could, and under the pressure of cir-

cumstances would, do many kinds of work by which formerly they had not taken kindly to and resented. As work proved productive, hope revived, and, with hope, energy and enterprise. The Southern man became aware that his salvation did not depend upon a reversal of the order of things, but upon a new order of things was opening new opportunities, and calling into action new energies. So his thoughts turned from the past, with its struggles and divisions and resentments, and turned upon the present and future with their common interests, hopes and aspirations. While the professional politicians of the two sections were still storming at one another, the farmers, and the merchants, and the manufacturers, and the professional men, had found something else to occupy their minds. Many of them came into contact with Northern people and met there with a much friendlier feeling than they had anticipated. It dawned upon them that this was, after all, a good country to live in, and a good government to live under, and a good people to live with. And it is this sentiment, grown up slowly but steadily increasing strength, and spreading among all classes of society, even those whose feelings against the Union were bitter during and immediately after the war, that has made the New South as we see it to-day."

## The New Orleans Exposition.

BY ALICE C. FLETCHER.

The extent and significance of the New Orleans Exposition is hardly appreciated by the thousands who have not been able to visit this remarkable showing forth of resources and industries.

A large number of Northern visitors flocked South for the holidays, and found New Orleans almost swamped in mud, the result of an unusually severe winter, and the Exposition still in the clutches of the workmen, with little to be seen but disappointment, save here and there the determined faces of the men who were "bound to see the thing through." The doleful tales of these early visitors, of the drenched hosts of people venturing upon like experiences. When, in February, the skies were clear, and the exhibits in order, there was little time or opportunity to overtake the unlucky stories and assure the people of the United States that the Exposition was well worth a careful examination.

The various buildings cover 76 acres, or  $\frac{1}{4}$  more than all the other buildings of the Centennial Exposition grounds. And while the Centennial structures cost \$6,165,077, those at New Orleans have cost but eight as much, yet, for space and lighting, they serve the purpose for which they were designed. There are two principal structures: the Main and Government buildings. In the former is found the machinery, set in motion by 32 engines, representing 5,500 horse-power and having  $2\frac{1}{2}$  miles of shafting. These engines also fill 5 miles of pipes which surround the principal buildings and cross through them at intervals of 100 feet in any direction. They also supply the electric lights which make the Exposition as attractive at night as by day.

The Government building, with its wonderful display of the resources and industries of our country, is perhaps the centre of greatest interest. Words cannot convey a full picture of the variety and beauty of the exhibits of the different states. The devices wrought in grain, in the spaces allotted to the Northwest, delight the eye, while the amazing statistics of crops, and the ample display of cereals, vegetables, fruits and minerals, indicate the wealth which lies in that region. The Southern states give a fine showing of cotton, rice, sugar and other staples, but the visitor is surprised when he turns to the exhibit of coal and iron deposits, to reveal the richness of this section and its important bearing upon the future of manufactures and great commercial localities.

As one paces the miles and miles of these exhibits of our common country, one feels that the old lines are fading away, and that, with the entire land, opened up to industry, the cords of unity are made as strong as the cords of steel that bind the continent together, and will not permit of halves or sections. One is also forced to face the picture of a future wherein the centres of trade and skilled labor are likely to differ from those now existing, and established in the earlier days of our history.

## EDUCATIONAL EXHIBITS, INDUSTRIAL TRAINING.

Leaving the floor of the building, oppressed by its countless treasures, one turns to the two sides of the gallery, whose numberless alcoves cover nearly half a mile, where are grouped the Educational exhibits.

Here, amid the books, diagrams, and various appliances of teaching, one comes upon the motor power that is set in motion and make effective the marvelous resources

gathered below from the East and the West and the North and the South.

The visitor is struck with the advance made in Educational affairs since the exhibit of 1876. The school has enlarged its work, it now includes the co-education of hand and brain, so the thoughts must find trained expression in labor as well as in speech. It is noticeable that the Indian, while the colored people and the Indian, the value of industrial education is recognized, as shown in the exhibits of Clark Institute for Colored, Carlisle and Hampton Training schools for Indians, and Hampton for both Colored and Indians, but little headway has been gained toward giving similar advantages to white boys and girls. A change is at hand however. Tulare Union, of New Orleans showed classes in manual labor, the lads pursuing their work at the Exposition, to the surprise and interest of visitors.

The complete and extensive educational exhibit sent by the French government shows how thoroughly France believes in training all the faculties and powers to mechanical, artistic and literary expression. Not the simplest lesson is omitted, from sewing a fine seam, or the primary instruction in carpentry, to the manufacture of watches, or designs in free hand drawing.

## INDIAN EXHIBITS NEXT TIME.

The Indians are not represented at the Exposition among those who can exhibit proofs of their labor and education. They are present only in promise. Their story of struggle is set forth by the history of a single tribe, used as a type only, to show how they are emerging from a past barren of results, to enter upon a future wherein they are to find place with the white men in the various industries of the land. Their children are being prepared for this work, as is shown by Hampton, Carlisle, Santee, and Albuquerque schools represented at the Exposition. If the Indian boys and girls can be made to realize the significance of the absence of their race from this great gathering together of the industries of all nations, they will determine to so labor and to persevere that when the next great Exposition is held, their people will be represented by the product of hand and brain, and find place among the producers of the world.

## THE COLORED EXHIBIT.

The Colored Exhibit occupies one side of the gallery of the Government building. Each State has an alcove, and therein are gathered many articles, from dainty bits of needle work or dexterous dental manufacture to heavy work in iron or skillful specimens of cabinet work. Few exhibits attracted more attention than that of a colored man who has made a model locomotive, about four feet long, with a little tender, which he runs up and runs on a track of very narrow gauge, just outside the Government Building. It is stated that he has received orders to duplicate his model for the practical training of pupils in more than one educational institution.

## "LOUISIANA DAY."

On Louisiana Day, between 60 and 70,000 persons were upon the grounds and thronging the buildings. The ceremonies took place in Music Hall, a large space set apart for concerts and festivals, in the centre of the main building. The occasion was one of the most memorable ones of the Exposition. All parts of the country united on that day to do honor to the Exposition, and to those who had labored to bring about its great success. One of the best and most significant speeches of this celebration was made by the Rev. E. A. P. Albert, a former pupil of Atlanta University. He told, in the following extracts, the story of the colored man's interest in the Exposition, and his hopes for the future, hopes which I heard frequently echoed by the leading men and women of the Southern states.

## SPEECH OF A COLORED ORATOR.

We have room for but a few extracts from Mr. Albert's speech which for eloquence, and argument, good sense and effect upon his Southern audience, may well be a source of pride to the race. He gracefully claims its share in the glory of the occasion, for

When Bienville built the Crescent City and named it in honor of the Duke of Orleans nearly 170 years ago, and when, five years later it was made the Capital of Louisiana, which then embraced all that territory which has since been organized into fourteen States and Territories, we were here, bought at the rate of three Indians for two Negroes, clearing the forests, tilling the soil, building cities, and helping the white man to subdue this country. With the proudest Roman of them all, we declare that, if this State was an empire, as such we rejoice in America's prosperity and boast of her history, while for Louisiana we entertain the

love that warms the hearts of patriots and strengthens the arms of warriors.

To our white fellow-Louisianians, we say, with Ruth to Naomi:

"Entreat me not to leave thee, or to return from following after thee; for whither thou goest, I will go; and where thou shalt lodge, I will lodge; thy people shall be my people, and thy God my God. Where thou diest, I will die and there will I be buried; the Lord do so to me and more also if I ought but death part thee and me."

Years ago, *De Bow's Review*, said: "What the South needs is an aristocracy. We know it takes half a thousand serfs to support one aristocrat. Nevertheless, we want one for it. To expect us to change in one decade or two as to treat the serf and the aristocrat with impartiality, is expecting too much."

Such were the prevalent sentiments of those times. But how changed! When a year or two ago the "civil rights bill" was declared unconstitutional; and when, more recently, the national government passed into the hands of the Democracy, and his Excellency Grover Cleveland was inaugurated as President of the United States, what papers stood more firmly than the New Orleans dailies in defense of, and pleaded more earnestly for the Negro's civil rights, under State and common laws; and what papers sought more faithfully to allay the fears of the colored people with the assurance that slavery was dead its resurrection undesired; and that assured them most emphatically that their rights should be held just as sacred under the administration of President Cleveland, as ever they were under that of his worthy predecessor, Gen. Chester A. Arthur?

Fellow-citizens, we invite you to visit the Colored Department of this temple, dedicated to human skill and industry. Go through the exhibits of your colored fellow-citizens; examine the evidences of their thrift, industry and intelligence; their aptitude in the arts and sciences as well as in profitable and useful inventions, and decide for yourselves whether your "brother in black" has made any improvement since the war. We are here to acknowledge the help afforded us by both North and South. An army of self-sacrificing Northern missionaries, with Bible in one hand and spelling books in the other, scarcely following for the smoke of battle to scatter, followed in the march of the Union army, sought the freedmen, extended the help which they so much needed, but which the poverty and temper of the South at that time could not afford. North-South at that time and since has planted over \$25,000,000 in this Southland, and has furnished an army or her best men and women to assist the negro in his dire necessity. The South gradually sweetening in her temper, and recovering from the sad reverses of the war, has now grasped the Negro's hand, and to-day her best men and women are open to the public school education the white children. The churches of the South too are, to a limited extent, engaged in educating these millions. The man that refused the mite in favor of the school room leads the movement.

To the credit of the South we can say that she opens her workshops, her factories, her warehouses, her trade routes, and all the lines of her commercial activity to our hands, while in nearly all her fields we monopolize the labor.

To-day, after twenty-two short years of freedom, many of which have been cloudy, without any apparent silver lining, we present you the results. We present you in the United States 7,000,000 Negroes, with nearly 1,000,000 children in school; publishing over 80 new papers; furnishing nearly 16,000 school teachers; about 15,000 students in the high schools and colleges; about 2,000 members in the Methodist and Baptist churches; owning 5,000,000 acres of land in the South; producing annually 1,000,000 more bales of cotton since than before the war; a saving of \$50,000,000 in the fraudulent Freedmen's Bank, and an assessment of \$100,000,000 worth of taxable property. These figures, be it remembered, have not been gathered by black, but by white men. With the editor publishing this bit of information, we ask the question, "How do these facts impress you, when you consider that the race did not own itself twenty-three years ago?"

Under the inspiration arising from what has been accomplished in the past, and the encouragements afforded by this memorable occasion, as Americans and loyal Louisiana, we take our place under the stars and stripes, under the protection of the eagle, and demonstrate our worth as men and citizens. And there we intend to stay until the soldiers of the Northern stars, and of the Southern cross; until those who wore the blue (or black), shall be bleaded together in the bonds of a common interest as a true humanity, receiving in this land of ours, the continual blessings of a trine God."

## Letters from Hampton Graduates.

FROM A STAY-AT-HOME "PRODIGAL."  
 TRIBUTE TO TRIED FRIENDS. FROM A  
 DIXON SCHOLAR. MEMORIES OF MISS  
 LONGSTRETH. REGRETS FOR GENERAL  
 MARSHALL'S RESIGNATION—ONE SATIS-  
 FACTION. TRYING TO TEACH. HONE  
 SWEET HONE. IN VIEW OF THE ELEC-  
 TION. FROM MARRIED GRADUATES—A  
 HAMPTON FAMILY.

FROM A STAY-AT-HOME "PRODIGAL."

Hampton counts as no prodigal, but as one of the most faithful sons whom she and no strange master has sent into the field to feed the lambs, the writer of the two following letters. But she is glad that he repents of his long silence, and hopes to have more frequently in the future, the graphic reports which he knows so well how to write.

March 24th, 1885.

Miss A. E. C.—  
 Dear Friend—: I suppose I have forfeited all claim of adoption to Hampton by not complying with the request to keep her informed of my whereabouts and vocation of life, etc., and am in "no way worthy to be called her son." But I am sure that she will not be less forgiving than the father of the prodigal, when I return and confess that "I have sinned against her, and am no more worthy to be called her son. Make me as one of her hired servants."

In order that you may see that I had a mind to do right, I send you this letter which I began to write soon after your re-charge of the work. It is dated January 22d, 1883, and gives a better account of my school work than I can give at present. Of course you want to know why I did not finish and send it. Just about that time my father, who had been confined to the house for nearly twelve months, got much worse and continued so until the 29th of the following March, when he departed this life. He was very kind and faithful, and his loss so much confused my whole being that I had not mind for writing for a long while. I would have written "In Fall, but I stopped teaching, and was so busy with other things that I had very little time for writing any save business letters which required very little time and thought. I disliked very much to give up my school over there, for I had worked very hard and had gotten it in good working order, but I felt it my duty to work at that which would pay me better, as I had greater responsibilities upon me than I had before my father died. So I engaged in a little business, (huckstering), and did very well. Just about as I closed out my business the increase of scholars in one of the public schools was so great that a new teacher had to be put in, and as I stood well with the trustees, and passed a satisfactory examination, I succeeded in getting the situation and have been teaching ever since. (four months) and have had a daily average of 45 scholars. I assist the Hampton graduate and we get on nicely together with our work. Our term will close about the 15th of May. We do not get our pay promptly every month, as we did. We have not gotten pay for but one-half of one month since Christmas. Hoping that you will excuse my negligence, I am with much respect,

Yours truly, I.

## TRIBUTES TO TRIED FRIENDS.

FROM A DIXON SCHOLAR.  
 We gladly publish the heartfelt tributes in the three following letters, the first of which is from the writer of the one above, one of the sixty pupils sent through Hampton twelve years ago, by the efforts of their generous friends and former teachers, Mr and Mrs. George Dixon, who, in their English home, will be glad, we hope, to know how constantly they are remembered in their Hampton field of labor, and in the many places brightened by their benevolence.

Jan. 22d, 1883.

Dear Friend—  
 Your letter informing me that Mrs. Dixon had given up the work of corresponding with the graduates and that you now have charge of it, was received a few weeks ago, and I was glad and sorry too—glad that Mrs. Dixon had given up the work, which

must have been a great burden upon her after working as she has for so many years, so that she may get the rest necessary to regain some of her lost strength. Sorry to lose the friendly and instructive correspondence which, we might say, has been a great treat to the graduates in their several fields of labor. She (Mrs. Dixon) is an old and tried friend of mine and our whole family, for it is to her that I owe my all for what education I have. She was the first to put a book into my hands just after Lee surrendered, and not into mine only, but into the hands of others—for she was the first teacher whom the Friends of Philadelphia sent here to teach us after the war closed; and she has been engaged directly or indirectly in the work ever since. Her name will ever be dear to me, and I daresay, it will ever be dear to the many hundreds whom she has helped or caused to be helped in getting an education. We bid her an affectionate farewell, and wish her many happy years in her private retirement.

It throws us old graduates somewhat in an awkward position to commence an old work with a new hand, so to speak, for those who have not had much dealing with the colored people are apt to misconstruct, to some extent, their language, and when opportunity permits they take their text from the 4th or 5th chapter of some colored person's letter that they have received, and make sport of what was meant to convey an idea which was very interesting to the writer, though badly expressed. But as General Armstrong has given us to understand that you are in the right church, I take it for granted that you are in the right way also, and shall endeavor to write to you, as I would my former correspondent, Mrs. Dixon, feeling that you will not tell tales out of school, though they be very amusing at times.

I have a very nice school house and a very interesting school, with 119 pupils on roll and a daily average of 50.

I commenced October 24, 1882, and am now on the 10th month. The term will be about nine months. The people generally are very friendly to me and my work, and I get on very well.

I get on very well too with my white friends, and ever have, and whenever I want a favor done I always go to them if I don't want to be refused. One great obstacle in the way is too much work and not enough pay. I have no assistant and it is impossible for me to do justice to so many scholars—fifty. Then a great many are not able to buy books and I have to talk a great deal more than I would were they all supplied with books.

Another difficulty is the non-attendance of pupils. Some of them drop off two and three days every week, and when the term ends they do not know very much, and their parents very often complain and say that their children went to Mr. A. or B. so many months, but did not learn anything. Last term the mother of a little boy went to the Superintendent and complained about her boy not learning anything, and a few days after she came to me with the boy and said he did not learn fast enough, and that he had studied the books at some other school than I had put him in. I got my school register and showed her that the boy had not been to school but two days during the month and a half that the school had been open.

## MEMORIES OF MISS LONGSTRETH.

This dear and constant friend of Hampton and its workers will ever have her own place among our "gentle memories." The letters of graduates often refer to her with the gratitude and affection which all who knew her feel. One young man writes recently:

"The colored people have lost a true friend in the death of Miss Longstreth. Future graduating classes at Hampton will not hear her kind, loving words, her good advice and her exhortations to do the right because it is right. She has finished her course and now rests from her labors."

## REGRETS FOR GENERAL MARSHALL'S RESIGNATION—ONE SATISFACTION.

From many graduates come such expressions as this of one young man: "I was very sorry to hear from you that circumstances rendered it necessary for General Marshall to resign the position of treasurer of the Institute," and this from one young woman graduate: "I am glad to know that General Marshall will still be connected in some way with the school." Not all have had the opportunity to say with the latter: "There is one satisfaction I have

however, and that is I was present when he got 'canned.'" The *canning*, as many of his friends will remember, was a gold-headed one, with an inscription expressing the loving appreciation of the Hampton alumni.

## TRYING TO TEACH.

A young man who has developed that fundamental principle of pedagogics that nothing is taught unless it is learned, from his own experience, and is not likely to, become therefore the less of a teacher, writes:

"Heretofore I have been writing that I am teaching, but of late I experience so much difficulty in getting some of my pupils to attain the desired standard that I feel like writing only that I am trying to teach."

## HONE, SWEET HONE.

The same writer says: "Last week I spent what money I had in the purchase of a lot. When I get some more money I'll build a house on it and call it *hone*. I hope later on to change it to *sweet hone*. The sound is so rather suggestive. We 'hear a sound of marriage bells.'"

## IN VIEW OF THE ELECTION.

He continues:  
 As you query about my experiencing any difficulty during the late election, I would say that I experienced none. The election was, in this county, as far as I observed and have learned, a peaceable one. The ringing of Southern newspapers and the New York *Nation* sent me by the kindness of Miss —, of Cambridge, Mass., had governed my mind to accept Blaine's defeat and Cleveland's victory. I was not in the least moved. My rights are guaranteed in the Constitution of the United States as much as the President's, and happily the time is not yet when one political party can change the fundamental principles of our Government. The colored people as a rule, show a great deal of dissatisfaction at the success of the party in power, but hope that President Cleveland's administration may prove a special blessing to the country and to them. Agents from Kansas and Arkansas have been taking advantage of the unsettled condition of their minds to induce them to migrate West. The agents have met with considerable success so far, but their success or failure in the future will depend almost entirely upon the nature of the reports received from those who have gone. And by the way, Miss C., will you please, if convenient, give me some information relative to some reliable paper printed in the interest of western emigration?

But about my school. The closing exercises were held on the 21st of last month. Many white citizens of the neighborhood were invited, but owing to previous arrangements to visit the New Orleans Exposition, but few attended. The colored people present were numerous. The programme for the day included recitations in reading, orthography, history, geography, grammar and arithmetic, exhibition of maps drawn by pupils, and speeches with music intervening. It was pleasing to see the parents' appreciation of their children's doings. Some of the white friends were called on for speeches but declined to say anything further than to express their pleasure with what they had heard and seen. With the close of the day the parents and children returned to their homes, and I to mine with the determination to teach a more successful school in the future than I have yet taught."

Mc. K.

## FROM MARRIED GRADUATES—A HAMPTON FAMILY.

Marriage is by no means always a stop to our graduates' teaching. It is more apt to be so in the cities, in the case of young women. One such, who is not discouraged by the school laws for good work in other directions, writes:

"I have not taught for five years—that is, since my marriage. Unfortunately, so soon as we take on 'double entry,' we are not wanted. So I take up my household work the Foreign and Home Missionary Society connected with the church, and the Women's Christian Temperance Union. I have a sister teaching at —, who was also a graduate of Hampton. The second sister has attended school here. She completed the 8th grade and instead of entering the High school, she taught last term and has the same school this year. She hopes next year to enter the Senior class at Hampton. My youngest sister is now in the Middle class at Hampton.

## SOUTHERN SKETCHES.

BY ORRA LANGHORNE.

## Our Dear Old Mammy.

Can human friendship display a tenderer tie than that which has ever existed between the Negro nurses of the South and the white children whose heads have been pillowed upon their faithful breasts? Whatever may be the prejudices of race, they all vanish in regard to the dear old "Mammy" of our infancy. The Southern Democrat who is roused to indignation by the very mention of "civil rights," becomes "as a little child" in his Mammy's presence, respectfully offers her a chair, and treats her with the courtesy due to his foster-mother. The refined and polished lady of the South, who shrinks in horror from the idea of social intercourse with Negroes, throws her arms as under Mammy's neck and presses her cheeks to the dear old face which bent lovingly over her cradle.

The Negro has been an interesting study to me, from the days of my childhood, when my favorite seat was upon the dropical feet of my Mammy, as she rested them upon a cushion, and never dislodged me, but pattingly shifted them to the other side, and on me a pleasant smile in return for the look of heartfelt affection with which I regarded her honest brown face. How oft have I disputed with my little sisters the pleasure of sleeping with her; how often have I felt guilty as I laid my cheek to hers and realized that I loved her better than my mother. For her slipper never was substituted for Solomon's rod; she never uttered with a serious air that it was "her duty to punish us." Mammy often told us that her mother was a king's daughter in her native land, and our ideas of royalty were much confused in the effort to reconcile her statement as to court life in Africa with the lessons from English history which mother was beginning to teach us. However, we thought it quite natural that a daughter of royal descent, should have her meals carried to her on a waiter by another servant after mother had filled the large picture-covered bowl with coffee and supplied the plate with blue flowers on it, from every dish on the table. How delighted we were when the presence of visitors or a slight indisposition confined us to the nursery, and we too, had our meals sent up to us, and could sit at Mammy's table and get a sip of her strong coffee or taste the highly seasoned viands from her plate, instead of the simple fare to which we were confined in mother's sight.

Mammy had her own ideas about bringing up children; and as she had successfully reared a brood of twelve in our grandmother's nursery, mother very willingly gave each new comer into the tender hands which had ever a ready welcome for the little strangers. One of her rules was that the children "must get their sleep out," and we were never harshly rebuked, but always awarded smiling to the crowning song improvised for our benefit with a pet name for each of her darlings, from "King"—as she always called our sunny-haired brother—to the "Birdie" which moaned away its feeble life in her arms. How vividly I recall the aspect of our nursery as it appeared each morning of my childhood; when everything having been put in order, and the children, clean and smiling, were perched in the deep window-seats, Mammy placed her rockingchair in the centre of the room, so that there would be no danger of anybody stumbling over it, drew out her yarn knitting, and laying it in her lap, opened the little Bible which was never out of her reach. She always seemed to me to look over in stead of through her large brass spectacles as she read aloud, in a sing-song voice, the blessed words of which she never grew weary. In those "good old times" colored people were not supposed to want to read anything but the Bible, and I often wonder what Mammy would have thought of the reckless way in which they handle newspapers and "Fifth Readers" in these days. What a comfort that little brown Bible was to Mammy, to be sure; and how serenely she read on while we played around her, in no wise disturbed when the exigencies of the dolls' wardrobe required some pins and was rushed to search Mammy's turban, which served as an unfailing pin cushion and was constantly replenished as she swept the floor.

I remember the consternation in the nursery one morning when Mammy had gone to sleep while reading as usual, the little Bible which had long been in a critical state, dropped from her hands in pieces on the floor. Mammy looked at the fragments, and then, just then, said she would repair its injuries, and when she brought back the book in a blue pasteboard cover, its owner was very much pleased, and its children decided to have a careful examination, that it was wiser than ever.

On rainy days, when all other amusements failed, Mammy sometimes offered, if we

(Continued on Page 81.)

## Southern Workman.

### Indian Department.

ELAINE GOODALE, *In Charge.*

JAMES McLOUGHLIN.

JOHN G. GASMANN.

"The Government," says a veteran Canadian missionary, "gives the Indian a reserve and a plow and bids him go to farming. What would become of the politicians if they were given bows and arrows and told by the Indian to live by the chase or die?"

BISHOP HARE says of the progress of mission work in Southern Dakota, "A noticeable fact is the disposition of the Indians to self help. They are learning to contribute to the work, even though they are destitute of money. They bring offerings from their products; hay, fowls, moccasins, milk, etc. In this way they raised in 1881 \$300, in 1882 \$305, in 1883 \$1200, and in 1884 \$1500, to help on the work, showing a gratifying increase."

THAT CANADA has seen fewer difficulties with her Indians, and that they came later than ours, is principally due to the fact that theirs is a more hospitable country than ours, the population of which goes on more gradually, and the relations between the original and incoming inhabitants have more time to adjust themselves. \* \* \* The key to the situation in Canada appears to be precisely the same as in the United States.—*Morning Star.*

LET US NOT depend on politicians to reform the Indians. We cannot safely depend even on Government schools to solve the Indian problem. The longest root of hope for the Indian is to be found in the self-sacrifice of the Christian church. \* \* \* It is the church, by evangelizing the Indian, that will bring him into a condition to desire education. It is through religion and education that he will gradually acquire self-support, self-protection, self-government. We must emphasize more incisively the religious side of Indian reform.—*Rev. Joseph Cook.*

#### The Savage Apache

The Apaches are cunning as the red fox and insatiate as tigers. There is no hope of glory to cheer the soldier who upholds our flag in that dreary field. *There is no stimulus but duty.* There is small honor in killing an Indian, (1) still less in falling before one. A passing interest is raised, but it is brief. The atrocities are so frequent and monotonous; always the same tale of insult, torture, death.—*Exchange.*

A recent conversation with one of our army officers, who wasted three years in fighting the Indians, throws some light on paragraphs like the above, so frequent in our newspapers to-day. "Are the stories of so-called Indian atrocities exaggerated?" we enquired. "Perhaps not," he replied, "with moderation, but there is another side which seldom appears. When we fall upon an Indian camp, we usually kill everything. The Indians won't ask for quarter; we can't take them prisoners; we are forced to exterminate them; the squaws fight as well as the men, and we can't well avoid killing them too; somehow most of the children perish. When the Indians

surprise a settlement, of course they retaliate, then follows the inevitable newspaper paragraph, "*Shocking Indian atrocities! No sex or age regarded.*" It is hard work to fight Indians under the conviction that *they are right and we are wrong.* That was my state of mind; and I soon exchanged from the cavalry into the artillery to get rid of the necessity of Indian warfare. The "stimulus of duty" seems to have been lacking here.

#### Why Not an Indian State?

Senator Ingalls, of Kansas, who as a member of the special committee appointed by Congress to investigate the condition of the Indian Territory, says in that territory in the best condition possible. "I think they will work out their own future, if left to themselves. The Indians of the territory are in favor of forming an Indian state, to be admitted as a member of the Union. They say they would willingly receive the Indians from other parts of the country, and do all in their power to help them along."

Friends of the Indian are already discussing this proposition. Why not an Indian state? There is land enough. The "unification, consolidation and organization" of the tribes would certainly promote their general progress. Why not admit such a state upon the same terms and with the same rights as any other state of the union? The Indians would have to become citizens of the United States by the process of naturalization. Their would be no special class of Indian rights or Indian disabilities, since all this would be superseded by a common citizenship.

Let it not be forgotten that a "common citizenship" implies certain natural and legal rights, not the least of which is the right to live where we please. No other class of citizens is set apart to form a manufacturing state or an agricultural state. We have no German state nor Irish state. The history of our attempts to remove Indians from their homes and establish them on lands of our choosing, betrays the exercise of arbitrary and worse than arbitrary power. The homes of our people are determined by natural causes, by inclination and choice. What an inconsistency to bring the Indian under the rule by making of him, at the outset, such a tremendous exception.

It is probably safe to say that hostile tribes of Indians, following individual customs and speaking distinct languages, would assimilate and combine less easily and quickly than Indians and whites. This device, assuming that it were practicable, would serve only to perpetuate a collection of petty nationalities. The Indian Territory is in itself a prodigious mistake. The theory is an exploded one. An Indian state! If such were the solution of our problem, it had better never be solved. And it never will be until not in one but in every State and Territory in the Union the Indian has his rights as a citizen and as a man.

#### The Indian in Current Literature.

The magazine literature of the day reflects rather than controls popular opinion. That the Indian is a more or less conspicuous figure in the month's periodicals, indicates, not so much that he is worth talking about as that *people are talking about him.* It may be a pity, but it is undoubtedly true, that popular interest, even of a light and sensational order, is very greatly to our purpose.

In that charming child's magazine, *Wide Awake*, Edith W. Cook puts into indifferent verse a legend of the Penobscots, from Mr. Leland's collection. The liberal illustrations are sketchily suggestive of the pretty story of a great magician baffled by a baby's laughter and cries.

"Vain was the strength of the giant,—  
Never a spell could bind  
Wasie, the unconquered baby—  
Stronger than sun or wind."

So, since the world had beginning,  
Nothing unconquered remains.  
Save only Wasie, the baby—  
Home's little master he reigns."

The same number gives us a picturesque account of a buffalo hunt, by an eye-witness. This is good description. "The tall brown covers of the teepees with a blue column of smoke rising from the nest of poles sticking out of the top, and the little bee-hive shaped wigwags, made from boughs covered with skins, composed a savage village,—beautiful in its straggling picturesqueness and thronging life, and so airy in its effect that you could not but feel that on the slightest whim, it would vanish like a mirage."

We cannot resist the temptation to appropriate two more sentences, in which we can feel the movement of the hunt.

"It was a beautiful sight to see the naked Indians and naked ponies, flying across country in a long, straggling line, converging toward the black, billowy mass of objects far ahead. \* \* \* Pretty Blackbird was in the lead, his horse cleaving the air like a swallow; his hair streamed in the wind, his muscular, bronze body poised gracefully as a part of his steed; his right hand held his Winchester rifle, thrown easily into the hollow of the left arm."

The notes of Mr. Geo. de Forest Brush, a painter of aboriginal scenes and figures, in the *May Century*, contains the subject from we suppose an artist's standpoint. There is something decidedly repellent about his selfish, matter-of-fact suggestions; and it may be added that the fine reproductions of his paintings show much the same sort of treatment.

After a few contemptuous, would-be disillusionizing sentences, Mr. Brush says: "But the question whether they are fit to enter the kingdom of Heaven is apart from that of their artistic interest. \* \* \* It is not necessary that an Indian learn to spell before we see that his long locks are beautiful as he rides against the prairie winds. A really handsome squaw is rare, but there are among them more than I have ever seen elsewhere, their bareless faces reminding one always of the antique. \* \* \* It is when we detach them from all thoughts of what we would have them be, and enjoy them as part of the landscape, that they fill us with lovely emotions. It is not by trying to imagine the Indian something finer than he is that the artistic sense finds delight in him. \* \* \* The Indian is a part of nature, and is no more ridiculous than the smoke that curls up from the wigwam, or the rocks and pines on the mountain side."

"The picture-writer" is extremely soft and graceful, but comparatively meaningless; in the Indian woman mourning her grave, on the other hand, we have a weird, repulsive, and undeniably powerful conception.

#### Marriage.

We have received the following announcement of the marriage of an Indian student of Hampton, who returned home a year ago, after a three years course, going through the Middle Class of the Normal School. He has made an excellent record since he left us, as a teacher of his people. We wish him joy in his new relation.

ESTES-BENOIST. At the church of the Holy Fellowship, Yankton Agency, Dakota, on the evening of June 4th, 1885, by the Rev. Joseph W. Cook, Mr. Joseph Folsom Essex, late of Hampton Normal Institute, and Miss Harriet Benoist, both of Yankton Agency. The church was filled with the friends, relatives and acquaintances of the contracting parties, both white and red. Mr. Cook provided a reception for the near relatives and friends of the bride and groom. Miss Benoist is a mixed blood, like Mr. Estes three-fourths white, and has been educated in the Mission school of the Episcopal church.

#### Incidents of Indian Life at Hampton.

Bows-and-arrows are the fashionable amusement in the Indian Department.

An Indian baby-carriage is a late addition to the shady walks about Winona.

We had a brief but welcome visit from five Carlisle teachers, the week before commencement.

Married, at Yankton Agency, D. T., April 19th, by Rev. J. P. Williamson, John Randall and Mary Goulet, the latter a returned Hampton student.

The "June tea" given to the smallest girls and boys, with a rose at each plate and unlimited strawberries, was hugely enjoyed by the guests, and to the lookers-on seemed quite the prettiest affair of the season.

Our boys were interested, the other evening, in an original debate written by Indian boys at Carlisle and given on their Anniversary Day. The question, "Shall the Indians be Farmers or Stock-raisers?" is discussed in these papers with spirit and good sense.

Our annual "Indian picnic" came off about the middle of May, with appropriate and time-honored festivities. An immense crowd took the merry party "across the creek," where a variety of innocent amusement, from flower hunting to a match ball game, enlivened the afternoon. Our Indians still seem uncommonly at home out of doors.

#### AN INDIAN FAIR.

Miss Walker has offered to hold a fair in Pittsfield this month for the benefit of the Lend-a-Hand-Club, and the girls and boys have made a number of pretty and characteristic articles for sale, ranging from bows-and-arrows and Indian painting to highly civilized fancy-work. A special fund is thus to be raised for lending a helping hand to Indian graduate-teachers in the West.

#### MISS FLETCHER'S TALK.

Miss Alice Fletcher, who has been doing good service to the cause in New Orleans, gave us the benefit of some of her experiences a few days ago. She spoke plainly and well to the scholars of the demands of civilization upon them and of their obligation to deserve the help they receive. "My boys and girls"—she said—"for you are not yet men and women—not until you have learned to use all the powers you have for the good of others—whenever you look at the cottage built by ladies of New Orleans for an Indian couple, remember what I have promised them for you, and remember that you have to make my promise good."

#### "THE WHEAT LOOKS PRETTY."

Minnie Stabler writes to us as follows from Omaha Agency. "We are very busy since we came home. We are going to breaking our land. We live in Philip's father's house; I missed my little house so much. I hope Mrs. Nancy keep it clean. I missed Hampton so much. All the Omahas are doing very well; they very busy in this Spring. *Their wheat looks so pretty!* So many going to break their land. The weather is so pleasant out here; the grass is green and the trees is so pretty. I told my mother that you all the teachers very kind to little Edie and she very much please to you all."

#### Talk about Carlisle.

SUGGESTIONS AND IMPRESSIONS FROM CAPT. PRATT AND HIS WORK.

"So you have seen Carlisle?" "Well, what is it like?" "How is it different from Hampton?" "How is it better?" These are some of the questions that assail us as we come to a late breakfast table on a fair May morning, after our three-days' absence on a visit to the other great Indian School, Carlisle and

Hampton are certainly generous rivals—"for of course we're rivals," exclaimed Capt. Pratt, with the hearty laugh that made his words sound delightfully cordial: "I crowd Armstrong all I can, and he—crowds everybody!" Meantime the friendly differences of workers in a common cause are food for thought and matter of helpful discussion.

"So you have seen Carlisle?" Yes—and that epitome of modern progress—a bit of the best of the nineteenth century set in the lovely frame of the Pennsylvania hill-country—will long be fresh in memory. Carlisle has a decided charm in its surroundings, and a breezy quiet, as it were, in its actual and mental atmosphere. There is something picturesque about the long, low barracks embowered in trees, and a certain quaintness clings to the old-fashioned interiors. This hint of the past is strongly at variance with the intensely modern and radical air of the compromising spirit of growth that pervades and rules. Carlisle will accept of nothing less for the Indian than equality—identity of rights and interests—she will make of him nothing less—nor more—than an American—alive to the struggle and the competition which seem, with us, the inevitable conditions of progress.

Her rigorous system of English speaking is a part of this exact training. The week before Commencement was marked by a "clean record" in English. No word of Indian was spoken by Capt. Pratt's four hundred Indian children. This is not a compulsory thing—it is the wonderful result of a very strong sentiment, rather than of severe discipline. Here is a high standard which commends itself to us at once. Yet there is much to be said, as Carlisle's liberal-minded lady principal herself admitted to us, in favor of a less consistent effort. The Indian must get his religious teaching largely through the medium of his own tongue, or get it, for the present, not at all. Two years of school life is admitted to be the very shortest time in which he can prepare to gain many abstract ideas through the English language; and after three or four years there are many stumbling-blocks in the way of the simplest Bible study. The mass of the Dakota people will learn the first truths of Christianity from the Dakota Bible. So say the teachers.

The general discipline of the school strikes us as admirably carried out. In some respects, noticeably in the association of the girls and boys, the system differs radically from our own. Doubtless the much greater number under Capt. Pratt's care itself admits of less individual freedom than is found possible and desirable of Hampton.

What of the work in the class-rooms? The methods are those of Hampton and of all model schools; the style is somewhat dissimilar to ours. Each teacher takes her own class through the day and evening. We should say that this tends to make work thorough and discipline easy, while on the other hand, the teaching loses in spirit and the teacher misses a certain relief in change of atmosphere.

The industrial system deserves hearty commendation throughout. Why do not some of our Indian boys learn tailoring? There are twenty apprentices in the tailor's work-shop at Carlisle. The girls mend all the boys' clothing as well as their own, and do it beautifully. We hear much of Carlisle's excellent farm and of the results of Capt. Pratt's "planting out" in the rural districts of Pennsylvania. We talked more or less with the boys on this subject, and are inclined to say that they surpass ours in a degree of agricultural enthusiasm.

#### Our Home Letters.

Every month an English letter from each Indian student carries some of the light of Hampton into distant Western homes. A boy who has been here but a year, understanding a little English when he came, says as follows:

"I am going to write you a letter to-day. I can not write English well. But I will try

to write some speak words English, and I want to tell you something about in Hampton, boys and girls. We are getting along nicely in school and we are trying to battle English every day. Sometimes I am try hard to battle English, and sometimes I forget and speak words Indian. \* \* \* Now I am going to tell you something about what we do at school. We go to school every morning. Some of the boys or girls work in morning and go to school in the afternoon. I read in Second Reader. Last Saturday we have good time, and at night we go to Winona, and we have good time. All the boys make arrow and bow, and make some nice pictures, and all Indian boys having a boat, when we did not have school, we take a boat and row on the water having good time. \* \* \* But I want say one more words to you. We are try to do right now, and we are always try to help each other boys, and I am trying every day."

This and more was written without assistance, and the spelling and penmanship are excellent.

We give further examples from some of the home letters of the thoughtful boys and girls of the first division.

"Now I like to tell you about Commencement Day last few weeks ago. A great many white people came here, and there are some gentlemen spoke to us. We had a nice time meeting together. There are some students spoke too. Some of the Indians sickness so they will go home. Because so many of them die this year. It is very hard time to them. Just like when the cloud close together, and their day is darkness, covered with them. That is night come to us, and then this is spring-time, so beautiful; and bright day most every day. \* \* \* I should go North this summer may be learn some more English words. But perhaps you will think just same. But it is not same. Because the Indians together here so they have speak to each other. So I think best way go to Massachusetts."

"Any thing we try hard here at Hampton because when we go back home Dakota some girls teach school and boys good work farm. I work farm too. This month all day speak English, nobody talk Indian; try hard."

"Last Decoration Day we had very good time; boys play ball all day and girls croquet on their grounds, and in evening the boys went to Winona Lodge and had good time there. In afternoon we was going to church to cemetery but it rain too hard that we could not go, so we all went up to chapel. I am in the first division now this term."

"With much pleasure I received your kind letter a long time ago, and so think of you. How thoughtful and kindness to write me most of the time! \* \* \* I am very tired to living in school, so I want a vacation for this summer, and also to see all my parents, and how they are getting along, and after that the boys went to Winona Lodge and had good time there. In afternoon we was going to church to cemetery but it rain too hard that we could not go, so we all went up to chapel. I am in the first division now this term."

"There was a white lady came down here this winter who was very interested in the Indians. And she wanted to have a fair for our 'Lend-a-Hand Club,' and so we have all been making things to sell. We have made a good many things. They are going to send them off to-day to the lady. She is going to sell them for us and send the money to us so we can have it for our 'Lend-a-Hand Club.' We are going to use the money for the sick ones or for the poor, and anything to help other people who cannot help themselves. I think Lend-a-Hand Club a very good thing to do."

#### From Hampton. (TRANSLATION.)

East of the Great Father's mansion there is a great school-house by the sea, called Hampton. At first this was a school for the black people, but now the Indians too are taught there. There are more than a hundred young Indian men and women. But they are not all Dakotas. They come from many tribes.

A young brave from Lower Brule, Baptiste C. Bearbird, writes to us Mar. 26th, and tells us all about it. He speaks well, but we have not room for all his words. He says:

"To-day I speak to you with a glad heart. Boys and girls from this school have been confirmed in the Episcopal church. (Then follow their names and names.) Since Nov. 1884 several have died. The first was a little girl from Cheyenne River. They said she had no father nor mother, so we gladly gave her to God to be his child. (Then follow the names of others who have died.)

My friends, this school is ours. We want knowledge and we have come here. I long want to see you. Sometimes we die here. Where do we go when we die? We go to God's house and have life without end. Therefore we are not sorry any more, and gladly go to live with God."

A little while ago a letter came from Grow Creek, and that letter told the truth. It said: "They have taken our lands away from us. Many hundred white people have come into our homes, and I think the Indians will fight." Therefore for a few days we could not study; we were always thinking about our homes. But our teachers helped us much, and made our hearts strong. "We know all will come right by-and-by," they said. We listened to them. At last one of our friends came down from Washington. His name was Prof. Painter. He stood up in the midst of us and said: I am glad to be with you. You have heard bad news from your homes. The President and Sec. Teller spoke, and the white people have done this. But now President Cleveland and Sec. Lamar have come in, and we have told them about the Indians. I think all will be right. We have telegraphed, (iron talk), and everything. Prof. Painter said, I know that he is a good man and always helps the Indians."

Baptiste C. Bear-Bird, in LAPE OAYE, Greenwood, D. T.

#### The Omaha Tornado.

Letters have been coming to us all the week from the Omaha Reservation, sad with the story of the tornado which has just swept over them.

Philip and Minnie, who with their little Eddie all Hampton visitors will remember, returned in the spring to their people. Friends in Hartford had promised them help in buildings a house, and while arrangements were being made they had made their home with Philip's father. The house swept away was a letter says was "blown to atoms." Fortunately the family were not in it and so escaped injury, but everything was lost, even their books and clothing.

The home of one of our little boys, Guy Stabler, was rolled over three times, the family inside. All were injured, the father probably fatally so. So many requests came asking that the boy be sent to his parents that he was finally allowed to go. When asked what he was going to do to help them, he pulled a fish book and line from his pocket and replied, "fish for them." The little fellow had thought it all out, and with his few pennies purchased the only means he knew of whereby he might be of service to those he loved.

The Indian children here have held a meeting and sent money to aid them, others have sent clothing, and we hope other friends may be found who will help these suffering people.

#### Editorial Correspondence. Among our Graduates.

Of the 1,000 inhabitants of Nottoway Co. Va., two thirds are Negroes. It is an orderly region, with little or no race friction and with apparently pleasant relations between white and colored. Here as elsewhere, in local elections there is less feeling than in State or National elections, a point in Southern life which is not generally understood. The Country treasurer, clerk and sheriff are democrats and independent, chosen for their fitness.

At Burkeville, where I had not been since the Appomattox campaign in 1865, I met William H. Ash, a Hampton graduate, and thirteen colored men in a neat school-house where the former teachers, and from them I received much information.

Fifteen young colored men and women from this county are at various institutions for the training of teachers. Five are at Hampton, two at Scotia Seminary, N. C., three at Petersburg Normal College and one at Howard University. There are seven from Hampton and six from other schools now teaching in the county, which supports in all eighteen colored schools, all over-crowded. Three of these are taught by whites, who would gladly do all the teaching, if the colored people would agree to it. The schools are open for six months, the teachers receiving \$25.00 per month, except two who get \$30.00. About one in ten of the colored voters in this county is a land holder. Land is cheap (\$5.00 an acre) but proportionately poor. Exhausted land is one of slavery's worst legacies to the future. The sale of liquor is almost the worst out of all the South is almost the enterprising youth to seek more favorable conditions elsewhere.

Intemperance is held in check by a good country justice, a Southern man, who restricts the sale of liquor as much as possible, and makes it really hard to get. I found that of the thirteen colored laborers before me, eleven

owned from ten to seventy acres apiece, one was a hotel waiter and had nothing, and one was a railroad employee with over \$300.00 in the bank. They were above the average and represented the class that cares for education. They all complained of the "no fence" law which compels them to fence in stock, so that crops may be protected. This they say makes it impossible for them to raise sheep, as they used to. The poor man wants to turn out his pigs and cattle for general grazing, having no pastures of his own, and thus make a barrel of meal last from Christmas till summer time. They propose to vote it down at the next election. "We take our children for fences" said they, and this of course means keeping them out of school to watch stock. Tobacco is the only crop that pays; good plants is the average to an acre, and five plants make a pound, which brings six cents. But it is steadily exhausting the soil, and it is clear that finally the blacks only will be able to declare that a large class of whites will do nothing but "drink whiskey, and keep store" which in their view means that land will gradually cheapen until Negroes will hold the most of it.

There are fifteen colored churches in the county but not more than two or three do county preachers. Rev. Mr. R. is a Presbyterian minister doing excellent work. He deplores the moral condition of these people which is not helped by ignorant ministers, many of whom do more harm than good. Danville, in Pittsylvania Co. near the N. C. line, is a wide awake, charmingly situated city of 10,000 inhabitants white and colored. Built on hills with a few fine streets, I have never seen more attractive looking homes than those on Main street. It is best known as the centre of a great tobacco producing region where the best quality of that article is raised and prepared for market. The place is growing wonderfully, new factories are constantly springing up. Young men have pushed it with Western energy, and it is to-day vastly unlike most Southern cities. Agents from foreign countries are here buying and shipping choice lots of the weed. The scene when hundreds of curious, covered wagons laden with tobacco from the surrounding region, come in long trains and fill the streets, is striking and reminds one of army days. The factories work on full time about half the year and the operatives are colored and of all ages. The young girls and boys hear much that is bad, and are corrupted, but they are forced to this life, and while many of them have earned comfortable livelihoods, built good houses, and live decently, many also have been ruined. An irregular factory life is bad for any class. Three cotton mills have recently been built for which the labor (white) is imported from North and South. Pittsylvania Co. is the largest in the State, with a population of 51,000, the blacks being in a majority of about 1,000. The land is undulating with many small and rapid streams. The soil is gray and red; the former lighter and adapted to tobacco, the latter, chiefly in the valleys, is good for grass, wheat and clover. But little grass is raised, these being imported from as far west as Chicago, which is evidently a mistake. The high price of tobacco discourages cattle raising, guano is used to stimulate crops, money is made, but the people would help the soil, and would mean less money now but more by-and-by. An hour's conversation with Rev. Dr. Dame, Episcopal Rector and formerly Sup't. of Schools, was interesting and instructive. The Negro population of Danville is in three divisions or communities, lying on the outskirts. Mechanicsville has about 2000, Jerusalem 2000 and Jacksonville one thousand. Nearly all these people live in houses of their own surrounded by gardens whose produce affords partial support. Good public free schools are in reach of all, I visited several and found them neat and in every way satisfactory.

A respectable element has grown up there is a colored citizenry from which the low and vicious are excluded, and its tone is steadily improving.

(Continued in August Number.)

We know of no invention since the production of the sewing machine, which lessens woman's labor so much as JAMES PEARLINE'S. Its success proves its utility. Within a few years it has become a necessity in the kitchen and laundry of thousands of families. It is harmless to fabric and hands, and does its work well and quickly. We advise those who do not use Pearlina to try it at once. By decreasing the hardest of woman's work, it promotes health and happiness.

### Decoration Day at Hampton.

Decoration Day at Hampton has an interest of its own. In former years it was the great gathering place of the colored people of Norfolk and the surrounding country. Steamboats, literally packed, came early in the morning and landing at the school wharf, poured forth a stream of visitors that overflowed the grounds and buildings, making the day one of confusion. For the last two years they have not been allowed to land here, and the place is much more quiet, in consequence, the excursions coming to the Hampton wharf instead. Early in the morning the soldiers from the National Home come over and decorate the graves of their comrades in the beautiful National Cemetery, which adjoins the school grounds. Here rest between five and six thousand dead. Next marble head-stones giving name and regiment, are occasionally interspersed with small square blocks on which one reads only a number; "The unknown" dead, "who rest in God's still memory folded deep."

It is a peaceful and suggestive spot, especially when one thinks of it in relation to the busy hopeful life all around it, and realizes that but for the one, the other could hardly have been.

But to return to the way in which the School keeps the day.

It is a holiday. No work is going on in the shops, and there are no recitations. The scholars and their friends from abroad, sit under the trees and chat pleasantly together.

Occasionally one sees an Indian youth and maiden enjoying each other's society in solemn silence.

At the quiet sunset hour the school assembles on the lawn in front of Virginia Hall, forms into line, the band leading the way playing a solemn dirge, and marches first to the National Cemetery. Here we gather in close ranks around the Soldiers' monument, hung with wreaths and garlands by the veterans from the "Home." Their decorations this year were unusually fine. A beautiful cross full eight feet high, of golden lilies and other greenhouse flowers, from the "Home" conservatory, was planted beside the pedestal and reached above it. The towering obelisk was wreathed and festooned with flowers, with the numbers of the 3rd and 16th army corps and other devices in beautiful effect. The school, circling the flower-wreathed Monument in the light of the setting sun joins in repeating the twenty-third psalm, followed by the Lord's Prayer, then comes "My country, tis of thee" sung as Hampton students can sing it.

After this, we scatter to lay our flowers upon the graves of those who have given their lives for this dear "country." Some of us, for some dear mother's or sister's sake, placing ours upon the *unknown* soldier. At the call of the bugle, the procession reforms and we march to the little burying-ground where the school has laid to rest some of her children, most of them from the far West. Loving hearts and hands have already been here, and on one grave, that of an Indian girl, her brother has laid a cross of roses. Here is another grave, covered with beautiful flowers, and on the head-board we read, "Soon, a native of Zululand"—and we rejoice to know that he "fell asleep in Jesus." There is more of comfort than of sadness as we think of these graves, for we know that loving ministrations have smoothed the pathway into the dark valley and that many have learned of Him, who is the Life, as perhaps they might never otherwise, have done. As we stand around the graves, a prayer is said, a sweet hymn sung, and as the evening shadows gather around us, we pass out from the little cemetery, leaving those who rest there, in the faithful keeping of the God and Father of us all. (So ends Decoration Day at Hampton.)

It is the only one that will clean white clothes,  
and is the only one that will not hurt the fabric.

JAMES PYLE, NEW YORK.

Hygeia Hotel, Old Point Comfort, Virginia.

Is situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, about 180 miles south of Baltimore, and 15 miles north of Norfolk and Portsmouth. The place is reached by the splendid steamers of the Bay Line, Potomac and James River Companies, running daily between Baltimore, Washington, Richmond and Norfolk, and by rail direct from Richmond via the Chesapeake and Ohio Railway.

The Hygeia has four stories in height, substantially built and comfortably furnished; has two Otis' hydraulic elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; rooms for bath, including HOT SEA, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country.

As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house which has accommodations for 1,000 guests and is open throughout the year, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Over \$150,000 have been expended in enlarging and improving the place within the past two years, and it is the most perfect in all its appointments of any hotel south of New York.

There is music and dancing every evening and all the pleasures of a fashionable watering place are to be enjoyed. The climate of Old Point Comfort is unequalled for salubrity and general healthfulness, material fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 74° in summer; 59° in autumn; 44° in winter, and 52° for spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. The whole region roundabout is filled with picturesque scenery, offering delightful drives by day and romantic strolls by night. Boating and fishing are especially attractive, and the surf bathing, which is good from May until November, is unsurpassed on the Atlantic Seaboard. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics of the Hygeia.

For further information address by mail or telegraph.

### Hampton School Record.

VOL. XIV.

HAMPTON, VA., AUGUST, 1885.

No. 8.

THE VIRGINIA STATE NORMAL Schools for this summer are held at Fredericksburg, Staunton and Marion for white, and at Danville and Petersburg for colored teachers.

The programmes are excellent, and every possible inducement in the way of reduced rates of board and travel, and general entertainment, is offered to the teachers of our State. The very marked change of feeling throughout the South is nowhere more noticeable than in the attitude of all parties towards these "Teachers' Institutes."

Superintendent Farr says: A great awakening in educational matters is now taking place, and the friends of education are everywhere calling for better instruction. The demand for skilled teachers greatly exceeds the supply, and the salaries are growing larger every year. Let the teachers of Virginia earnestly prepare themselves, and come, as they should, with possession and enjoyment of the increasing rewards and honors of the profession.

And that this awakening is not confined to the white population is shown by the following proposition made by leading colored citizens of Danville, among whom we are glad to see more than one name which belongs also to Hampton:

"We, the undersigned, citizens of Danville, having seen a public expression of the people in the churches in favor of the State Normal Institute for colored public-school teachers being held here next summer, are prepared to say that the people will take care of three hundred or more teachers, at a cost of two dollars to two dollars and a half per week, each, for board and lodging. We ask that the institute come to Danville, because we think such a session of teachers here will be of much benefit to the town and surrounding community. There are many teachers in the counties of Patrick, Franklin, Henry, Pittsylvania, and Halifax, whose salaries are small and sessions short, who cannot afford to attend the institute when held far away. We have a room sufficient for an assembly-room for lectures, &c., and rooms for a division of the teachers into any number of classes that may be desired."

The pamphlet entitled "Proceedings of the third annual Conference of County and City Supts of Public Free Schools and Principals of High Schools of the State of Virginia" is well worth the attention of all who are interested in the cause of education in our Southern States. It differs from most such reports in that the Superintendents of Schools for all the Counties in the State were called upon last year to supply concise histories of the schools under their charge, and a sufficient number have responded to make a most readable little volume, which will certainly add interest and value to the permanent records of the Department.

Not much more than two hundred years ago, Sir William Berkeley, the Royalist Governor of Virginia said, "But, I thank God, there are no free schools, nor printing, and I hope we shall not have them these hundred years, for learning has brought disobedience into the world, and printing has divulged them against the best of governments. God keep us from both."—Campbell's History of Virginia.

From his day until the outbreak of the civil war, the situation is described by the Superintendent of Schools in Campbell Co., as follows:

Previous to the year 1861, the system of education—if indeed it may be termed—was what is known as the "Old-Field Schools." These schools were taught by some old invalid, or by a man too lazy to do anything else. The number of schools was small, and the instruction given inferior, generally. The usual mode of establishing one was as follows: The teacher would go around to the people with a subscription

for the patrons to sign, stating the number of children they would send and the amount each would pay for tuition. Children whose parents were too poor to pay their tuition were sometimes allowed to come, and at the end of the session the teacher would make an account against the county for the number of days such children had attended school, and after qualifying to the account before a magistrate, he was allowed five cents per day, which was paid by the sheriff.

The teacher was generally incompetent as a scholar and ignorant of the art of teaching; and if he possessed any distinctive characteristic, it was a self-conceit that proclaimed that he knew all that was necessary for any child to know. There were some bright exceptions to the above-mentioned class of teachers—men and women who conducted their schools in a rational manner and after approved modern modes. These were fully alive to their duties and responsibilities as instructors. Some of these are now teachers in public schools, and are fully abreast of the times. The wealthy usually employed a teacher for their younger children at their homes, while the older and more advanced were sent to boarding schools, academies, colleges, &c. Negroes received no literary instruction, being prohibited by law; but in spite of the restrictions, some few favorites were taught to read by the younger members of the master's families. The fact of a man being too poor to pay for the tuition of his children was very humiliating to him; his children were sometimes taunted with it by other children; and frequently, rather than submit himself and his children to such indignities, he would not send them to school at all.

The "Old-Field Schools" were distributed over the country, at long distances apart, and with an aggregate attendance of about three hundred in the county. Many of the parents, even some possessing land and stock, were unable to read and write, and the only information they possessed was obtained by observation or handed down by tradition. Education acquired by means of public money was considered an arrangement for paupers only, and no man wished to be thought a member of that class. All would shun it if they could. In the year 1861 the war commenced, which threw all systems into confusion; schools were closed, fathers enlisted in the army, boys were called into military service or to work on farms; or, in other words, all were called upon in some way to serve the Confederate Government.

The history of the next ten years is condensed by the Supt. of Craig Co.:

From 1861 to 1870, the time of the institution of the free-school system, there was comparatively little attention paid to the education of the young. Schools everywhere were neglected, especially during the war. Had the country remained long in this condition, almost universal illiteracy and barbarism would have been the inevitable result. It is a fact, however, worthy of note, that during these years there were some who took an interest in educating their children, and would have an occasional school for their benefit during the winter.

In 1870 the public free-school system was inaugurated, and the progress since, has been, in most localities, uninterrupted. The testimony given in this Report is unanimous, and we only regret that our space will not permit us to print much of it *verbatim*. The only cause found for complaint is the smallness of the salaries paid, which are insufficient to procure the best teachers, and as a result of this the feeling in favor of Federal aid seems to be strong and general. In regard to this, one expression of feeling may stand for all, and we give the words of the Supt. for Halifax Co.:

But we hail with joy the prospect of more speedy help than can be obtained by asking for increased taxation. We mean the passage of the Blair-Bill—a measure which seems fraught with so much good for the impoverished South, that it is folly to think for a moment that our representatives will allow this opportunity to pass by without securing for us this boon so greatly desired, so ardently to be prayed for.

And again a single quotation (from James City Co.) will give a fair idea of the general progress and of what it means to the South:

In 1870 the "public free-school system" was first inaugurated in this county. It met with opposition from some of the white citizens, who looked upon it as a "Yankee" lever that would undermine their domestic institutions, destroy society lines, and bring the classes in closer proximity than they desired. Those of more liberal ideas favored it as being adapted to the wants of the people generally. The colored citizens hailed it with rapture, and looked upon it as a second "emancipation proclamation." The interest manifested by them is not surprising, for it was the first ray of light which was to penetrate that darkness which had bound them for more than two hundred years in the chains of ignorance. The "system" had many obstacles to overcome before it could take many steps in the direction of success. It struggled along, however, overcoming prejudice on the one hand and hostility on the other, growing from eleven schools, with an average daily attendance of 208 pupils in 1871 to twenty schools with an average daily attendance of 315 pupils in 1885. What their future will be depends upon the good people of Virginia. If they receive that support and fostering care to which they are entitled, they will continue to be an honor to the state; if not, they will become a reproach.

The 35th anniversary of Berea College, deserves and has obtained very general notice both North and South, and the hearty congratulations which accompany these notices, must be very gratifying to the founder and teachers of the school. That the experiment at Berea has demonstrated the possibility of the co-education of whites and blacks under certain conditions, there can be no doubt, but the white population of our Southern States is by no means homogeneous and it is possible that the mountain farmers of Kentucky and Tennessee have accepted gladly opportunities upon which their more aristocratic or more prosperous neighbors in the sea-board and gulf states would turn their backs. Our admiration for and sympathy with Mr. Fee's work is complete, but we do not feel that all the obstacles to co-education have yet been overcome, and indeed the success at Berea seems to us, in one sense, a guide post on the road to failure. That is, we believe that it is only poverty and the conditions which it creates, which for many years to come will force Southern whites and blacks into the same schools. So soon and whenever there is money enough to support them, there will be separate schools. Any successful imitation of Berea must include a very careful study of the conditions, and the fact that South Carolina (for example) and Kentucky are almost as far apart, in some respects, as South Carolina and Maine, must be given its due weight in the educational problem under consideration.

We add a brief account of Commencement Day at Berea taken from the New York Freeman:

GREAT DAY FOR BEREA. LOUISVILLE, June 28.—One of the most remarkable commencements in Kentucky's history of schools was the 35th anniversary of Berea College. The presence and support of prominent Southerners is all the more remarkable from the fact that Berea College was founded in 1858 as an Abolition Institution, and has more Negroes than white persons among its pupils. Special trains have been run for two days from Lexington, Columbus and other points, largely patronized by colored people, though in the great tabernacle where the exercises were held which seats 25,000, fully two-thirds were white. Indeed so many of the whites

have come in from the adjacent country that they outnumbered the colored in general attendance. The Baccalaureate sermon was preached by Prof. W. E. C. Wright and the address before the literary societies by Judge William Beckner. At the closing exercises this afternoon formal addresses were made by Geo. W. Cable, Washington Gladden and Robert West of the Chicago *Advocate*, followed by short speeches by Roswell Smith, Cassius M. Clay and the veteran Rev. J. G. Fee. President Fairchild presided. Mr. Smith gave \$5,000 to the institution in addition to \$2,000 given by him yearly. There were about 600 visitors from abroad. Over a hundred and fifty schools in the State are now taught by pupils from Berea. The annual attendance is about 400. This is a school whose officers and teachers a few years ago were mobbed and repeatedly driven from their homes for doing a work for which now Kentucky generally commends them, which shows a remarkable change of public sentiment.

The following letter from a Hampton graduate is pathetic rather than bitter, and if the conditions which it describes were likely to continue, would be something more than pathetic. The common sense of humanity is however coming to the rescue, and railroad and steamboat companies will not be long in finding that a colored man's money is as good as a white man's. We give the letter entire:

Gen. S. C. Armstrong, Hampton Va.

Dear Gen. I thank you for the month's receipt of the "SOUTHERN WORKMAN." The last issue is before me. The graphic descriptions Miss Bacon gives of Hampton life in and out of school, the discussion of Indian affairs, the letters from graduates—every department is peculiarly interesting to me.

But what holds my attention longest and gives rise to the most earnest thought are the extracts from the press North and South upon the ever-recurring Negro question.

The student on entering the outside world finds it quite different from the one he has left within the walls of his Alma Mater. On the one hand are his people degraded by their experience as slaves and on the other are the whites whom the dreadful institution has prejudiced against his race.

He finds the white man vested with power and drawing well defined lines of caste in ways of travel and places of trade. And the high-sounding expressions about "inalienable rights" and all men being "free and equal" suddenly become hollow and meaningless. He finds his faith in mankind slowly ebbing away, because those who lift their hands in holy horror at the daily records of frauds, burglaries and petty pilferings, deliberately rob a helpless people of the immunities of citizenship.

Persons who have as keen an appreciation for the beautiful, the clean, the orderly as their white neighbors, are doomed to reckless smoking-cars, dirty ill-smelling waiting-rooms and other such inconveniences, because they are guilty of a black skin.

I have sat upon the beautiful floating palaces that ply the great water routes of this country and which are owned and controlled by people who doubtless pride themselves on their justice and fair-dealing, trying to appease my hunger with a cold lunch which experience had taught me to provide, while delicious odors stole up to me from the dining-room below from which I was isolated because of my color. And this lonely parody would form itself in my brain: "Has not a colored girl appetite? If it is sharpened by salt-sea air and enhanced by savory smells, will it not clamor for a good warm dinner?"

It is not simply because of these humiliating experiences that I write you this, but because this is a point which the agitators of the Negro Question seem not to have considered in their bearing upon their progress. But you see that the effect of this state upon the weak and ignorant is to discourage and hinder his efforts to rise; while the more intelligent are made to lose faith in mankind. Yours sincerely, J. S. A. C. Class of '82.

The "other side" to this is given in the following item from the New York *Evening Post*, which shows how directly this particular reform lies in the line of general progress.

"In commenting a day or two ago upon the outrage reported to have been perpetrated on a negro clergyman and his wife on a railroad train in Alabama, we remarked that this state had seemed to lag behind other Southern commonwealths, but that progress was making even there. Convincing evidence of such progress has since then come to hand. A few days ago a committee representing the Colored Teachers' Association of Alabama waited upon the Railroad Commissioners of that State, and complained that colored people are not furnished by certain railroad companies equal accommodations with whites. The Commissioners assured the Committee that they recognized the force and justice of the complaint, and promptly took steps to compel the offending corporations to give the negro passenger who buys a first-class ticket just as good a car to ride in as the white. This is a great advance for Alabama, and the fact that the negroes of that State gain this measure of justice just after the Confederacy is fairly in the saddle again is an amusing commentary upon the colored prospects of the future, which were to befall the blacks if the Democrats elected their President."

In the *Southern Letter*, a little publication issued monthly by the Tuskegee School, we find an editorial which gives the immediately practical view of the value of technical education to the colored people of the South. The time is coming when the proverbial "ten acres and a mule" will no longer enable the colored man to earn his living, unless they shall be supplemented by the training of which a few men here and there, like the Principal of Tuskegee, already see the need.

At present, the Negro's resources, as a laborer, are of the most limited description, and the first step towards any radical improvement in his condition must be taken in the direction of increasing his skill as a workman. Imagine, for a moment, the effect of the Negro in some parts of the South, if anyone of the numerous cotton-picking machines now on trial should prove successful. To what market could he take his untrained hands and head? He cannot, of course, be driven from all his fields of labor by the irresistible power of machinery, but the pressure of the "one idea" man is doomed to go under.

But on the other hand the man who, accepting the new order of things, fits himself for something better than the unintelligent routine of his past, has nothing to fear, and Prof. Washington's words to his people are, at this point, emphatically the words of wisdom.

In order for us to appreciate fully the importance of giving our students practical training in farming, gardening, brickmaking, stock raising, poultry breeding, carpentry, blacksmithing, painting, printing, sewing, etc., he should take a trip out into the country where the majority of the colored people live. He would see how one *idea* the people are,—how unvaried are their means of making a living. The great mass of the people actually *know* how to do nothing but raise cotton, and of course are far from knowing how to do even this intelligently. The result is that no matter how hard the people work they remain poor, because they are compelled to buy their corn and meat, and pay some one else to do a thousand things for them which they should know how to do themselves. Some families make no pretense at raising a garden even, and cotton is planted to the very door.

"To get the student to think, to investigate, to form original ideas about how to make a living is one of the main things that we are trying to accomplish by our industries."

WHETHER or no Asiatic cholera reaches our shores during the present summer, the possibility of its arrival has already produced certain results for which we ought to be thankful. Discussion of the causes of this and other filth diseases has never been so general as now, and never before have such efforts been made to awaken the popular mind to the fact that a proper system of quarantine, co-existent with general cleanliness, will absolutely prevent anything like an epidemic of cholera or any similarly imported disease.

It is said of cholera that "it derives all its epidemic destructiveness from filthy conditions, and especially from excremental uncleanness." And this means, to put it in a nutshell, that the people of the United States have the matter in their own hands. All authorities now agree that "outbreaks of either yellow fever or cholera may be promptly suppressed by the intelligent application of well-understood principles of prevention, medicine, and sanitary science, and their epidemic extension may be prevented by the active enforcement of a thorough quarantine of observation and sanitation." Proved as we are by the fact that neither cholera nor yellow fever has ever originated among us, both being distinctly foreign diseases, it is evident that even with our present limited knowledge they can be kept at bay, while the conditions which invite them and redouble their terror are certainly under our control. For the individual, simple, regular and in all things temperate living; for both communities and individuals, cleanliness in person, in food, in household arrangements, in drainage, and water supply, for rich and for poor. When it is remembered what an epidemic of cholera or yellow fever means to a city or a nation, there is something almost paralyzing in the thought that the responsibility for these horrors lies directly at our own door. Indeed the punishments which follow uncleanness everywhere and at all times are so tremendous that it seems as if the Creator of purity must Himself be filled with an overpowering hatred of all things impure. We do not yet call it a crime to be unclean in body, nor even in mind; but what crime in all the calendar brings upon itself swifter, fiercer vengeance than does the neglected sewer which sends diphtheria or cholera into our homes, or the impure thought which weakens and degrades the whole organization? Surely if Life teaches anything, it teaches ceaselessly and with unflinching force the lesson of cleanliness; that cleanliness of mind and body whose outcome is the purity which shall see God.

#### Editorial Correspondence. Among our Graduates.

(CONCLUDED.)

Few at the North have any idea of the true simplicity, thrift and moral health that exists among the better class of Southern blacks. There is no *Negritude* in their lives and homes.

Generally the best houses are owned by mechanics and are the result of hard work, economy and good character. I remember one who, ever the need of incidental training for the race. Skilled labor will push them forward as nothing else can. Out of the 5000 colored men in Mississippi, Co. it is estimated that only 500 own farms or city houses. Where there is enterprise and progress the Negro shares in it and gets his portion. I attended three churches on Sunday, May 26th. Rain reduced the congregations, for it is admitted that colored people as well as white, don't turn out in bad weather. I saw many of the people and found that like others in the South they were prejudiced against Hampton on account of the labor system, which they did not understand, thinking it to be a source of personal profit to the Principal. Their ideas were derived either from students dismissed from Hampton for bad conduct, or from pupils from other institutions who had taken pains to delude them.

It was pleasant to meet so many simple, earnest, hard working people. The Rev. Mr. Whitehall's congregation have been for years worshipping in the basement of a new building, waiting to go "up stairs" till they could raise the \$14,000 necessary to complete their church. They are pushing vigorously for the money. Rev. Mr. Morrell and his people have a similar task on hand. They and the large majority are Baptists. I visited a small but flourishing Presbyterian church, and talked freely with an intelligent group of Negroes after the service.

They do not feel perfectly comfortable since the "massacre" of 1891, feeling whether with or without reason, is manifest; they confess to a want of confidence as to fair treatment when they are opposed to the whites. It looks as if Mahan's power had greatly decreased in this region.

Comparing city and country schools, an experienced observer said that a teacher could do ten times better teaching in the country than in the city. In the former he could reach and influence the people far better, and they are not affected

by many of the injurious influences so powerful in cities. A local preacher stated that in some localities the poverty of the people was so great that the girls of large families would sacrifice their character to get clothing. The blacks incline to settle in neighborhoods, but often go off by themselves to get the land they wish. Often they buy and overestimate their power to pay, and after working for years are obliged to forfeit all they have earned. Sometimes they are taken advantage of by whites sometimes by their own ignorance. A colored democrat declared that political societies and whiskey were the curse of his people. "Societies," he said, "wither their feet keep them from praying for their churches; politics make them crazy. If a monkey were to make a political speech, they would go to hear him." It was admitted that the colored people were not sufficiently united, did not care enough for each other, did not work together for their common benefit. Mr. H. C. Slaughter, Supt. of Schools for both races, Danville, Va. Good houses are provided for all,—comfortable, airy, well black-boarded, on the whole remarkably good. I visited three colored and one white school. A hundred black youths from here have been to Hampton. Not all have succeeded, but our graduates are a moral and educational force in the community. Eight of the hold leading places as teachers and have won universal respect. Their work is good.

For many years (till 1880) the Friends' Freedmen Association kept up a very successful teaching. Mr. and Mrs. Geo. Dixon, who taught in it, educated at first a number in Hampton, who, now in State employ, are the best kind of practical missionaries to their own people.

Only a few normal and collegiate institutions are Northern teachers now needed; the work of educating the Negro is being done and can best be done by graduates of the race for itself. I was glad to find everywhere that Hampton graduates, after a few years, are, almost without exception, property holders. Teaching alone will not enable them to do this, but by farming or some other work in the summer they can lay up a little every year. One in Danville has an acre lot on which he is raising "truck" to sell in the city. Those in the place own around of from 25 to 30 acres; they teach six months and farm the rest of the year. City sessions are ten months in duration, but there high farming on a small scale is both efficient and profitable. Those who have learned trades are the most fortunate of all; they accumulate more quickly than others. It was pleasant to meet in a social way one afternoon, a party of the graduates with their wives and children, who had prepared a refreshing table of good things. Such cheerful, hopeful, capable workers will in time bring about great results. Lynchburg is said to be the most hilly city in Virginia. Danville stands next. Both are growing rapidly, the tobacco crop being their chief interest. The former has nearly twice as many inhabitants as the latter, and 23,000—nearly one-half of whom are colored.

Lynchburg's progressive spirit is well shown in her efforts to have a perfect system of education. The Superintendent sent to Northern cities to examine the best schools, and after thorough investigation he made recommendations which were adopted. This city is said to lead Virginia in school work, and is ahead of many Northern cities. Excellent provision is made for both races. I visited the new building for colored schools, which is the best thing of the kind in the State, (three stories in height, with four rooms on each floor), and found five of the teachers from Hampton. The most advanced and the primary classes were the best, both taught by our graduates, and their work is appreciated. Great progress has been made in five years. In 1880 there were recorded 12,000 "absences and tardinesses" in the school year. This year 2,300 children are enrolled, and there have not been 600 such entries. Mr. Glass, Superintendent of city schools, is a man of superior capacity, and of enthusiasm, and has the confidence of all. Like many other Democrats whom I met, he is heartily interested in the colored race, and is working for them with all his heart and strength. Major Kirkpatrick, a leading lawyer and late slave holder, has the same spirit, and is now a trustee of Howard University. Lynchburg's generosity to the cause of education is her chief glory. The city is a beautiful situation in a mountainous region within sight of the Peaks of Otter, and the eye is fascinated with the views presented from the various points to which hospitable friends are ready to guide the traveler. Here the race question is at its best, so far as I have seen. Colored men here in several instances own business stands in the best streets. They are not excluded and pushed out as elsewhere, but quietly and comfortably hold their own along with their white neighbors, making no undue push and no unpleasant pressure, and are not

complained of. They have thousands of pretty houses won by thrift. I visited a very nice grocery with \$1,000 worth of stock, started by a young colored man with \$50 capital. He was doing a good business, and lived nicely in an attractive house attached to his shop.

I enjoyed meeting for the first time Mrs. Orta Langhorne, whose name is familiar to readers of the WORKMAN. She has a quiet, lovely suburban home, with a delightful mountain view.

Farmville is the seat of the new Normal School for girls (white), presided over by Dr. W. H. Kuffner, assisted by Miss Bush, formerly of Connecticut. The students are a charming company of about one hundred young ladies from all parts of the State. It was opened but a few months ago, is overgrown already, and should be at once doubled in size. The future of this State is largely in the hands of her teachers, and this school will certainly supply her with good ones. Virginia has made no better investment than in starting this Normal School. I had the pleasure of meeting Dr. Ruffner, who is the father and founder of the first State system of free schools opened in the South after the war. One of a giant could have done it. He is the educational Ajax of the South. Here lives also Judge Watkins, a trustee of the Hampton Institute, a Southern man and a Democrat, who is looked up to with peculiar respect and reverence by all classes, and well deserves it. The colored race has no better or more useful friends than such men as he. There are few men anywhere so pure and noble-minded as this excellent judge.

Miss Lucy Boulding, a Hampton graduate, teaches a large graded colored school here, assisted by a fellow graduate who is abundant in the neighborhood of Farmville and are making their mark upon the people. I had, as elsewhere, a meeting with them, and urged upon them the need of occasional meetings for discussion of their work and for mutual encouragement. Colored teachers are doing a good work for Virginia and the South. Their school rooms are usually good, but, beyond the necessary black boards, are very bare. I cannot but wish that friends who read this would collect pictures to furnish the walls of these school rooms. The full page illustrations of *Harper's Weekly*, judiciously selected, could be placed around the wall just above the line of black boards, and make a good effect. Any good pictures would be welcome to children who see nothing of the world.

All who sympathize with the "Lend a Hand" idea are invited to co-operate with us. S. C. A.

#### Laws of Virginia.

How much even the "Conservative South" can change in a couple of hundred years is seen on inspection of the old laws of Virginia, as quaint to modern ears as the Blue laws of Connecticut. A friend sends us a specimen which he has come across in his legal researches.

March, 1623.

That whosoever shall absent himself from divine service any Sunday without an allowable excuse shall forfeit a pound of tobacco, and he that absent himself a month shall forfeit 50 lbs of tobacco.

That whosoever shall disparage a minister without bringing sufficient proof to justify his reports, whereby the minds of his parishioners may be alienated from him, and his ministry prove the less effectual, his prejudice shall not only pay 500 lbs weight of tobacco but also shall make the minister so wronged forgiveness publicly in the congregation.

That no man dispose of any of his tobacco before the minister be satisfied, and upon pain of forfeiture double his part of the minister's means and one man of every plantation to collect his means out of the first and best tobacco and corn.

THE BEASTLY USE OF SPENDING MUCH POWDER IN VAIN.

Act XII, March, 1655.

Whereas, it is much to be apprehended that the common enemies, the Indians, for opportunity serve, would suddenly invade the colony, to a total subversion of the same, and whereas, the only means for the discovery of their plots is by alarms, of which no certainty can be had in respect of the frequent shooting of guns in drinking, thereby they proclaim, and as it were justify, the beastly vice spending much powder in vain, that might be reserved against the common enemy.

Be it therefore enacted, that what person soever shall, after publication hereof, shoot any guns at drinking, marriages, or funerals may be accepted, that such person, etc. be fined 10 lbs of tobacco.

"The vice of spending much powder in vain" is not confined to old or new Virginia, we fear; even a Senator may sometimes wish he had not wasted so much against the Indian.

# SOUTHERN WORKMAN.

TWELVE PAGE MONTHLY.

(Reduced to eight pages from July to October)  
Printed on the Normal School Steam Press  
by Negro and Indian students trained  
in the office.

S. C. ARMSTRONG, }  
H. W. LUDLOW, } Editors.  
M. F. ARMSTRONG, }

REV. H. B. FRISSELL, Chaplain,  
MR. W. N. ARMSTRONG,  
MRS. ORRA LANGHORNE,  
MISS ALICE N. BACON,  
F. N. GILMAN, Business Manager.

Terms: ONE DOLLAR a year IN  
ADVANCE.

Entered at the Post Office at Hampton, Va., as second  
class matter.

Subscribers are reminded that the "Work  
man" is reduced to eight pages during the  
next four months, resuming, in November, the  
twelve page form.

As we go to press, flags are at half  
mast, the draperies of mourning are  
upon land and sea, honest evidence of  
respect for the dead and sympathy for  
the living meets us on every hand, and  
it needs no words to tell that the season  
of bitter trial for an heroic man is over.  
On the morning of July 30, Gen. Grant  
died, most peacefully, at Mt. McGregor,  
New York, having won his final victory  
through a patient endurance of suffering,  
which has completed and purified his  
fame. The South is as ready as the  
North to acknowledge his greatness  
and to claim him as fellow citizen, and  
his hope that sectional feeling might be  
buried with him, seems on the way to  
fulfilment. He will be followed to the  
grave by all the honors that a united  
nation can bestow, and that he lived to  
know this must always be a cause for  
gratitude.

## The Southern Press. Both Sides.

We find in a paper read by Rev. J.  
Mitchem, Pastor of the A. M. E. Church  
in Logansport, Ind., before the "Pastoral  
Association," a summing up of  
what he considers "hopeful signs of  
rapid progress in the right direction"  
for his race. His facts are sufficiently  
accurate, with perhaps the exception of  
his estimate of colored authors, and  
mean, we believe, all that he claims for  
them.

"1st. The doors of the public schools,  
high schools, normal schools, colleges and  
universities, in the East, West, North and  
South, are open for the reception of the  
colored people, and the willingness with  
which they enter them and the eagerness  
with which they pursue the studies assigned  
them.

"2d. The large number of secular and  
religious weekly and monthly papers that  
are edited and published by them.

"3d. We have now more than one hundred  
colored men who are editors of secular  
and religious papers in the United States,  
whose productions compare favorably with  
many of the papers that are published by  
the white people of this country.

"4th. We have scores of colored men and  
women who are authors of books which are  
read with pleasure and profit by thousands  
of the best and most intelligent people of  
this nation.

"5th. We have also between six and seven  
hundred colored persons employed in the  
different departments of the State and  
general government. I think that the re-  
commendation and the appointment to those  
places of trust and honor are some proof  
of their fitness for the places assigned them,  
and also the large amount of wealth which  
they have accumulated is a sign of progress.

"6th. In the year 1860 the colored people  
of the South, who were slaves, did not own  
an acre of ground and not a dollar's worth  
of taxable property. These same people in 1880, in a  
period of less than seventeen years, were  
paying taxes on something over \$100,000  
worth of property. In the year 1860 these  
same people had no right to know the  
alphabet, but now nearly two millions of  
them can read the Holy Scriptures. This  
means progress in the right direction.

"7th. According to the United States  
census of 1880, there were enrolled in the  
public schools 858,912 pupils and 15,834  
colored teachers. In the year 1860 there  
was not a legal marriage among them; now,  
every marriage is legal, with better preachers,  
better churches, and purer and better morals.

"8th. The last thought that we desire to  
call your attention to as a hopeful sign of

progress, is the great army of Christian men  
and women, made up out of nearly all the  
denominations in the United States, who are  
responding to the call of the gospel of Jesus  
Christ, to give of their money and labor and  
prayers to help us in this grand work of  
conveying the light of Christian civilization  
into the homes of the freedmen of the  
South, and also into the homes of those  
in the North. Truly Ethiopia is stretching  
out her hands unto God, and God is raising  
up friends for us in the East, West, North  
and South, and princes are not only coming  
up out of Egypt, but they are already here."

The *Christian Recorder* (colored), in  
an article entitled "A Generation of  
Freedmen," gives, from its point of  
view, a similar resume, which, besides  
being comprehensive and thoughtful,  
has a dignity and freedom from ex-  
aggeration which do not usually char-  
acterize such articles. It is good reading  
not only on account of the subject  
it treats, but also because the matter is  
well and strongly handled.

"The boy one year old when Abraham  
Lincoln pronounced the freedom of the  
American slaves is now twenty-two years  
old. Inside of that time thousands of colored  
persons have been born and have reached  
maturity, many of them having become  
heads of families. The responsibilities that  
fell upon their fathers with a blow between  
which and slavery there seemed to be little  
to choose, are borne by them with manly  
dignity. In this generation great changes  
have taken place in the bearing and actions  
of the race; yet only such changes as we  
wise as to point out, indicating what may be  
expected in the future. Ripeness of man-  
hood to any great extent could not be ex-  
pected in one generation. It is true that  
many of our previous race circumstances  
had been such as to develop something of  
the proper feelings for the activities of  
American citizens, but the development in  
the past twenty-two years has been great  
and rapid. There are now quite one hundred  
thousand colored persons of both sexes  
possessed of respectable training, and the  
schools are turning them out daily. This  
should give to the generation just entering  
life impulse as will enable them to make  
a thousand times more of life than we  
have done. They are removed a generation  
from the scenes of bondage, and are almost  
out of the transit movement from slavery to  
unquestioned freedom. Much better homes  
greet and keep them; much better environ-  
ments surround them; much better teachers  
teach them; better hopes inspire them;  
better purposes actuate them; better morals  
energize them; better conceptions of Christi-  
anity guide them.

"Men and women begin new homes and  
new business relations now who were  
schooling at the proper age, and who will  
give their children schooling at the proper  
age. There is quite a number of colored  
men taking colored boys into the trades as  
mechanics. The vast business of our be-  
nevolent, educational and religious institu-  
tions has given our men a somewhat com-  
prehensive business character. We have  
had considerable experience in statecraft  
and jurisprudence. Now all these facts ap-  
pear to us for a demonstration of manliness  
and womanliness far ahead of that of twenty  
years ago. The actions of the present  
are not to be based on the conditions of  
those days, but on those of the present.  
Though there may not be many men among  
us possessed of the great powers of Douglass,  
Payne and others, yet the sum of our power  
should be much superior to those of their  
days."

More than one Northern newspaper  
has commented upon the address which  
furnishes the text for the article given  
below, and it is interesting to notice  
how nearly the views of able men,  
whether of the North or the South,  
coincide when the questions considered  
are practical rather than theoretical.  
We have not the space here to quote  
from Northern newspapers, but the edi-  
torial which we take from the *North*  
*folk Landmark*, headed "Our Colored  
Friends," might, with a few changes in  
form, easily claim a New England  
origin.

"The Rev. J. H. Pollard, of one of our  
colored churches, was good enough to send  
us a copy of an address of his own recent  
delivered before the pupils of a public  
school in Petersburg; and we are glad to  
send from the text of this that he gave them  
sound and excellent advice. His note, cov-  
ering the enclosure, deserves a fuller notice  
however; than his address, and we give it  
a place in our columns, as follows:

"158 QUEEN STREET,  
NORFOLK, Va., June 23, 1885.

"Mr. Editor—Enclosed 'an address de-  
livered in Petersburg, Va., May 25th, 1885."  
The work was put up by a little colored boy,

14 years old, and hence the mistakes. I am  
not a politician, and in no sense a leader of  
the colored people, but I do believe that the  
colored people are beginning to realize that  
their interest is your interest, and that your  
interest is their interest. All the people in  
the South should have a good government and  
a development of our national resources. We  
have been enemies long enough. It is time  
now that we should be friends. Yours, very  
respectfully,

(Signed) J. H. M. POLLARD.

"The sentiments of our correspondent are  
excellent, and we are glad to tell him that  
the white people have never been enemies  
to the blacks. A review of the relations of  
the two races shows that. As slaves, the  
Negroes of the South emerged from barbarism  
into Christian civilization, and they  
are the only people who, under such circum-  
stances, and the former slaves, and made it their  
business to inflame animosities. In one  
word, so far from being 'enemies' of the  
friends. This is now beginning to dawn on  
the minds of our colored citizens. They see  
the Democrats in power and their privileges  
respected. They understand that they would  
not re-enslave them if we could; and that  
slavery, in God's providence, has disappeared  
from our system of government. With this  
state of facts before us we are not surprised  
at the sentiments expressed by our corre-  
spondent. It is true that the white people  
and the colored people have a common in-  
terest. What hurts the richer people in a  
State or in a community, hurts the poorer.  
The employer cannot suffer without its being  
felt by the employee. One has of the popu-  
lar cannot be oppressed without its re-  
acting on the other; and the white people  
understand these things perfectly. They  
began to pay an enormous school tax in Vir-  
ginia before they were required to do so,  
and the Negroes became the beneficiaries.  
They cherish and foster the system to-day.  
The Commonwealth contributes to the sup-  
port of the admirable School conducted by  
General Armstrong; and the white people  
of this State are sincerely anxious to see the  
colored folk improved in mind and morals,  
in worldly estate and in spiritual enlighten-  
ment. We are not enemies to the Negroes.  
We are their real friends; we have never cal-  
culated or flattered them for selfish ends;  
our candor in dealing with them is of itself  
evidence of our sincerity. Let our corre-  
spondent, who has the advantages of educa-  
tion, make these things plain to his people;  
and the more he cultivates a kindly feeling  
between the races the better will be the dis-  
charge his duties as a pastor and a citizen."

One of the colored journals decides  
that the cause of the Negro is not hope-  
less white such incidents as these con-  
tinue to occur.

"An exchange says: A prominent colored  
clergyman of Montgomery is said to have  
willed his property, valued at \$12,000, to his  
former master."

Another says: Steve Wright, in saving  
property of white people at a fire in Au-  
gusta, Ga., lost his life. The white citizens  
have purchased a monument for his grave,  
and at a recent meeting have decided to buy  
a house and lot for his widow. This is kind-  
ness and recognition of true heroism. We  
will have to change our opinion of the  
Southern white man."

The relief of turning from the re-  
cords of political squabbles and  
intrigues to such sound common-sense  
work as is reported below, is like step-  
ping from a close over-heated room in-  
to the teeth of an ocean breeze.

The more one considers the South-  
ern situation, the more the temptation  
to defy "Work" grows upon one, un-  
der the plea to assume the proportions  
of a panacea for all the evils bequeathed  
to the present generation by an indol-  
ent, falsely ambitious past.

Mr. H. T. Roffe, superintendent of the  
Georgia Machinery Company, Atlanta, in a  
letter to the *American Machinist*, gives  
an account of a very promising beginning of  
the industrial school in that city. He writes:

"You will, no doubt, be pleased to hear of  
our efforts to start an industrial school in  
this city, and of our complete success. Last  
January a few gentlemen, including Mr.  
L. C. Chastain and Mr. Elias Halman, met  
together and proposed to open a night school  
for the benefit of the working lads in this  
city. It was decided that the school be open  
in February and continued until the end of  
April, three months as an experiment, and if  
successful to reopen again next October. Mr.

S. M. Inman, Mr. W. C. Morrill and other  
gentlemen subscribed \$1,000, and I offered  
my services to take charge of the school  
with Mr. F. Ludlow and Mr. William F. Ott  
as assistants.

We bought a lathe, drill press, vices, car-  
penters' and pattern makers' tools, drawing  
instruments, smith's forge and other tools.  
We hired a room with steam power and light  
and started work in February. Our school  
nights were Monday, Wednesday and Friday  
in each week. We had room for twenty  
boys, but so many applying, we increased the  
number to twenty-five. Monday and Wed-  
nesday nights we had general work, and on  
Friday nights, we rigged up some skeleton  
benches on the work benches, and gave in-  
struction in drawing and geometry. Most  
of our lads were apprentices in shops, rail-  
road and private; some had been in the trade  
three and four years, and some as many  
months, consequently we had to find out  
what a boy could do, and gauge the work to  
suit. We had one on a valve seat (I had an  
old steam pump sent up to practice on); we  
had three of our best lads on surface plates,  
some filing and chipping; one on the drill;  
another on the lathe; one or two on the  
forge, and some on the patterns and core  
boxes. The boys stuck to work in splendid  
style, and I would like you to see some of  
the nice little jobs they turned off every side.

It is almost impossible to find a first-class  
American vice-hand; one that can use a ham-  
mer and chisel and file properly. They can  
all run a lathe, planer and milling machine,  
but put them on the vice and they get left,  
therefore we made vice work take the first  
place. We gave a boy a cast iron cube about  
1 1/2 inches; he had to take a hammer and  
chisel and take a light chip off every side,  
making the cube as perfect as he could. No  
"choking" hammers were allowed. We then  
gave him a 12-inch flat bastard file, and taught  
him how to hold it, and also to file properly.  
No forefingering on top of the handle was al-  
lowed, neither was the point of the file used  
to take out the round place in the centre of  
each face in the cube. It made me tired to  
see how some of the lads twenty years old,  
who had been at the trade three or four years  
(in a good shop, too), picked up a file, hand  
on top of the handle, and watch them seasaw  
up and down with elbows about a foot away  
from their bodies. They thought they could  
file, too, but they don't think so any more.  
Anyhow, we taught them all we could in the  
time allotted until the end of April, and I  
can assure you the lads thoroughly appre-  
ciated our current endeavors.

The noble-hearted gentlemen that gave the  
money desired to run the school another  
month. We did so, and ran it up last week.  
When we had the school thoroughly on its  
way, we invited the leading men in this city  
to come out and see us. Several of them  
came, amongst whom was Mr. Henry Grady,  
of the *Constitution*, who will, through his pa-  
per, make a great effort to increase our facili-  
ties next fall, so that we can accommodate  
100 boys. There is no doubt that our little  
attempt will result in a first-class technical  
and industrial school in this city. When the  
people of Atlanta make up their minds to  
have anything they are going to get it.

The Democratic party has still to face  
and dispose of such charges as the fol-  
lowing from the *Virginia Star* (colored)  
and the almost superstitious readiness  
with which a majority of the colored  
population still lay all their misfor-  
tunes, from epidemics of chicken cholera  
to loss of office, at the door of that  
mysterious "Party," shows that Re-  
publicanism has not even yet fatally  
overdrawn its account. What clever  
leadership can still accomplish in the  
South, was shown—with a good many  
exclamation points—in the recent con-  
vention at Richmond.

"When the Readjusters and Republicans  
first went into power they found our public  
schools in a deplorable condition. Teach-  
ers were paid in script and the shavers and  
money sharks bled them to death. With a  
lower tax rate by an honest administration  
of the financial affairs of the State, they  
doubled the number of schools, teachers and  
pupils. They paid the teachers in money  
and the era of good times dawned.

Less than two years of Democratic rule  
has reduced the number of schools, teachers  
and pupils by one half, while the teachers  
are on the verge of starvation—their  
pockets full of script."

"When Democracy triumphs the public  
schools languish.

When Republicanism triumphs they flourish.  
Let all poor men, white and colored,  
who are too poor to pay the schooling of  
their children, note the difference."

DIED—In Norwood, Nelson Co., Va., April  
3rd, Miss Millie A. Bennett, class of 1878.  
She was a native of Wilmington, N. C., and  
has taught ever since her graduation, at Nor-  
wood.

### Letters From Hampton Graduates.

STUDIES AND STRAWBERRIES. A CALL TO AFRICA. FROM DANVILLE, LOVE OR FEAR.

#### STUDIES AND STRAWBERRIES.

Another married pair, both Hampton graduates, are fortunate in being partners in their work of teaching as in other cares and pleasures of life. And in all their partnership they seem to walk together as if well agreed.

The husband says:

—Va., April, 1885.

My dear Miss C.:

We opened our school on the first Monday in September, 1884, with an enrollment of between sixty and seventy pupils, which number soon increased to one hundred and sixty-one; but of course you will know that the enrollment of a rural district school (colored) is usually almost two times the size of its average attendance. During the third, fourth and fifth months our attendance averaged about 92.5 and after that time begins to fall off gradually until about the 10th of May, when strawberries begin to ripen, and then our enrollment is between seventy-two and eighty; our average attendance between forty-eight and fifty-four; when suddenly a call is made for strawberry pickers and the fields gain forty or forty-four of our attending forty-eight or fifty-four, the school must necessarily close.

This time the school has been larger than ever before, work has progressed with less friction, pupils have behaved better, new studies have been introduced, commendable progress made in them.

The studies introduced were astronomy, history and philosophy. Those who were studying history when I came here, have all left school and are now, for the most part, battling with the problems of every day life. Five went to Hampton—four of whom are still there—one to Wayland Seminary, and those who have begun the study this term, had oral lessons last term from the lips of their teacher as a preparation for the book.

Experiments in Natural Philosophy are both amusing and interesting to them; upon a card bent at each end, by the breath, knocking a card from under a coin held upon the finger, shooting a tallow candle through a board, placing one-half of a sheet of writing paper over a full glass of water and inverting it, the siphon and other experiments equally interesting. On the whole, we have quite an interesting school. Playing bandy with the boys and jumping rope with the girls are active sports in which I take part often.

We have formed a literary club, composed of some of the pupils of our school and some other young people of the community, and it is quite successful so far. It has given one public entertainment, which was, give public entertainments, composed of singing, recitations, or select readings and debates once every month.

On March 29th I had the pleasure of attending the wedding of two Hampton graduates, namely, C. R. Creekmur to Grace J. Hopper, at Deep Creek, their home. The bride was handsomely attired and the affair passed off nicely. Both are still teaching. With great respect, yours truly:

Mc.

The wife writes:

My dear Miss C.:

I am my husband's amanuensis, but he is good enough to allow me space in his letter for a few words to you with my own name appended, in fact, he thinks the letter would be incomplete without such addition.

On the 3d of April we finished our seventh month, and on the 6th all of the teachers of Norfolk County assembled at the Court House in Portsmouth, in compliance with a call from the County Superintendent to attend the Teachers' Institute to be held there for one week. There were about thirty teachers present; not more than three I think, absent; there were more colored than white teachers present. A great deal of very creditable work by pupils was on exhibition; the prize offered for the best was the medal which had been awarded our County, at the Superintendents' Conference, held in Richmond in March. The prize was won by a Berkeley school, (white). Only a very few of the colored teachers knew of the competition for a prize, and only the few had work on exhibition. What a wonderful thing! The colored teachers informed themselves into an organization known as the "Norfolk County Teachers' Association." Among other things we decided to purchase suitable certificates for

prizes for different exhibits from our schools which shall be held for yearly competition, the winning school each year carrying off a prize. While the Institute was in session we learned that only those schools which had not finished the seventh month could remain open longer, all others must consider their schools closed. Cause—no money! due to bank failure. As we had finished our seventh month our public school was closed, but the people would not allow it to stop a day. The Educational Club, (made up of the people, for the people, by the people) called a meeting at once and decided to employ us both for at least two months longer; (last year they employed Mr. McNeil only and they pay promptly and well; so you see our school is still going on, and we have quite a full school. The weather is so continuously and unusually cool that the strawberries which usually begin about now and a little later, to call the children, haven't even blossomed. We have fires nearly every day and evening, and they feel decidedly comfortable. I am enjoying this weather though, and am feeling a little better now than I have felt all winter, and especially the early part of the fall, then I was quite unwell, and was at times unable to be at school.

I have told Mr. McNeil that it seems to me very providential that we are not both sick at the same time, as it seems to have been thus far arranged, we can be each other's nurse, (that is allowable, isn't it?) I've an idea that my husband makes a better nurse than I, he is so very gentle and patient and seems to think of the right thing at the very rightest time for tempting the appetite, etc.

I hope you are well. How I wish that I might look forward to seeing you this spring as last; I'd enjoy it so much. The Alumni Reunion of '84 will ever be a green spot in our memories.

Truly yours, D.

#### A CALL TO AFRICA.

The work in Africa grows from year to year more inviting, and it is no wonder that the faces of some of our students are turned in that direction rather than toward the more familiar home field. There is enough to be done either here or there, but perhaps special words of encouragement should be given to those who are willing to take the unknown risks inseparable from the life of an African missionary.

Richmond Institute.

Miss — I cheerfully respond to your circular, yet I feel that I owe you an apology for not replying earlier. Owing to a press of study, I was compelled to delay my response. I am now pursuing the studies of the last year in the Academic Department, from which department I shall graduate in May. Our Theological Course having been extended two years longer, I shall not be able to finish from that term. If I spend two years longer in that department, I shall receive a degree. But I have concluded that I must do something for Christ, and that very soon, as the fields are white and waiting for some one to thrust in the sickle. I am aware of the fact that the better preparations we make for our work, the better we can do it, and the more good we will undoubtedly accomplish; but when I think of the "Land of Darkness and Sin" and of the thousands who are passing from the shore of time ignorant of the great plan of salvation and ignorant of the One who alone can calm their troubled consciences, I am compelled to believe that I can do something for the good of those who are anxiously waiting to hear the gospel and to be saved on its terms. I look forward with pleasure to the time when I shall take my stand, God so wills, on the shores of the "Dark Continent" and tell the poor heathen of the love of Jesus.

My school term has been pleasant so far, and I am glad to say that I don't anticipate its being otherwise. Resp't. J. W. K.

#### FROM DANVILLE.

A line from one of the Danville teachers is interesting in connection with Gen. Armstrong's letter from that place.

March 18, 1885.

Dear Miss C.:

This is quite late for a card or a letter that should have been written in October last, but I hope you will pardon my delay in answering your letter. I have been teaching school in one of the public schools of

Danville ever since the first of September. There are several of the Hampton graduates teaching in the same school. Mrs. D. and myself teach the first primary grade. When school first began and throughout the winter my children numbered from forty-eight to fifty daily attendance. Most of the factories have begun work and many of our children are leaving school. I like the work of teaching very much. W. teaches in the same school that I do and has been for two years. I attend Sunday School every Sunday when it is pleasant weather at one of the Baptist S. S. I have a small class of little girls to teach. My brothers G. and H. are teaching school.

It seems rather strange to be at home this winter teaching when I have been going to school so many winters myself for quite awhile. When I was at Hampton and Miss Hyde was telling us how to teach little children, it seemed to me as if it would be very easy; but I find it to be harder to put it in practice than to think about what I could do.

Hoping you are in the best of health, I am very respectfully yours. S. A. I.

#### LOVE OR FEAR?

We wish that all our teachers took the view of discipline which is embodied in the following letter. To rule by brute force is a simple matter enough, but it is a system which reflects small credit upon those who employ it, and with but few exceptions, is as unfortunate in its results for the teacher as for the pupil.

—Va., Nov. 30th, 1884.

Miss —

It affords me a great deal of pleasure to report to you. I feel under obligations to the Hampton Institute because it was my turning point of life. As I was not teaching in the same place last winter I did not receive your letter until in the summer, but I have not failed to report to Gen. S. C. Armstrong every winter since I left Hampton. I am now teaching Mt. — school in Appomattox Co., Va. The school is not a large one, but is progressive. We have a good school-house, and I have some very interesting scholars, several who say that they desire to become teachers. I am trying hard to learn how to teach. I am getting better pay for teaching than I have ever received before. My aim in life is to do all that I can to improve the condition of my people both mentally and morally. I feel like a very small teacher, but the people say that I am a good teacher. Oh that I could conquer or dispel ignorance. It is hard for any one who does not know, to imagine the condition of some colored children in some of the rural districts. It makes me feel very sorry sometimes when they come to me, and I scarcely any knowledge of anything. They come out from their homes influenced by surroundings and do not know how to behave or do anything right.

The principal instruction that I receive from their parents is to whip, whip, whip them; and they think that I am not teaching if I am not whipping. I try to rule by love and my scholars love me in return, and I cause them to do anything that I tell them to do without whipping i. e. after I have taught them awhile. Some parents think that their children ought to be educated in a few weeks, and if they cannot see speedy results they become dissatisfied. I try to do that which I believe to be right and best. I have a great deal of walking to do, it makes me very tired sometimes; but my heart and mind is on teaching and it does not make me tired. In vacation I tend a small crop, and go to Teachers Normal Institute. I think that I am getting along quite well.

### SOUTHERN SKETCHES.

BY ORRA LANGHORNE.

#### Aunt Pokey's Son. A Story of the New South.

"Who do you think is in town, mother?" said Isaac Randolph, the intelligent-looking young colored teacher, who had just graduated at Dartmouth and received an appointment in the Southern Institute, established by a Northern missionary society at Richmond.

Mrs. Pocahontas Randolph, better known as "Aunt Pokey," a tall, majestic-looking African, with the clear-cut features of a Greek statue, tossed her turbaned head and shook the great gilt hoops in her ears, as she went on huttering a pile of batter-cakes, and answered indifferently, "La, chile! I dunno. Dar is so many folks a comin' and a gwine dese days, I nudder know who will be a turnin' up nex'. Mis' use ter tell we, de Scripser said de debil would be let loose a thousan' years, an' sometimes I does think dis is de time. But come on, honey, an' eat yo' supper," added Aunt Pokey, briskly, "de cakes is gittin' cold, an' dis here sassaige is jes' done to a turn."

The little shop where Aunt Pokey sold confectionery, and the delicate breads and cakes, which many Richmond people thought only her hands could make, was very tidy and comfortable, with its tempting wares tastefully arranged.

The gas light in the trim parlor behind the shop reflected from the well polished stove, the carved furniture, the little mirror on the mantel, and the frames of several gay pictures which adorned the walls.

The young professor laid his paper on the book shelf beside him, and seated himself at a table covered with a white cloth and set with much taste, displaying savory viands on fanciful china.

It would have suited Aunt Pokey's tastes and habits much better to take a seat beside the cooking stove in the adjacent kitchen, helping herself to food from the griddle and the frying pan as she desired, but since the return of her son, of whom she stood a little in awe, from the North, she had been careful to set the table regularly as he requested.

As she filled the Professor's plate, and gave him a cup of aromatic coffee, the little bell in the shop tinkled twice. Aunt Pokey glanced sharply through the door into the upper part of the door, which opened from the parlor, then rose quickly to answer the bell. Having waited upon her customer and given the dusky urchin who should have done so, a vigorous shake, for being out of place when wanted, she returned to the table, saying sternly, "I is got to skin dat boy yit! Ei he was my own flesh an' blood I would ter' him all ter pieces, an' bein' as he aint no kin ter me, and is a orfin nigger, I is bound to put up with him. Dar aint no 'pudence to be put in none ur dem boys! Dar aint no young niggers been brought up right sence de here freedom come in de '60s. De Professor smiled at the stout matron seated herself and resumed her supper, still shaking her head and uttering vengeance on "dat boy."

As he turned away from the table and reopened his paper, the young man remarked quietly, "You did not seem to take much interest in what I had to tell you, mother—Mrs. Conner is in town."

Aunt Pokey hastily put down the cup she was lifting to her lips, raised both hands, and ejaculated, "Bless de Lord! Oh my Lord! Whar' or' yearth is she? Does you know fur certin' she is—here, Jemms Isaac?" Aunt Pokey, according to the mood she was in, addressed her son promiscuously from "Ike" to "Furressor Randolph." When much excited she was apt to say "Jemms Isaac."

"Does you know Miss Isabella is really in dis here Richmond? Has you seen her?" she continued in an agitated voice.

She is certainly in town," said her son gravely. "You know our principal is boarding on the hill near the Infirmary, and when I called at the house on business this afternoon, I saw trunk in the hall, marked 'Moncure.' The name attracted me, because you always seem to think so much of your old master's family, and I was about to make some enquiries when an old lady passed through the hall, I recognized her at once, though it is so long since I left the plantation, and she is very much changed. Probably that picture you prize so highly aided my memory. I heard her tell the baggage man, who was waiting at the door, that she would stay there, and asked to have her trunk carried up to her room." She seemed quite feeble and worn, and I presume she has come to town for medical attention."

Aunt Pokey appeared to use her own expression, greatly "flattered" by her son's information. She drank her coffee absently, seemed to forget that she had filled her plate with batter-cakes, and sat talking to her father in broken sentences. So great was her abstraction that she even failed to notice a moppet-headed little black-moor, serve a moppet-headed little black-moor, (Continued on Page 91)

### Indian Department.

ELAINE GOODALE, *In Charge*

Regular Contributors:

HERBERT WELSH, *Cor. Sec'y Indian Rights Association,*

ALICE C. FLETCHER,

REV JOHN J. GRAYATT,

MRS. A. S. QUINTON, *Gen'l Sec'y of the Woman's National Indian Ass'n.*

REV. SHELDON JACKSON, D. D.,

JAMES MCGLOUGHLIN,

JOHN G. GASMANN.

MISS FLETCHER'S "Historical Sketch of the Omahas" gives a definite account of the mental and material progress of a representative tribe.

If you want anything larger you have to give time to it. If you want an education, you have to give time to it; and to make of yourself a good worker, a good citizen, a person that the world needs, you will have to give time to it. *Frank La Flesche, Omaha.*

The Indian Rights Association publishes a pamphlet giving the history of the Crow Creek affair, through the "documents in the case." Both sides are fairly represented and the comments of the western press furnish the best evidence against the reasonableness of their complaint.

FIFTY years ago, Rev. T. B. Williamson began to work among the Dakota Indians. To-day we meet with representatives of eleven Indian churches, and are able to talk with the pastors of those churches in our own tongue. The Presbytery of Dakota covers a wide territory; there are 30,000 Indians in the field. Men and women are needed as never before. *Rev. John B. Pomeroy.*

### Are You Civilized?

The absolute ignorance of intelligent men and women about Indians is a fact that slowly forces itself upon an educated consciousness. Where we find prejudice and narrowness, we usually find it deep-rooted in ignorance—ignorance dense, solid, and apparently hopeless. Many of us cherish fables as absurd and believe in them as implicitly as did that little girl who exclaimed on seeing her first real live Indians: "O, mamma! Didn't it hurt them awfully when they pulled the feathers out?"

"Are the Indians very hard to manage?" asked a lady the other day in pitying tones. "Not so hard as most children, I think," I replied. "But they are so fierce and revengeful, ain't they?"

A popular preacher has taken a western trip of a few weeks. He returns, and lectures on the Indian question, the Chinese question, the Mormon question. He disposes of each in a few words. "I can't give you a rose-colored view of the Indians. (Of course he has studied the type at rail-road stations!) They are a lazy, dirty, rascally set. They treat their women like dogs. It is abominable that we should be taxed to support these fellows. Make them work for a living like the rest of us!"

"I want to thank you for your sensible view of the Indian question," I say, after the lecture. The lecturer looks at me with slightly embarrassed surprise. "I want to apologize—to you—for speaking so strongly," he says, with the unfeeling gallant politeness of the popular divine. "Not at all. You said what we all say—perhaps from a little different standpoint."

What is your stand point? Do you know anything about Indians or not? I was once discussing the knotty question of the Indian's political position with an intelligent, educated young

Indian. It seems to him—as it is to—unjust, almost an impassable discrimination. "You must remember," I said, "that there are a great many men—men in Congress—men who make the laws who have never studied this thing and never thought about it." "Can't they read? Can't they hear?" he exclaimed. "I must talk to them." "I am afraid they wouldn't listen to you." A peculiar look came over his face as he said quietly, "I didn't know there were people like that. I don't want to talk to them. I want to talk to the white people who are civilized."

### The Indian in Current Literature.

#### II.

The reviews, with their more "solid" table of contents, support the popular monthlies on the Indian question. Mr. McNaughton, in the *Nineteenth Century* gives us "The Red Man," from a trans-Atlantic point of view. He directs no little satire against "border logic" and the greed of politicians, and declares with enthusiasm that "The sympathies of the world—at least of the Great Republic—are concentrating upon the Red Man."

"The hackneyed question," as he calls it, of the Indian's mental capacity, "is continually thrust forward in connection with the policy pursued toward him. How mental capacity, or rather how a finer tissue of brain organization, can affect the dispensation or the suspension of justice, any more than it can affect the remission of sin, is a point which the pale-face conveniently ignores." Meanwhile, "The Red Man's capabilities for civilization are less doubted with every year's progress, and doubted the least by those who know him best."

Mr. McNaughton wisely remarks that "it is their vague and undefinable position before the law that has been, from the beginning, the main source of trouble with the Indians. Not an alien, nor a denizen, nor a subject. The Federal law is mystified in defining his legal status, and suspiciously regards him as a sort of unclassified heretic, but still under the Federal jurisdiction. Perhaps the closest approximation that can be made towards defining his unique position before the law—but with the usual contradiction in terms, that characterizes the Indian controversy—is, that the Indian is a *perpetual sojourner* upon lands which are his, but whose right to that land is subordinate to the Government's desire to purchase."

The Indian Rights Associations are credited with a conspicuous share in bringing about the new era of justice. "Their object is to influence public sentiment, and through that to bring a pressure upon Congress to grant the Indian, first, his land in severity; second, citizenship. This is the only possible solution to the problem that has vexed the Federal Government for a century, and made its policy vacillating, inconsistent, humiliating, cruel. This allotment of land in severity to the Indian \* \* \* will enable him to sunder his tribal affiliations and his allegiance to tyrannical chiefs, and thereby remove the only legal obstacle in his way to adoption as a citizen. As a citizen he may maintain his rights in the courts of law; for, (be it known to the world and be it said with due humiliation,) the Indian has now no legal redress."

It is not proposed to confer the elective franchise without discrimination, but with certain qualifications upon the native sagacity of the Indian, stimulated by the happy prospect before him, will speedily acquire. That there are even now, hundreds of Indians better qualified for exercising the political rights of citizenship than are many thousands of the whites who poll their unread ballots, is evident enough. People who talk of the "possibility" of civilizing the Indian are ignorant of

the progress made during the last decade. The schools at Hampton, Carlisle, Forest Grove and other places have demonstrated not only the possibility but the *astonishing aptitude* for advancement shown by Indian children. After their course of instruction they return to their homes and forests as so many lanterns of civilization and Christianity. I admit that here and there, a pupil under the influence of his old surroundings has 'gone back into barbarism.' But if a lamp here and there go out in the darkness, shall no more lamps be lighted?"

It is a long step from the insistent demands of practical philanthropy to the vague but fascinating conjectures of American mythology and folk-lore. We turn to the *Magazine of American History* and follow Geo. Jones' curious account and somewhat unsatisfactory explanation of the "Cave Myth of the American Indians."

The traditions of a subterranean origin for mankind seems to have been peculiar to America and a feature of the native mythology. "In a cave within a certain hill the Master of Breath moulded the first Indians out of clay, and when the soft material had hardened into flesh and bone," he brought his creatures out and gave them the surface of the earth for a dwelling place. Such is the substance of a legend repeated among various tribes in various forms, often with the addition of a water-feature, or in connection with the kindred tale of a watery origin.

The question which occurs first," says Mr. Jones, "upon surveying this group of legends so alike in their general tenor, is, are they intrinsically connected with one another in the sense that, they are the fragments of some primeval tale current among the Indians at a time when they were less widely scattered over this continent than at present, or have they sprung up at several centres independently of each other?" This question is one of great interest to American ethnologists, but one to which, in the present state of our knowledge respecting the mode of growth and diffusion of popular tales, it would, perhaps, be rash to attempt an answer. But whether or not these tales have any true kinship with one another, it hardly admits of doubt that they have a common basis, either of fact or of logic, and that they may be regarded as practically, if not actually, different versions of a single original tale. What is this basis, and what is the meaning of the story?"

Mr. Herbert Spencer has suggested that "the early progenitors of a tribe were dwellers in caves on the mountains; and where caves are used for interments, they become the supposed places of abode for the dead; and hence develops the notion of a subterranean other world."

Dr. Daniel G. Brinton, eminent in this field, finds in this tradition an underlying meaning—a "bit of primitive philosophy." "Out of the Earth rises life—to her it returns. She it is who guards all germs, nourishes all beings. The Aztecs painted her as a woman with countless breasts; the Peruvians called her Mama Ollpa, Mother Earth; in the Algonkin tongue the words for earth, mother, father, are from the same root. *Homa, Adam, chanaigens*, what do all these words mean but earth-born, the son of the soil, repeated in the poetic language of Attica in *Anthropos*, he who springs up like a flower? \* \* \*

The Indians often pointed to some height or some cavern as the spot whence the first men issued, adult and armed, from the tomb of All-mother Earth. This cavern, which thus dimly lingered in the memory of nations, occasionally expanded to another world, imagined to underlie this of ours, and still inhabited by beings of our kind, who have never been lucky enough to discover its exit."

\* \* \* Such tales of an under-world are very frequent among the Indians, and which thus dimly lingered in the memory of nations, occasionally expanded to another world, imagined to underlie this of ours, and still inhabited by beings of our kind, who have never been lucky enough to discover its exit."

The delightful poetry of this interpretation does not, however, satisfy our inquirer. "Is there not," he asks, "internal evidence to be obtained through an examination of various versions of the story itself, which will conduct us to something better than a mere guess, however plausible, at its origin and significance?" To us the "something better" which he proposes is little more than an ingenious fancy. He develops his theory very cleverly, however.

"In primitive geography the earth is surrounded by water. \* \* \* The world sea, as well as the cave of the under-world, was an important element in the primitive conception of the sunrise and sunset. Out of this sea the sun arose every morning, and into it he returned at evening. \* \* \* When the story of the sun's rising and setting became confused and entered upon its mythological career, the world-sea contracted its dimensions and became simply a lake or a river in the lower world. \* \* \* This conception of the sun's rising from a sea, as well as from an under-world, furnishes the connecting link between our cave world and the equally prevalent tradition that the first man or first men came out of the water. \* \* \* Let us suppose, to illustrate the case before us, that an ancient Peruvian chant, addressed to the rising sun, under the name of Viracodea, contained a phrase which may be translated, 'He comes up from the sea, or from the great hollow.' Now, let it be borne in mind that this phrase may be ambiguous in regard to tense; for those modifications of the verb which distinguish nicely the time of an action belong only to the more highly developed languages, and are wanting or neglected in barbarian speech. \* \* \* If now, a chant or a hymn such as we have supposed were to be preserved and sung at religious festivals until a time when Viracodea was no longer distinctly identified with the sun, but had become a personal deity, the ambiguous phrase will most naturally be taken in a historical sense and will be understood as meaning, 'He, Viracodea, came out of the sea.' Here we have already a tradition, due simply to the misinterpretation of an old song. And when once the story has been started that the great and beneficent Viracodea came out of the sea—or out of the cavern—men will not be long in discovering the precise spot where the event took place."

### Indians in Massachusetts.

Eight girls and six boys left us the latter part of June for a summer with the farmers among the Berkshire Hills. They go to friends who will teach them farm and house-work in the most practical way, and send them back in the Fall renewed in body and mind by this total change of atmosphere. Two girls have gone to Longmeadow and one to Concord for the same purpose. None are to be paid for their services, but are expected to so conduct themselves that each party will feel mutually benefited by the summer together. The boys, being usually strong, can often do a man's work on the farm, while the girls can make themselves useful in many womanly ways. This summer none have been sent except for good conduct and character here, and we hope they will do much toward wiping out the unpleasant name made there by some very unreliable ones during the past few summers.

Mr. Rathbun who has charge of the vocal and instrumental music, says of his Indian pupils:

"We are glad to say that the new venture of teaching the Indians instrumental music is proving very successful. Some of the organ pupils already show a proficiency, that would do credit to our more civilized people. While only partially understanding our language, by means of signs, etc., new ideas are introduced and taken hold of with a zeal that shows only the chance to development is wanted. A new field of usefulness may thus be opened to many on their return home. Rudiments of vocal music are being introduced into the regular summer school."

### Incidents of Indian Life at Hampton.

On the morning of the July 26th, a party of thirteen Indians, Omahas and Winnebagoes, arrived at the school, under the care of Noah La Flesche. The party consisted of five girls and four boys and two married couples.

A new home has been built among us. Bear Bird and his wife, Julia, have gone into one of the new cottages put up for our married students. Everything is very bright, new and pretty, and they take great pride in keeping it so. As yet it has no name. Should the home of Bear Birds be called a den or a nest? Time will tell, if it has not already.

### The Irony of Fate.

A small, vine-grown brick building near Virginia Hall, formerly known as a gas house, is being reconstructed and put in order by a squad of Indian boys. It is henceforth to be known as the Guard House.

### Vacation.

Here at Hampton we believe in object-teaching, especially with the Indians. The boy who replied that vacation meant "another kind of work" had learned his lesson after this method. This vacation we have on the Indian grounds 155 colored and 65 Indian students. 52 new Indians from Indian Territory, Nebraska and Dakota, are expected this month.

For the Indian boy, vacation means that he must rise at 5:15, put his room in order, breakfast at 6, go to work at 7, dine at 12:15, go into school at 1, back to work at 3, supper at 6:30 and prayers at 7. After this his day's work is done, and he is, with all the other students, usually found assisting in a lively and interesting scene on the large green in front of Virginia Hall. Here for half an hour in the cool of the day the whole school is gathered, playing games, chatting socially together, or enjoying the quiet society of one, on the principle that "two make a company." The quarter-of-eight bell always seems ahead of time, and it is hard to say good night just as the setting sun is lighting up the water and making all the world so beautiful, but it must be done. The colored students must go in to night-school, and the Indians to their respective cottages or to prayer meeting. They are not allowed to leave the grounds, but may enjoy their evening hour after their own fashion until 9 o'clock, when a bell summons them to roll-call and prayers. This service is conducted by Indians only, showing that they are making some progress in self-government.

This is vacation, yet no one complains; they know no other way and are thoroughly in earnest in desiring to make the most of their time.
